JUNE has two events of unusual interest to the jeweler — commencement exercises and weddings—for the former we have made up an attractive line of coral and cameo scarfpins and brooches, the engravings on which, consisting of mythological and historical figures, are sure to appeal to graduates. For the weddings, we have anything that may be desired from the above articles suitable for bridesmaids, ushers, etc., to expensive diamond ornaments for the bride.

One of our memo packages will convince you we sell "Sellers." Let us hear from you.

Why Do Some Succeed While Others Fail?

People start in business with the same advantages and the same opportunities, yet you are no doubt acquainted with many firms who have been in business for twenty to forty years, and yet they do not progress, but are shipping $40 000 to $50,000 a year while we have been in business eight years and are shipping ten times that amount.

¶ There is a reason. Things don't happen in this country without a reason. ¶ The man who is generally considered lucky is the man who leaves nothing to luck. ¶ We are live-minded, red-blooded men of business, with eyes, ears and brains open all the year around for new ways to make a dollar. Come in with us, we may help you.

Mr. RETAILER:

There is but ONE line of Raised Gold Decorated Watch Cases in this country.

You may see COPIES, IMITATIONS and HONEST ATTEMPTS,

BUT

the Raised Gold ARTISTS in America to-day are employed on the products of the SOLIDARITY WATCH CASE CO.

This is a bold statement, but you won't hear it questioned.

Our 1908 line far surpasses anything we have ever shown, and at no advance in cost to you. Your jobber will send selection upon request.

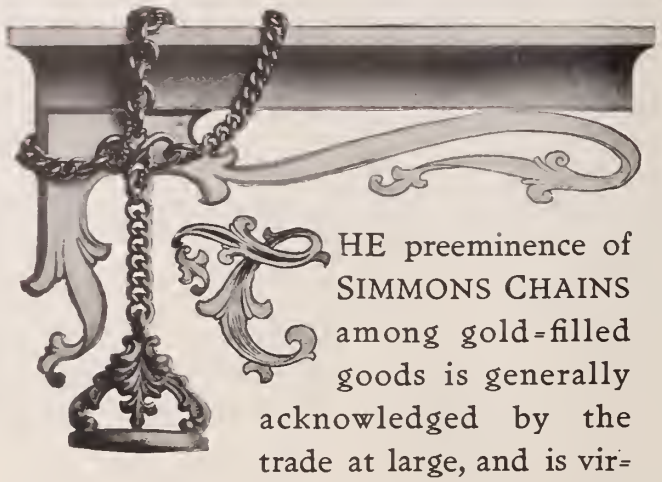
FOR SUMMER HOMES AND COUNTRY LIFE

these goods are very popular and particularly appropriate. : : We issue a handsomely illustrated Casserole recipe book. : :



MERIDEN SILVER PLATE COMPANY

INTERNATIONAL SILVER CO.

Successor

Meriden, Conn.

NEW YORK : : CHICAGO

THE preeminence of SIMMONS CHAINS among gold-filled goods is generally acknowledged by the trade at large, and is virtually admitted by every jeweler who offers his customers another make of chains with the claim that they are "just as good as Simmons."

The Simmons line is undeniably the strongest selling proposition in chains the market offers. No other make of chains has been so extensively advertised, or is so widely known, or offers so broad a selection of fine, ready-selling patterns.

These are stubborn facts, and every jeweler who is not yet fully convinced that Simmons Chains ought to be strongly represented in his stock, owes it to himself to carefully think them over.

SPECIAL ORDER WORK

ROMAN JEWELRY

THE TRUE Roman Color is a delight to the eye. Its exact attainment is an artistic achievement. Add to perfection of color superior technique in execution, and you have the secret of the Roman Jewelry made here.

The numerous examples include interesting styles of

APPLIED WORK,
VERMICELLI TRIM, and
SHOTTED EFFECTS

These modes of decorative treatment are applied to all lines, producing results that are notably rich and varied.

In some instances the color tone is intensified and contrast introduced by artistic

CORAL
COMBINATIONS

These creations are a credit to the dealer handling them, while they yield him good profit.

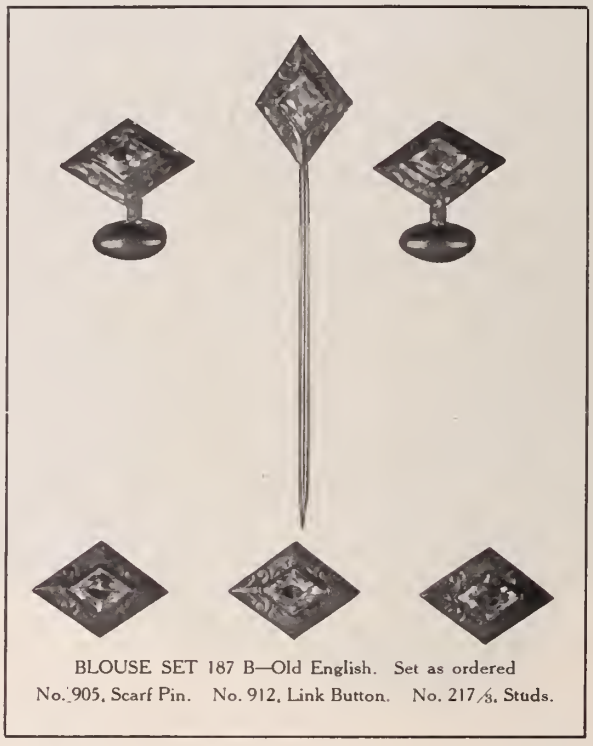
Jewelry which gives Distinct Pleasure to its Wearer



This can be truthfully said of the F. & B. New Fashion Collar Pin and Supporter. The lower pin and support are in one piece, the upper pin being movable, and the entire support is worn on the outside of the collar, thereby adding a dainty touch to the Ladies' neckwear, and at the same time doing away with uncomfortable inner support. With many unique designs we are now ready for the Spring Season's orders.

FINE GOLD FILLED COLLAR PINS. PATENTS PENDING

The practice of keeping to one color scheme in Jewelry is becoming an established fashion. Our New Blouse Sets, made up of Studs, Link Buttons and a Scarf Pin, all set with stones of the same shade, make pretty ornaments for the Summer Gowns.

We have, besides, a handsome line of Lockets and Chains, Bracelets and Link Buttons, Veil and Scarf Pins, Hat Pins and Brooch Pins, as well as Neck Chains and Pendants.

Our Sterling Silver Goods afford a choice selection of Toilet and Manicure Pieces, Table Ware, Vases and Candle Holders, suitable for June Weddings and Graduating Gifts.

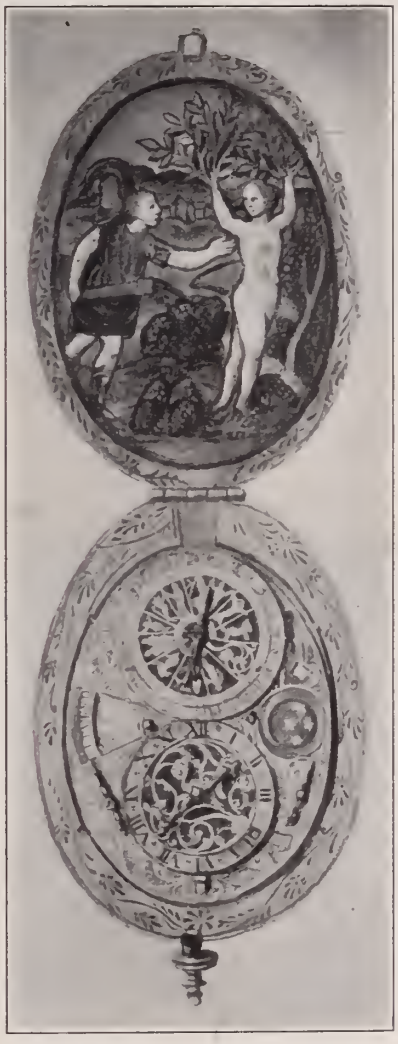
Limoges Enamel as Applied to a Valuable Old Egg-Shaped Watch.

THE most valuable watch in the world is probably the unique egg watch, in Limoges enamel, of which we present illustrations herewith, and which was recently acquired by the well-known Berlin collector, Carl Marfels. It came from the famous collection of Baron Mayer Karl von Rothschild, Frankfort-on-the-Main, and is generally valued at 50,000 marks ($12,500). The movement, with the exquisitely engraved dial, was made by the celebrated English watchmaker, David Ramsay, while the wonderful paintings in translucent Limoges enamel are by the famous enamel painter, J. Reymond, of Limoges, France. The great value of this watch is based on its extraordinary beauty and unique rarity.



ONE SIDE OF THE ENAMELED CASE.

The salient point in this respect, and, indeed, in the whole field of collecting specimens of antique art, is artistic character. A watch may be ever so old, but having no decoratively ornamented dial, no handsomely embellished case, it is practically almost worthless. It is the artistic execution of dial and case that makes an antique watch valuable. If to these artistic qualities is added the element of rarity, the value soars into the unlimited.

The business of Eugene D. Allen, Marseilles, Ill., is now conducted under the name of J. H. Allen.

Old Clock With Enamel Figures.

A CURIOUS specimen of a clock was recently brought to the jewelry store of C. H. Baldwin, Allentown, Pa., for repairs. Its age is not known exactly, except that it is likely over 100 years, judging from its make and style. It is an English John Taylor clock and was a very handsome piece in its day, with solid brass works, brass dial and enamel figures set in a fine mahogany case, which stands about 20 inches high and is about 12 inches in width. The works are all hand made and the brass is engraved throughout. The peculiar thing about the works is the old Verge escapement, which is similar to that in the old English watches. This takes the place of the pendulum, and in appearance is like the hairspring of a watch on a larger scale. The clock strikes the hours and half hours and has an alarm.

THE WATCH AS IT APPEARS OPENED.

Handsome Silver Trophy Made for the Winner of the Belmont Stakes of 1908.

ON the front cover of the current issue is illustrated the $1,000 Belmont Stakes trophy for 1908, offered by August Belmont and won by James R. Keene's horse "Colin" on the Belmont race track, Saturday, May 30.

The prize for this year was a humidor incased in silver and gold, by Tiffany & Co. The illustration shows a front view of the trophy. The decorative scheme is in the style of Louis XVI. The humidor is mounted on four short standards. On the four corners at the top of the trophy are four horseshoes. Massive handles embellish the sides. On the front of the trophy is this inscription in relief in solid gold letters and numerals: "The Belmont Stakes, 1908. Won by ———."

ANOTHER SIDE OF THE ENAMELED CASE.

The case of the humidor is surmounted by a superbly modeled representation of "Rockland," the famous race horse.

The trophy is 15⅞ inches in length, 11 inches wide and 9¼ inches high, without measuring the height of the horse.

The stock of the Klemme Jewelry Co., Albert Lea, Minn., will shortly be moved from its present location in the Skaug building, to the Lempke building. All the woodwork in the new quarters will be of mahogany.

"IN THE GOOD OLD SUMMERTIME"

When washable vests are worn, and soft bosom shirts, coat shirts and negligee shirts add to men's comfort—they all can be made more attractive by wearing the right kind of jewelry with each or all.

The right kind is the kind we make—

MOTHER OF PEARL JEWELRY FOR MEN OR WOMEN

We carry the largest stock of this class of jewelry in the United States, for we make

Larter Vest Buttons
From $7.50 per set of six, up

ELSIE BEE'S FASHIONS.

SUMMER NOVELTIES NOTED IN A LADY'S RAMBLES AMONG THE JEWELERS.

ENGINE-TURNED engraving is being applied with charming effect on the frames of gold bags.

* * *

The large loop hair pin, which is having favor at present, is sometimes made of gold instead of shell.

* * *

A new snake necklace is constructed of tiny joints of engraved gold. Its workmanship recommends it, but it is almost too frail to be very practical.

* * *

The demand increases for enameled sets of links and buttons to match the neglige shirts. There is often a single stone in the center to harmonize with the enamel.

* * *

Hat pins grow larger and larger—probably to conform to the extraordinary size of the hats of the prevailing fashion. One of these bears a tremendous gold ball, handsomely engraved and pierced.

* * *

The Merry Widow pin—a gold bar from the ends of which is suspended a chain that may or may not bear a pendant—is having considerable vogue. Without ornamentation it is worn by men as suitable for the Ascot tie. It is particularly attractive with the Merry Widow jarbot, as it admits of a wide range of treatment in the La Valliere effect.

* * *

New but simple watch chains for men's Summer wear are appearing just now. They are short and are made with a button—plain, engraved, engine-turned or polished—to fit into the buttonhole of the coat lapel. The watch is thus dropped into the pocket of the coat. When the shirt-waist days come, these watch chains are indispensable to the man who would be well and comfortably dressed.

* * *

Still new designs are coming forth in gold bags, the latest being a fine, dainty effect in a stripe. The mesh is so delicate that when the bag is empty it hangs perfectly straight, while it expands surprisingly to hold almost any number of the small articles that a woman wishes to carry. The same design is also mounted crossways, which gives a distinctly different style.

* * *

A novel veil pin, made to suit the present style of wearing the veil so that it envelops the head, is fashioned like a wire hair pin. The prongs are waved so as to insure against falling out, and the top is ornamented with a simple design in gold scroll-work or half-pearls. Indeed, all colors may be used in stones and enamel to match veils and costumes. The pins are sold in pairs, one for each side of the head, and they pin the veil snugly to the hair. They are the most practical style of veil pin yet devised, as they may be so easily removed when one wants to lift her veil. They are decorative and pretty, and they are without the pin fastener, which is always catching in the veil and causing both annoyance and destruction.

ELSIE BEE.

Utilization of Baroque Pearls in Jewelry Designing.

Written expressly for The Jewelers' Circular-Weekly by Chas. A. Brassler.

ON various occasions we have presented to our readers illustrations of interesting freak pearls and humorous and other objects into which they have been wrought. The famous German goldsmith Melchior Dinglinger (1664-1731) is noted especially for his clever productions in this line, specimens being still to be seen in the Green Vaults at Dresden. It is reported from London that E. Hopkins, of Hatton Garden, will have an interesting exhibit of Australian freak pearls at the Franco-British Exposition, recently opened in that city. Among the exhibits will be a unique specimen, consisting of a pearl of extraordinary shape, closely resembling a head and bust.

BEAUTIFULLY DESIGNED FLOWERS MADE OF BAROQUE PEARLS.

DOMESTIC FOWL PORTRAYED BY BAROQUES.

The method of utilizing these irregular baroque pearls, is susceptible of wide variation and the goldsmith who is blessed with a lively imagination will find here a rich field for its exercise. We are able to show some attractive examples, photographs of which were kindly furnished by C. Hertel & Son, court jewelers, of Hanau, Germany. A mannikin figure of a little monk is notably original. The maker of such fantastic articles must be not only a good draughtsman, but possessed of a certain sense of humor, such as the little monk reveals. The quaintly designed little pug nose is turned heavenward, and, moreover, the plump little belly forces the robe apart. Face and body are both cleverly made from baroque pearls.

For the remaining illustrations, a few explanatory words will suffice. The leaves in the floral designs may be advantageously made from green gold; in the case of the dragon fly, the wild duck and the owl the body is appropriately enameled. In the daisy, the blossom cup or calyx is fashioned with emeralds; the antlers of the flower, on the other hand, are of chased old gold. As already stated, there is no limit to the imagination in the creation, with the pearls in their original form, of varied objects. Of course, we must be careful not to force their adaptation to the creation of something unique.

As regards the working up of such pearls, a few hints may be given that will doubtless prove welcome. Before all things, says a recent writer in a German exchange, the object should first be composed on a wax plate and the pearl tested in every respect to find how it can be employed to the best advantage. Then, with India ink, mark the places at which the pearl must be drilled. In brooches, like the daisy, the points of the petal pearls, where they are too thin, must be filed down, so as to obtain a surface that can be easily drilled. In addition to this fastening, it is moreover advisable to back them with a boss and to also attach a pin thereto. In the case of round, thick pearls this is not necessary—here a single pin will suffice—but with pointed petal pearls it is the more desirable because with comparatively slight strain, such as may be caused by catching in a shawl, they may easily be broken. In chain jewelry these American leaf pearls in many instances replace the more expensive drop pearls (pendeloques). One often notes their use as danglets on modern pendants.

From the foregoing it may be seen that the working of pearls depends on their natural form. If this is the case with regular shapes, it is the more so with baroque pearls. Some of these pearls are often rejected, owing to their irregular shape, as useless, and we hope our article will help to insure these products, a second consideration. The ingenious designer will undoubtedly find the irregular shapes serviceable.

Illicit Diamond Buying In South Africa.

Extensively practiced in Kimberley between the years 1876 and 1881.

IT is a well-known fact that the nucleus of many a fortune acquired in South Africa was obtained by illicit diamond buying. From the year 1876 to 1881, before the famous De Beers mines had thoroughly inaugurated a system to cope with the illicit diamond trade, illicit diamond buying was extensively practiced in Kimberley. The penalty of a conviction under this act has always been most severe, even from the earliest days of the birth of the diamond fields, but some few years elasped before a police and private detective system was of sufficient avail to check illicit trading in diamonds.

Before commencing with thoroughly authentic examples of methods adopted by illicit diamond buyers, it is as well to describe briefly the scene of their operations. When the first great rush to the diamond fields occurred in 1876, Kimberley consisted of a few tin huts and Kaffir kraals, situated on the northwest of Cape Colony, bordering on the Orange Free State, on the west. The nearest railway being over 300 miles away, and transport being at excessively high rates, only those persons who possessed a capital of not less than $500 could reach Kimberley in any degree of comfort. Real hardships were endured on the road. Ox wagons and mule wagons were the general means of locomotion, and the pioneers carried small tents or "bug walks," as they were called, to afford them protection, the thermometer in Summer registering as much as 115 in the shade and descending to freezing point in Winter. The town grew to such an extent after the "rush" that a large settlement soon sprang up. Claims were pegged out and washing for diamonds was carried on vigorously by all sorts and conditions of men. Rough sailors, university men, doctors, rascals of every nationality, raw Boers, ex-army officers, youths of 18 or 19 who had run away from home—in fact, men of every type were soon engaged in the hunt for riches.

A Cape police garrison was established, and law under the British Government soon began to assert itself. Then Cecil John Rhodes arrived on the scene and large companies were at once formed. The Du Toits Pan claims came to the fore, and after a few years a huge excavation, 150 feet deep and an acre in extent, could be seen; and Kaffirs in thousands, working with feverish energy, who from the top of the pit resembled ants. Saloons and gambling dens sprang up and illicit diamond buying soon became rife.

The Orange river, only three miles away, formed the border between Cape Colony and the Orange River Colony. No extradition law between the Boer and British governments existed in those days, and once over the border with a parcel of diamonds, both diamonds and illicit diamond runner were safe from molestation. The penalty for a conviction was enormous, and sentences of from eight to 15 years hard labor on the breakwater at Cape Town were very usual. Most common among the methods used by the illicit diamond buyers was to employ a Kaffir who could speak English, furnish him with a little money and set him to work on one of the claims where washing for diamonds was in progress. Either by stealing them, buying or finding and not reporting them, this Kaffir was enabled—if he was clever—to obtain a parcel of stones. These would be delivered in due course to the illicit diamond buyers, on whose shoulders then rested the responsibility of getting them "across the border."

Strangely enough, one of the first big parcels of diamonds to be safely taken across the border and out of reach of the diamond act was carried unwittingly across by the then Chief of Police of Kimberley, Captain Brenchley. I have often heard Captain Brenchley tell the story. It appears that at the time of the latter's tenure of office as chief of police he had suspicions that a certain Ike Solomon was dealing illicitly in diamonds. He posed as a real estate dealer, and occasionally, to keep up appearances, would buy or sell a tin shanty and take more pains than was necessary to advertise the fact. One evening he happened to meet Captain Brenchley at the Grand Hotel in Kimberley, owned by a Mr. Peterson. He made himself exceedingly affable to the police captain, who surmised that Solomon was trying to get into his good graces by being polite and affable. After ordering champagne for all in the bar, "Ikey Sol," as he was termed, began to speak about shooting. He informed Brenchley that he had recently purchased a farm in the Free State which abounded in game of all description, and lamented the fact that being no sportsman himself he was unable to keep down the game on his place. Captain Brenchley, being an ardent sportsman, replied that he would much enjoy a day on the farm in question. Finally it was arranged that Ike should take Captain Brenchley and his friends, who included the chief magistrate of Kimberley, for a day's shooting on his farm. The day was arranged, but at the last moment it was discovered that shot cartridges were very scarce. Ike Solomon undertook, however, to supply 100, which he said he could borrow from a friend.

Eventually the party, consisting of six, started in three "Cape carts" from Kimberley. Ikey was in great spirits and Captain Brenchley was pleased with himself because he felt certain that Ikey was only entertaining him so royally to bring off a "coup" in the near future; and the chief of police felt certain of capturing him at his illicit trade. They crossed the border into the Free State and breakfasted at a coach stage. They then proceeded to Ikey's farm, but not a trace of a single head of game was to be seen. The party then returned to Kimberley, Ikey apologizing profusely all the way home and insisting on providing a champagne supper on arrival. Two months later he left Kimberley for good, and soon after his departure Captain Brenchley received the following letter:

> My dear Friend:
>
> I must call you friend, because you have to me been a good one. I know all the time you think I buy diamonds and carry them over the border. I now inform I do buy the diamonds, but you, dear friend, you carry them over the border for me in your cartridges which I borrow from my friend Nathan, and I fill nearly all with diamonds after I take out the bullets. These I change at the breakfast for real cartridges, and you think nothing. Over you I make much money, and now go home. My friend, I say good-bye; but watch for Light Nancy because she is too clever for you ever to catch.
>
> Your friend always,
>
> Ike Solomon.

The temptation, however, of making another coup was too great for Ikey, and he returned again to Kimberley, after some years in Europe, and was convicted in 1885 of illicit diamond buying in Kimberley and sentenced to 12 years hard labor. He died while serving his sentence.

The most notorious character the diamond fields have produced, however, was Scotty Smith. His relationship to Scotland, however, was most remote, Scotty having a distinct touch of the tar brush. His adventures were numerous and full of interest. I will give a few of the most exciting.

Scotty's chief occupations were cattle lifting, highway robberies, gun running and illicit diamond trading. His first feat was particularly simple and daring. Hearing that a large parcel of diamonds awaited the coach at a certain hotel, Scotty held up the manager in his office and obtained the diamonds. He was masked at the time and was not suspected of the robbery. A week later he calmly handed them over to the authorities and obtained a substantial reward. On another occasion a dealer in diamonds at Christiana, on the Vaal river, had purchased from the diggers a large number of diamonds and insured them for £10,000. He then arranged with Scotty that the latter should hold up the coach on the agreement that he should receive a half share of the insurance money on delivering the diamonds back again to the man who had insured them. This suited the adventurous nature of Scotty and he promptly agreed. Single handed—Scotty seldom worked with another—he held up the Kimberley coach at the top of the rise. He recognized the driver as a man he had formerly been friendly with, and not wishing to kill him he stampeded the mule team by shooting the leader through the ear.

The team stampeded down the hill and the coach overturned. Scotty obtained the mail bags, but search as he would he could find no trace of the registered parcel of diamonds. He then rode cross country to Kimberley and appeared that evening in his usual haunts. He met the coach next day, and when charged with the hold-up very cleverly proved an alibi. After awhile he returned to Christiana and saw the man he was in collusion with. Each accused the other of bad faith. To settle their quarrel they proceeded to the post-office, producing

the receipt for the delivery of the diamonds to the postmaster.

The latter denied having seen the parcel, but on searching his office discovered the bag safe and sound in a small closet, much to the disgust of the confederates.

Scotty's greatest haul was made in a most original manner. He became so closely watched by the police eventually that although he was in possession of a large number of large and valuable diamonds, scheme as he could he saw no chance of running them across the border. At last he originated a plan which proved most successful.

He put each diamond in a lump of dough and in the shape of a ball, forced them down his horse's throat, saddled up and proceeded toward the Free State border.

Although searched over and over again, the police feeling even the hide of his horse and even accompanying him to the border, and again searching him, he eventually arrived in the Free State, which was sanctuary. He then shot his horse and extracted the diamonds.

Before his death he owned up to many coups he had successfully accomplished, and to show his extreme cleverness, he was never convicted of a serious crime. Illicit diamond dealing on a large scale exists in Kimberley to-day.

FREDERICK FRANKLIN.

Recent Decisions by General Appraisers on Clocks and Bronzes.

Decisions of the Board of United States General Appraisers, New York, in cases involving duties on jewelry and kindred lines have been announced in the last week as follows:

PARTS OF CLOCKS—CARVINGS.—Protest of J. J. Buchey & Co. Carved wooden elk heads, classified as parts of clocks under Par. 191, Tariff Act of 1897, were claimed to be dutiable as manufactures of wood. The testimony showed that these articles were in fact made use of in the manufacture of souvenirs, but that this use is exceptional, the principal use being as parts of clocks. Assessment affirmed on the authority of Magone v. Wiederer (159 U. S., 555).

BRONZE STATUARY.—Protests of John L. Vandiver, Philadelphia. The protests related to bronze statuary, claimed to be "statuary" as defined in Par. 454, Tariff Act of 1897. Protests overruled. Note G. A. 5213 (T. D. 24016) and Tiffany v. United States (71 Fed. Rep., 691).

The jewelry business of George E. Feagans, Joliet, Ill., was incorporated, May 26, with a capital stock of $50,000. The incorporators are: George E. Feagans, Lonnie Feagans and Mr. Larson. George E. Feagans expects to give his entire attention to his business in Los Angeles, Cal. Lonnie Feagans is to be the manager of the Joliet store.

J. J. Powers, formerly engaged in the jewelry business in Corinth, N. Y., but who for the past two years has been in the lumber business elsewhere, returned recently to Corinth, where he has taken charge of the watchmaking business of J. J. Dayton, on Main St.

Involuntary Petition in Bankruptcy Filed Against the Superior Comb Co., New York.

A petition in involuntary bankruptcy was filed in the United States District Court last Wednesday against Archie Hallel and Ralph Cohen, who were doing business under the name of the Superior Comb Co., 43 John St., New York, by the following creditors: Goodfriend Bros., $123; Albert Lorsch & Co., $406, and Julius Mamluck & Co., $30.

The claims are for goods sold and delivered to the alleged bankrupts.

It is alleged that they are insolvent, and while insolvent, about May 25, permitted one of their creditors to obtain a preference through legal proceedings and have made no effort to vacate or discharge such preference.

It is also set forth in the petition that about April 10 they admitted, through their attorney, their inability to pay their debts in full. It is also alleged that they transferred portions of their property to several creditors. The liabilities are $5,500.

Ernst Lowenstein & Cane are the attorneys for the petitioning creditors.

The business was started in January, 1907.

The Marinette Optical Society, Marinette, Wis., was organized recently.

Handsomely Wrought Wreath Recently Presented to a Chicago Society.

ILLUSTRATED below is a handsomely wrought silver wreath which was recently presented to the Schwabischen Unterstutzung Verein, a Northside German pleasure society, of Chicago, by the wives of the members.

The wreath measures 15 by 20 inches and was made by A. L. Williams & Co. expressly for the occasion. The lion and the deer are gold-plated, the base being silver. The berries that form part of the wreath are also gold-plated. It was presented April 28, on the 25th anniversary of the Verein, the celebration having been held at the Northside Turner Hall.

SILVER WREATH MADE FOR A FRATERNAL ORGANIZATION OF CHICAGO.

The wreath weighs about 30 ounces and is valued at $200.

A new town clock at Chardon, O., has been placed in position in the Court House tower.

Emil Groux, 129 S. Main St., Wilkes-Barre, Pa., was interviewed recently by a reporter of a local paper with reference to a project for tearing down the old Town Tower on the Public Square of the city. He said that the tower should be replaced by a new one of steel, but that the present clock is in excellent condition and will give satisfaction for many years to come.

New Illinois Law and Other Measures Adopted for Development of Pearl Fisheries.

The new law, the purpose of which is to restrict clam and mussel fishing in the rivers of Illinois, has been misunderstood in relation to some of its provisions, as recently reported in a number of papers. The law does not require that every fisherman shall have a license, but it does require that non-residents of the State must take out licenses before they can legally fish for claims or other shellfish in any of the navigable rivers of the State. A separate license is required for each boat.

Other restrictions apply alike to the residents and non-residents. All are prohibited from fishing between Oct. 1 and April 6. The boats must not have more than two bars. A bar must not exceed 16 feet in length. Spaces separating hooks must not be less than eight inches.

This Illinois law is only one of a number of measures which the friends of the American fisheries hope will contribute to the development of the industry. The Federal Government has been asked to establish hatcheries near Muscatine, Ia. Laws somewhat similar to the Illinois act have been proposed in other western States.

Phillip J. Mackey, Muscatine, Ia., who was in New York recently, said that in his opinion a great deal will be accomplished as a result of the various movements. He said that the pearls, baroques and shells of the fresh water mussels have not been handled in the past to as much advantage as have the similar products of the Oriental oyster beds, and the increasing attention to the details in these respects will prove a great advantage.

As a result of improved machinery, he said, the use of the mussel shells for buttons and ornamental articles is on a better basis than formerly. The shell is cut and treated to better advantage and some kind of shells are now being utilized which were formerly considered unsuitable for the purpose.

A copy of the Illinois law has been received at this office from Maurice Brower, and is given in full as follows:

AN ACT FOR THE PROTECTION OF MUSSELS, FRESH WATER CLAMS AND SHELLFISH.

Sec. 1. *Be it enacted by the People of the State of Illinois, represented in the General Assembly:* It shall be unlawful for nay person or persons to take or catch, by any means whatever, in any of the navigable waters within the jurisdiction of tbis State, any mussel, fresh water clam or shellfish from Oct. 1 to April 1 (both dates inclusive) of each succeeding year.

Any person violating the provisions of this section shall be punished by a fine of not less than $25, and not more than $100 for each offense, or imprisoned in the county jail not exceeding one year, or by botb such fine and imprisonment, in tbe discretion of the court.

Sec. 2. It shall be unlawful for a non-resident of the State of Illinois to take or catch mussel, fresh water clam or shellfisb, or attempt to take or catch mussel, fresh water clam or shellfish in any boat, skiff, row boat, flat boat, launch, or other water craft or vessel in any of the navigable waters within the jurisdiction of this State, unless a license for such boat, skiff, row boat, flat boat, launch or other water craft or vessel shall have been procured therefor, as hereinafter provided.

Any person not a resident of the State of Illinois who shall take or catch or attempt to take or catch any mussel, fresh water clam or shellfish in any boat, skiff, row boat, flat boat, launch or other water craft or vessel in any of the navigable waters within the jurisdiction of this State, without a license for such boat, skiff, row boat, flat boat, launch or other water craft or vessel, shall be punished by a fine of not less than $50 nor more than $100, or imprisoned in the county jail not exceeding one year, or by both such fine and imprisonment, in the discretion of the court.

Sec. 3. It shall be unlawful for any person or persons to take or catch, or attempt to take or catch in any of the navigable waters within the jurisdiction of this State, any mussel, fresh water clam or shellfish in any boat, skiff, row boat, flat boat, launch or other water craft or vessel having more than two bars. Each such bar shall not exceed 16 feet in length, and the space separating tbe hooks thereon shall not be less than eight inches.

Any person violating any of the provisions of this section shall he punished hy a fine in any sum not exceeding $100, or imprisoned in the county jail not exceeding one year, or by both such fine and imprisonment, according to the discretion of the court.

Sec. 4. Any person not a resident of the State of Illinois desiring to take or catch in any of the navigable waters within the jurisdiction of this State, any mussel, fresh water clam or shellfish by means of any boat, skiff, row boat, flat boat, launch or other water craft or vessel, shall first obtain a license for each boat, skiff, row boat, flat boat, launch or otber water craft or vessel so to be used by said person, not a resident of the State of Illinois. The city or village clerk of any city or village, and the county clerk of any county are hereby authorized and empowered to issue sucb license, and for each such license the person making application therefor shall pay the sum of $50 for each boat, skiff, row hoat, flat boat, launch, or other water craft or vessel so to he used. And each city or village or county clerk issuing any such licnse shall be entitled to charge and receive a fee of 50 cents for each license so issued by him to be paid by the party applying for such license. Said license fee of $50 above provided shall be paid by the said clerk to the State Treasurer at the end of each month, and shall be placed to the credit of the State Fish Protection Fund, and shall be disbursed hy the State Treasurer on warrants signed by the State fish commissioners, approved hy the Governor, and filed witb the Auditor of Public Accounts, who shall draw his warrant therefor on the State Treasurer.

Such license shall expire on the first day of October following its issuance.

At the time said payment is made, the persons making the same shall receive from the fish commissioners, fish warden or deputy fish warden, a metal tag, which shall be of uniform style and pattern, to be prescribed by the fish commissioners, and the person to whom the license is issued shall attach in a conspicuous place such metal tag to the boat, skiff, row hoat, flat boat, launch or other water craft or vessel so licensed.

Any person not a resident of the State of Illinois, who shall take or catch, or attempt to take or catch in any boat, skiff, row hoat, flat boat, launch or other water craft or vessel in any of the navigahle waters within the jurisdiction of this State, any mussel, fresh water clam or shellfish, to which no metal tag is attached in the manner herein provided, shall be punisbed by a fine of not less than $50, nor more tban $100, or imprisoned in the county jail not exceeding one year, or by both such fine and imprisonment, in the discretion of the court.

Sec. 5. It shall be the duty of all sheriffs, deputy sberiffs, coroners, constables, fish commissioners and fish wardens to cause any person violating any of the sections of this Act to be promptly prosecuted.

Sec. 6. To enforce the provisions of this act all suits hrought under the same shall be brougbt in the name of the people of the State of Illinois, and shall be brought on tbe complaint of any person or persons showing by affidavit that some section of this act has been violated, giving the names of the persons violating, if known, and if unknown, such affidavit shall state that such violation has been committed hy some person or persons whose name or names are unknown, and such complaint shall be made before any justice of the peace of the county in which such violation has been made.

Exports of Jewelry, Clocks, Watches, Silverware and Kindred Lines from the Port of New York.

WASHINGTON, D. C., June 3.—The following were the exports of jewelry, silverware, optical goods, clocks, watches and kindred lines from the port of New York for the week just ended:

Bremen: 3 cases watches, $4,008; 5 cases plated ware, $246.

Bombay: 14 cases watches, $1,975.

Buenos Ayres: 7 cases optical goods, $2,984; 1 case watches, $1,075; 1 case jewelry, $150; 1 case watches, $497; 21 cases plated ware, $3,472; 1 case optical goods, $173; 37 cases plated ware, $5,437; 2 cases watches, $13,000.

Callao: 2 cases plated ware, $110; 1 case watches, $204; 65 cases watches, $199.

Calcutta: 1 case watches, $400.

Colon: 4 cases watches, $739.

Constantinople: 3 cases scopes and views, $115.

Genoa: 1 case jewelry, $500.

Hamburg: 3 cases optical goods, $525.

Havre: 2 cases plated ware, $376; 8 cases jewelry, $589; 1 case watches, $314; 2 cases optical goods, $102.

Havana: 1 case plated ware, $164; 31 cases clocks, $635; 6 cases optical goods, $158.

Hobart: 25 cases clocks, $600.

Lausanne: 1 case plated ware, $500.

Launceston: 5 cases clocks, $150.

Lisbon: 3 cases watches, $414.

Liverpool: 1 case jewelry, $500; 377 cases clocks, $2,800; 8 barrels jewelers' sweepings, $5,000; 20 cases clocks, $573; 2 cases jewelry, $750; 3 cases watches, $1,500.

London: 5 cases clocks, $369.

Manila: 7 cases clocks, $290.

Melbourne: 1 case watches, $385; 5 cases clocks, $168.

Montevideo: 11 cases plated ware, $637; 8 cases plated ware, $585; 25 cases clocks, $272.

Naples: 1 case jewelry, $250.

Oporto: 1 case watches, $138.

Para: 1 case jewelry, $433.

Rio de Janeiro: 1 case watches, $370.

Rome: 1 case jewelry, $350.

Santo Domingo: 1 case plated ware, $150.

Singapore: 7 cases clocks, $101.

Southampton: 3 cases optical goods, $350; 5 cases watches, $358; 20 cases watches, $4,013; 1 case jewelry, $450; 1 case scopes and views, $114; 1 case optical goods, $112.

Sydney: 27 cases clocks, $1,221; 2 cases optical goods, $276.

Vera Cruz: 16 cases clocks, $211.

Wellington: 15 cases clocks, $416.

Zanzibar: 14 cases clocks, $233.

Sleeping Car Co. Not Responsible for Jewelry That Is Not Baggage.

The United States Circuit Court of Appeals for the Fifth Circuit held recently in the case of Bacon *vs.* the Pullman Co. that while a passenger is entitled to carry with her and retain in her immediate custody as baggage a reasonable quantity of personal effects for her use, comfort and adornment during the journey, according to her station in life, a carrier or sleeping-car company owes her no duty with respect to valuable jewelry carried by her in a handbag for transportation merely, without any intention or purpose of using it during the journey, the jewelry under such circumstances not being regarded as baggage.

The court said that a sleeping-car company, being under no duty to care for the jewelry, which did not constitute baggage of a passenger, carried by her into her stateroom, was not responsible for the theft of the jewelry by its porter, such act being outside the scope of his employment.

The jewelers of Pennsylvania will hold a State convention, to-day, June 10, when the retail jewelers of Reading, Pa., contemplate perfecting a local organization.

Scientific Precious Stones

The making of a precious Ruby by scientific methods is to-day a fact, known to every layman. The HOPE SAPPHIRE is but a recent achievement, yet its importance is practically established.

These two stones are legitimate additions to the precious stone family; they have come to stay.

To increase your sales put our RECONSTRUCTED RUBY and HOPE SAPPHIRE in your line.

Carried in brilliant cut and cabochon; all shapes and sizes.

Judge Lacombe Decides Against Bernard Citroen in Leeds Pearl Case.

Judge Lacombe in the United States Circuit Court, New York, handed down a decision, last week, in which he reversed the decision of the Board of United States General Appraisers and affirmed that of the Collector in the case of the United States Government against Bernard Citroen, Paris. This suit was brought by the Government to recover $110,338, part of the duties assessed on 37 pearls brought to New York in June, 1906. The pearls were sold to Mrs. Wm. B. Leeds for $340,000.

The particulars of the importation have been published a number of times in this journal. When the pearls were brought to New York by Mr. Citroen he had them invoiced at $220,000, and paid a duty of 10 per cent. ad valorem under the clause of the tariff law relating to pearls in their natural condition. The Government afterward claimed that the pearls really constituted a necklace, and hence that they were dutiable at 60 per cent. A reliquidation was ordered by the Collector of the Port, and Mr. Citroen was called upon to pay 50 per cent. more duty, amounting to $110,338.

A protest was entered by Mr. Citroen, who asked for the return of the additional duty, and the protest was first heard by the Board of General Appraisers, who reversed the Collector and held that the 10 per cent. duty was sufficient.

The Government then appealed to the United States Circuit Court. At the hearing in court W. Wickham Smith argued for the plaintiff that the pearls were imported in a loose condition, not strung. He said that the Government had no right to take into account anything but the condition of the pearls at the time of importation. Mr. Smith cited the Neresheimer, Tiffany and other cases. He pointed out that drilled and assorted pearls had been held to be pearls in their natural condition. He also called attention to the distinction made in the first Tiffany case that unless the collocation of pearls is such as to give to the pearls a greater value than they have if sold separately, then the collection cannot be considered a necklace. In this case, he contended, the pearls were worth as much separately as when strung.

Assistant United States Attorney Nichols said that the tying up of the large amount of capital involved in making a collection of pearls such as this necessarily added to their value, or the dealer would not collect them.

The 37 pearls weighed 985 grains, an average of 26.62 grains each. The central pearl weighed 53 grains. In accordance with the decision of Justice Lacombe, the additional duty of $110,000 will be demanded of Mr. Citroen. Mr. Smith said, however, that an appeal will be taken to the United States Circuit Court of Appeals. Judge Lacombe in his decision says:

"This case forcibly indicates the defects of the old practice whereby the proofs were taken in part before the Board of General Appraisers and in part before the court after the Board's decision was rendered. The opinion of the two general appraisers who united in reversing the collector—the third general appraiser dissented—indicates that they would probably have decided the other way 'had these 37 pearls been assembled into a completed necklace abroad and worn as such.' The brief additional testimony introduced in the Circuit Court conclusively establishes that proposition, and upon all the proofs the 37 pearls cannot, under the rule laid down by the Court of Appeals in Tiffany *vs.* U. S., 112 F. R. 672 and Neresheimer *vs.* U. S. 136 F. R. 86, be classified, even by similitude, as 'pearls in their natural state.'

"Inasmuch as this case will undoubtedly be appealed, it seems unnecessary to add anything to the discussion of the correctness or practicability of the rules for classification laid down in the earlier cases above cited, except in one particular. Counsel for the importer challenges the suggestion in the Tiffany case that, when there has been a careful process of assortment and selection as to size, quality, lustre, shape, etc., which takes time and skilled labor, the 'string of pearls thus produced is worth more than the aggregate values of the individual pearls composing it.' Reference is made to testimony to the effect that a collection of pearls will often be sold to one purchaser at a less price than the aggregate would amount to, were each pearl sold separately. There is nothing surprising in the circumstance that a dealer will be content with a smaller percentage of profit if he can sell 37 exceptionally large and expensive pearls in a single transaction than he would expect if he had to dispose of them individually, possibly having to wait many months before all were sold. It is a mere 'wholesale discount' and does not indicate that the intrinsic value of the collection is reduced by sorting, selecting and arranging. If it were, we may be very sure that dealers would not thus waste their time and skill and the interest on their money.

"The decision of the Board is reversed and that of the collector affirmed."

General Appraiser Sharretts in speaking of the decision called attention to the reference made in regard to part of the testimony being taken before the Board of General Appraisers and part before the court. He said that a law recently passed will bring the testimony before the Board.

In an interview with W. Weckham Smith, of the firm of Curie, Smith & Maxwell, counsel for the importers, he said:

"The decision in this case has been made to turn entirely on the fact that Mrs. Leeds had contracted in Paris for the purchase of these pearls laid down in Newport, R. I., duty paid; that she had given in part payment some jewels purchased at Tiffany's in New York, estimated to be worth $50,000, and that she had repeatedly worn the Citroen pearls in Paris as a necklace.

"On such a theory of the law where is the line to be drawn? Suppose Mrs. Leeds had sold these pearls (through a broker or dealer) to someone else, who had immediately shipped them unstrung. Would the fact that Mrs. Leeds had worn them as a necklace make them dutiable at 60 per cent.? Suppose she had sold them to a dealer who had held them for sale in Paris for a year, and then shipped them here unstrung. Would they then be dutiable at 60 per cent.? Suppose she had sold them to a dealer who had mingled them with 13 other pearls and sent the 50 here unstrung. If these 37 pearls could be identified, would the Collector be justified in assessing 60 per cent. on the 37 and passing the 13 at 10 per cent.?

"Can any logical line be drawn in this matter except to have the Collector deal with merchandise as he finds it, without regard to its previous history or use, or to its intended use after importation?

"These questions will be carefully and fully presented to the higher tribunals.

"But in the meantime nobody will import all the pearls that once constituted a necklace in one shipment."

Joseph T. Evans, Boise City, Idaho, Makes Assignment to a Bank.

Boise City, Idaho, June 5.—Joseph T. Evans made an assignment this week to the Bank of Commerce of this city. One of his largest creditors threatened to attach a part of his stock, and this was followed by the assignment. His indebtedness, it is estimated, amounts to $16,000, much of which is due to wholesale houses. The assets are estimated at $11,000.

Mr. Evans recently conducted an auction. He was formerly in business at Rushville, Nebr., and afterward was in the sewing machine business in Alliance, Nebr.

In the last four years Mr. Evans has been in the jewelry business in this city, carrying a moderate stock.

Petition in Bankruptcy Filed Against the Walter E. Bush Co.

A petition in involuntary bankruptcy was filed Saturday in the United States District Court, New York, against the Walter E. Bush Co., manufacturer of badges at 123 Liberty St., New York, by creditors with claims as follows: Riker Bros., $276; Dick & Dodge, $30; Harry D. Miller, $600.

The two creditors first mentioned have claims for jewelry sold and delivered, and for designing jewelry. The claim of Harry Miller is based on demand notes.

It is alleged that the Walter E. Bush Co. owes debts to the amount of more than $1,000 and is insolvent. It is said that the company admitted in writing under date of June 2 that it is unable to pay its debts.

Wm. J. Miller was appointed by Judge Holt to be receiver.

The business was incorporated Jan. 21, 1907, with a capital stock of $5,000. The officers were: Walter E. Bush, president and treasurer; David H. Alberts, vice-president; E. B. Mayo, secretary. The officers, together with H. J. Bush and F. V. Lacountrie, constituted the board of directors.

Mr. Bush was formerly employed by the C. G. Braxmar Co.

Safe Blowers Rob Store and Take Away Jewelry Valued at $500.

Kansas City, Mo., June 3.—The building occupied by the Beach Jewelry Co., Buckner, Mo., was entered about 3 A. M., Wednesday, and $500 worth of jewelry was taken. The safe door was blown off.

In the same building is the post office, from which about $80 worth of government funds were stolen.

Reward Offered for the Arrest of James McMenamin, Former Jewelry Salesman.

CHICAGO, June 6.—James McMenamin, who for three years was a salesman for the M. S. Fleishman Co., is now wanted by that company, which has sent out circulars offering a reward for his arrest. It is charged that he recently returned his sample trunks from Colorado Springs, and that a quantity of diamond rings, valued at $5,000, was missing. The company swore out a warrant before Judge Gemmill, of the Municipal Court.

The company, besides offering a reward for the arrest of the salesman, offers a liberal reward for the recovery of any part of the jewelry.

In the description in the circulars it is stated that McMenamin is 53 years of age, is five feet 10 to 11 inches in height, and weighs between 180 and 200 pounds. His

JAS. M'MENAMIN, MISSING SALESMAN.

hair is dark and tinged with gray and is parted in the middle, falling over the forehead; mustache same color. It is added that he has dimples in his cheeks, a pink complexion and slightly red nose. When last seen by his former employers he wore a dark blue suit of clothes and carried a dark tan valise. He was last heard from by the company at Boise City, Idaho, and was then on his way west. He is usually smoking or chewing the end of a cigar.

The following description of the missing rings is given, the figures showing the numbers which are engraved on the inside of the shank:

1, Tiffany mounting, x766-10 (weight, 2 7-8 1-64); 1, green gold, carved, heavy, 763-37; 1, carved, heavy, colored, x769-38; 1, carved, heavy, colored, x769-43; 3, green, carved, heavy, 772-22; 3, rose, heavy, carved, 772-17; 1, flat Belcher, x756-63 (weight, 1 1-2 L 1-16); 3, lion head, rose, x761-19 (weight, 3-8 1-16); 1, Tiffany, x773-25 (weight, 1-34 1-32); 1, Tiffany, x774-1 (weight, 3-4 L 1-16); 1, Tiffany, x769-65 (weight, 3-4); 1, Tiffany, x769-37 (weight, 3-4 3-64); 1, Tiffany, x761-25 (weight, 7-8 1-32); 1, Tiffany, 760-57 (weight, 1 1-8); 1, Tiffany, x765-57 (weight, 1 1-8 3-64); 1, Tiffany, x755-46 (weight, 1 1-2 1-16); 1, fancy mounting, 755-36; 1, Tiffany, 765-39 (weight, 3-8 L 1-64); 1, Tiffany, 757-40 (weight, 1-2 L 1-32); 1, Tiffany, 762-53 (weight, 1-2 L 1-32); 1, Tiffany, x752-38 (weight, 1-2 1-16 1-64); 1, Tiffany, x752-40 (weight, 1-2 1-32); 1, Tiffany, 773-42 (weight, 5-8 L 1-32); 1, Tiffany, x756-55 (weight, 5-8 1-64); 1, Tiffany, x769-36 (weight, 5-8 1-32); 1, fancy mounting, x765-64; 1, fancy mounting, x765-65 (weight, 1-4 1-16); 1, fancy mounting, x751-8 (weight, 3-4 1-64); 1, fancy mounting, x766-1 (weight, 3-8); 1, x764-45; 1, Tiffany, 768-63; 1, Tiffany, x773-61; 1, fancy, x760-48; 1, fancy, x760-46; 1, fancy, x760-49; 1, fancy, x752-7 (weight, 1-8 1-16); 1, fancy, heavy, x765-52 (weight, 3-8 1-16 1-32); 1, fancy, x764-39; 1, fancy, x764-54; 1, fancy, 772-61; 1, 1 opal, 753-62; 1, fancy, x764-49; 1, fancy, 772-45; 1, fancy, x764-23; 1, Tiffany Belcher, x764-27; 1, fancy, 754-40; 1, Belcher mounting, x752-48; 1, fancy, x764-15; 1, fancy, x755-37 (weight, 1-8 1-32); 1, fancy, 764-61; 1, cluster, chipped diamonds, 753-53; 1, fancy mounting, 770-31; 1, fancy, x765-33; 1, fancy, 755-66; 1, fancy, 762-22; 1, fancy mounting, 770-47; 1, fancy mounting, 768-22; 1, fancy mounting, x758-7; 1, fancy mounting, 754-54; 1, fancy mounting, x758-4; 1, fancy mounting, 772-2 (weight, 1-4); 1, fancy mounting, x765-34; 1, fancy mounting, x752-11; 1, fancy mounting, x764-42; 1, fancy mounting, x755-31 (weight, 1-4 3-64); 1, fancy mounting, x772-58; 1, fancy mounting, x757-30 (weight, 1-4); 1, fancy mounting, x754-16; 1, fancy mounting, x770-54; 1, fancy mounting, x758-52; 1, fancy mounting, x764-13; 6, 5 emeralds, 751-12; 2, plain mounting, 753-27; 1, fancy mounting, 772-40; 1, fancy mounting, x758-60; 1, fancy mounting, 770-64; 1, fancy mounting, x765-17; 1, fancy mounting, 771-21; 1, fancy mounting, 753-38; 1, Tiffany Belcher, x764-26; 2, 1 opal, 754-35; 1, oval opal cluster, x751-38; 2, 3 pearls, Tiffany mounting, x762-17; 2, 1 pearl, Tiffany mounting, x755-57; 2, 1 pearl, Tiffany mounting, 768-65; 1, Tiffany, x751-1; 1, 1 pearl, Tiffany mounting, x757-2; 1, 1 pearl, Tiffany mounting, x757-16; 1, 1 pearl, Tiffany mounting, x757-13; 2, 1 opal, x754-31; 1, opal cluster, 752-45; 1, fancy, 753-2; 2, 1 opal, x753-13; 4, 3 rubies, 751-39; 1, 1 ruby, x751-27; 1, 2 rubies, x751-60; 1, fancy, x752-18; 10, 3 opals, fancy cluster, 751-67; 1, and diamond cluster, 802-8; 6, oval opal cluster, 751-46; 8, 4 opals, x751-52; 20, 4 opals, 751-29; 1, 500-3; 2, 1 turquoise, 753-14; 1 opal, diamond cluster, 751-40; 1, and opal cluster, 755-3; 1, and opal cluster, 753-54; 12, 4 amethysts, x751-34; 2, 1 opal, 753-12; 1, ruby and diamond cluster, 754-66; 1, and diamond cluster, x756-32; 1, Tiffany, x755-62 (weight, 1 1-32); 2, 1 opal, 753-63; 5, Tiffany mounting, x772-52; 1, fancy, x772-34; 2, 3 pearls, Tiffany, x762-18; 1, 1 pearl, Tiffany, x757-18; 1, Tiffany, x751-31 (weight, 1-2); 1, Tiffany, x769-27 (weight, 1 7-8).

Burglars Take Jewelry Valued at $600 from Store of M. L. Finkelstein.

ST. PAUL, Minn., June 4.—The jewelry store of M. L. Finkelstein, 112 E. 7th St., was entered early Tuesday morning and $600 worth of jewelry stolen.

Entrance was made by filing a guard bar in the rear of the store. A crowbar, about which was wrapped a piece of cloth to prevent a noise, was used to pry the iron bar. These tools were found lying in the alley.

The burglar or burglars made their way to the roof of the jewelry store through the Medical block, 7th and Robert Sts. They then climbed down a fire escape to a hatchway between the rear of the Finkelstein store and that of the Stanley Shoe Co. on Robert St.

The robbers stole their plunder from the front window. Evidently the robbers were scared away before they could lay hands on other jewelry in the store.

The robbery was discovered by a clerk upon opening the store a few hours later. The police are of the opinion that the robbers are inexperienced, but were acquainted with their surroundings.

Trophy cups of the recent automobile races at Wilkes-Barre, Pa., were exhibited in the window of Frank Clark's store, that city.

Abraham Jacobson, Boston, Mass., Makes Assignment for Benefit of Creditors.

BOSTON, Mass., June 8.—Abraham Jacobson, who has a retail store at 361 Hanover St., on June 1, made an assignment to William Charak for the benefit of his creditors. The assignee is personal counsel for Mr. Jacobson. The liabilities are estimated by the assignee at $3,000, of which about $700 is due for money borrowed and the remainder is owing to the merchandise creditors. The stock on hand is said to be worth about $1,500. Mr. Charak says that he intends to make an offer of compromise and that this will be more advantageous to the creditors than would be bankruptcy proceedings.

Mr. Jacobson, who is about 36 years of age, began business in this city. He was at 69 Prince St. in 1899, but was unsuccessful and moved to Waterville, Me., where he was in business for a time under his wife's name. In 1902 the husband, having received his discharge in bankrupcy, continued in his own name. In 1903 he returned to Boston and for a time carried on a wholesale business selling from his grip. He was for a time in business at 218 Hanover St., where in 1904 he settled with his creditors on a basis of 20 per cent. He opened at his present address in May of last year and has carried a line of cheap jewelry.

Death of Daniel K. Hatfield.

POTTSTOWN, Pa., June 1.—Daniel K. Hatfield, who was for many years in the jewelry business, died last Thursday at his home, 539 High St., in this city. He had been ill only a few days with pneumonia.

Mr. Hatfield, who was born in Pottstown, Nov. 17, 1840, was the son of Josiah and Amelia Keyser Hatfield. The mother died in his infancy and the elder Hatfield moved to Fremont, O., where he died a few years later. At the age of 12 the boy went to Philadelphia, Pa., to learn the jewelry business with James Robinson, at 11th and Market Sts., that city. About 40 years ago Mr. Hatfield returned to his native town and had been a resident here since. He was in the jewelry business for 20 years, retiring in 1899.

Mr. Hatfield was held in the highest respect in this community, and his death was a severe shock to his many friends. He had been a member of the Presbyterian Church since early manhood, and for many years was superintendent of the Presbyterian Church in Pottstown.

The surviving relatives include his widow and three sons, also a sister. The funeral took place Saturday.

Sheff Bros., Wheeling, W. Va., moved last week from Main and 11th Sts. to their handsome new store at 1151 Market St.

The store of Hope Bros., Knoxville, Tenn., was mentioned in a complimentary manner in an article which appeared in a recent issue of the *Illuminating Engineer*, under title of the "Great White Way in Knoxville." The writer says that the firm has obtained a most striking effect for the façade of the store.

Pupils of Pratt Institute Exhibit Work in Jewelry and Metal Chasing.

The 25th annual exhibit of the work of the students at Pratt Institute, Brooklyn, N. Y., which was held Thursday, Friday and Saturday of last week, attracted much attention. Prominent in the exhibit was the display of jewelry, metal work and enameling on the fourth floor of the main building.

The exhibits of the class in jewelry and metal chasing were displayed in two large glass cases and consisted of a varied collection of rings, pendants, bracelets, stick pins, brooches, scarf pins, buckles and hammered copper work.

A silver medal presented by Albert M. Kohn, of Theo. A. Kohn & Co., 321 Fifth Ave., New York, as a prize for the most proficient student of the jewelry class was awarded by a committee of trustees to Carl Johonnot. The work exhibited by Mr. Johonnot included a number of fine pendants, rings, silver spoon, stick pins, etc.

The course in jewelry and metal chasing has met with marked success. The regular course extends through three years. All work is designed and modeled in wax, cast in plaster and then wrought in copper, silver and gold. The course is under the supervision of Walter Scott Perry, director of the department of fine and applied arts, but immediately in charge of Carl F. Hamann, who directs the work both of the day and of the evening classes. He is an expert jeweler by profession, having formerly been connected with Durand & Co., Newark, N. J., and later with Tiffany & Co., New York. In 1889 he went to Europe and studied modeling in Munich for 18 months, going from there to Paris, where he studied in the Académie Julian and Ecole des Beaux Arts for two years. He brings to the students the knowledge and skill of a professional workman, combined with the originality and artistic appreciation of a professional artist.

The students in the day course are instructed in drawing, design, historic ornament and in applied work in chasing and repoussé, jewelry enameling and metal work. In hammered metal work the students make their own tools and produce objects in copper and silver, including trays, bowls, spoons and the like. Instruction is also given in enameling on copper, silver and gold.

The evening class takes up the work of the application of relief ornament and the finishing of castings in a thoroughly professional manner. The course also provides for wax modeling and hammered metal work. Instruction is given in the making of tools, the modeling of objects in sheet metal, repoussé or relief ornament in flat and hollow ware and the chasing of ornament in bronze, brass, silver and gold. The class meets Monday, Wednesday and Friday evenings.

Those taking the course during the past year were: F. E. Bauer, M. V. Brooke, B. L. Carpenter, M. E. Carter, C. H. Cheney, Frances Cullen, Robt. Donogh, Mrs. I. S. Freeman, F. S. Gardner, Florence Ingraham, H. C. Jaffery, C. H. Johonnot, C. E. Jones, R. H. Lewis, M. R. Mason, W. M. Minnis, Ethel C. Nesmith, Morian Ogden, Edith Sutherland, Ethel Walbridge, Ella S. Underwood, Daisey Thompson and Mrs. G. R. Westbrook.

Sixth Annual Picnic Held by tne Maiden Lane Outing Club.

The sixth annual picnic of the Maiden Lane Outing Club, an organization of the younger men in the Maiden Lane jewelry district, New York, was held Saturday, at Clifton, Staten Island. There was an attendance of about 60, and all agreed the outing was the most successful event in the history of the club.

The members gathered in Maiden Lane about 10 A. M. and walked to the Battery where they took the ferryboat to Staten Island and from there went by rail to Clifton.

Arrived at their destination, the members took possession of a convenient field, where the day's festivities were begun. Refreshments were prepared on the field and the kettle containing the hot frankfurters was a center of interest from the first. The refreshments were served under the supervision of a member of the party who wore a large badge denoting his official capacity.

In the forenoon a ball game was played between picked teams, which resulted in a victory for the aggregation under the leadership of Captain Haywood, by a score of 14 to 8.

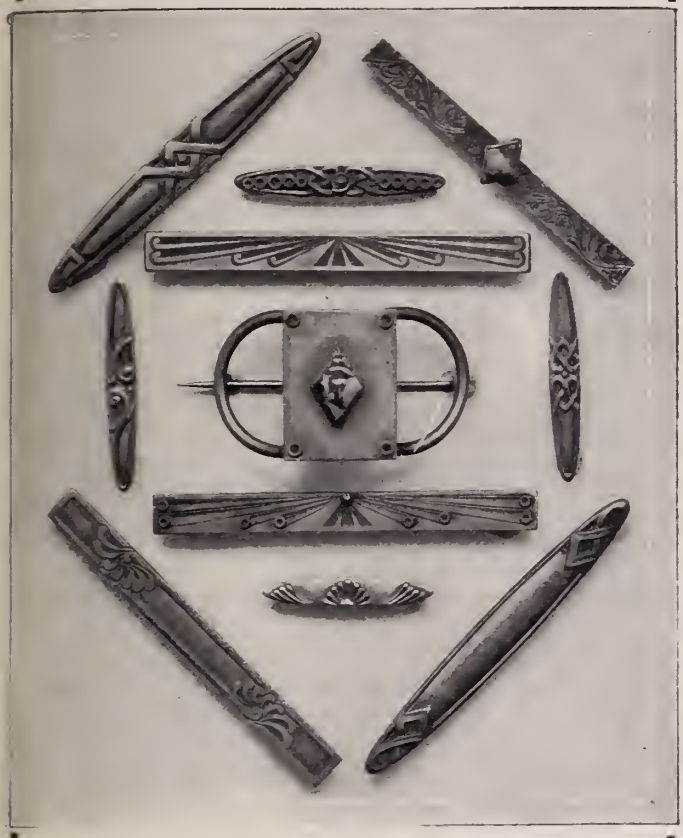
The potato race was won after an exciting contest by Harry Ulmer. The next event was throwing the baseball, the successful contestant being George Heywood. Following this came the running broad jump, won by Harry Wiltshire. In putting the stone Herman Heilmann proved the winner. The last field event was the running of the bases on the ball field. Dan Parker won.

Suitable prizes were awarded the successful contestants.

A second ball game was played, after which the jolly jewelers had a group picture taken and returned to Bachman's, where dinner was served.

Receivers Appointed for John Kahn & Co., Baltimore, Md.

BALTIMORE, Md., June 3.—Albert Gill and Bernhard Cline were appointed yesterday by United States Judge Morris as receivers for the assets of John Kahn and Solomon Fernheimer, conducting a retail jewelry business at 234 Park Ave., as John Kahn & Co.



An involuntary petition in bankrutcy was filed against the concern a short time ago, the liabilities having been estimated at between $21,000 and $25,000. It is claimed that the concern has stock valued at $6,000 and outstanding accounts amounting to $10,000.

The receivers were bonded for $8,000 and will act until the selection of a trustee in bankruptcy.

H. Bernstein, of the Bernstein Loan & Jewelry Co., Memphis, Tenn., was recently taken into custody on a charge of receiving stolen property.

At a recent meeting of the creditors of Isaac B. Braverman, Reading, Pa., who formerly conducted business under the name of the Keystone Jewelry Store, before Referee in Bankruptcy Bertolet, examination by the counsel of the creditors was concluded.

Hearing Begun in the Case of S. K. Reich, Alleged "Money Switcher."

SYRACUSE, N. Y., June 6.—The examination of Samuel K. Reich, alias Grossman, the alleged "money switcher," was begun in the police court to-day and adjourned until Thursday next. Reich was charged with grand larceny, first degree, and the only witness sworn was Charles Bebb, clerk in the jewelry store of Adolph Roth. It is charged that Reich gave Mr. Bebb $13 in $1 bills for diamonds valued at $714.

Bebb swore that he went to the Syracuse Savings Bank and saw Reich counting the money. Then Bebb counted and found that the roll was $1 short. Reich, he said, then threw a silver dollar on the pile of bills which included a $500 bill, two bills of $100 and 13 one dollar bills. Reich counted the roll again. Bebb was positive that he also counted the money again and placed the bills in his pocket. Bebb swore that he had the money when he wrote the receipt. He said that he put the roll in his pocket, and he expressed the belief that Reich had picked his pocket. The police say Reich probably shifted the roll when he counted it the last time.

Bordy & Lavine appeared for Reich.

Receiver of John Hellerich, Detroit, Mich., Continues the Search for Assets.

DETROIT, Mich., June 9.—A hearing in the bankruptcy case of John Hellerich took place to-day. The receiver will endeavor to trace all property that may be disposed of for the benefit of the creditors. The receiver's clerks were surprised Wednesday last to find five large boxes and two barrels, all full of goods, on the sidewalk in front of Hellerich's main store at 39 Michigan Ave. The merchandise was identified as part of the stock from the former branch at 510 Gratiot Ave. It was mostly a cheap lot of clocks and plated ware.

John Hellerich visited his former store once during the week and joked with the receiver's clerks regarding the property alleged to be missing, remarking that he would soon open up again.

An inventory has been taken by Bernard Stroh, but the appraisal is not complete. It is thought that the assets so far collected will bring $10,000, while the debts will run close to $20,000.

Hellerich will be called as a witness before Referee Joslyn this week.

Petition in Bankruptcy Filed Against the Firm of Buhn Bros.

SEATTLE, Wash., June 8.—A petition in bankruptcy has been filed against the firm of Buhn Bros., who have jewelry stores at Sedro-Woolley and Bellingham and who also have a clothing store in Everson. It is said that the firm has liabilities amounting to $30,000 and that the assets are about $18,000.

The members of the firm are G. O. and E. H. Buhn, aged respectively about 27 and 26 years, who started in business together about three years ago, coming from Redlands, Cal., where G. O. Buhn had previously been in business with his father. They carried fair stocks at the two jewelry stores and have enjoyed a good standing in the trade.

Examination Continued in the Bankruptcy Proceedings Against Maurice Dreshfield.

The examination in the bankruptcy case of Maurice Dreshfield, who was associated with George H. Carpenter in transactions in which, it is alleged, $182,549 worth of diamonds were obtained from R. A. Breidenbach, 51 Maiden Lane, New York, was continued Monday before Referee Olney, 68 William St., New York.

Mr. Breidenbach, a petitioning creditor, was on the witness stand and gave testimony relative to transactions with Dreshfield. On cross-examination, Attorney Dittenhoefer asked about a note for $2,859 signed by George H. Carpenter and indorsed by H. Morath. This note, the witness said, was his property. Mr. Breidenbach said that the note went to Morath for services and that he (Breidenbach) bought the note back.

Mr. Morath was an employe of Mr. Breidenbach at the time the petition in bankruptcy was filed against Dreshfield. Attorney Dittenhoefer tried to get the witness to admit that the note passed to Mr. Morath so as to qualify him as a petitioning creditor.

A note for $1,550 made by George H. Carpenter to Maurice Dreshfield was next shown to the witness. He testified that the note went to a Mrs. Wagner, on account of money owed. It was admitted that she is an employe of Mr. Breidenbach and that they are relatives. She was one of the petitioning creditors. Mr. Dittenhoefer tried to show that the note was given to her to qualify her as a petitioning creditor.

Attorney Dittenhoefer then argued that the petition in bankruptcy should be thrown out of court and cited cases where the courts did not sanction the splitting up of a claim to make a sufficient number of creditors to file a petition in bankruptcy which, he claimed, was done in this case.

An adjournment was taken for a week.

At a previous hearing R. A. Breidenbach testified relative to his meeting with Mr. Carpenter and a previous conversation with Mr. Dreshfield.

Mr. Breidenbach told of meeting Carpenter and of the events of that meeting. He testified to the delivery of diamonds to Dreshfield on several occasions, and said that Mr. Carpenter told him that he (Breidenbach) was to get an interest in the Monarch Corporation, but that he never did. The witness said that Carpenter came to his office Dec. 16 and told him that Dreshfield was in Buffalo and wanted more diamonds. In response 68 brilliants were delivered to Carpenter. Breidenbach said that Jan. 14 a note came due and was not paid, and that he telephoned Carpenter. The witness was told that Carpenter would be down to pay it, but the latter did not come.

Later another note came due and the witness said he attempted to see Carpenter, but could not get any satisfaction. So on Jan. 18 he went to consult Sol. Oppenheimer, attorney.

A. W. Johnson, Spencer, Ia., was recently married to Miss Ruby Cutshall, of Dickens.

National Monthly Import and Export Statistics.

WASHINGTON, D. C., June 8.—The records of the Treasury Department contain the following comparative statistics of interest to the jewelry trade for April, 1907 and 1908, and for the 10 months ending April, 1908:

Death of Edward F. Barnes.

SCHENECTADY, N. Y., June 3.—Edward F. Barnes, who had been engaged in business as a pawnbroker and jeweler at 619½ State St., this city, for about 17 years, died suddenly of heart disease at his home, 8 College St., Saturday night. The deceased had been a sufferer from the disease which proved fatal for some time past.

Mr. Barnes was born in Buffalo in 1838, and by dint of energy and business acumen built up a successful business here. He was a Civil War veteran, having served in a New York military organization.

Mr. Barnes left an estate nominally valued at $25,000. He bequeathed about $6,000 to Mrs. Martha L. Campbell, his mother-in-law, $2,000 to Miss Bertha Clay Campbell and a small bequest to his widow, to whom he gave $5,000, when they separated a few years ago. The balance of his estate went to the Children's Home. This will amount to about $12,000.

Mr. Barnes separated from his first wife many years ago. Both remarried, believing the other dead. Mr. Barnes' first wife is believed to be dead. A son by his first marriage, a graduate of Cornell, died in Manila, P. I.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended June 6, 1908.

The U. S. Assay Office reports:

Gold bars exchanged for gold coin	$837,867.63
Gold bars paid depositors	50,973.68
Total	$888,841.31

Of this the gold bars exchanged for gold coin are reported as follows:

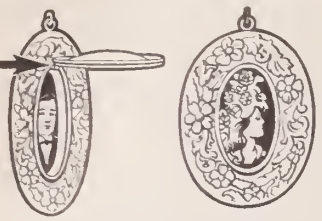
June 1	$45,914.19
" 2	327,725.57
" 3	95,653.05
" 4	41,104.03
" 5	316,708.62
" 6	10,762.17
Total	$837,867.63

W. F. Antemann & Son, Albany, N. Y., supplied the beautiful silver service which was presented recently at a special meeting to Willis G. Nash, cashier of the New York State National Bank, Albany.

Will of the Late H. N. Konrad, Kansas City, Mo., Filed in Probate Court.

KANSAS CITY, Mo., June 4.—The will of the late Herman N. Konrad, the jeweler who was killed in an automobile accident at 14th St. and Brooklyn Ave., the night of April 20, has been filed in the Probate Court. It shows a total value of $5,486.90, outside of the home at 2338 Forest Ave. and a 10 years' lease on the store building at 810½ Grand Ave.

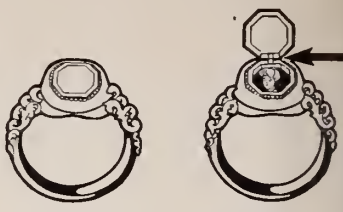
The jewelry stock is valued at $3,000. Mr. Konrad left $430 on deposit in the German-American Bank, and had $40 cash and $65 worth of jewelry on his person at the time of his death. The Forest Ave. residence is worth about $10,000.



State Tax Appraisers' Estimate of the Value of Estate of the Late Elias Ettenheimer.

ROCHESTER, N. Y., June 6.—State tax appraisers have placed the value of the estate of Elias Ettenheimer, the jeweler, who died April 20, at $158,859, all in stocks and bonds except $4,000 in real estate. The inheritance tax will be $1,509.

Among the stocks held by Mr. Ettenheimer were: National Bank of Savannah, $20,000; Traders' National Bank, Rochester, $10,000; National Bank, Rochester, $17,555; deposit, Savannah National Bank, $25,000; Security Trust & Safe Deposit Co., Rochester, $8,271; Pullman So., stock, $6,273; Chicago & Quincy R. R., $9,550; Rochester Railway & Light Co., $5,141 seven per cent. bonds, $5,985.



Ralph S. Seltzer has retired from the firm of H. F. Seltzer & Co., 925 Chestnut St., Philadelphia, Pa. The business will be continued by H. F. Seltzer.

According to a recent dispatch 270 pearl fishers lost their lives in a typhoon off Western Australia. The men composed a fleet of 40 vessels which were engaged in pearl fishing. The disaster occurred off Thursday Island, the typhoon having struck the fleet just as it was starting for the fishing grounds.

Jewelers and Opticians of Kansas and Missouri Open Convention.

KANSAS CITY, June 9.—Conventions of the following associations opened in this city to-day: Kansas City Retail Jewelers' Association, Missouri Retail Jewelers, Kansas Association of Opticians and Missouri Association of Opticians. The headquarters of all the societies are in the Baltimore Hotel.

At 9 o'clock this morning the visiting jewelers and opticians, with their wives and families, were received in the parlors of the Baltimore Hotel by the Kansas City wholesalers and their wives. The visitors registered and badges were distributed.

The first business meeting was called to order at 10 o'clock, when an address of welcome was delivered by C. L. Merry, the president of the Kansas City Jewelers and Optical Jobbers' Association. A response was delivered by Herman Maueh, president of the St. Louis Retail Jewelers' Association.

At the afternoon session, W. J. Lewis, president of the Kansas City Opticians, called the meeting to order. The programme of the afternoon included addresses on the following subjects: "Amendment to the National Stamping Law," Geo. H. Edwards, Kansas City, Mo.; "Optical Short Cuts," Thomas Gowenlock, Clay Center, Kans.; "Freight by Mail, or the Parcels Post," Charles E. Leeman, California, Mo.; "Publicity," L. Roy Curtiss, Kansas City, Mo. The evening was given up to receptions, luncheons and festivities in Carnival Park.

The programme for the remaining two days of the convention is as follows:

WEDNESDAY, JUNE 10.

9:00 A. M.—Meeting called to order by Walter Sperling, president Kansas Jewelers. Introduction of resolutions and referring same to the proper committees. Reports of committees. 9:30—"As the Traveling Man Sees Us," R. S. Davis, Atchison, Kans. 10:00—Reading of the proposed "Law to regulate the stamping of gold-filled watch cases." How it will affect their sale. Discussion of same by members. 11:00—"Optical Legislation," Dr. S. W. Lane, Kansas City, Mo. 11:30—"Cancelled Postage Stamps;" a paper on "Mail Order Houses," J. C. Haupt, Peabody, Kans. 12:00 M.—Recess. 1:30 P. M.—Meeting called to order by C. E. Range, president Missouri Opticians. "Department Stores," Wm. Westphal, St. Charles, Mo. 2:00—"Good Business," Frank Yale, Kansas City, Mo. 2:30—"The Relations of the Retailer to the Jobber," J. A. Runyan, secretary Manufacturers and Merchants' Association, Kansas City, Mo. 2:00—Entertainment for the visiting ladies by the Ladies' Reception Committee of the Kansas City Wholesalers. Auto ride through the parks and boulevards, leaving the Baltimore Hotel at 2 o'clock. 5:30—Take street cars at Baltimore Hotel for Electric Park, dine at Morton's restaurant and spend the evening visiting the various amusements and entertainments at the park.

THURSDAY, JUNE 11.

9:00 A. M.—Meeting called to order by R. D. Worrell, president Missouri Jewelers. Reports of all committees. 9:30—"Good of the Order," C. H. Carpenter, South Bend, Ind. 10:00—"The Eye in Relation to Health," Dr. B. W. Needles, Kansas City, Mo. 10:30—A paper on the State Commission for Watchmakers, Charles S. Sands, Kirksville, Mo. 11:00 "Chunks of Thought," S. J. Huey, Excelsior Springs, Mo. 11:30 "The Laborer is Worthy of His Hire," a paper on the right prices for repair work, A. A. Marvin, Blue Rapids, Kans. 12:00 M.—Unfinished business. Adjournment of the joint sessions. 1:30 P. M.—Executive meetings and elections of officers of the four State associations. Kansas Association of Opticians in the Japanese Room. Missouri Society of Retail Jewelers in French Room. 2:30—Kansas Retail Jewelers' Assocition in the Japanese Room. Range and Walter Starcke, at their desks in the Convention Room.

William Keddie Files Bankruptcy Petition and Says Errors Were Made in Schedules.

A petition in bankruptcy was filed in the United States District Court, New York, last Wednesday by William Keddie, 170 Broadway. His schedules display liabilities of $22,296, including secured claims of $13,975 and unsecured claims of $1,346. The assets are set down as $770, and consist of notes for $767 and cash amounting to $3.20.

Mentioned in the schedule of secured creditors are Mechanics' National Bank, $5,800; Maurice Brower, $4,150, and Emma Keddie, $4,025.

Mr. Keddie claims that gross errors were made in the schedules. His liabilities are, he says, as follows: Jennings, Lauter & Co., $200; Irving Baum, $425, and Maurice Brower, $4,150.

Mr. Keddie says that he had notes and accounts due him of $8,477, among which, he says, is one claim for $5,360 for goods obtained on memorandum and pawned, so he says, three days before the title was given. He claims that notes were given for these goods. The tickets, Mr. Keddie says, were returned to him.

Mr. Keddie started in business in 1890 as a member of the firm of John R. Shepard & Co. He was previously with Henderson & Winter for about 17 years. John R. Shepard & Co. dissolved in 1893.

Salt Lake City Jeweler Run Down by Electric Car and Dangerously Injured.

SALT LAKE CITY, Utah, June 4.—Carlos E. W. Bowers, 235 S. Main St., was run down while on horseback by an electric car near his home, 780 5th E. St., Tuesday, his horse killed underneath him, and he himself possibly fatally injured.

The impact of the car threw Mr. Bowers' horse from the track and broke its back. Mr. Bowers himself was dashed against the front glass, which was shattered into bits, and then hurled over his horse off the track.

The physicians believe that Mr. Bowers will recover unless there are internal injuries. There are two severe gashes in his head and many contusions on his body.

The horse was slightly unruly at the time of the accident and shied on the car tracks. The car was said to be going at high speed.

Mr. Bowers, who is 47 years of age has conducted a jewelry store on S. Main St. for eight years.

Trans-Atlantic Voyagers.

TO EUROPE.

Ernst Gideon Bek and C. E. Binder sailed Saturday on the *Finland*.

William Hofmann, of Eichberg & Co., New York, sailed yesterday on the *Kronprinzessin Cecilie*.

B. Roede, of the Frankel building, John St., New York, sailed Saturday of last week, for Europe, on the *President Lincoln*.

The property occupied by Carl Oesterle, 106 Chicago St., Joliet, Ill., has been leased for a long term by the Woodruff Safe Deposit Co.

The following traveling representatives were in St. Louis, Mo., last week: John J. Moffitt, Battin & Co.; Ernest A. Rose, Weigle & Rose; Millard E. Heise, Langfeld Bros. & Co.; C. H. Davison, Kohn & Co.; F. F. Gibson, Gibson-Krugler Co.; W. S. Melis, Gorham Co.; Mr. Bliss, Wordley, Allsopp & Bliss Co.

The following traveling representatives called on the trade in Kansas City, Mo., last week: G. F. Peusch, V. Horbes Jewelry Co.; John Hoagland, F. T. Pearce Co.; E. W. MacAllister, Irons & Russell Co.; W. S. Sparrow, Stern Bros. & Co.; A. B. Chace, Mandalian & Hawkins; W. Strauss, Jacob Strauss & Sons.

The following representatives of the trade visited Lancaster, Pa., recently: Charles B. Gray, Schwartz & Gray; George S. Melville, D. Wilcox & Co.; J. F. Ruth, South Bend Watch Co.; M. B. Loomis, C. Sydney Smith & Co.; F. A. Brennan, L. Witsenhausen; Walter J. Mays, McIntyre, Magee & Brown; A. N. French, Link & Angell Co.

Traveling representatives calling on the trade in Omaha, Nebr., recently, included: John A. Lossau, Martin-Copeland Co.; Harry E. Andrews, Gorham Co.; Mr. Bliss, Wordley, Allsopp & Bliss Co.; J. Percy Wrayton, Durand & Co.; R. T. Kleckner, Theodore W. Foster & Bro. Co.; G. S. Melville, D. Wilcox & Co.; Mr. Bennett, Waite, Mathewson & Co.; F. R. Truell, W. H. Saart Co.; Ike Price, Louis Strasburger's Son & Co.; John Hoagland, F. T. Pearce Co.; W. D. Powers, Wm. C. Greene Co.

Traveling representatives in Los Angeles, Cal., recently, included: C. C. Brooks, Morgan & Allen Co.; Louis Blackinton, W. & S. Blackinton Co.; H. E. Cobb, Daggett & Clap Co.; D. Childs, B. A. Ballou & Co.; Wm. Fay, J. T. Mauran Mfg. Co. and Wolcott Mfg. Co.; Bert Nohles, Sturtevant, Whiting & Bigelow; R. C. Read, H. F. Barrows Co.; K. L. Taylor, Riley & French; George Remington, Maintien Bros. & Elliott; Mr. Wilkins, Ostby & Barton Co.; P. A. Wilkinson, J. J. Sommer & Co.; J. W. Hagan, A. J. Hedges & Co.; W. B. Wood, Morgan & Allen Co.; E. V. Saunders, I. A. Hall & Son; J. T. Brennan, Burr W. Freer.

Traveling representatives who called on the Cincinnati, O., trade, during the past week, included: R. B. Carr, Link & Angell Co.; L. Gumbinner, M. Gugenheim; Mr. Hagerstrom, Hagerstrom Co.; J. M. Curtis, Meriden Silver Plate Co.; Arthur Totten, Sansbury & Nellis; L. H. Smith, Bippart, Griscom & Osborn; Charles L. Sexton, William L. Sexton & Co.; Lester B. Smith, Dominick & Haff; F. F. Gibson, Gibson, Krugler Co.; Thomas E. Rogers, Riker Bros.; A. L. Hancock, C. Sydney Smith & Co.; George S. Melville, D. Wilcox & Co.; Mr. Lampert, Henry Zimmern & Co.; Ernest Block, Louis Stern & Co.; P. A. Wilkinson, J. J. Sommers & Co.; I. E. Rosenberg, Morris, Mann & Rielly.

Among the traveling representatives who, last week, visited Pittsburg, Pa., were: Charles S. Peckham, J. H. Peckham & Co.; Mr. Tinker, Wm. B. Durgin Co.; George Southwick, Payton & Kelly Co.; Charles E. Howe, E. L. Logee & Co.; W. H. Osborne, R. Wallace & Sons Mfg. Co.; E. M. Barney, L. S. Spaulding; Lester B. Smith, Dominick & Haff; J. T. Griffith, Jr., Carter, Howe & Co.; George S. Melville, D. Wilcox & Co.; A. J. Sherrard, Enos Richardson & Co.; David E. Jacobs, Wagner Comb Mfg. Co.; E. P. Tiffany, F. H. Sadler Co.; J. F. Dean, Reed & Barton; W. S. Loeb, Dueber-Hampden Watch Works; Frank J. Ryder, Walter E. Hayward Co.; Fred G. Burgess, Bishop Co.; C. B. Bartlett, Whiting Mfg. Co.; Harry Goodison, E. G. Webster & Son; Mr. Fisher, Furbish, Swift & Fisher; L. E. Picard, American Watch Case Co.; Arthur H. Moore, Moore & Son; Mr. Rogers, C. H. Cooke Co.; Fred T. Barry, Louis Stern & Co.; L. Witsenhausen; W. S. Strauss, Jacob Strauss & Sons; G. P. Clap, Daggett & Clap Co.; Frank P. Kennedy, Paye & Baker Mfg. Co.; G. W. Bleecker, Martin, Copeland Co.; Harry C. Berdan, Gorham Co.; James D. Otis, Harvey & Otis.

Manufacturers for Live Jobbers only

That "Piano Advertising Plan" from Iowa

Pulls prosperity out of a lean year of panic. It never had an equal among advertising and premium propositions for building up trade in the teeth of a gale of adversity. It doubles sales for merchants and puts on subscriptions for the newspaper publishers. And it's brand new to-day.

The smallest merchant can work it just as successfully as the largest. The puzzle of it is that it does not cost the merchant one dollar, but actually makes him big money.

Nobody ever fails at this money-making enterprise who uses my plan and my pianos, which are of uniformly excellent quality. I superintend the manufacture of them myself, so I know.

And let me tell you it would be suicidal for any merchant to give away a cheaply made, inferior piano to any customer if he wants to reap a permanent benefit from the enterprise.

Here is a plan by which the merchant and publisher alike can turn hard times into hard cash, increase their business amazingly—literally make two dollars grow where there was one before—and pocket no possible loss for their thrift.

Live Ones—Write me *Needy Ones—Wake Up* *I'll Show You How it's Done*

SALESMEN—Boys with Grit and "Go"—

IT'S YOUR CHANCE. I want a few Reliable Salesmen to Canvass the Retail Trade. Samples in coat pocket. Don't worry trying to revive dead lines. Get one with breath in it now. It's a boom year for you if you connect right. Get wise to the "Iowa Idea."

Boston.

TRADE CONDITIONS.

The closing month of the first half of 1908 finds Boston and New England manufacturers and dealers in jewelry and kindred lines of goods in a much more hopeful frame of mind than they manifested earlier in the year. There has been a distinct improvement, wholesalers and retailers in Boston affirm, during the past two or three weeks, and their May record of sales, as a rule, surpassed expectations. June promises to make a good showing also, the season bringing out new business in wedding and commencement gifts. The demand runs more to useful presents than to the merely ornamental, and is more pronounced in other goods than in those specifically classed as jewelry, but there is a fair general demand of encouraging proportions at present. The resumption of full-time schedules in many New England manufacturing plants has imparted a new impulse to business of various kinds.

Carl D. Smith, of Smith, Patterson & Co., has returned from an outing at his Summer home in New Hampshire.

Francis Cowan, son of Henry Cowan, will accompany his father on an automobile trip to Atlantic City this week.

D. Mendelsohn, formerly with Mendelsohn Bros., has started in business, taking quarters in room 910, Jewelers' building.

Joseph R. Blake, head of the repair department of N. G. Wood & Sons, is in the city hospital, seriously ill with pneumonia.

C. A. Senter has closed his store at Lawrence, Mass., and has moved to Brockton, Mass., to engage in the same line of business.

George Gordon, Lawrence, Mass., who recently bought out the Bay State Jewelry Co., of that city, is selling out the stock at auction.

Joseph Cowan arrived home last week from an extended western trip, and immediately occupied his new quarters in the Jewelers' building, formerly the offices of Henry Cowan.

The Thomas Long Co. has asked that Annie Sullivan, who was recently arrested in Washington, be brought to this city to answer to a charge of stealing a diamond in the company's store, May 9.

The E. Howard Clock Co. has placed a tower clock on the Tressler Orphans' Home at Loysville, Pa. The company has also installed a fine double-dial bracket clock in the South End Settlement House in this city.

Among the new Massachusetts corporations chartered last week was the Blackmer Cut Glass Co., New Bedford, the incorporators being Arthur C. Blackmer, David L. Parker, William H. Bigelow, John H. Lawrence and Rufus A. Soule.

N. G. Wood & Sons, bowling team have received the prizes won by them as champions of the league of teams representing leading jewelry houses of this city. A handsome bronze cup goes to each of the following members of the team: John Folsom, Charles Ward, Louis McKenna, Charles Hosking, A. G. Wood.

Bernard Adelberg, jeweler, 1113 Washington St., has brought a suit for $2,000 damages against the New England Telephone Co., whose telephone book contained a printer's error designating him as "jewer" instead of "jeweler." Mr. Adelberg avers that his business has been injured and he has been subjected to ridicule because of the error made by the telephone company's printers.

Providence.

H. J. Cartier, a retail jeweler, has been appointed a member of the Board of Commissioners to investigate the affairs of the State College.

The Gorham Mfg. Co. announces that it will shut down its big factory in Elmwood for two weeks in July for the regular Summer stock-taking.

The firm of Palmer & Nickerson, which succeeded that of Palmer & Krohn at 109 Friendship St., will shortly go out of business, it is announced.

Edward J. O'Gara, a member of Sprague & O'Gara, jewelry enamelers, died in this city Monday of last week of typhoid fever. He was 26 years old.

In the Municipal Court last week Dexter B. Potter, executor under the will of the late Edgar L. Logee, received permission to continue the emblem business.

Robert C. Budlong, president of the Manufacturing Jewelers' Board of Trade and a member of the S. K. Merrill Co., is convalescent after a long illness.

Police Commissioner Luther, a senior member of William H. Luther & Son, is to take out a license to run an automobile. He will be among the first to comply with the new automobile law.

A sneak thief, on Tuesday night of last week, climbed through the transom above the door leading to the novelty store of E. Devoll, 5 Arcade, this city, and stole rings, bracelets and other jewelry valued at $100.

The annual Summer outing of the New England Manufacturing Jewelers & Silversmiths' Association will be held Friday, June 19. There will be a shore dinner, a sail down the bay and festivities at one of the shore resorts.

The Board of Trade has received a communication from the American consular service at Kingston, Jamaica, calling attention to the fact that jewelry, clocks, watches and china ware are included among the articles for which there is a special demand in Jamaica.

A blaze which the police say started in a pile of rubbish in the shop of Rudolph Grode, manufacturer of materials and findings, damaged several firms in the buildings at 234 Chestnut St. and 111 and 113 Point St. early Sunday morning. The following jewelry firms were damaged: Costello & Co., jewelers' findings; Feintuch & Sollinger, comb makers; Abraham Jacobs & Co.; Universal Die Sinking Co.; T. P. Ide & Co., manufacturing jewelers; Byron Colvin, chain maker; F. H. Cole, jeweler; John M. Howard, ring maker; Lipsey Bros. & Ross, manufacturing jewelers, and the National Jewelry Co. The total damage, according to the firemen, was in the neighborhood of $20,000.

Mayor McCarthy and Alderman Fletcher, the latter a manufacturing jeweler, had a sharp tilt at Thursday's meeting of the Board of Aldermen. The debate was on the subject of lobbying, which, the Mayor claimed, was carried on in the interest of the Rhode Island Co. Mr. Fletcher is the aldermanic member of the railroad committee, and he demanded that the Mayor name the lobbyist. This the Mayor refused to do. At the same meeting Alderman George Parks, another jeweler, presented a publicity bill requiring that the names of all firms performing services for the city be published, with particulars as to the work and the charges. The bill was referred to a committee.

Burglars entered the residence of George W. Hutchison at 195 Thayer St. last Wednesday night. Mr. Hutchison and family were sleeping when the burglars entered through a dining-room window. The crooks, after examining the contents of several rooms and leaving a trail of burned matches behind them, went to the dining room and were bundling up the silverware when the cook arrived at the front door. The thieves heard her and made their escape, taking with them only about $25 worth of silverware. If she had not arrived when she did they would have succeeded in carrying off hundreds of dollars' worth of property. Mr. Hutchison is a member of Hutchison & Huestis.

Attleboro.

Charles H. Eden is home from a business trip in the interests of the C. H. Eden Co.

William E. Rounseville, of C. A. Marsh & Co., has opened a Summer cottage at Harwichport.

Charles M. Robbins and Miss Minnie A. Swint, East Boston, were united in marriage last Wednesday, at the home of the bride.

Chester Dobson, nephew of Thomas S. Bennett, of the Electric Chain Co., was married Wednesday, June 3, to Miss Gertrude Demmons.

The Horton, Angell Co. Association has decided to hold its annual outing, June 19, at the grounds of the Warwick Club. The party will go on special electric cars.

Joseph L. Sweet, of the R. F. Simmons Co., gave an interesting address before the ministers of the Attleboros on Saturday afternoon. He described his pilgrimage to Palestine and the Holy Land.

Ezekiel Blake, treasurer of James E. Blake Co., has presented the following annual report: Machinery and tools, $105,221; cash and debts receivable, $29,905; manufactures and merchandise, $74,521; total assets, $209,647; capital stock, $100,000; profit and loss, $109,647.

The Jewelers' Baseball League has been organized by employes of D. F. Briggs Co., R. F. Simmons Co., Bates & Bacon and the Horton, Angell Co. The opening games were played on Saturday. R. F. Simmons & Co. beat D. F. Briggs Co., 10 to 2, and Horton & Angell beat Bates & Bacon, 15 to 14.

The annual corporation report of A. S. Ingraham Co., as presented by its treasurer, Albert S. Ingraham, is as follows: Machinery, $2,100; cash and debts receivable, $13,910; manufactures and merchandise, $524; good will, $6,000; total assets, $22,534; capital stock, $20,000; accounts payable, $1,822; profit and loss, $712.

An effort is being made to have the manufacturers of the Attleboros and Providence, R. I., agreed on a specified time for the annual two weeks' Summer vacation. The Providence jewelers have proposed to close the first two weeks in July, but many of the manufacturers in the Attleboros would prefer the early part of August for a number of reasons.

GORHAM SILVER

"Not Strength, but Art obtains the prize."—*Pope.*

¶ The average Committee entrusted with the task of choosing the Trophies or Prizes bestowed in summer sporting and athletic contests is composed of men of taste and discrimination, who insist that their choice shall possess not only intrinsic but also a marked artistic value.

¶ Thus, for the reason that art appeals to them and obtains the prize of their elective preference, each succeeding summer season witnesses the offering of an increasing number of Gorham Cups and Vases as prizes in connection with Yachting, Rowing, Golf, Lawn Tennis and Athletic events in general.

¶ The Gorham Company, therefore, take particular pleasure in directing the attention of the Jewelry Trade to their special and other pieces designed with especial reference to the above purpose.

Better Business Conditions.

DISTINCTLY encouraging to business interests are the figures on commercial and banking failures of the United States for the month of May, the reports being the most favorable of any month since July of last year. As pointed out a month ago in these columns, the April figures showed improvement, and now the returns for May show that the tendency toward better conditions has continued.

The May failures of all classes, according to the statistics compiled for *Dun's Review*, were 1,379 in number, with liabilities of $13,643,381. The total liabilities of April, the best preceding month of the present year, amounted to $20,316,468. There is, therefore, a decrease of more than $7,000,000 as compared with the preceding month, and about $13,500,000, or 50 per cent., as compared with either of the two opening months of the year. Speaking of the conditions as disclosed, *Dun's Review* says: "The effects of the panic are wearing off, and the weak spots in the commercial world are so far eliminated that the monthly failure reports are gradually returning to normal."

Comparison with the exceptionally favorable returns in the same month last year shows that there were 345 manufacturing failures for $6,988,988, against 212 failures with liabilities of $4,758,725 in May, 1907.

The total liabilities in May were more than one-third greater than in the same month last year, but it is observed that much of the increase was supplied by a few large failures, and outside of them the average of the liabilities for the month just passed is about the same as it was a year ago. This is true in both the manufacturing and the trading classes.

In the figures as to the dealers in jewelry and clocks the failures in May of this year amounted to 21, and this is a particularly favorable showing for the number, both in May of 1906 and in May of 1907 was 19, while in 1905 it was 16 and in 1904 it was 28. The liabilities in the month just passed were $247,843. This was greater than in May, 1907, when the total was $178,206, but was less than in either of the next preceding years, the total for 1906 being $311,400 and the total for 1905 being $442,621.

One of the bright factors in the general business situation is the large increase shown in the manufacturing activities. The increase in the number of wage-earners means greater buying powers, and as the demand broadens it produces a further decrease in the amount of idle machinery. Careful buying in the last six months has brought stocks to a low point in nearly all lines of trade, from the manufacturer to the consumer.

Gem Importations During May.

THE total valuation of precious stones and pearls imported at the port of New York in the month of May was $463,454, showing a continuation of the gradual but certain upward movement which set in several months ago and to which attention has been called before in these columns. The gains may be noted by a comparison of the figures for several months. In February the total valuation was $200,443; in March the valuation jumped up to $389,514. April was the first month of the year in which the figures passed the $400,000 mark. The May returns show a gain of $60,000. The value of the uncut precious stones imported in May was $176,146, while cut precious stones and pearls amounted to $287,308. The chief gain in the last month has been in the latter classification.

Advertise in THE JEWELERS' CIRCULAR-WEEKLY and responsible jewelers will do business with you.

LETTERS TO THE EDITOR.

The Scientific Sapphire.

NEW YORK, June 4, 1908.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

In your editorial of this week, "Another Reported Process of Making Gems," you make a statement, to which we take exception.

You say: "Various imitations of other stones have been put on the market as reconstructed stones or under similar names and the claims have been disproved."

While the report from Berlin, which has called forth the editorial in question, may be silly enough in its way, the fact that a sapphire is made to-day scientifically cannot be denied. We claim that our scientific sapphire is made absolutely in the same manner as the scientific ruby and is a chemical compound of the same substances which constitute the natural sapphire, namely alumina and chromo. This can easily be proven by a scientific test of the stones, especially of those of recent manufacture, the methods of which have been greatly improved over the first samples imported last Fall.

The question of precious stones scientifically made is not to be dismissed with the remark that "imitations are made so and so." The scientific stone is becoming more and more of a factor in the jewelry business and is creating a place entirely its own.

Many of the brightest minds in France—and the French chemists are known as leaders in this science—are devoting a great deal of attention to this question and their progress is worth while watching.

A. A. HELLER.

Market Price of Silver Bars.

The following are the quotations of silver bars in London and New York, as reported by Zimmermann & Forshay:

		London.	*New York. .999 Basis.*
June	2	24 1-4d.	$.54⅝
"	3	24 5-16d.	.54¾
"	4	24 1-4d.	.54⅝
"	5	24 3-8d.	.54⅞
"	6	24 3-8d.	.54⅞
"	8 (Holiday in London).	.....	.....

The store of W. T. Johns, Hampton, S. C., was entirely destroyed by fire, June 1.

43 Rue de Meslay, PARIS *Telephone, 480 John* *31 Maiden Lane, NEW YORK*

Trade-Mark

OUR guiding principle has always been to incorporate as much artistic skill and good material in the construction of our jewelry as possible. This is contrary to the skimming, economic operations so extensively practiced in the manufacture of inexpensive gold jewelry. In observing this standard we naturally sacrifice the petty profits resulting from the less exacting methods of others; nevertheless our jewelry is consistently low priced and of a quality away beyond the ordinary.

¶ Ask to see it and look for our trade-mark—the imprint of originality and all that's good.

85 Sprague Street
PROVIDENCE, R.I.

H. A. KIRBY

9-11-13 Maiden Lane
NEW YORK CITY

North Attleboro.

Woodbury Melcher is home from the west.

Fred. S. Gilbert was in New York last week on business for his firm.

J. J. Sommer & Co. began Monday to operate on a schedule of 13 hours a day.

Fred. Bishop, of the Bishop Co., will build a residence on Grant St., N. Attleboro.

Christopher Dobra, of B. S. Freeman & Co., has been honored with an appointment as deputy in the Fall River Lodge of Knights of Pythias.

The deal whereby Arthur P. Watson expected to purchase the stock owned by William Read in the W. A. Read Co., Providence, has practically fallen through.

John P. Ballou, who conducts a jewelry and optical store on Washington St., this city, has opened an optical store in Foxboro. W. Clarence Wilkins, a graduate optician, will be the manager of the new store.

A biography of the late Edwin Davis French, noted throughout America and Europe as a famous bookplate engraver, has been presented to the Richards Memorial Library. It is a gift of his widow. Mr. French was a native of this city.

Walter C. Sherman is home from a western trip in the interests of the estate of O. M. Draper. Mr. Sherman, who was a famous ball player while at Brown, has consented to coach the local High School team for its game with Attleboro High.

Appraisers of the estate of Frederick E. Sargeant, late cashier of the Jewelers' National Bank, make the following report to the Bristol County Probate Court at Taunton: Personal estate, including policies of insurance payable to estate and other investments, $29,521.95; real estate in Somerville, Mass., $1,400; total, $30,921.95.

G. Herbert French, treasurer of W. & S. Blackinton Co., has filed with the Commissioner of Corporations the annual statement of W. & S. Blackinton Co., as follows: Machinery, $30,905; cash and debts receivable, $146,038; merchandise, $35,698; total assets, $218,641; capital stock, $150,000; accounts payable, $1,825; surplus, $60,816.

The many friends of Frank Fontneau, of Fontneau & Cook Co., are extending their sympathy to him for the sudden death of his brother, Charles Fontneau, on Tuesday morning of last week. The latter was taken suddenly ill Sunday night by drinking by a mistake a rheumatic liniment, supposing it to be essence of peppermint. He was employed in the factory of the E. I. Franklin Co., North Attleboro.

A three-story addition to the Totten building will be constructed this Fall. It is expected that the addition will be 90 feet long. The growth of the business of the Geo. L. Paine Co. makes it imperative that more room be obtained before the rush which is expected in the jewelry business following the election. J. J. Sommer & Co. are also desirous of obtaining additional floor space. A small wing has recently been added to the building and is used by J. J. Sommer & Co. as a stamping room.

George C. Smith, Watertown, N. Y., has applied for a discharge in bankruptcy.

New York Notes.

F. Alpers is now located in his new store at 3013 Third Ave., near 155th St.

Ernst Gideon Bek and C. E. Binder sailed, Saturday, for Europe on the *Finland*.

Charles Dickens, of Dickens, Cockburn & Co., Toronto, Ont., was here last week.

Benjamin Kent, of B. & H. Kent, Toronto, Ont., called on friends in this city, last week.

Ingomar Goldsmith and H. A. Dillon are spending a 10 days' outing in the Adirondacks.

James V. Lott, cashier of the Liberty National Bank, died, May 28, after a brief illness.

Jacob Engel, of J. Engel & Co., Baltimore, Md., was a visitor in Maiden Lane, last week.

Charles M. Robbins, of C. M. Robbins & Co., Attleboro, Mass., called on friends in New York, last week.

B. Roede, of the Frankel building, John St., sailed Saturday of last week on the *President Lincoln* for Europe.

Frederick Holthausen, 888 Manhattan Ave., Brooklyn, and Mrs. Holthausen have gone to Liberty, N. Y., for a vacation.

A discharge in bankruptcy was granted Monday to A. Fragano, 107 Mulberry St., releasing him from liabilities of $2,399.

Morris Lissauer, with Zach A. Oppenheimer, 68 Nassau St., returned recently from Europe on the *Kronprinzessin Cecilie*.

William Hofmann, of Eichberg & Co., sailed yesterday on the *Kronprinzessin Cecilie* to visit the European diamond markets.

Geo. W. Street, of Geo O. Street & Sons, accompanied by his family, has opened his country home at Great Barrington, Mass., for the Summer.

At a recent meeting of the 32d Ward Taxpayers' Association, Brooklyn, it was decided to present a $250 electric time clock to No. 152 School, recently built.

M. & L. Hess have sold for the Brunswick Realty Co. to William I. Rosenfeld a six-story store and loft building, plot 65.10 by 92 feet, between Sixth and Seventh Aves.

A petition in bankruptcy was filed Friday of last week against Maurice Molineau, an optometrist at 666 E. 164th St. The debts amount to $1,390, with nominal assets of $1,250.

The jewelry business which formerly belonged to O. B. Kartevold, 61 Hamilton Ave., and which recently came into the possession of Theo. Kartevold, was sold, June 3, to Juell Bil.

A. L. Strauss, for several years a diamond salesman with Casperfeld & Cleveland, has opened an office for himself in the Townsend building, 1123 Broadway, under the firm style of A. L. Strauss & Co.

The prizes distributed at the rock-drilling contest held at Madison Square Garden, last week, for the championship of the world were three silver cups made by Tiffany & Co., and donated by W. H. De Lancey, Pittsburg, Pa.

F. Holt, president of F. Holt & Co., Newark, N. J., was present at the mass meeting of Optimists of New Jersey, held in Newark, last week. A committee was appointed to conduct a publicity campaign for the New Jersey brand of optimism.

There is now on exhibition at the Fifth Ave. salesrooms of Tiffany & Co. a large block of amethyst crystals. The exhibit was found in Brazil, South America, in 1900. It was taken from a grotto 33 feet deep and 16 feet wide.

Judge Holt in the United States District Court has confirmed the settlement offered by D. & A. Brinker, 47 Maiden Lane. The settlement was at 30 cents on the dollar in notes at two, four, eight and 12 months. The liabilites were $7,420.

Perley & Bro., New York, were incorporated this week with authority to manufacture watches and jewelry; capital stock, $10,000; incorporators, Henry C. Perley and C. Norwood Perley and George W. Fuller, New Rochelle, N. Y.

The Knickerbocker Clock & Gear Co., New York, is not the Knickerbocker Clock Co., and attention is called to this distinction by the former company, which has been much annoyed by the receipt of mail intended for the latter concern.

The first meeting of creditors of Lindo Bros., 1157 Broadway, against whom a petition in bankruptcy was filed in May, will be held in the office of Referee Wm. Allen, 67 Wall St., June 15, at 11.30 o'clock, for the appointment of the trustee and for the examination of the bankrupt.

Bernard J. Wiener has formed a partnership with Maurice Zilver under the firm style of Wiener & Zilver. Mr. Zilver has been connected with the largest firms of America and Europe, and is a well-known figure in the diamond business. They have opened their factory and office at 45 John St., in the Frankel building, where they cut, repair and polish diamonds.

Judge Mulqueen in the Court of General Sessions, last Wednesday, sentenced Gustaf Ramussen, a chauffeur, to a term of not less than four nor more than five years in prison for the theft of a $1,000 diamond studded ribbon guard. The guard was stolen from Mrs. Barrows, wife of Ira Barrows, of H. F. Barrows & Co., 15 Maiden Lane. Mrs. Barrows lost the guard while out driving. It was found by a driver and given to the convicted man, who pawned it.

One of the largest and most valuable pieces of coral ever broken from a reef for exhibition purposes was brought to this city last week by Capt. Joshua Slocum of the yacht *Spray*, in which he formerly sailed alone around the world. The specimen, which weighs nearly two tons, is the property of the American Museum of Natural History. It was found by Dr. B. E. Dahlgren, who spent several months off the coast of Andros Island exploring reefs, gathering coral and getting photographs for the Museum.

Frank C. Pacific, Paterson, N. J., who was among the callers at the office of THE CIRCULAR-WEEKLY, last week, stated that, a short time ago, in response to a circular letter sent out by the Knickerbocker Clock Co., 901 Lexington Ave., Brooklyn, which advertised a Dutch Mission clock for $7.75 if purchased within 10 days, he forwarded to the concern a check for the required amount and failed to obtain the clock. As reported in last week's issue of THE CIRCULAR-WEEKLY, several similar complaints have been lodged against the concern.

David Drelich, 262 Newark Ave., Jersey City, N. J., told the police, Friday, that he had been chloroformed and robbed as the result of a plot by which he had been lured to a house. A man entered his store Thursday night, introduced himself and said that some boarders in his house wanted to buy watches and jewelry. After he had closed his store for the night Drelich went to 145 9th St., but could find no one of the name that had been given to him. On his way out he says he was grabbed in the hall by two men, one of whom held a cloth saturated with chloroform over his nose. Drelich said that he lost consciousness and when he revived found that he had been robbed of $35 in cash, a check for $22, five watches valued at $50, 14 scarf pins worth $50, seven pairs of earrings worth $25 and four chains worth $12. The police have obtained no clew to the robbers.

The souvenir number of *American Industries* of June 1 contains an excellent report of the 13th annual banquet of the National Association of Manufacturers held recently in the Waldorf-Astoria. Ludwig Nissen, of Ludwig Nissen & Co., who acted as toastmaster, spoke of business conditions, and his remarks are reported in full. Mr. Nissen at the dinner, among other things, said: "It seems fitting and wholesome to call attention to the fact that practically none of you, though you are styled by the newspapers 'Our Captains of Industry,' has gained that title by virtue of being reared in luxury or specially trained for it by our great universities, but that your ability to guide great business enterprises to success has been obtained in the 'school of hard knocks.' There are but few of you whose development into his present proud position has not been accompanied by the shrieks of the whistle, the clang of the hammer, the buzz of the saw and the hum of the wheel in your representative capacities as wage earners. Would that the wage earner of the present day would look in on this picture and be inspired with the determination to work upward to your level instead of imbibing the spirit of anarchy and socialism, which aims downward toward equalization with the lowest. We have lately heard some mutterings of bad times. They will be good again some day and everybody should help to have that day come quickly. This great, rich and resourceful country of ours is just on the threshold of a great prosperity. It cannot be ruined by a few mistakes or misfortunes. Neither capital nor labor can hope for any length of time to get and to hold the upper hand. Its final and ultimate destiny lies in the keeping of the combined energy, integrity and nobility of character of its whole citizenship."

The special committee on the Saint-Gaudens Exhibition, which closed May 31 at the Metropolitan Museum of Art will endeavor to obtain bronze replicas of some of the exhibits for presentation to the Museum. The formation of a fund for this purpose is under way. Among the recent accessions to the Museum are a silver coin, Republic of Strasburg, and a silver medal given to the defenders of the city of Augsburg, Germany, gift of Edward Colonna; bronze commemorative medal of the 50th anniversary of the American Numismatic

(Continued from page 63.)

Society, gift of the society; pair of gold and agate earrings, Italian, 19th century, gift of Mrs. John McKesson; one gilt and pressed book cover of a manuscript, Persian, late 16th century, purchase; metal ewer with inscription, Persian, metal pipe-holder ("hakke"), East Indian, silver plaque, Spanish, all purchased. Among the recent loans are a collection of 195 ancient faience glass-paste objects, representing the main epochs from prehistoric to Roman days, lent by Garrett C. Pier; silver watch, Charles II., by Moilliet, London, early 18th century, lent by Edward Colonna; three watches with painted enamels, Dutch, early 18th century; two gold, one chased metal and one silver watch, English, 18th century; ivory crucifix clock, oval metal striking watch, agate watch and a silver skull watch case, 17th century; one gold repeating watch and one chased gold watch, 18th century; one gold star-shaped watch and one gold-enameled watch, 19th century, French; three watches set in two finger rings and one brooch, two gold watches and one enameled butterfly watch, French or Swiss, 19th century; brass striking watch, 16th century; leather-covered silver repeating traveling watch, one watch with painted enamels, 18th century, German; chased gold gourd-shaped watch and one shell-shaped gold and enameled watch, Swiss, 19th century, lent by Maurice M. Sternberger; silver tea set of four pieces, American, lent by Mrs. DePeyster; three silver and 19th century silver-gilt Buddhist jewels, 19th century, lent by Edward Colonna.

Connecticut.

Gen. George H. Ford, New Haven, was re-elected a trustee of the New Haven Orphan Asylum, June 1.

Alternate Delegate Frank A. Wallace, Wallingford, left for Chicago, Saturday, to attend the Republican Presidential convention.

The prizes given by the Alpha Club for the athletic games recently held at Stamford were supplied by Samuel Phillips, a local jeweler.

R. W. L. Wendt, New Milford, is now located in more commodious quarters in the Andrews block, opposite the Bank building at that place.

Patrick Leary, for some time in the employ of the Waterbury Clock Co., Waterbury, will sail for his home in Ireland about June 14. He will be absent some time, combining business and pleasure.

Dr. F. W. Smith, for many years engaged in diamond mining in South Africa, was stricken suddenly with paralysis at the home of his sister in Niantic last week. Dr. Smith's entire left side is affected.

Burglars gained an entrance to the factory of the Rogers Silver Plate Co.'s plant, Danbury, one evening recently, and attempted to steal a quantity of metal. They were frightened away by a watchman.

Frank Veca, a junk dealer of Bridgeport, was arrested, June 2, charged with stealing a quantity of iron scrap belonging to the Challenge Cutlery Corporation. The scrap was stored back of the Bridgeport box shop.

Edward L. Botsford, well known in the jewelry trade, died at his home on Cedar St., Seymour, June 2, aged 65 years. The deceased had been ill for several months. He was a veteran of the Civil War, having enlisted from Southbury, Aug. 16, 1862.

John M. Harmon, who was succeeded as manager of factory "E," International Silver Co., Meriden, by Henry H. Stockder, is now assistant to S. L. Barber, manager of factories "A" and "N," International Silver Co., and will be located at the latter factory.

An order was granted, June 6, by Judge J. H. Reid, sitting in the Superior Court at New Haven, to the receivers of the Silver City Plate Co., Meriden, authorizing the latter to sell his plant for not less than $3,500. The receivers are Sheldon B. Beach and E. H. Ray.

Miles A. Illingsworth, for many years traveling representative with the American Silver Co., Bristol, and whose territory includes New York and Pennsylvania, has decided to move with his family to Philadelphia, thus overcoming the disadvantage of being out of touch with his territory part of the time.

James Bergen, who was struck, June 1, by an automobile owned by Col. Watson J. Miller, president of the Shelton branch of the International Silver Co., escaped injury. Mr. Bergen was walking across the street, and, in the confusion caused by the large number of vehicles, became bewildered and was knocked down.

Frank Tarchias, who was released after having served three months' sentence in Hartford for the theft of a diamond ring from the jewelry store of Wm. T. Steven, 380 Trumbull St., at that place, was sentenced, last week, to 18 months' imprisonment in Springfield for a similar offense committed last November.

Out of respect to the memory of the late Erwin M. Beebe, who died recently in Meriden, factory "E," International Silver Co., was closed during the afternoon of the funeral, which was attended by about 75 of the office and factory employes. Delegates were present from the Keystone Chapter of the Royal Arch Masons, Central Lodge, F. and A. M., and also members of St. Elmo Commandery, Knights Templar.

Several men were recently taken into custody in New Britain, accused of stealing stock from the factory of the Landers, Frary & Clark Co., at that place, for some time past. The men, when surprised at their homes by the police, gave their names as P. Dulhart, J. Runsie, Joseph and Paul Sorbo and E. Dyson, all Italians. Dyson claims that a dozen knives and forks which were found in his home were given to him as a wedding gift.

The police recently took into custody Herbert Reininger, who was said to have assaulted his brother, Joseph Reininger, in the latter's jewelry store at 166 Northampton St., Easton, Pa. While the brothers were struggling, it is said, some of the clocks and glassware was knocked from the shelves and was broken. Herbert Reininger has been manager of a branch store for his brother at Alpha, N. J.

Chas. W. Ruehle has begun business at 139 Columbia St., Detroit, Mich., as a watchmaker.

J. I. Hollingshead, watchmaker and optician, has opened a store at 999 Grand River Ave., Detroit, Mich.

Frank Wolfburg has leased quarters at 69 E. 2d St., Oswego, N. Y., where he will open a retail jewelry store.

P. G. Allert, until recently of New York, has opened a jewelry and watch repairing shop at 261 Main St., Danbury, Conn.

D. Mendelsohn, formerly with Mendelsohn Bros., has started in business on his own account, with quarters in room 910, Jewelers' building, Boston, Mass.

The Tiffany Jewelry Co., Paterson, N. J., was incorporated Monday with a capital stock of $50,000 by Raymond Tiffany, Arthur C. Clement and Frederic Beggs.

The Blackmer Cut Glass Co. was recently incorporated in New Bedford, Mass. The incorporators are: Arthur C. Blakmer, David L. Parker, William H. Bigelow, John H. Laurence and Rufus A. Soule.

The Flitchcraft Savings Bank Clock Co. was recently incorporated in Chicago with a capital of $25,000 to manufacture and deal in clocks. The incorporators are: Roland B. Flitchcraft, George W. Wadsworth and Frank Donahue.

The John D. Allen Co., Muncie, Ind., was organized a few days ago and will conduct a retail jewelry store in that city. The members of the company, which has a $1,000 capital, are: John D. and Jeannette W. Allen, of Muncie, and Margaret D. Fender, Chicago, Ill.

ENTERPRISING and successful jewelers everywhere are pushing the sale of some individual line of watches which they believe to be superior to all others, and upon which they can also make a satisfactory and justifiable profit.

This explains the growing demand for ILLINOIS WATCHES, in 0, 12, 16 and 18 sizes, by increasing numbers of leading jewelers throughout the United States.

If you are not familiar with the superior quality of — and advantages gained by handling—Illinois Watches, it will mean reputation and dollars for you to investigate.

Every one fully guaranteed.

Vol. LVI. CHICAGO, WEDNESDAY, JUNE 10, 1908. No. 19.

Chicago Notes.

H. E. Glendore, jewelry auctioneer, is making a sale at Terre Haute, Ind.

H. G. Schramm, traveler for Stein & Elbogen Co., has returned from his coast trip.

F. W. H. Schmidt was confined to his home last week suffering from sore throat.

W. S. Sparrow, of the Chicago office of Stern Bros. & Co., is now on a trip to the coast.

J. J. Bleich, Paducah, Ky., with his wife and daughter, was a recent visitor at Chicago.

I. L. Gross, traveler for the Knickerbocker Silver Co., is making a trip east as far as Cleveland.

G. S. Titus, local representative of the Middletown Silver Co., has returned from a month's trip.

Louis E. Fay, representing the R. F. Simmons Co., left, last week, for a month's trip on the coast.

A first dividend of 25 per cent. will be paid the creditors of the Shourds, Adcock, Teufel Co., June 15.

Geo. W. Cureton, representative of H. G. Lefort, left, last week, for a trip west as far as Denver, Colo.

R. T. Kleckner, of the Chicago office of Theo. W. Foster & Co., left, last week, for a month's trip on the coast.

R. J. Wilson, representing the Geo. E. Hancock Co., has moved from room 501, Heyworth building, to room 903.

M. H. Cowen is covering territory including St. Paul and Minneapolis for Mr. Madsen, of Rettig, Hess & Madsen.

L. M. Levy, secretary and general agent of the Philadelphia Watch Case Co., Riverside, N. J., spent last week at the Chicago offices.

Anthony Serewicz, Chicago representative of the Dueber-Hampden Co., returned, last week, after a three months' successful trip to Europe.

Geo. C. Gubbins, with the Illinois Watch Case Co., has returned from a trip to Kansas City and Cleveland, and will be in the office for some time.

The affairs of Max Marcus & Co. were settled, May 29, by a compromise, 25 cents on the dollar being paid. The company has now resumed business.

Harry E. Farquharson, representing E. D. Gilmore & Co. and E. A. Potter & Co., left last week for a month's trip to San Francisco and coast points.

Fred C. Emerson, salesman with Rettig, Hess & Madsen, was married, May 30, to Miss Dottell Van Liew, daughter of Mrs. A. O. Van Liew, South Bend, Ind.

W. D. Dreyer, formerly of Jones & Dreyer, has started in business at 607 American Trust & Savings Bank building, under the firm name of W. D. Dreyer Co.

B. R. Fischer took his 11-year-old daughter to New York Saturday. She will accompany Mr. Fischer's brother, Richard Fischer, on a trip to Germany, to be gone for the Summer.

H. O. Deuss has recently applied for a patent on a mechanical device for displaying diamonds, precious stones, etc., in show windows. A vibrating motion is caused by a spring movement.

Robert L. Clark, formerly with the Towle Mfg. Co., has taken the sales agency for Kansas and part of Missouri for the Angldile Computing Scale Co., Elkhart, Ind., and now resides in Kansas City, Mo.

Charles E. Sutton, Providence, R. I., formerly with Morden & Kettlety, has succeeded B. S. Sandfelder as Chicago representative here of McRae & Keeler. Mr. Sandfelder now represents M. W. Carr & Co.

P. B. Noyes, general manager of the Oneida Community, Ltd., Oneida, N. Y., and G. W. Allen, of the factory at Niagara Falls, were recent visitors at the Chicago office. L. A. MacKown, local manager, left, last week, for New York.

L. Sachs, for the past seven years in the retail jewelry business at 418 National Ave., Milwaukee, Wis., has secured an interest in C. G. Breitenbach & Co., and is now secretary and treasurer of that company. He will dispose of his retail business.

An agreement has been reached in the matter of Joseph Brown & Co. Twenty-five per cent. is to be paid—12½ per cent. in cash and 12½ per cent. in notes. The compromise was confirmed May 29 and the first payment will be made this week.

Among the out-of-town buyers here last week were: F. A. Copeland, Elgin; A. F. Pierce, Milford; D. J. Conway, Wilmington; Mrs. G. S. Bauder, Milford; H. E. Volkmann, Kankakee; Mr. Emerick, of Emerick, Barrett & Co., Freeport; H. Bolender, Rockford; Edw. S. Jacobs, of Vahlman & Jacobs, East St. Louis; C. H. Coles, Sandwich; Thomas Brown, Quincy; Fred Hegner, Blue Island, Ill.; C. M. Hunnicutt, Rockville; F. L. Baldwin, Gary, Ind.; W. E. Zilmer, Monroe; Adam Imig and wife, Sheboygan, Wis.

Kansas City

Nevin Bros. spent several days recently at McAllister Springs, near Sedalia, Mo.

Mr. Player has removed his store from 31st and Main Sts. to 47th St. and First Ave.

John Wenger, Dresden, Kans., has been enrolled as a student at the Kansas City Polytechnic Institute.

G. J. Harris, Chickasha, Okla., and G. Rochfelder, Axtell, Kans., have been enrolled as students at the Kansas City Horological and Optical School.

Otto Knaull, traveling representative for the Woodstock & Hoefer Watch & Jewelry Co., after a week in the house replenishing his trunks, is again on the road.

John Mulhaupt, with the Woodstock-Hoefer Watch & Jewelry Co., is away on a two weeks' vacation. G. F. Taylor, with the same company, is spending his vacation in Colorado.

C. E. Vandel, credit man for the Edwards & Sloane Jewelry Co., was recently operated on for appendicitis at the Wesley Hospital, in this city. Lewis Jaskow, of Bodenheimer & Jaskow, New York, is also a patient in the same institution. He was operated on nearly a year ago for the same disease, but found further treatment necessary. Both patients are progressing favorably.

The following jewelers called on the trade here during the week: George Gardner, Pawhuska, Okla.; L. J. Harris, Corder, Mo.; G. W. Lewis, Herrington, Kans.; A. Y. Boswell, Tulsa, Okla.; W. R. Pearce, Gardner, Kans.; W. W. Whiteside, Liberty, Mo.; Morrison Bros., Olathe, Kans.; Chas. Jahn, Enid, Okla.; A. Rosenfield, Leavenworth, Kans.; B. G. Gustafson, Lawrence, Kans.; L. J. Davis, Atchison, Kans.

C. P. Kionka, of Kionka & Kionka, is back from his eastern trip, and is looking after the business of the firm during the absence of his brother, E. Kionka, in Texas, where he is looking after some coal lands in which the brothers are interested. The lands are situated at Ciseo and promise to prove valuable. A letter from Mr. Kionka brings the information that a five-foot vein of coal was struck at a depth of 115 feet.

The Board of Public Safety at New Philadelphia, O., is considering the advisability of installing clocks in different parts of the city so that the police patrolmen may register as they pass along on their beats.

STORE OF E. F. JAKEMAN, NORFOLK, VA.

NORFOLK, Va., Jan. 22, 1908.

The Arnstine Bros. Company,
Cleveland, Ohio.

Gentlemen:—Replying to your favor of the 4th inst., relative to the results obtained from the Catalogs, beg to say that the results, considering the times, and it being my first year, were very satisfactory. I think, of course, after establishing the Catalogs for several years, that it will result in doing a much larger business.

My customers and friends complimented me very much upon the appearance of the Catalogs and the class of goods illustrated, and it is my intention to follow next season with another Catalog, even larger and better. Yours truly,

E. F. JAKEMAN.

This concern used The Arnstine Bros. Company's Catalogs in 1905, 1906, 1907, and again placed order for 1908.

Gentlemen:—Answering your favor of recent date, regarding your methods, treatment and results, I can only repeat that there can be no doubt about the trade bringing powers of the Catalog and other advertising matter, and since becoming a customer of your house I have found your methods and treatment courteous, fair and helpful. Respectfully, E. H. SOUDER.

We are represented in nearly every State in the Union. If you are interested, and will notify us, our representative will take pleasure in calling on you and explaining our method

THE ARNSTINE BROS. COMPANY

Originators of Our Exclusive Catalog Method for the Retail Jeweler

CLEVELAND, OHIO

Indianapolis.

Charles Peek, who has been ill for some time, is reported much improved.

Asher W. Gray, of Gray, Gribben & Gray, is spending a few days in Logansport, where he is visiting relatives and friends. He will return this week.

John P. Mullally, president of the Indianapolis Retail Jewelers' Association, was called to Greenfield last week as a witness in the trial of an important damage suit.

Quite a number of local jewelers are planning to attend the convention of the National Retail Jewelers' Association, which will be held in Cincinnati, O., in August.

James Gribben, the 19-year-old son of David S. Gribben, of Gray, Gribben & Gray, has taken a position with his father's company. He has been attending Shortridge High School.

In the Federal Court, last week, George A. Fogas, of the Fogas Jewelry Co., filed his answer to the proceedings to have him declared a bankrupt, recently filed by the Clemens, Oskamp Co. He entered a general denial of the charge.

The Marion County Board of Review is in session in this city, fixing the valuations of corporations for tax assessments. The Baldwin-Miller Co. has been listed at $28,300 as compared with $26,000 last year, while the recently incorporated company of Chris. F. Bernloehr & Bros. has been listed at $3,000.

Charles B. Dyer will leave, June 20, for a 70 days' tour of Europe, personally conducting a party of 15 persons. The route includes a visit to London during the London Art Congress, Aug. 6-10. During Mr. Dyer's absence his store and arts and crafts school will be in the charge of his father, George G. Dyer.

At the instigation of the Indianapolis Retail Jewelers' Association a representative of one of the large watch manufacturers has been working in the city in an effort to get jewelers to maintain uniform prices on watches. He has been successful in a number of instances, a number of jewelers having withdrawn their former low prices.

J. A. Oswald, Crawfordsville, secretary of the Indiana Retail Jewelers' Association, was chairman of the committee arranging a big automobile demonstration in that city, June 4. Several hundred automobile enthusiasts from all parts of the State participated in the events, which were conducted under the auspices of the Crawfordsville Commercial Club.

A number of jewelers were in this city last week, attending the annual convention and State reunion of the Benevolent Protective Order of Elks. Among the number was George H. Morgle, Brazil, who came with the Brazil Band, of which he is a member. Others were: H. B. Lodde and L. O. Mertz, Lafayette; Clyde Porter, Tipton, and J. F. Kiser, Muncie.

The Federal Court here has restrained the Indiana Railroad Commission from enforcing the commission's recent order requiring a reduction of from 10 to 12 per cent. on express rates within the State. There is now a case in the courts to test the legality of the commission's action, and the restraining order is to remain in effect until the first case has been decided.

St. Louis.

Samuel Kober, of the E. Maritz Jewelry Mfg. Co., has been in Illinois during the past week.

Walter W. Conaway, of the Eisenstadt Mfg. Co., has just returned from a two weeks' vacation spent in the south.

D. A. Curtis & Son, Greeley, Colo., have been in this city the past week, selecting stock for the opening of their store.

Announcement has been made of the marriage of Miss Florence Kite, of the Eisenstadt Mfg. Co.'s office force, to Meryl V. Nicholtz. The ceremony will be performed to-day.

Leo Bauman, junior member of the firm of the Bauman-Massa Jewelry Co., and his bride, who was Miss Aurelia Scharff, have left on their wedding tour. They were married at the Columbian Club, June 3.

Joseph Niedhart, who threw a huge stone through the display window in the Mermod, Jaccard & King Jewelry Co.'s store several months ago, was sentenced, Thursday, by Judge Fischer to two years in the penitentiary.

Out-of-town jewelers in St. Louis last week were: D. H. Keene, Fort Worth, Tex.; I. Jacobs, Joplin, Mo.; P. Siegel, Nashville, Ill.; F. Simon, Collinsville, Ill.; August Winkler, Poplar Bluff, Mo.; C. Burckhardt, Red Bud, Ill.

The executive committee of the Missouri Society of Retail Jewelers met Thursday in the Hotel Jefferson and made tentative plans for the trip to Kansas City this week for the State convention of the organization. The delegates to the convention will not be chosen until the eve of departure. Many others of the retail trade in the city will make the journey, however.

Minneapolis and St. Paul.

F. L. Bosworth, of the F. L. Bosworth Co., Minneapolis, is now in the east, on a business trip.

Alfred Anderson, Minneapolis, has returned from Spokane, Wash., at which point he makes headquarters for trips among the western logging camps.

Max B. Witebsky, Minneapolis, who recently went through bankruptcy, has resumed business at 105 Washington Ave., N. His stock and fixtures were sold at referee's sale last week, bringing $125.

W. R. Cooper, of S. H. Clausin & Co., Minneapolis, left, June 3, for Chicago for a few days, and will proceed from there to French Lick, Ind., thence to the east, on a vacation and business trip combined.

S. Swanson, Minneapolis, had a supposed customer who wanted to invest $100 and no more in a watch and chain, and wanted the watch engraved as a present. He offered a check for $100 and did not seek to get the watch, saying that he would come in later for it. Mr. Swanson investigated and found the check was worthless, there being no funds. The young man never returned. It is probable that he intended to get the check and apologize for the failure to meet the amount, and then get it cashed on Swanson's indorsement, but in some way was apprised of the fact that he was suspected and concluded not to return.

Los Angeles.

H. J. Kuechler, Stockton, Cal., was here on a pleasure trip, recently.

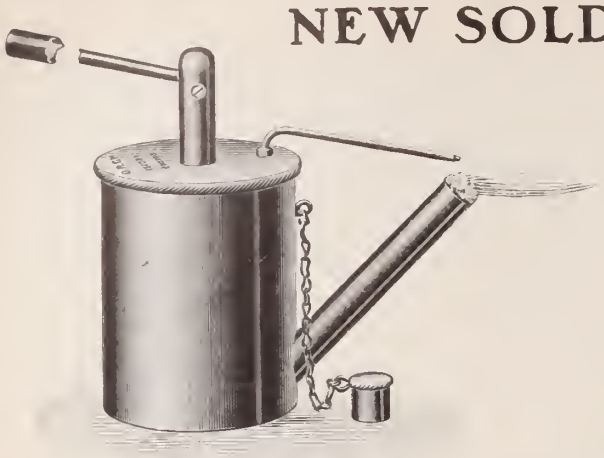
George V. Lippold has moved his business from 717 S. Broadway to 410 W. 7th St.

The H. J. Whitley Co. has just installed in its factory a new 100-pound drop hammer and a foot press with patent lifter.

J. W. Reed, formerly with E. W. Reynolds Co., is now traveling for Henry M. Abrams, San Francisco, selling Illinois watches through southern California.

Drs. Logan and Davis, eye specialists at 415 S. Spring St., in the store with the Crown Jewelry Co., have dissolved partnership. Dr. Logan will continue business at the same location, while Dr. Davis will have his office at 205 S. Spring St., with the Simon Conradi Co.

S. Simmons, 315 S. Spring St., has just returned from a visit to his Moqui-Aztec turquoise mine in Esmeralda County, Nev. He brought with him about 400 pounds of fine turquoises, including one pure turquoise nugget, which he values at $5,000. It is sky-blue in color and perfect, its weight being over 3,300 carats.



Mrs. Ada Showalter-Taylor, wife of E. A. Taylor, of Taylor Bros., 217 W. 5th St., who had been mysteriously missing for 10 days, was found lying asleep in a clump of bushes near Glendora, a little town 25 miles from Los Angeles. Mrs. Taylor, who was a well known musician of this city, was married to Mr. Taylor about three months ago. She had no domestic or other trouble so far as known. She appeared entirely rational after she was awakened. She expressed herself as being glad to return to her home again.

The Pacific Gem Co. has rented a room 60x160 feet on the third floor of the Victor Dahl building, 622 S. Broadway. This will be occupied by the company as a factory and headquarters for wholesale business. Its retail business at 335 S. Spring St. will be discontinued and the entire attention of the concern will be devoted to the wholesale business, after July 1. The company has occupied its present location at 335 S. Spring St. for nine years. It is the purpose of the manager, Mr. Marcher, to establish branches in Denver, Chicago and New York and carry a stock of gems at each of these places.

The Lapis Lazuli Mining Co., composed of residents of Los Angeles and Pasadena, has just been organized under the laws of Arizona, with a capital stock of $500,000, and with the following officers: President, J. E. Tressler; vice-president, Margaret Robertson; secretary, Juliet Murat; directors, J. C. Barr and P. Stansfield. Mr. Stansfield, who has been an active factor in organizing the company, is manager of the Western Gem Co. of this city. The new company will have offices in the San Fernando building. It is the purpose of the company to develop a new mine of lapis lazuli recently discovered in San Bernardino County. Men are now on the ground doing development work.

The South Bend Watch Co., South Bend, Ind., is operating its factory full time with the full working force.

NEW SOLDERING LAMP and BLOWPIPE COMBINED

"An Apparatus of Merit"

The blowpipe is attached to the cover and can be turned in any direction. The cover consists of an air chamber which is filled one-third with benzine. The lower chamber is used for the alcohol, filling it one-half and is connected with the spout and wick. The wick can be regulated to give a large or small flame. When blowing into the air chamber through the blowpipe the air will mix with benzine vapor, which is let out of the chamber through the small tube on top, and passes the flame, making a sharp and intense flame.

No. E 223—Made entirely of brass, Each, $2.00

If you have not a copy of our double-sized 440-page Catalogue, write at once. Sent gratis upon application.

The Largest Exclusive Jewelers' Supply House in the World.

SWARTCHILD & COMPANY

WM. C. PENFOLD CO.

No. 35 MAIDEN LANE, NEW YORK

LARGEST EXCLUSIVE WATCH JOBBERS IN NEW YORK OF

Dueber-Hampden Watches
Dueber Cases — Hampden Movements

A Complete Line Always on Hand. Mail Us Your Orders

AN EXAMPLE OF A GREAT ACHIEVEMENT IN THE MANUFACTURE OF IMPORTED WATCHES IS EVIDENCED IN

"Tavannes" Movements and "Cyma" Watches

WHY?

Because all features heretofore existing that have been an obstacle to the modern watchmaker have been eliminated — being brought about by the introduction of automatic machinery in the manufacture of these goods, and the concentration of our mammoth factory on a modern scale, enabling us to furnish "FINISHED MATERIAL" ready to use.

"TAVANNES" movements and "CYMA" watches give most satisfactory results when exposed to the extreme influence of TEMPERATURE, ELECTRICITY or MAGNETISM.

TAVANNES WATCH COMPANY

131 Wabash Avenue

Cleveland.

Sidney Y. Ball has just returned home after an absence of several weeks.

C. M. Fogg, secretary and treasurer of the Keystone Watch Case Co., was in Cleveland, recently.

Chas. D. Rood, president of the Hamilton Watch Co., spent Friday in Cleveland, on his way home after a western trip.

The Wingate Nusbaum Co. is conducting a closing out sale. The business will be discontinued as soon as the stock and fixtures are disposed of.

The Ball system of railway time service is being installed on the Chicago, Peoria & St. Louis Railway by Harry Mowatt, assistant general time inspector.

W. B. Wingate, formerly of the Wingate Nusbaum Co., announces that he has formed a connection with the retail department of the Sigler Bros. Co. and will be glad to meet his old friends there.

A number of Cleveland wholesalers have announced their intention of participating in the meeting to be held at Detroit to form a national association of wholesale jewelers and the plan seems to be well thought of here.

An interesting feature of the excursion which brought the delegates and visitors of the Locomotive Engineers' Convention from Columbus to this city, was the presentation of "Ball" watches to each engineer and fireman of the two special trains.

Mrs. Carrie P. S. Hook, wife of George W. Hook, of the Webb C. Ball Watch Co., died last Friday morning after a lingering illness. Funeral services were held here, Saturday afternoon. Interment was at the old home of the deceased, in Rochester, N. Y.

The following jewelers were here during the past week: W. J. Higgins, Shelby, O.; F. N. Prevey, Akron, O.; J. W. Helfrich, Carrollton, O.; G. F. Elgin, Kent, O.; Albert Zang, Alliance, O.; E. D. Davis, Kent, O.; A. P. Humphreys, Bellefontaine, O.; E. D. Kindig, Elyria, O.; H. S. Summer, Akron, O.; A. J. Miller, Massillon, O.; Ed. Critz, Elyria, O.; A. E. Kintner, Painesville, O.

Pittsburg.

TRADE CONDITIONS.

Traveling representatives for local concerns, who have been through West Virginia, eastern Ohio and western Pennsylvania, report that jewelers' stocks are pretty low and that when buying starts in after the Presidential nominations a brisk business in this city may be anticipated.

E. A. Bloser, New Kensington, and Frank Murdock, Ligonier, were among the out-of-town merchants in Pittsburg, last week, on business.

Sam F. Sipe last week mailed his men customers a rubber dating stamp and sent the women patrons of the house a chamois jewelry bag.

A number of retail establishments last week began closing at 5 P. M., but there are quite a number of prominent houses who are remaining open until 5.30 and 6 P. M.

Henry A. Barrett, of the Geo. B. Barrett Co., who has been ill for several years, occasionally feels strong enough to take an automobile ride, which he very much enjoys.

John W. Kimpel has moved from his former location in Butler St. to 4117 Butler St.. He has much larger quarters at the new store and has made them very attractive.

T. S. Hoffman, Derry, Pa., contemplates selling his store at that place preparatory to retiring from business. He has been identified with the jewelry trade for the last 64 years.

The receiver of the Farmers & Drovers' National Bank, Waynesburg, last week paid another 15 per cent. dividend, making a total of 40 per cent. paid during the last year, the bank having closed its doors nearly two years ago.

The Jewelers' Duckpin League gave a banquet Monday night in the Hotel Henry, about 25 or 30 persons being present. J. M. Wightman, of James R. Reed & Co., officiated as toastmaster, and addresses were made by a number of persons. The league will be reorganized and several other teams will be admitted.

Elmer Vey, a son of Benjamin Vey, of 840 E. Ohio St., North Side, is lying at the point of death at the Allegheny General Hospital. He was accidentally knocked from a Butler St. car a week ago, last Friday night, while the car was rounding the curve at Wildwood and was picked up unconscious and brought to this city. Mr. Vey is suffering from concussion of the brain. Mr. Vey was employed by his father, is 25 years old and is married.

The executive committee of the Pennsylvania Retail Jewelers' Association held a meeting last Thursday. The work of Secretary C. S. Wiley and Vice-President J. P. Archibald in securing new members and arranging for the convention, which will be held in Philadelphia, Aug. 12 and 13, was approved. President A. C. Graul was unable to attend the meeting on account of illness in his family. Another meeting of the committee will be held June 18 to make further arrangements for the convention.

Milwaukee.

E. J. Born & Co., Ashland, Wis., have moved from the Bristol building to the Braun block.

Mrs. I. F. Larson, wife of the well-known Beloit, Wis., jeweler, P. S. Larson, three weeks ago left $500 worth of diamond rings on a wash stand in a railway station at Janesville. They have just been returned by a woman who found them.

W. & E. Schmidt, Third St., may be obliged to sue the city of Milwaukee to recover damages to their street clock in the Becker night raid. The City Comptroller has refused to sign the resolution of the Council, giving the company $250, as he holds that the city is not legally liable.

The A. Bringe estate has asked for a temporary permit from the mayor to replace its clock, torn down in the recent raids by city employes. Permission was granted, subject to the provision that the clock must be taken down at once, should the Council so order. Similar permits will be granted to other jewelers who wish to take the chances.

W. H. Replogle, Shenandoah, Ia., has engaged the services of W. C. Zuhlke as watchmaker.

Lancaster, Pa.

Roy Cornetius, with John Reisling, Memphis, is visiting in Lancaster.

Joseph Ziegler, Morgantown, Pa., is visiting his old home, Shoek's Mills.

Jay N. Waters, Wilmington, Del., is visiting his brother at Columbia.

Victor Bowers, who was on the sick list for over a month, is convaleseing.

John J. Bowman, of Ezra F. Bowman's Sons, visited Harrisburg last week.

Monroe Hoeh, Baltimore, formerly a Lancaster watchmaker, is visiting here.

Percy C. Benson has taken a position as salesman for a Pittsburg jewelry firm.

Jacob B. Wolf, Des Moines, Ia., passed last week in Lancaster. This was his first visit in 15 years.

Mareus Hughes, a former Lancaster County jeweler, later of Altoona, and now in business in Detroit, passed last week in Lancaster.

Parke Bowman and Jacob Shire made a trip through southern Lancaster County last week, enjoying themselves afoot for three days.

Archie J. Brown will join a party of friends from Pittsburg, his old home, on a trip to Europe, leaving in the last week in June. He will be absent nearly two months.

Cohen Bros., jewelers and opticians at Reading, Pa., and Trenton, N. J., recently opened an optical establishment in Lancaster, on the second floor of the building at 6-8 N. Queen St.

The newly organized board of directors of the Non-Retailing Co. organized last Wednesday by electing A. F. Hostetter, Esq., president; John W. Eshleman, vice-president; Milo B. Herr, secretary.

The officers and representatives of the Grand Lodge of Pennsylvania, United Commercial Travelers of America, which met here last week in annual session, visited the Hamilton Watch Factory in a body Friday.

At the recent sale of the household effects of the late Patriek Murray, near Mt. Joy, a grandfather's clock sold for $170 and a pair of beautiful old brass eandlestieks for $20. Several silver spoons of the Colonial period brought $15.

John B. Roth, Jr., manufacturing jeweler, made the pins for the Lancaster General Hospital Nurse's School graduates, who held finishing exercises June 5. He has also finished pins for the Athletic Association of Yeates School, Lancaster.

Jewelers visiting Lancaster in the last week included Archie May, York; David B. Frymyer, Strasburg; George Goeke, Baltimore; Godfried Sing, Newark; S. H. Miller, Mt. Joy, Pa.; Mrs. Phoebe Barnes, Scranton; James Dolliver, Columbus, O.

A. L. Werner finished his course as watchmaker in the Bowman Technical School last Friday and went to Washington, D. C., with his wife, before returning to their home in Fort Wayne, Ind. George Falkemer, Shrewsbury, Pa., who was a student in watchmaking and engraving at the school, has gone to Weston, W. Va., to take a position with G. C. Burrell.

Edmund Albertson, Mechanicsville, N. Y., has not been seen for three weeks by his friends, who have been making inquiries about him.

Pacific Northwest.

Fred Van Norden, Bandon, Ore., has moved his stock of jewelry into the building recently vacated by A. Rice, the jeweler.

C. C. Payne, Ontario, Ore., is holding a sale of his stock preparatory to moving into the quarters now occupied by the First National Bank.

The Harrington Drug Co., Harrington, Wash., has put in a small but select line of jewelry and has secured C. B. Curtis as watchmaker to attend to its repairing and engraving work.

A burglar recently broke the show window in the Oriental Optical Co.'s store, Seattle, Wash., and secured four gold filled watches and chains and two gold watch fobs. There is no clue.

C. T. Gifford, Tacoma, Wash., has moved his stock of jewelry into more commodious quarters at 1140 C St., in that city. Mr. Gifford has been connected with the jewelry business for more than 50 years.

Pacific Coast Notes.

H. E. Denton, Lompoc, Cal., has adopted the plan of making monthly selling trips to Guadaloupe, Cal.

B. N. Porter, of the Swastika Gem Co., Venice, Cal., recently made a trip to San Diego and obtained some specimens of southern California gems.

C. I. Slick, recently with C. D. Peacock, Chicago, is now with E. E. Wood, Modesto, Cal. W. S. Shoemake has recently accepted a position in the clock department of E. E. Wood.

C. A. Cline has purchased the store of the Hanson-Pearce Jewelry Co., Telegraph Ave. and Bancroft Way, Berkeley, Cal., and intends to enlarge the stock. Mr. Cline also has a store at Bellingham, Wash.

Señor Antonio Puro, banker and broker, was arrested, June 1, on the charge of stealing a gold watch in a jewelry store at San Jose, Cal. In his room was found a satchel containing watches, jewelry and unset gems to the value of $20,000 or more, it is said. Descriptions of the articles found are being sent to all parts of the country.

Columbus, O.

John Dunbar, who was recently taken into custody, accused of stealing 32 gold watches from a jeweler in Xenia, has been sentenced to 18 months' imprisonment in the penitentiary.

C. E. Radebaugh, jeweler and optician, 579 N. High St., who has been confined to his bed with a severe attack of typhoid fever since May 7, is now improving very slowly. Physicians say, however, it will be some time before he can attend to his business duties again.

Thieves recently made an unsuccessful attempt to break into the jewelry store of Schneider & Michael, 224 N. Main St., Lima, O. The show window had been cut and a piece of flannel rag was found close by. It is believed that it was the intention of the thieves to press the flannel against the cut glass and then adopt the usual means of abstracting the stock from the window.

Philadelphia

William Boreher, lapidary at 7th and Sansom Sts., was bereaved last week by the death of his wife.

C. Jules Graeff, who had been watchmaker with B. F. Williams Co., began, last week, to work for the trade at 726 Chestnut St.

R. T. Chapman, Atlantic City, has gone to the Adirondacks to seek rest and relaxation before the busy seashore trade is fully under way.

E. J. Schmauck, an old-time retail jeweler of Kittanning, Pa., but now retired and living in New York, visited his son in this city, last week.

H. McLain, 1627 Atlantic Ave., Atlantic City, N. J., has been extended the sympathy of friends in the trade because of the recent death of his mother.

The Bailey, Banks & Biddle Co. and J. E. Caldwell & Co. displayed, last week, the trophies to be awarded at the Wissahickon Heights Kennel Club Dog Show.

James McMillan, of the material department of M. Sickles & Sons, who has been critically and painfully ill for six weeks, was able to resume his old duties last week.

Charles W. Smith, lapidary, 719 Sansom St., has closed out his business and retired to a farm at Pitman, N. J. Mr. Smith is a brother of Harry Smith, a lapidary on Sansom St., near 8th St.

Seigmund Lubin, manufacturing optician, 8th St., near Chestnut St., announced last week the approaching marriage of his daughter, Miss Emily Dixie Lubin to Ira Morrell Lowry in the Chelsea Hotel, Atlantic City.

A. Tuebner, who about two years ago embarked in the retail jewelry business at 902 Filbert St., has given up his store there and has moved back to 726 Arch St., where he had previously carried on the engraving business exclusively.

Col. J. Warner Hutchins, president of the Jewelers' Club, officiated last week as grand marshal at the Masonic ceremonies marking the laying of the corner stone of the Nurses' Home and Surgical Ward building on the grounds of the Jewish Hospital at Tabor.

Ellis Abbott, an outside salesman for Goldstein, Crossman & Herbach, jewelers and opticians, combining a regular retail trade with an instalment business at 720 Girard Ave., shot and killed his wife, Mrs. Emma B. Abbott, at a hoarding house, 1727 Fairmount Ave., last night. The two had been separated some months. After the crime, which was witnessed by the couple's four-year-old son, Abbott effected his escape and has not yet been caught. Abbott is 34 years old.

Ed. and Lou Sickles, of M. Sickles & Sons, are making a business trip this week to the eastern manufacturing centers. Jesse L. Brown, of the traveling staff, has departed on a vacation trip, part of which will be spent at his old home in Richmond, Va., and in nearby Virginian resorts. Max Polak, also of the traveling force, contemplates a pleasure trip to the middle west.

Visitors to this city's trade, during the week, included: Karl Weidel, Trenton, N. J.; L. L. Bickings and Charles Kohler, Norristown, Pa.; J. H. Merz, Hopewell, N. J.; C. F. Rudolph, Wilmington, Del.; H. Fritzsimmons, West Chester, Pa.; D. H. Krause, North Wales; H. MacFarland, Downingtown; H. Kratz, Souderton, Pa.; F. Klein, Mahoney City, Pa.; E. K. Bean, Lansdale; Mr. Fort, of Fort & Goddwin, Trenton, N. J.; E. L. Ostrander, Pitman, N. J.

Tuesday afternoon, June 23, has been fixed as the date for the annual baseball games between nines representing the New York and local members of the Philadelphia Jewelers' Club. The game will be played as in other years on the grounds of the Philadelphia National League Club, Broad and Huntingdon Sts. The wives and other friends are invited as spectators. A stag entertainment will be given at the National Sporting Club, 11th St. and Washington Ave., at 9 o'clock in the evening. The application of any local or visiting jeweler for admission cards will be honored at the Jewelers' Club, 1228 Chestnut St.

Canada Notes.

J. W. Fraser, Russell, Man., has been burned out.

The firm of L. N. Parè & Cie, Montreal, is dissolved.

E. G. Amy, Dryden, Ont., has sold out his business to A. G. Ripley.

The death of George Williams, watch dealer of St. Peters, N. S., is announced.

Duncan A. Kennedy, Cornwall, Ont., has assigned to Geo. A. Stiles. A meeting of creditors was held June 4.

The jewelers of Hamilton, Ont., have decided to close their places of business every Wednesday at 12.30 P. M. during the Summer months.

Out-of-town buyers calling on the Toronto trade last week included: Wm. A. Fenwick, Shelburne; T. C. W. Watson, Newmarket, and E. Smith, Oakville, all Ontario.

A. C. Babcock, alias Portsmore, who was brought back from Chicago and placed on trial Tuesday of last week before the Police Magistrate of Toronto, on the charge of obtaining about $700 worth of jewelry from Ryrie Bros., Ltd., and paying in bogus checks, pleaded guilty and was sentenced to one year's imprisonment.

Max Barnard was tried before the Police Magistrate at Toronto, Monday, of last week, for stealing a diamond ring from the store of Galster Bros., 170 Queen St., W., Toronto, by substituting a paste diamond while examining goods. He was identified by other jewelers as a man who had inspected rings in their stores, and it was proved that he sold the stolen ring. Barnard was sent to jail for 90 days.

Francis Gambino and Salvatore Margolese were recently charged with the theft of jewelry from the store of Theo. A. Grothe, Montreal. The jewelry was stolen April 23 and the men were taken into custody May 4. The Italians, when they were put on trial, last week, claimed that they had bought the jewelry from a stranger, but they were found guilty. Gambino was sentenced to 18 months' imprisonment and Margolese to six months. They are to be deported after their sentence expires.

San Francisco.

Gus Regan, with the Alphonse, Judis Co., is away on his vacation, which he is spending in the Yosemite Valley.

A. S. Conningham, with the Bohm-Bristol Diamond Co., recently enjoyed a pleasant outing at Healdsburg, Cal.

Among the out-of-town jewelers in San Francisco, during the past week, were: M. K. Giant, Vallejo, Cal., and Walter King, Stockton, Cal.

Leon Van Vliet, of the Baldwin Jewelry Co., located on Van Ness Ave., has gone to Los Angeles, where he will spend a month's vacation.

Mrs. Josie Harper, a jewelry saleswoman, formerly in the employ of A. S. Levin, and well known to the trade here, died in this city, Sunday night, May 31.

R. L. Radke and wife have returned from a pleasant trip to the Yosemite Valley. While there Mr. Radke attended the convention of the Native Sons.

John A. Hammersmith, of Hammersmith & Co., acted as starter at the big 24-hour automobile endurance race which took place at Haywards, Cal., May 30 and 31.

A. Feldenheimer, of the California Jewelry Co., is to be married in Germany about July 1, and will return immediately to San Francisco with his bride. He has been in Europe for several months.

Owing to delays in installing the fixtures, Hammersmith & Co. have not been able to occupy their new building at Sutter St. and Grant Ave. At least a week yet will be needed to complete the fittings.

Radke & Co. have renewed the lease on their present store at Van Ness Ave. and Bush St. for the period of two years, and Mr. Radke says that they do not expect to move down to the old business district before the expiration of the lease. He gives as a reason that it is his opinion that the next two years will be consumed in the building operations in that district and that shopping there in the meantime will be attended with many unpleasant features; hence, he will stay in the present location until these conditions are past.

C. F. A. Sturts, the clockmaker, will soon install an automatic clock system in the new Pacific building. In each room will be placed a neat clock having a 12-inch dial and conforming to the finish of the room. All of the system will be controlled and regulated by a master clock, operated by electricity. The occupants of the building will be charged a monthly rental of 25 cents for the clocks. Mr. Sturts will keep them in repair.

At the meeting held by a number of the most important jobbers and wholesalers of San Francisco, last week, to consider the advisability of forming a local branch of the National Jewelers' Association, no action was taken on account of the vagueness of the principles and details of the proposed organization. The matter was discussed to some length and the final decision was deferred until further information on the subject could be obtained.

A burglar recently attempted to rob the jewelry store and pawnshop of Louis Van Fleet, at 3 Stockton St. After entering a clothing store which was separated from the jeweler's store by a wooden partition, the man began sawing his way in. The noise attracted the attetion of a patrolman, who summoned assistance and arrested the man. He gave his name as Francisco Lastarrio, and said that he was a native of Peru and a sailor. Near the safe, which the burglar had not had time to open, was found a complete set of burglar tools.

Cincinnati.

Mayo Loeb, of Herman & Loeb, is spending his vacation at eastern resorts.

R. G. Maas, of A. A. Spiegel & Co., left recently on a pleasure trip to Illinois.

A. C. Tepfert, with A. & J. Plaut, left, last week, on a business trip through the middle west.

The Clemens Oskamp Co. has just added a complete new line of Pickard's hand-painted china.

John Shields, Syracuse, N. Y., formerly with Thoma Bros., was here in the last week, attending a wedding.

Frank B. Decker, watchmaker, formerly with Louis Rauch, has opened an office with Lindner & Co., Carlisle building.

Nathan Hahn and Adolph Scharr, of Lindenberg, Strauss & Co., are taking a 10 days' rest in the mountains of Virginia and Kentucky.

The Frank Herschede Co. furnishes the 13 silver trophy cups to be awarded by the Cincinnati Golf Club to the prize winners in the golf contest this month.

William J. Schroeder, attorney for the Cincinnati Wholesale Jewelers and Manufacturers' Association, and Miss Joseph, of this city, were married, June 4.

The residence of Burton Fox, of Fox Bros. & Co., Avondale, was entered by thieves last week and $38 in money and two checks, one for $150 and the other for $60, were stolen.

E. F. King, Jasonville, Ind., has sold out his business to A. J. Long, formerly in business in that place. Mr. King will go to Indianapolis, Ind., and will start a phonograph business.

Cincinnati creditors of J. G. Irwin, Harriman, Tenn., were notified that there would be a meeting of the creditors at Knoxville, Tenn., June 10, to act on a petition for the sale of real estate.

Leonard J. Fox and Burt Ganz, of the Gustave Fox Co., left, this week, on a business trip to Chicago, where they will also attend the national Republican convention. Mr. Fox will then go to Minneapolis, Minn., to attend the convention of the Nobles of the Mystic Shrine.

Out-of-town jewelers who were here in the last week included: F. W. Birchard, Tiffin, O.; E. Mossiman, Bluffton, Ind.; R. Max, Ironton, O.; A. Newsalt, Dayton, O.; Sam Rosenfield, Jonesboro, Ark.; A. Clooney, Maysville, Ky.; J. A. Worrell, Washington C. H., O.; W. M. Northrup, North Baltimore, O.; O. L. Sherwood, Ewing, Ky.; Frank Noyes, Osgood, Ind.; A. M. Stamm, Williamsburg, O., and J. W. Tufts & Son, Loveland, O.

The address of Chas. W. Brown, who, as stated in the last issue of THE CIRCULAR-WEEKLY, was recently chosen Grand Commander of the Knights Templar of West Virginia, was, owing to a typographical error, erroneously given as Charleston instead of Charles-Town, W. Va.

Detroit.

Max Jennings was in from St. Clair, Mich., recently.

Wallace Kay, of John Kay & Co., made a short business trip to Saginaw, last week.

Ed. G. Way, representing the Michigan Retail Jewelers' Association, called on a number of local wholesalers, recently.

Chas. W. Ruehle, watchmaker, has opened a small shop at 139 Columbia St., east. He was formerly with the W. A. Sturgeon Co.

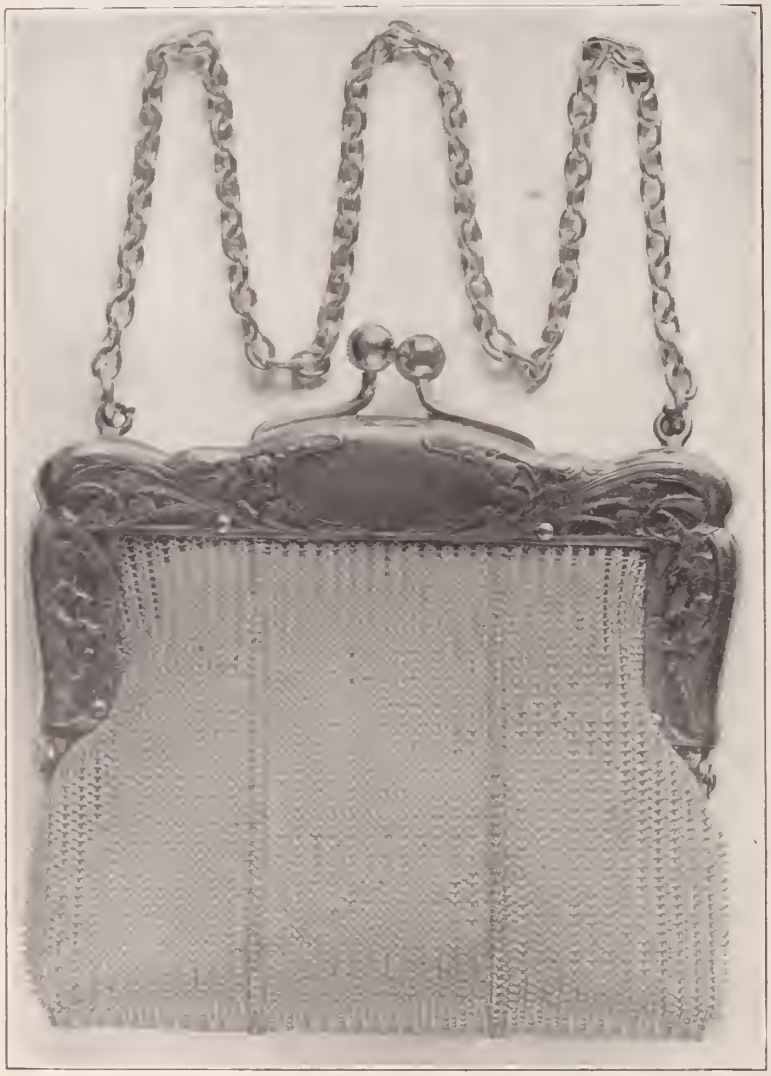
F. P. Mathauer, of Mathauer & Koester, has returned from a trip through Ohio and will not go out on the road again until the close of the Summer.

Julius Melm has started in the jewelry engraving business for himself, locating with the Detroit Jewelry Mfg. Co. at present, and taking outside work.

Earl Johnson, formerly a popular salesman with W. A. Sturgeon & Co., has gone out on the road for Richard Kern, with a line of stick pins and cuff buttons.

Charles Gamble, a jeweler employed in the shop of Wm. F. Schultz & Co., died Thursday, of consumption. He was 19 years of age, and had been employed in the jewelry business for three years.

E. W. Krainbrink, salesman for the Chas. A. Berkey Co., was in a Pere Marquette collision in the western part of the State, last week, in which a number of persons were injured, but he had the good luck to escape unhurt.



Detroit friends of J. F. Plimley, who was formerly in the manufacturing line here, are glad to hear that he has partially regained his health in southern California and is back in the same line of business again, having started up in Los Angeles.

A sad memento of the death of Charles S. Graves, Bad Axe, came to one of the local manufacturing shops, last week. Smith H. Graves, a brother to whom Charles S. Graves had bequeathed his watch, sent it here to be gold plated and engraved. The case showed dents where shot had struck it when the deceased was struck by the charge of buckshot which killed him, and these dents will be left unsmoothed.

Quite a number of Detroit jewelers took advantage of the Board of Commerce trip to the Soo, last week, to enjoy three days of outing and frolic. About 500 merchants and professional men left Thursday on the new $1,250,000 steamer *City of Cleveland* and the return arrival was Sunday afternoon. Stops were made at Mackinac, Port Huron and other cities, where customers were met and entertained on board. There was a continuous programme of jollity. Among the jewelers who went were: Chas. A. Berkey, secretary of the Detroit Jewelers' Board of Trade and head of the Chas. A. Berkey Co.; Maurice Black, Hugh Connolly, Adolph Enggass, George Johnston, of the Johnston Optical Co.; William C. Noack, of Noack & Gorenflo; Ernest H. Pudrith, E. H. Pudrith Co.; R. J. F. Roehm, of R. J. F. Roehm & Co.

F. J. Loeper has sold his business interests in the firm of Loeper Bros., Reading, Pa., to his brother, and opened a store on his own account at 21 S. Main St. Mr. Loeper formerly conducted a retail jewelry business at Tonopah, Nev.

The New Satchel-Shaped German Silver Bag

Made of heavy woven wire, 4 sizes; durable and neat in appearance

In connection with the Satchel Bag we are showing a large variety of Mesh Bags in German silver; the designs are new and attractive.

CROSS & BEGUELIN

31 Maiden Lane - - - - - NEW YORK

Omaha.

Harry Swan has returned from Lincoln and taken a position with J. L. Jacobson.

Grover Peterson, with the Sol. Bergman Jewelry Co., is back from a western trip.

The young daughter of J. L. Jacobson will be among those who will graduate this June.

Mrs. C. L. Shook, of the Shook Mfg. Co., went to Fremont, Nebr., last week, to attend a convention.

J. A. Dowding, Allams, Nebr., stopped over in this city for a few days of last week while en route to Iowa.

Curtis M. Lindsay, son of S. W. Lindsay, has returned home from Armour Technical School, Chicago, and will spend his Summer with his parents.

Fred Brodegaard & Co. supplied the Automobile Club with 10 prize cups, which were given away, May 30, at the first auto hill-climbing contest held in Omaha.

Sam Warner, Chadron, Nebr.; Chas. Locke, Bloomfield, Nebr.; R. A. Helmer, South Auburn, Nebr., and Wm. M. Lockard, O'Neill, Nebr., were here last week, replenishing their stocks.

Alex. Hohnquist, watchmaker for S. W. Lindsay, accompanied by his wife, has returned from a trip to Chicago. Miss Ada Scranton, with S. W. Lindsay, has returned from Kansas City, Mo., where she went to attend the funeral of her father.

One of the large front glass show windows in the store of A. Mandelberg was broken last week by an unknown man. Fortunately nothing was stolen, the thief evidently having been frightened away before he had time to accomplish his purpose.

Floyd Bright and Jesse Parsons, charged with robbing the store of the Mawhinney & Ryan Co., this city, were recently indicted by the Grand Jury. Bright claims to be 16 years of age and Parsons says he is 17. Bright was at one time in the reform school.

J. Preston Holliday, formerly of the firm of Mawhinney & Holliday, of this city, and who for the past seven years has been engaged in the wholesale hardware business in Minneapolis, Minn., has resigned his position as secretary and director of that firm and has connected himself with the Mawhinney & Ryan Co., this city, where he will take an active interest in the management.

Harrisburg, Pa.

The store of Samuel Katz in Middletown, this county, was entered by burglars recently.

L. G. Hess has purchased the interest of Geo. M. Uhrich in the Nyerstown department store.

Failure to comply with a city ordinance requiring pawnbrokers to report loans cost Abram Cohen & Son a $100 fine last week.

A large number of bids for furnishing the State with supplies during the coming week were opened last week by the Board of Commissioners of Public Grounds and Buildings. Among the successful bidders were the Kendall Optical Co., this city, and Queen & Co., Philadelphia, Pa.

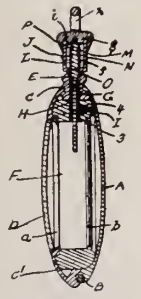
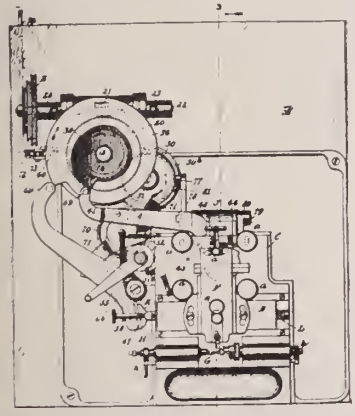
PATENT DEPARTMENT



[IN WHICH IS CONTAINED A LIST OF THE LATEST PATENTS GRANTED BY THE UNITED STATES AND GREAT BRITAIN, THE UNITED STATES PATENTS THAT HAVE EXPIRED AND THE REGISTERED TRADE-MARKS.]

UNITED STATES PATENTS.

ISSUED JUNE 2, 1908

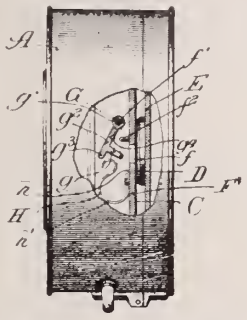


889,364. WATCH CASE. William J. Gardiner, East Toronto, Ontario, Canada. Filed April 22, 1907. Serial No. 369,696.

A watch case having the glass bezel and center

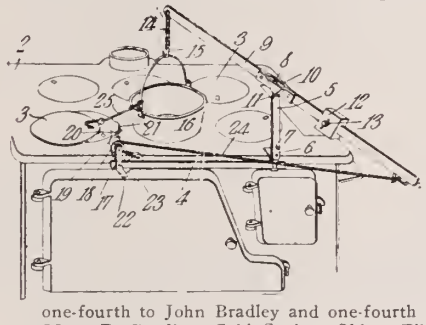
and pendant formed integral; the back lid or cover removably secured in place; a ring or dust-band, provided with a hole, and removably held within the watch case between the lid or cover and the glass bezel and abutting the center, thus providing the watch case with a ring of substantially solid metal so as to prevent the dinging or damaging of the perimeter of the edge of same; a sleeve provided at its upper end with spring members formed by slitting the upper portion of said sleeve for a suitable distance, this hole in said ring or dust band where it is removably held; sleeve resting within the pendant and extending into the crown, and a winding or setting bar associated with said crown and designed to be moved thereby longitudinally and axially within said sleeve and suitably constructed so that the said spring members may co-act therewith so as to allow for the necessary movement of said winding and setting bar; said winding and setting bar snugly fitting said sleeve the required distance above and below the bottom of said slits so as to prevent the passage of dust between these parts.

889,386. STAFF-LATHE. Walter B. Mehl, Waltham, Mass., assignor to the E. Howard



Watch Co., Riverside, N. J. Filed Oct. 9, 1906. Serial No. 338,116.

In a staff lathe, the combination with two slides placed one above the other and carrying a cutter and arranged to move independently of each other, of a cam lever engaging said slides and fulcrumed on an eccentric, and rotating cams engaging said lever for operating said slides.

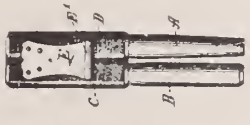


889,393. MARKING DEVICE FOR WATCHMEN'S CLOCKS. Abraham A. Newman, Chicago. Filed Dec. 4, 1906. Serial No. 346,274.

The combination with a matrix, of a key-guide opposed to the matrix, a key adapted to engage the

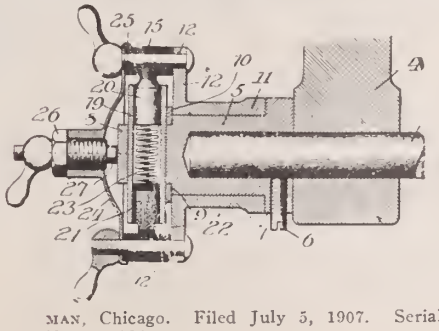
key-guide and having a character adapted to cooperate with the matrix, a spring opposite the key-guide, said spring being bent into a substantially S-shaped form, one end of which is suitably supported, the opposite end being adapted to engage a portion of said key.

889,421. CULINARY TIME-INDICATOR. Samuel S. Wolfe, Robert Lee, Tex., assignor of



one-fourth to John Bradley and one-fourth to Mary D. Bradley, Cold Spring, Okla. Filed May 27, 1907. Serial No. 376,006.

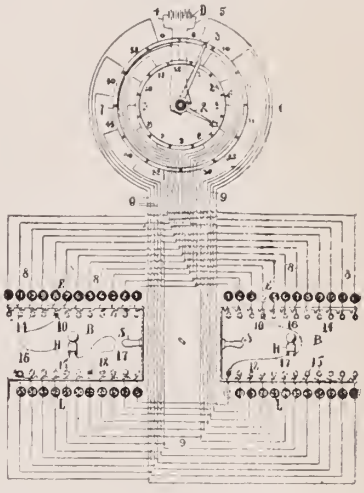
In apparatus of the character described the combination with a swiveled lever, and a support therefor; of utensil engaging means carried by the lever, adjustable means upon the lever for swinging the lever vertically to raise the utensil and its contents when reduced to a predetermined weight, and normally supported gravity operated means released by said movement of the lever for automatically swinging the lever and utensil horizontally immediately subsequent to the raising of the utensil.



889,435. FOUNTAIN-PEN. Jacques Bustanoby, New York. Filed Dec. 21, 1907. Serial No. 407,481.

The combination of two pens arranged in alignment with each other in the writing position, with their nibs extending in opposite directions, a double

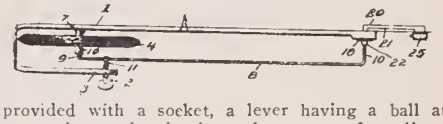
cap for holding the pens in parallel when not in use, with their nibs pointing in the same direction, and a clip connected with said double cap and disposed symmetrically with respect to a line drawn centrally between the cap sections.



889,450. TIMING DEVICE FOR JUMP-SPARK IGNITION SYSTEMS. William D. Foreman, Chicago. Filed July 5, 1907. Serial No. 382,226.

In a timing-device of the character described, the combination with a rotary member and an adjustable stationary member provided with electrical contact-pieces, of a brush carried by said rotary member, and a contact-cleaner slidably supported on rotary member to be movable relative thereto.

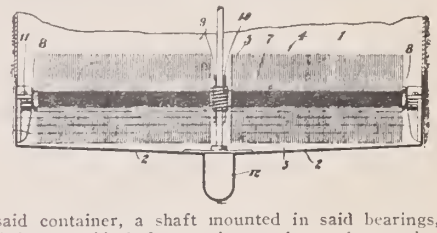
889,533. ILLUMINATING ELECTRIC CLOCK AND CALL SYSTEM. George B. Maas, Cleveland, O. Filed Dec. 9, 1907. Serial No. 405,704.



A system substantially as described comprising a time board and separate sets of lamps thereon

representing hours and parts of hours respectively, a sounding device in circuit with both said sets of lamps, and a clock and electrical connections therefrom with said lamps and through said sounding device.

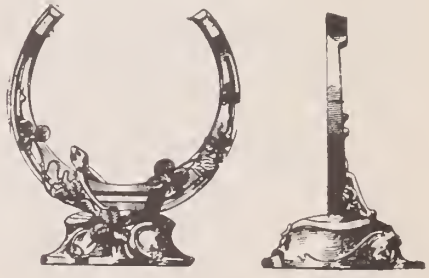
889,765. THERMAL ELECTRIC ALARM. Lloyd Currier, Underwood, N. D. Filed May 11, 1907. Serial No. 373,108.



The combination of a supporting member having one end bent back upon itself, a heat responsive element secured to the supporting member and

provided with a socket, a lever having a ball at one end engaging in the socket, means for adjustably mounting the lever on the bent-back portion of the said supporting member, and a circuit-closing device controlled by the lever.

889,813. GOLD-SAVING APPARATUS. Louis Sachse, Los Angeles, Cal. Filed June 16, 1905. Serial No. 265,490.



An amalgamating box provided with a detachable mercury container roller bearings entirely inside

said container, a shaft mounted in said bearings, disks on said shaft spaced apart by washers and a nut screwed on said shaft and clamping said disks and washers.

DESIGNS.

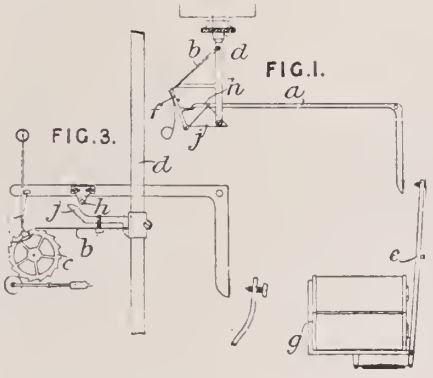
BRITISH PATENTS.

(ABRIDGMENTS OF SPECIFICATIONS, 1907, FROM *The Illustrated Official Journal.*)

ISSUE OF MAY 20, 1908.



1,905. CLOCKS. W. NIEHUS and E. NIEHUS, both of Bristol. Jan. 25.

Chimes, Striking-Mechanism.—In chiming and striking clocks, the chime train is actuated by the time train and automatically winds a secondary hour-striking train. The wheel *q*, Fig. 2, of the chime train, actuated by a spring on the drum *p*, gears with a wheel *a* on an arbor *b*. A pin *i* on a nut *c* on the arbor *b* carries one end of a spring *s*, the other end of which is attached so as to give a slip action inside a drum *d* loosely centered on the arbor *b*. The drum *d* has a wheel *e* driving a pinion *h* on the arbor of the secondary hour-striking train carrying the hammer-lifting wheels *j*. When the clock is chiming, the wheel *a* is rotated, winding up the spring *s* which, when the chimes are stopped, causes the wheels *j* to effect the striking of the quarter, half, or full hours. In applying the invention to existing clocks, the ordinary striking-train is first converted into a chime train, and the secondary automatic hour-striking train is then added.

1,945. ELECTRIC CLOCKS. H. H. S. CUNYNGHAME, and F. HOPE-JONES, both in London. Jan. 25.

Relates to means for imparting impulses to the pendulums of electric clocks of the types described in Specifications No. 1587, A.D. 1895, No. 7868, A.D. 1897, and No. 6066, A.D. 1905. As the pendulum *d*, Fig. 1, swings to the left, the spring *b* trips a catch *f* permitting a gravity arm *a* to fall, a roller *h* running down the right-hand face of the pallet *j* and imparting an impulse to the pendulum when passing through the zero position. In its descent, the gravity arm closes the circuit of an electromagnet *g* through the armature *e*, which then restores it to the normal position. In the arrangement shown in Fig. 3, the impulse is imparted every half-minute, a pin *y* on the scape-

wheel *c*, which is driven by a click *b*, freeing the gravity arm once every revolution. In order to concentrate the impulse on the pendulum when it passes through the zero position, and finally to check the speed of the gravity lever, the impulse pallet *j* has the form of a short parabola at the top, which after a steep incline terminates as an archimedean spiral. In an alternative form, the pallet is carried by the gravity lever, and the roller by the pendulum. The wheel *c* may be arranged to rotate once a minute and carry a seconds hand. According to the Provisional Specification, the gravity lever may be replaced mechanically, and the impulse may be given as in a marine chronometer, the gravity lever being centered at some point coincident with the vertical line of the pendulum, and the impulse consisting of a blow delivered in line with the two centers as the gravity lever falls.

Complete specifications accepted May 13, 1908.

Lapis-Lazuli

LAPIS-LAZULI, a beautiful colored stone, has been used from the earliest times for ornamental purposes. It is of rich blue color, opaque, with a subvitreous luster; its hardness is 5.5; specific gravity, 2.38 to 2.45; is found in masses, and has an imperfect dodecahedral cleavage. It is seldom found in crystals, and when it is the specimens are small and of the rhombic dodecahedral form.

It fuses to white glass; with borax it effervesces and becomes colorless; if calcined it loses its color, and gelatinizes in muriatic acid. It often has iron pyrites disseminated throughout, which gives it the gold spotted appearance it often exhibits. The deep-colored pieces are most esteemed, being used for studs and brooches as well as for vases, ornamental furniture, mosaic work, etc. Ground to powder they form the valuable pigment called ultramarine. The writer believes, however, an artificial substitute, costing much less, has been discovered nearly as good as the genuine ultramarine.

Lapis-lazuli was well known to the ancients, and was the sapphire of the Greeks and Romans. Many fine specimens exist in old Italian and Spanish churches in slabs, pillars and other adornments to the altars and shrines, also as panels on which are paintings. In the Russian palace of Zaraskoeselo is a room made by order of Catherine II., the walls of which are wholly covered with slabs of lapis and amber.

The ancients used it in medicine as a purge. E. F.

Demand for American Plated and Silver Jewelry in Mexico.

THERE is a limited demand for American watches, and a medium grade of gold and silver jewelry in the Tuxpau district, Mexico. The largest demand is for plated and rolled goods, such as inexpensive rings, watches of a cheap type, earrings, brooches, and a limited quantity of collar and cuff buttons and small wares of aluminum and oxidized silver.

In connection with American plated and rolled ware, however, there is the constant complaint made that they tarnish too rapidly when worn and produce a discoloration of the skin of the wearer, and this, despite the fact that such goods are sold with a guaranty for one or more years. It is suggested that our manufacturers should either seek to overcome this defect or else that the goods should be offered for sale without any guaranty.

One thing must certainly be remembered, if this market is to be extended: Salesmen must be able to speak Spanish. A second point is that it is an entire waste of money to send any printed matter in English.

Now It's The Lord Elgin

The demand to-day is for thin watches.

The public have been waiting for a thin Elgin Watch—now it's here—the

LORD ELGIN

The Thinnest Watch Made in America with Enamel Dial

the thinnest watch made in America with enamel dial.

Like all Elgin Watches—it was not put on the market until worthy to carry with it the Elgin reputation for reliability.

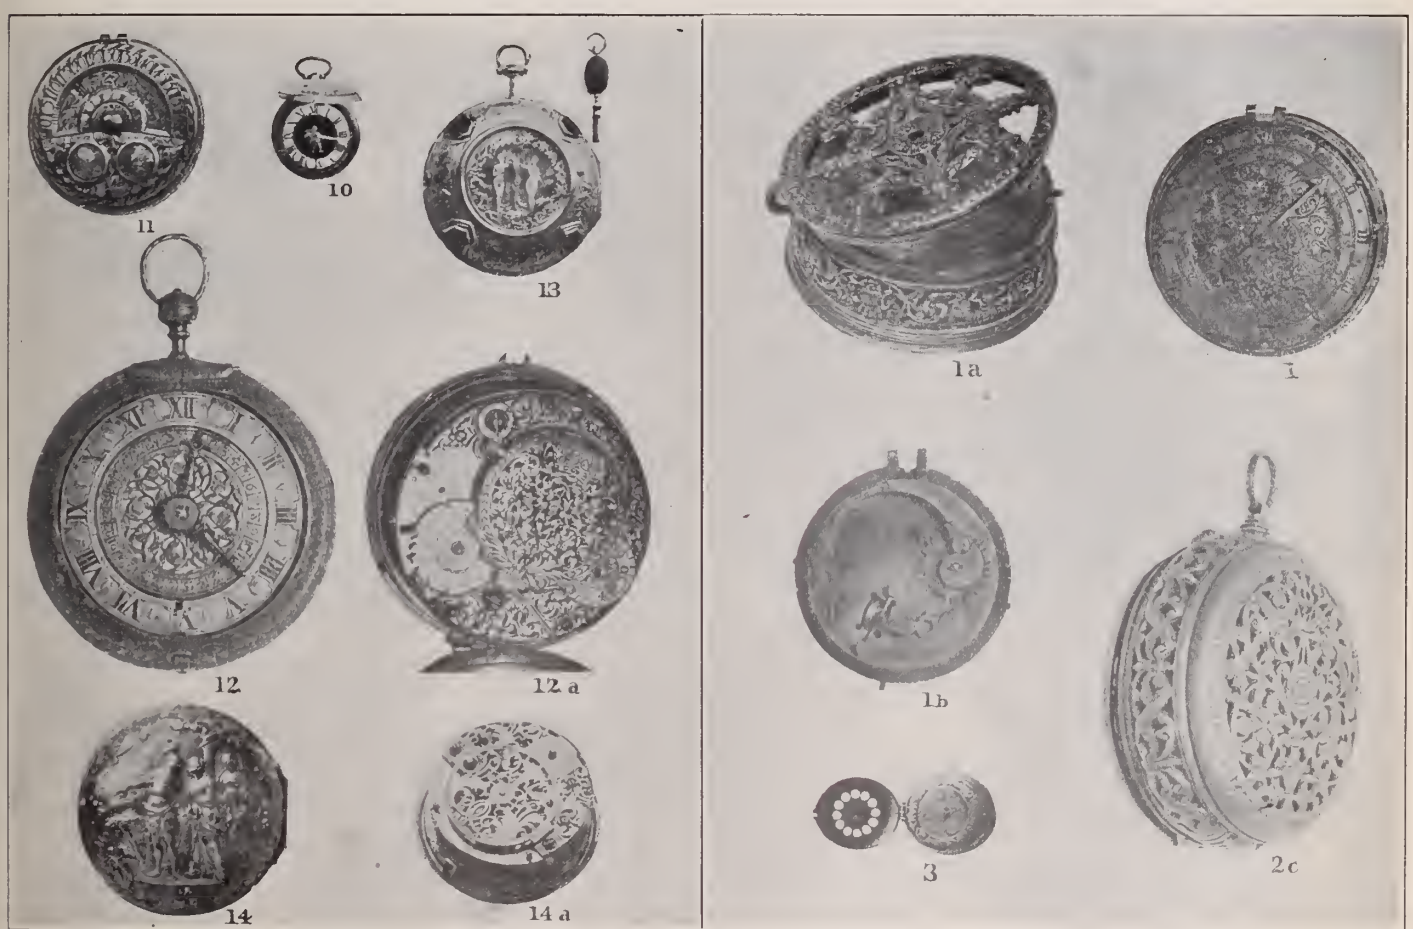
THE HOROLOGICAL REVIEW



The Famous Pleissner Collection of Watches in Dresden

By M. Engelmann

OUR existence is controlled by the clock. Its measuring and dividing teaches and warns us to make good use of our lives, for "Time is the stuff from which our lives are made up, and in no store is a new supply to be had" (K. J. Weber). Would the great marvel of our precise business life, so much inquisitive activity, more especially the astronomical—would so many other triumphs of civilization have been possible to-day, or even conceivable, if we did not possess that popular product of technical skill, the clock?

Especially is it the watch, that symphony of small and smallest wheels and moving parts, that brings rhythm and harmony into the daily activity of every one of us. Since its invention 500 years have passed, but it is hardly 50 years since its possession—and for this we have to thank machinery—has not been the privilege of the wealthy only, but an indispensable property of everybody.

The invention of the watch was not a discovery born at once of itself, but represented only a progressive development in the production of small room or table clocks. Even the weight, as a propelling power, had been superseded, before the days of Peter Henlein, the inventor of the watch, in favor of the spirally wound steel spring. Nevertheless, we must recognize the completion by Peter Henlein in Nuremberg, prior to 1511, of the first clock to be regarded as a pocket device, or to be worn about the neck, as an achievement in civilization of the highest importance. Although foreign countries have sought to dispute with the Germans the invention of the watch, there is no earlier, no more definite proof of the first production of a watch available than is to be found in the Cosmographia Pomponii Melae, of Johannes Cochläus (1511). Cochläus there writes: "Every day more difficult things are invented; thus Peter Hele, still a young man, is producing works that excite the astonishment of even the greatest mathematicians, for he constructs, with a little iron, clocks with very many wheels that, no matter in what position we may place them, without any

25,000,000 Mail Order Buyers Will Read Such Advertisements as This:

Never Buy a Watch by Mail

NO one can sell a watch by mail that will give satisfaction. The name of the dealer or the reputation of the maker has nothing to do with it. The watch that keeps perfect time in your pocket cannot be depended upon to keep time in another man's pocket. The highest grade, most costly watch made will fail as a time-keeper unless it is adjusted to meet the individual requirements of the person carrying it. You cannot do it yourself. Only a skilled watchmaker can do that. A variation of one one-thousandth part in the vibration means a gain or loss of a minute and a half a day, and a watch which varies that much is useless as a good time-keeper.

All the skill that money and experience can control is put into South Bend Watches and grade for grade, they are superior to any other watch made, but even a South Bend Watch must be adjusted to the individual who carries it if time-keeping service is to be obtained.

South Bend Watches are sold by reliable jewelers who are competent to properly adjust them. No extra charge is made for this service. The manufacturer will not allow a South Bend Watch to be sold in any other manner. ***You cannot buy a South Bend Watch from a mail-order house.*** Every South Bend Watch sold is carefully looked after by an authorized representative of the South Bend Watch Company, who knows how to care for the watch in such a manner as will furnish the greatest amount of time-keeping service.

A SOUTH BEND WATCH

South Bend Watches cost no more than other watches of similar grade. You do not gain anything by buying a watch by mail, even though the price does seem rediculously low. There are many excellent movements sold in this manner, but the purchaser invariably is disappointed in a watch thus obtained.

Every South Bend Watch, before it leaves the factory, must undergo tests that are twice as severe as the worst strain you will ever give it. It is baked in an oven and kept for hours in a refrigerator at freezing point, to demonstrate that it will keep perfect time without being influenced by the changes in temperature. It must keep perfect time in every position and not be affected by the jars and jolts of railway trains, horseback riding, automobiling, etc. You might freeze it in a block of ice without injuring it in the slightest degree.

No watch sold by mail can possibly give the service that a South Bend Watch does. Your jeweler will gladly show you this beautiful modern watch and tell you all about it. He will explain to you why South Bend Watches keep time better than any other watch. If your jeweler is not our representative, send us his name and we will take the matter up with him personally.

Cut out the coupon and mail it to-day and we will send you, free, our handsome book, "How Good Watches Are Made," and a little device showing how a South Bend Watch adjusts itself to every temperature.

HIGH-GRADE WATCHES

South Bend, Indiana

weights, record time and strike for 40 hours, irrespective of whether they are carried on the breast or in the purse." Since July 1, 1905, Nuremberg possesses a life-size statue of the happy inventor, although it is only an ideal figure, for no portrait of him has been handed down to us.

Public collections, but especially private collectors of the highest standing, have turned their collective activity towards the historical development of timepieces. The watch has in this respect enjoyed special favor. Thus in the circle of collectors in this field we must include the dowager queen Carola of Saxony, also the well-known author of the delightful story, "Lottie, the Watchmaker," Marie von Ebner-Eschenbach. Among the prominent German watch collections we need only mention the collections of Marfels at Berlin, Fränkel at Frankfort, Junghaus at Schramberg (the latter now partly in the national industrial museum at Stuttgart, partly in the German Museum, Munich), that of the National Museum, Munich, and that of the Germanic Museum at Nuremberg.

It may be that individual collectors have devoted attention rather to the acquisition of the artistically executed, varied forms that were distinctive of the exterior of the old clocks—the ornamentation of case and dial, for instance. But the old watch presented, not only from the artistic standpoint, but also in the works, in their general gradual development into the most accurate chronometer, a wealth of matter worthy of collection.

A collection which presents from both points of view the development of the watch from its invention to the beginning of its mechanical production has been formed, after many decades of activity as a collector, by Master Clockmaker Rob. Pleissner, of Dresden. Only within the most recent period, at the historical exhibition of clocks held in Nuremberg in 1905, and at the German art trades exhibition in Dresden in 1906, has it been accessible to the public, and it has been on exhibition now for some time at the Royal Mathematical Physical Salon in the "Zwinger," at Dresden.

This collection is classified in periods as follows: (1) Renaissance, 1500 to 1600; (2) Louis XIII., 1610 to 1643; (3) Louis XIV., 1643 to 1715; (4) Louis XV., 1715 to 1774; (5) Louis XVI., 1774 to 1793; (6) Empire, 1793 to 1820, and (7) the "Biedermeier" period, 1820 to 1850. To these divisions there has been added an eighth—Invention and Experimental Work.

The first division shows us that the earliest form of pocket watch was of the box pattern. The oldest specimen, made between 1530 and 1540 (Fig. 1), has a fire-gilt bronze case, which, in its ornate, well-preserved perforated work, with representations of personified astronomy, of hunting scenes, scroll-work and hermaic ornaments, displays a high order of artistic merit. As in all the early watches, the lid is not provided with a crystal, but is also made of bronze, with perforated decorative work. The dial shows the hours of the day from I. to XII., and the hours of the night from 13 to 24, and has only an hour hand. Small projecting points above the hours served to show the time at night by sense of touch. The movement itself is made entirely in iron. In joining it together no screws were used—their use does not date back beyond 1530—but conical pins, fitted into holes, were employed. The mainspring is exposed, no spring barrel having been as yet devised. The soul of the watch, the so-called escapement, was modeled after the verge escapement used in the large clocks. The balance itself, a small metal beam or bar, with swinging weights at its ends, was in accordance with its shape, known as a "spoon" balance.

The neat spiral balance spring was at the time unknown. A primitive regulation of the rate was effected by allowing the balance to strike, at each side, against a vertically disposed and subsequently adjustably arranged hog's bristle. As the mainspring, according as it was newly wound or almost run down, naturally exercised a varying power, the earliest watchmakers sought to correct this by the employment of a braking spring sliding on a mandrel-shaped piece of metal. (Figs. 1 b and 2 b.)

In two box watches of somewhat later origin, shown in Fig. 2, brass and screws were used in the movement. The "spoon" balance has been superseded by the balance in wheel form in use to-day (Fig. 2 b). A striking mechanism is also included, which is released by pressing in a pin on the dial side.

While the ovoid-shaped watch, that soon created for it the well-known title, "Nuremberg egg," was not the most ancient form

This year, this is doubly the season when you can make Ingersoll Watches help you

because people are economizing and buying low-priced things, and because the outdoor season is the time when men want a watch they don't have to be too careful of.

People will come into your store who would go past it if you didn't have Ingersoll Watches.

2 PROPOSITIONS

1st. To jewelers who are now carrying Ingersoll Watches we have a scheme that will enable you to sell five times as many as you otherwise would, besides many other goods. If you want it sign the left hand coupon below.

2d. To jewelers who do not yet carry our goods, we can show you how you can use them to the general advantage of your business, besides making considerable money on them. You want to know what is going on in the trade—then sign the right hand coupon below. It will be the first step in a money-making direction.

2 GOOD NEW THINGS

A 12 size *thin* model watch—the Ingersoll "Junior"—in solid nickel case, to retail at $2.00. This will be the biggest seller in the world next to the Dollar Watch. If you want to be abreast of the market send for sample.

An Initial-back Ingersoll Watch, gun metal finish, hand engraved, gold initials. Backs are interchangeable and extra backs supplied on memo. Looks like an expensive article. You need an artistic novelty like this to tempt trade now. Retail price, $1.25.

of watch, the Pleissner collection includes several of these Nuremberg eggs, the origin of which dates from the middle of the 16th century. Among them is the smallest egg-watch so far known to exist, with a diameter of one inch (26 millimeters) in the longitudinal axis (Fig. 3). Almost similar to the egg shape, the lengthened octagon also occurred frequently at this period. In Figs. 4 and 5 two of these watches are shown. In addition to the box and egg shaped watch, the production of bizarre shapes in watches was commenced in the 16th century. Only recently Herr Pleissner acquired a neck watch, dating from the 16th century, made for a church dignitary, in cross shape, by Cyprianus Reitter, of Augsburg (Fig. 6). The movement, fitted with an enameled and engraved dial side, is set in a case fashioned from a single piece of rock crystal.

The above referred to inadequately reliable brake-spring arrangement was soon (already in the 16th century) replaced by a decided improvement—the fusee, provided at first with a gut cord and afterwards with a chain. As a matter of fact, the important invention of the fine spiral balance spring, as the best substitute for the hog's bristles, was first employed in the second half of the 17th century by Hooke and Huyghens.

With the beginning of the 17th century we already find makers' names in the clocks, whereas previous to that only stamped shop marks or guild stamps occurred. The interior ornamentation at this period became richer, the technical execution more finished. Of the five egg-watches of German origin of the 17th century, two have Oriental figures and characters. In the movement the automatic recording of the date, the day of the week and the phase of the moon was introduced. Fig. 7 shows one of these watches with its beautiful decoration of the plate. The art of engraving had now attained its highest perfection, and finds its most profuse and tasteful employment on almost all the watches in the second division of the collection. Here, too, we find the watch as a pectoral cross (Fig. 8), only in this instance executed completely in gilded brass. The maker was Giouan Battista Marcarone, of Milan. As another extraordinary form of watch we may refer to the reproduction of the tulip bud in silver (Figs. 9 and 9 a).

Soon the round, non-angular form of our modern watch began to make its appearance. Particularly notable in this division is the dainty little ladies' watch in double case (Fig. 10), made in 1640 by D. Rousseau, with an angel as hand or pointer, and already a curved crystal, also a similar one with beautifully executed miniature paintings on the outside and inside of the case.

The disturbance of the Thirty Years' War crippled also the German art of watchmaking. The succession fell to France and Holland, later to Switzerland and England.

The effort to ornament the movement itself is more conspicuous in the next following division, viz., that devoted to the period of Louis XIV. Especially it was the covering of the balance, known as the balance cock, that was distinguished as a work of art in perforated and engraved workmanship. The outer ornamentation is also frequently varied and displays the most artistic taste. The watch has again increased in size, more especially in rotundity. The peculiarity and perfection of the make of the hinge, in some watches of this period, is for us a lost art. After the spiral-shaped spring had found rapid introduction with the balance, further technical improvements were sought. Thus we find, in this division, two watches finished about 1700 and having the so-called "traveling time" or traveling

numerals. While the hour hand stood still, the dial plate, turning on its axis, passed it by. In Fig. 11 such a device, made in 1720 by Machael Wagner, of Breslau, is portrayed. On the small lower half of the dial of this watch are the pictures of the Emperor Charles VI. (1685 to 1740) and his mother, Queen Anna (1664 to 1714), worked in gold relief.

Very soon the hour hand alone was not regarded as sufficient, and in 1700 the minute hand was added to the watch. A saddle watch of King Charles XI. of Sweden, signed Coquai (Figs. 12 and 12 a), finished between 1670 and 1680, is probably the oldest small-sized timepiece in existence having a minute hand. Very peculiar in this specimen is the division of the hour into 48 minutes. A notable mechanical work of art is a gold watch made by Cabrier, London (Fig. 13). The reverse side shows Adam and Eve, with the serpent crawling slowly around them.

In the 18th century cases with embossed work were popular. As a rule, the *motif* for the decoration was an event in mythology. In the Pleissner collection there are several very well preserved specimens of this kind. Figs. 14 and 14 a reproduce one of these watches, on the outer case of which Hector's departure is portrayed. This watch is, at the same time, a characteristic example of frequently occurring deceptions. The back plate, which, with its beautiful silver balance cock, merits attention, bears the name "Graham, London." In this case the name of the old master, as in many instances of watches exported at this period from England to the Continent, is no more than an attractive advertisement. Probably this watch never saw Graham's workshop.

The fourth division contains watches from

Lifting Watch so Dial Faces the Wearer

Watch worn on chain as a pendant, pinned to garment as additional security

Showing Watch Worn with Dial Outward

Brooch and Case Combined

Which Enables a Watch to Keep Correct Time

CANNOT BE LOST WILL NOT PULL OR WEAR OFF

Dubois Safety Chatelaine Brooch Watch Case

Patents Pending in U. S. and Foreign Countries.

Watch worn as Chatelaine, showing it lifted to read the time

MERITS—Holds the watch firmly and securely, thus preventing the movement from being jarred, as there is no swinging or bobbing up and down while the wearer is walking or running. Protects both the case and garment from wear.

UTILITY—It can be raised so as to read the time, and reversed to have either the dial or back facing front, without removing brooch pin or watch from the garment. Can be worn on the shoulder, belt, chain or fob.

ARTISTIC AND PRACTICAL — The only brooch and watch combined. Affords absolute security, as it has a safety catch. Nothing to wear out, as it works on friction bearings. Eliminates the possibility of loss of the watch owing to either bow, hook, swivel or link wearing out, breaking or coming apart, as in the old style chatelaine. Does not interfere with either winding or setting of movement.

Licensed Under Wachter Patent. Patented July 25, 1905; May 21, 1907.

Watch worn on belt as Chatelaine, also long neck chain can be worn attached to it

the period of Louis XV. In this case, too, the exterior and interior decoration is very rich. The case itself is flattened and reduced in size again. The spiral balance spring and the minute hand are already generally adopted. The vertical or verge escapement is still prevalent as the operating mechanism. A double-case repeating verge watch, made about 1720 by Joh. Külper, of Brieg-on-the-Oder, already has a striking train with rack impulsion. An excellent technical innovation this, which is generally ascribed to George Graham, but which we here have proof was known in Germany at the supposed time of its invention. While in this division we find chiefly the productions of France and England, the names of German makers also occur. Thus, one of the most charming specimens in this division comes from the master-hand of Jean Francois Poncet, of Dresden.

This excellent horological artist was manager of the Green Vault in Dresden, was ennobled in 1782 by the Emperor Joseph II., and has become known to wider circles through Kügelgens' "Youthful Reminiscences of an Old Man." The little gold watch, Fig. 15, shows on the lid before a fortress in royal blue enamel a group of peacocks. Another native of Dresden, Leuckert by name, made, about 1740, a lady's gold watch in a jasper case, with a large pendant of the same material (Fig. 16). A very tedious task in this specimen was doubtless the delicate execution of the decoration in jasper inlays in matt relief on a brightly polished ground. A watch, signed Kroplin, made after 1700, has a tortoise-shell outer case, with beautiful decoration, skilfully worked out in silver nails.

The dial (Fig. 17) presents an original arrangement, the figures VI. to VI. occupying only one-half of the silver dial, the hours of the day or night being distinguished by the appearance, in an aperture under the figures, of a picture of the sun or of the starry canopy with the moon. England is represented by a wonderful specimen, executed in gorgeous enamel colors and in excellent preservation, by Markwick Markam Borell, London. The watch (Fig. 18) was made in 1745, to order of a Turkish customer, and has two equally richly enameled outer cases.

Among the English masterpieces in this division may also be mentioned the superior embossed and chased works of Relias Seitham, London, 1710; Debaufre, London, about 1720, and an elegant enameled little watch by Richard Jones, London, about 1750. Switzerland is represented by Abraham Colomby, about 1745; France by Outin and Vauchez, about 1780.

A special characteristic of the period of origin of the watch is the bow—the so-called head. With the tastes of the times its form and style changed. In the earliest days of the watch a simple, massive, short-connected ring, we note the bow itself becoming smaller and more ornamental, also changing into a flattened or bowed form, while the connection of the bow, the neck, was made thicker and longer. Especially striking are the styles in division V., watches of the period of Louis XVI. The richly ornamented dial plate, so extensively used in the first third of the 18th century, during this period give place to the simple enameled dial. All the specimens display the charming ornamentation and fine decorative skill of the style of Louis XVI. Together with the most finished enamel work, sometimes translucent and often provided with pearl settings, we find the delicately worked "four-color" gold represented.

Pastoral scenes, floral wreaths, etc., were the principal decorative motives. It is exclusively French and Swiss art and skill that are represented in this division; among the makers' names we need only mention Bréguet, Le Roy, Vauchez and Caladon. A fine Geneva movement, with visible balance, represents especially the taste for automatons at this time prevalent. Before a revolving windmill and a running spring moving figures pass (Fig. 19). In England, about 1700, Tompion had invented the so-called "trough" escapement. It was the predecessor of the cylinder escapement, invented by George Graham in 1720, and which attained great importance in watchmaking. A gold ladies' watch, by Charles Le Roy, decorated with a rare enamel, was already equipped with a cylinder escapement.

The period distinguished as Empire (division VI.) made the watch much thinner. Even the head (bow) showed this peculiarity. With the progress of civilization the demand for greater precision in timepieces also made itself evident. As a result, towards the end of the 18th century the seconds were almost universally introdueed. Partly as a large hand, as "seconds from the center," partly as a small hand on its own dial, the recording of the seconds was almost everywhere introduced in watches during the Empire period. The ornamentation of the movement gradually disappeared; the improvement of the works and the introduction of accurate operating mechanism was the moving principle of the watchmaking art of this period. Julien Le Roy had materially improved the repeating mechanism. The employment of jeweled bearings, first tried by Debaufre in 1704, found general employment about 1800, coming from France. The joint invention of the chronometer escapement by Pierre Le Roy, F. and L. Berthoud, Arnold, Bréguet and Earnshaw imparted to watchmaking simultaneously a mighty progressive impulse.

The Englishman, Thomas Mudge, a pupil of Graham, assisted by the Saxon ambassador, Count Moritz von Brühl, perfected his detached lever escapement. Lépine constructed the toothed mainspring barrel (going barrel) that abolished the fusee and chain. A. L. Bréguet introduced the resonant spring (gong) in place of the bell in repeating watches. Swiss workshops turned out the first watches with the winding post or square at the back and a lid, giving access to the works, opening on this side. The production of the English, French and Swiss workshops still controls the markets of the world. The Empire watches also still showed the enamel ornamentation, frequently surrounded by strings of pearls or a rose border. Often the ornamentation included scenes of a sentimental character; for instance, in watches of the Pleissner collection of the Empire period we find a leave-taking from the nunnery, or Cupid bringing a message, etc. A very fine specimen by Ilbery, London (Fig. 20) represents the marine battle of Aboukir Bay, in partly translucent enamel work. This movement contains the then rare duplex escapement with compensation balance, constructed by the Frenchman Dutertre, in 1724, and improved by Pierre Le Roy.

Another enameled watch (Fig. 21) with a border of 400 pearls, with cylinder escapement and center seconds, has on the back a unique automaton work; scissors grinders are plying their trade by the side of a running stream. A large, very thin enamel watch (Fig. 22), made by Du Pont, Geneva, about 1800, is provided with the "virgule" escapement, constructed by Abbé Hautefeuille.

(To be continued.)

A Clock Case Made of Pennies.

A NOVELTY in clock making consists of a timepiece, whose case is made of English pennies. The coins, of which there are 96, all bear the date 1797, and were beaten out to almost double their original size and then riveted together, while the figures were made of small strips of copper, cemented on to the face.

The clock stands 14 inches high and is eight inches broad at the base. That "time is money" is an adage with which we all more or less agree, but this is a case in which the saying might be reversed and still remain true. The clock is owned by a resident of Laurel Bank, Ilkley, Yorkshire, England.

Horological Notes.

AN automatic electric time switch device, reeently described by *Popular Mechanics*, is a simple means for shutting off electric lights used for illuminating windows or signs. It is nothing more than a common alarm clock, attached by a chain and lever to a regulation electric switch. The alarm hand of the clock is set for the time desired, the lever on the switch is turned to indicate on or off, and the chain hanging from the end of the lever is fastened in the slot of the alarm key by a hook. The proprietor then leaves his place of business for the night, knowing the device will switch off the lights at the time set.

A unique watch is owned by a resident of Cincinnati, O. It is claimed that it measures less than one-quarter of an inch in diameter. The numbers on the dial are engraved in red so as to be more easily discernible. The timepiece was made by an American clockmaker.

A clock which is attracting a great deal of attention is now displayed in the store of Carter & Co., 304 King St., Wilmington, Del. The timepiece was constructed nearly a century ago by George Crow, who lived in Wilmington and was a maker of clocks at the corner of Spring Alley and Walnut St. The timepiece is of the old grandfather type and stands seven feet in height. The dial is of brass. There is also a dial which indicates the day of the month.

See issue of June 17 for next instalment of "A Catechism of the Lever Escapement," by T. J. Wilkinson.

Special Railroad Movements

To secure and hold the railroad trade there is no more attractive and permanently satisfactory line than the V. & C. Special Railroad Movements.

The watches in question have been in use for many years by a great many railroad men on all important lines in this country, and have shown a degree of accuracy and reliability which is unparalleled.

Many railroad watch inspectors have assured us that the rigid requirements of a railroad watch are met by the V. & C. to a degree which is beyond criticism, and which places the line in a class by itself.

You should have a representative showing of these railroad movements—17 to 21 jeweled, adjusted to heat, cold and position, and lever set—in order to get your share, and more than your share, of this most desirable class of business.

The Cultivation of a Retentive Memory

A Desideratum in Successful Merchandizing

CAN you imagine anything so trying on the patience of your employer as to come into his office in the morning and find lying upon your desk the letter that he dictated the day before ordering some repairs for a broken machine? The order is now over 12 hours behind what it should be, and, instead of being in the manufacturer's mail, it is still unmailed. This forgetting may cause the idleness of many men, who cannot afford to be idle. Not only that, but your employer may have given his word and honor, and even a bond, to have a certain work completed in a given time; therefore, he can't afford a delay of even so little time as one hour.

He is at the office by 7.30, and about 8.15 you come in leisurely whistling some popular air that you heard at the show the night before. You spend about 15 more minutes looking in the glass, combing your hair and manicuring your nails. Then when you report for duty, no less than 30 minutes late, as usual, and your employer asks about the important letter, you say: "Did I forget to mail that?" so innocently he doesn't fire you as he ought. But, if you can read human nature, see that look of pity on his face. It is as plain as day, and says: "Poor fellow! Poor fellow! You are now well on your way to business failure." And what a pity, too, because all you need is the training of your memory to make your service of inestimable value, as no one in the city can do better work.

If you have been told a thing once, remember it.

I once knew a fellow who was so forgetful that when he went upstairs to dress for dinner he would forget what he was doing, finish undressing and go to bed. He has been known to put his foot up on a chair to tie his shoe lace, and put the other foot up, too, and stand there on the chair trying to think what he wanted to do up on the chair. This poor fellow has been known to stand for a half-hour on a corner waiting for a car and there was no car line within three blocks of that corner. And, the worst of it is, that he does this no less than twice a month.

Keep your ears open for just one day and see how many times you hear: "Oh, I forgot to mail that letter," "I forgot to see Mr. Collee," etc. You will hear it so many times you will no doubt lose the number.

What is this that one sees in the papers about "stop forgetting?" Can it be there is a cure for this dangerous disease? Most assuredly there is, and it is not a bad antidote, either, but just requires regular applications to the afflicted parts. It will take no small amount of patience and persistence, for, remember, it is of long standing. The fact is it runs in the family. Your mother and father were both forgetful, all four of your grandparents, too, so you can't expect to cure your malady in a day.

The first and, in fact, only remedy is to listen to what is being said, and to listen understandingly and absorbingly.

If you don't thoroughly understand what you hear, you cannot grasp it intelligently, and unless you have it clearly impressed upon your mind you never can hope to retain it long. If it is possible, ask more about it that you may thoroughly understand it. In most cases the informant will be elated to tell you again. In all probability he will over-explain each point this time in order to impress upon you how much he really does know. Try it and see for yourself.

If you would have a good, clear memory you should commit witticisms, poetry, orations and the like. You can't possibly do any better than to take some word that should be in your vocabulary and is not, learn the spelling, pronunciation and definition for the first lesson. In a few days you will be able not only to grasp, but to retain the spelling, pronunciation and definition of two words each day. This is soon followed by three and so on until it will surprise you how much you can remember. In a year your vocabulary would be greatly increased and thus prepare you for advancement in your work.

What does forgetting cost the people of the United States each year? No one can answer. Undoubtedly millions and millions of dollars.

You say: "Maybe so, but I never lost anything by forgetting." You have forgotten right there. I dare say you would be worth twice the salary you are getting if you never had forgotten anything. Did you ever go into your employer's office to take a letter and begin to look for your pencil, and after finding it discover that you haven't sharpened it? Did you never forget to make out reports, bills or statements at the proper time? If you never forgot anything about the office you will soon be near the top, if you are not now.

The "oh! I forgot" telegraph operator ruins brokers, manufacturers and business men very often, and he may ruin you or me. Suppose an "Oh I forgot" fails to operate the switches and one is left open under the wheels of the limited on which we are riding. You and I are hurled into the presence of our Maker through forgetfulness.

What does forgetfulness cost in time and human life? Can you answer? No. Time and life cannot be measured by any standard of value that we know, and they are man's most valuable assets.—*Business Monthly Magazine.*

Keeping Show Cases in Good Condition.

MANY dealers are frequently at a loss as to the best method of keeping their show cases in first-class condition, especially if their stores are located in a main thoroughfare, says a contemporary. The glass in the cases frequently becomes slightly cracked from heat or a sudden blow, and if not attended to the crack will spread until at least one pane of glass is ruined. To prevent a crack from spreading, scratch a line slightly beyond its extremities and at right angles to it, with a diamond or glass cutter, and the crack will in no case extend beyond the scratch.

For cleaning glass, a good method is as follows: Mix one ounce of whiting, one ounce of alcohol and one ounce of water of ammonia in a pint of water. Apply with a soft cloth, allow to dry and then wipe off. Cases should be set perfectly level on the floor, especially the new all-glass variety, which, if this is not done, are certain to warp. The legs of the case should be propped to the required height from the floor to insure their sitting true.

Where the wooden portions of the cases become scratched, the following formula will be found effective: Dissolve one ounce of white wax in a pint of pure turpentine. To dissolve the wax, place the vessel containing the turpentine over a burner and warm, and apply with a soft cloth. This will in every case greatly improve the surface. If these methods on the care of show cases are followed out they will likely repay owners for the care taken by retaining a much better appearance for a considerable time.

Storekeeping Department.

Watches Cleverly Displayed.

A UNIQUE display of Rockford watches was made recently by S. Jacobs & Co., 518-520 Nicollet Ave., Minneapolis, Minn. The display consisted of 250 watches, all in running order, displayed on a horseshoe six feet high and four feet across. Suspended from the center was a large watch-shaped board three feet high and two feet across, on which was displayed enough watches to cover the background. The watches were all kept running during the exhibition, and represented the entire line of Rockford in 0, 16 and 18 size. In the front part of the window were shown quantities of the different parts and materials which enter into the manufacture of the watches. The exhibition, which attracted a great deal of attention, was in charge of George G. Gubbins.

Three Points in Your Contracts.

READ your contracts carefully, with three ideas in mind, and remembering always that a defective contract in form or substance is far worse than none at all:

(1) See that it covers fully all the points you wish to have it cover, leaving nothing to verbal agreement or assumption. Verbal agreements are of difficult proof in the face of a written contract, and the law sometimes assumes most startling things where the terms of the agreement are not specific.

(2) See that it includes no point you do not intend having included. No matter how much the man you are dealing with is your personal friend, if he means to be honest with you he will not insist upon including something that might, if the contract passed into the hands of a third party, get you into trouble, and if he does not want to be honest with you there is no better time, no time so opportune as before the contract is signed, for resisting his encroachments.

(3) See that it is legal in all its forms. A contract partially fulfilled and then invalidated because of some irregularity in the midst of its terms is reasonably certain to work serious injustice to one party or the other, whether the error was due to intentional neglect on the part of either party or not. Before any of its terms are entered into it is evident that there is an equality of positions in the relationship of the two parties. After this equality has been disturbed by a commencement of the new obligations it is seldom, if ever, entirely restored until the contract is completed on both sides; hence any interruption is unjust to one or the other.

"Good Advice."

DO not join the Knockers' Club; and avoid all fellowship with the folks who are trying to wear the face off the clock.

Frequent meetings of department heads, and meetings of all the workers in any one department are good things. They dissolve much social ice. You can't afford to cut them out.

The One-Man Business.

By Xeno W. Putnam.

DON'T get the self-importance idea, to the extent of developing a commercial system the successful continuance of which depends upon you or any other single man. A really good bookkeeper always has his accounts in such a shape that another man as good as he could at any time take them up and carry them on without a break in the system. Likewise a really great business organizer always has the affairs of his institution in such a perfect condition that another man of equal capacity could step at once into his place and continue the business without a jar.

One of the biggest retailers of New York designates his splendidly arranged business system as his life insurance policy, wherein, in the event of his death, his place could be filled so perfectly by the man next lower down that the profits of the business would continue uninterrupted and the income to his family be as thoroughly assured.

Such a business means an organized system of responsibility, the various branches of which are inter-supporting, but so well balanced that the removal of any one would leave the equilibrium of the entire structure undisturbed.

What a contrast such a business presents to the loose-jointed and unstable structures that are made or broken by the fortunes of a single man. Yet the latter may, in his shortsightedness, be inclined to boast of his own importance, little realizing the lack of permanency and of system apparent in the business structure depending for its life entirely upon himself.

C. H. Wallace, who conducted the C. H. Wallace Jewelry & Optical Co., Washington, N. C., has sold out his business to R. Lee Stewart, Washington, who will continue it in that town. Mr. Wallace is now on a visit to Michigan, and in about five weeks will remove to Los Angeles, Cal.

Keep Up Steam.

THE difference between success and failure, between getting business and not getting business, is not always so much in the quality of the effort put forth as in the amount. In other words, the effort which gets business frequently differs from that which does not get business more in degree than it does in kind. Men who do things and are heard from accordingly seem to do their work a great deal like other men who never are heard from.

The difference is that they are a little more intense, they hold out a little longer, and when the other fellow stops, thinking that the case is hopeless, they make another big effort and win what they are seeking for.

It takes a lot of fuel and heat to bring water to the boiling point. It takes just about as much fuel and heat to raise the temperature of the water to 210 degrees Fahrenheit, but if you take away the fire when you have reached 210 degrees the water will never boil.

Moral: Add a little more fuel and keep the fire going.—*Leadership.*

AN ATTRACTIVE WINDOW DISPLAY OF WATCHES BY S. JACOBS & CO., MINNEAPOLIS, MINN.

Ideas and Schemes.

DISPLAYED recently in the show window in the store of G. W. Fairchild & Sons, Bridgeport, Conn., was a model of Commodore Bishop's steam yacht *Akela.* The model is the work of Capt. Wm. S. Green, master of the yacht, who carved it in his spare moments.

* * *

M. W. Bassett, Hartford, Conn., is distributing an attractively printed folder entitled "A Message Telling Thee of Jewelry Bargains." It is designed to call particular attention to Easter jewelry.

* * *

W. P. Harvey, 206 Sixth Ave., Des Moines, Ia., has adopted a new line of advertising by offering a special article at a special price each day.

Pedantic Advertising Too Stilted to Be Generally Effective

Forced and Strained Rhetorical Effects to Be Avoided

ADVERTISING goes straight for the appetites, desires and pride of man, and likewise to his wife and children. Sometimes it goes straight for their vanities, weaknesses or credulity, says *Printers' Ink.*

Therefore, it ought to be very human.

But it isn't always—not by a long shot.

Much of the advertising printed has a purely pedantic appeal. It lacks red blood in its text and horse sense in the way it is placed.

The best way to illustrate the difference between a really human advertising appeal, and one that smells of the lamp, is to tell the story of a canned plum pudding.

This was an especially fine canned food article, selling for a good price, made by a house that is almost the equivalent of Tiffany's in that industry. Sales through the regular channels of trade had been so large and constant for many years that the manufacturers thought a little general advertising for this pudding might make them larger. So an appropriation was made and plans considered.

Now, if this proposition had been laid before a pedantic advertising man, he would probably have reasoned about this way:

Here is a *de luxe* article. Only the bluestocking trade has ever bought it. The price is a trifle high for a food article—too high for Bridget O'Grady. So we must use either the 35-cent magazines going to the very best people, or the newspapers with a small, select, bookish following. We must talk to these bluestocking readers in the bluestocking language. We must be ornamental, dignified, unusual.

But this plum pudding account fell into the hands of an agent who had been a police reporter in his youth, and he reasoned it out in the light of a police reporter's knowledge of human nature, thus:

This has been a bluestocking article for years. Therefore, chances are, all the bluestockings know about it already, or at least their grocers carry it in stock. The price is high. But I can't see that this should put it out of the reach of Bridget O'Grady. It is true, Mrs. O'Grady cannot afford to eat this plum pudding every day. But the bluestockings don't eat it every day either—they couldn't digest it. It isn't an everyday article for any one, but an occasional luxury. Now, when Mrs. O'Grady has a guest she seldom stops at prices in setting her table. Nothing is too good to place before her company.

The hospitality of the poor is prodigal. They spend a good deal more, proportionate to income, than the millionaire who gives a monkey dinner. Therefore, it seems to me that this pudding ought to be advertised in papers like the New York *World* and Chicago *Daily News,* so that Mrs. O'Grady can hear about it and buy something new and luxurious for dessert when she entertains.

How shall I talk to her? The conventional way of the pedantic advertising agent would be to make things simple and easy for Mrs. O'Grady to understand, to set the ads. in the black type that is supposed to be the only sort that plain people can read—in a word, to *talk down.* But I don't believe Mrs. O'Grady need be talked down at all. I'm going to talk to her as though she belonged to the smart set. I'm going into the newspaper she reads every day, which is filled with wood-letter bargains, and talk to the bluestockings. Mrs. O'Grady has a legitimate human interest in the rich, as anybody may see in the articles that newspaper prints about the smart set. I'm going to put into Mrs. O'Grady's newspaper precisely the sort of dignified and unusual advertisements of this plum pudding that I should put into the Boston *Transcript* or New York *Post.*

Suppose she had never seen those papers, but got hold of a copy by chance. Likely enough the solid type articles wouldn't interest her. They'd make her head ache. She gets her news in headlines and diagrams, and isn't accustomed to purposes and problems. But she'd understand the *ads.* in those papers, and read 'em, too, and be interested in looking over the smart set's shoulder, and maybe try some of the things that the bluestockings eat. So I'm going into the New York *World* and Chicago *Daily News* with advertising that she will read, as it were, over other people's shoulders.

That was about the actual line of reasoning with this commodity.

Moreover, it was carried out along the line indicated, and has proved one of the most successful of food campaigns pro rata to the expenditure.

Pedantic advertising lacks red blood because the men who write and place it have chiefly a closet or office acquaintance with people. One trait invariably marks the man who doesn't "mix" with his kind; he is unable to understand people unless they are grouped into classes. He thinks of the well-to-do class, and talks to them in print like a snob. He has a pigeonhole in his brain where the folks who work for a living are all segregated, and when he talks to these he specifies wood type and patronizes them as though they were menials.

At one of the New York theatres a new "society" play was being rehearsed under the eyes of the manager and the playwright. Its scenes were laid at Newport and in upper Fifth Ave. The manager complained that the actors were not dignified and formal as society people should be.

"Make it true to life among the smart set," he insisted. "You there, Frothingham—when you come on, don't loll as if you were loafing in Third Ave. Have manner—tone—bearing—race. The smart set don't act in that way."

"I beg your pardon," interrupted the author of the play, "but that's just how the smart set *does* act. It lounges and lolls all over the shop. If you fancy that society is made up of Beau Brummels, you will be greatly disappointed."

Most advertisements with an appeal to the well-to-do are "staged" about as this manager wanted his play produced. The advertising man in his coop of an office, unmindful of the fact that a good many rich people are fools, writes copy on the assumption that a painful amount of intelligence goes with the possession of money. And he is forever fearful, in writing for the plain people, that he will talk over their heads. But as a matter of fact, when he goes over anybody's head at all, it is just as likely to be the head of a rich man as of a poor one.

Money is no indication of tastes, habits and education.

Some years ago Tiffany received an illiterate scrawl asking for a catalogue. The dignified advertising of this house is a fixture in the magazines, and a sumptuous catalogue is offered. The last costs so much per copy that discriminate distribution must be made. Inquirers are usually looked up for commercial rating when there is any doubt. This scrawled note was such an inquiry as Mike O'Grady might have written. On the mere surface appearance it would have been tossed into the waste-basket and ignored. Strictly a case of "nothing doing *there.*"

But they looked Mike O'Grady up in Dun's and found him rated at a million, and an "A" credit risk. Investigation showed that Mike had nearer 10 millions than one. So no time was lost in sending him the catalogue. He apparently knew how to make money, despite his penmanship. He may have been a plain living, hard-thinking citizen himself, but he had children and grandchildren, and knew how to make them Tiffany presents.

Another incident in the same house shows that no mere classification of people on paper will hold in everyday life. A jeweler once used a local paper in an aristocratic neighborhood on the assumption that an extremely *bong-tong* class of householders would thus be approached in their own homes. The number of inquiries received after a week or two far exceeded those from general magazine advertising. These letters were impeachable in form, and came on monogram stationery. It was thought that a new advertising medium of marvelous potency had been discovered. But, lo! when the inquirers were looked up it was found that most of them were valets, maids and butlers of those fine families! They read the local paper and answered the ads.

Retail Advertising Department.

Much of our present-day advertising overdoes classification. Sometimes the advertiser writes "classy" copy because he has set definite limits in his own mind as to who can afford to buy his goods, or who is poor and illiterate enough to be gulled by them. Again, the men who sell space have encouraged classifications as a talking point. Some strange distinction must be drawn between a 35-cent magazine and a 10-center, or between a three-cent daily paper and a penny dreadful.

Up to a certain point it is, perhaps, necessary to sort people into classes. Some communities in this country have so large a proportion of immigrants who cannot read English yet that in retail advertising it has been found best to trust to pictures of goods with a large black price. These two facts bring the immigrants to the store. But such sorting does not go far, even among immigrants. It is entirely a local affair, and accomplished by using the proper newspapers. When it comes to a general campaign in magazines, "class" distinctions are superfluous and offensive.

We undoubtedly carry classification too far. If the advertiser forgets classes and masses, and strikes a happy medium between the two, and keeps his attention centered on telling a plain story about goods, it is reasonably certain that readers will classify themselves. At best, classification is a guess at the reader's intelligence or income, and usually a poor guess at that.

Many a commodity is pitched either too high or too low in its advertising copy. Men's clothes are a good instance of the first. Chewing gum is an excellent instance of the other.

Most of the men's clothing advertising is aimed at the college trade. Strong emphasis is put on the fact that trade-marked lines are being worn at the colleges. Pictures of men in their clothes are almost invariably college scenes, and the fact that undergraduates wear them is advanced as the cardinal reason why everybody else should. But there are only about 200,000 students enrolled at the universities, colleges and professional schools of this country. Many men have a decided aversion to wearing what college boys wear, and prefer the more conservative clothes worn in business.

An appeal to business men would cover infinitely more ground. Likewise, chewing gum was once assumed to be the especial tid-bit of sections like the East Side of New York, and its advertising long followed the extremely elemental lines supposed to be essential in persuading the Mollies and Katies of shop and factory. But chewing gum is an excellent after-dinner confection, and has a distinct value as a hygienic mouth-cleanser. When the advertising copy was given a little more tone, and the manufacturers stopped guessing as to the intelligence of consumers, chewing gum was sold more widely.

Classification is always a guess in the wrong direction when the pedantic man makes it. He guesses that Bridget O'Grady is not in the market for a canned plum pudding, because the price is such that she cannot afford it. But if he knew Mrs. O'Grady in the flesh he would advertise his plum pudding to her just because she can't afford it, for that is a good reason why she should want it if it is properly set before her. This would be the guess of the man who "mixes," and when it comes to advertising he is the only man entitled to classify.

What Some Jewelers Say.

A DISABLED watch is no more than a piece of junk. It our business to repair disabled watches and make them keep time. Skilful work at most reasonable prices. D. E. Baker, Washington, Pa.

We Mount Diamonds—If your mounting has become worn and you desire something new and up to date, call on us. We will advise you what to do. Diamonds reset or remounted while you wait. A good assortment of mountings kept in stock. Don't send your mountings away to be mounted. We do the work here and you can get it promptly. T. H. Wynne, Griffin, Ga.

Wedding gift wares of unusual attractiveness are at our store awaiting your selection. Our Spring stock is unusually varied and complete, and offers an exceedingly wide range for you to choose from. There's Teko pottery, imported brass goods, Sheffield plate, coaster sets, etc., among the more unique lines, besides a wonderful showing of silverware, cut glass, etc. Suitable wedding gifts may be had from $1 upward. Edwards & LeBron, Chattanooga, Tenn.

Wedding and Commencement Invitations—We desire to suggest to those intending to send out invitations that the very finest engraved work at this store costs you no more than the ordinary kind usually does. If you are unable to come to the store, drop us a card and we will mail your our portfolio of samples, showing the latest and most fashionable effects, most approved forms. And the finest stationery to be had. Wm. C. Graves & Bro., Memphis, Tenn.

Gifts from our Second Floor—The range in prices and universal excellence of the wares shown in our art rooms demonstrate that it is not necessary to pay a large sum for articles of artistic merit. One may select here an interesting bit of Moorcroft or Ruskin pottery at a few dollars or pay into the hundreds for a piece of porcelain decorated by Sadler or Alcock, the renowned flower and figure painters of England. The same wide choice is presented in bronzes, plates and glass ware. Spaulding & Co., Chicago, Ill.

For weddings we have the finest collections in Maine, of rich wares intrinsically valuable and of high artistic excellence. Common and ordinary things are excluded. Some things in our shop are better than others, of course, but all are good. You are sure of good value for the money expended. Remember, also that the "Page Box Mark" imparts an added value to a gift. A. G. Page Co., Bath, Me.

Tired Eyes Need a Rest—If you can afford to drop your work for a month it is likely your eyes would regain their normal strength. But a cheaper way is to let us measure you for a pair of eyeglasses. Notice we said "measure" you? No other way to rightly do it. No need to quit work—even for an hour. Give us a few minutes of your time for examination, and we guarantee you perfect satisfaction. C. S. Barrett, Optician, with Emerick, Barrett & Co., Freeport, Ill.

Call and see our immense stock of jewelry, silverware, cut glass, optical goods and bric-a-brac, by far the largest, prettiest, best selected stock ever shown here. Our prices are right. We will save you money on every purchase. Lehmann Jewelry Co., La Grange, Ga.

Protect your watch from loss or damage by dropping from your pocket by having it attached to a firm, dependable, handsome chain. We have a splendid new line of chains, including many exclusive designs that strongly appeal to the admirers of style and superior quality in jewelry. They range in price from 25c. to $12. F. H. Sanders, Ottawa, Ill.

Let a diamond be your savings bank. If you are one of the many people who find it difficult to save money, we suggest an ideal plan which will make the saving of your surplus earnings both pleasant and profitable. These plans are open to any responsible person having a regular income. The possession of wealth is not at all necessary. We want the trade of the employe, as well as the employer. These plans permit your securing a diamond upon payment of one-fifth or more of the price of the stone, and the deferred balance can be settled for gradually in convenient monthly payments. All of our diamonds are marked in plain figures at the lowest net cash prices which we can afford to take for them. It would be manifestly unfair to the cash buyer to sell people on time as cheaply as we sell for cash. Therefore, instead of asking a little more than we will take for the stone, and then take off the discount for cash—which is a common rule—we reverse the practice that generally obtains. In other words, our goods are priced for cash, and when time is wanted, we charge a small advance covering the deferred balance, varying in amount to the time required. In ordinary instalment houses, the customers have no way of knowing just how much a premium over cash prices he pays. We tell you exactly what this difference is and our customers can choose for themselves which plan is better for their individual requirements. We have a very attractive souvenir diamond booklet, and it will pay you to read it. It is well illustrated, cash and time prices are quoted, exact weights and grades are given, and our various selling plans and protective agreements are fully described. Write for a copy of our 148-page catalogue and this booklet, "About Diamonds," No. 17.—Geo. T. Brodnax, Inc., Memphis, Tenn.

Mind Me and You Will Wear Diamonds—Diamonds greatly improve a person's appearance. Diamonds always retain the value. Diamonds always increase in price. Diamonds are always negotiable. I sell diamonds for cash or on easy payments. I. J. Lipsohn, Gloversville, N. Y.

An interesting article on "June Wedding Advertising" will be found in this department in the issue of May 13 last.

[Answers are also solicited from our readers to the questions published on this page.]
No attention paid to communications unless accompanied by full name and address of the writer.

QUESTION No. 2150.—**Stripping Silver from Copper Wire.**—*We have a lot of copper wire that has a heavy deposit of silver on it. How may we recover the silver from the copper?* *S. & S.*

ANSWER:—The silver can be dissolved from the copper with the following solution: One gallon of sulphuric acid, and nitric acid one pound. Put the dip into a glazed earthen jar, then place it in another vessel containing hot water, being careful so that no water enters the acid. The copper wire with the silver is put in until the silver is dissolved. If the acid acts too slowly, then add a little more nitric acid.

QUESTION No. 2151.—**To Etch Alabaster.**—*What can I use to etch alabaster?* *T. E.*

ANSWER:—For etching alabaster, cover the object with a resist composed of white wax and oil of turpentine, thickened with finely powdered white lead. When the resist has set and the design has been drawn in it, etch with diluted hydrochloric acid.

QUESTION No. 2152.—**To Gild Enameled Jewelry.**—*Could you kindly give us a formula for gilding 14-karat enamel jewelry? We have had much trouble in getting a good Roman color without chipping the enamel. We learn there is no cyanide of potash used in this formula in getting the proper results, so we would deem it a great favor if you can aid us in this work.* *C. R. S.*

ANSWER:—A bright 14-karat gold solution which will produce a finish that does not require burnishing is made as follows: Take 10 pennyweights of gold and roll out as thin as possible, then heat gently to a red heat and allow to cool. Cut the gold into small pieces, place in a glass flask or evaporating dish, and pour in two ounces of muriatic acid. Then add slowly one ounce of nitric acid and place on a sand bath over a gentle heat; increase the heat a little after the dish is warmed. Do not use too much heat or it will drive off the acid before the gold is dissolved. If all the gold does not dissolve, add a little more acid in the same proportion as given above. When all is dissolved let remain on the warm sand bath until the acid is evaporated to the consistency of syrup and has a reddish brown color. Reduce the heat until the acid is all evaporated, leaving a brown deposit, which is chloride of gold. For a 14-karat solution this chloride is diluted with warmed distilled or rain water and is ready for the solution. For a Roman or fine gold solution the brown powder is diluted with warm distilled or rain water and filtered through two layers of filtering paper, which will allow all other metals that may have been in the gold to gather in the filtering paper. For the 14-karat solution, take the dissolved or chloride of gold, and add to it one gallon of distilled or clean rain water. In a little warm water dissolve about half a pound of cyanide of potassium and add this to the gold bath, a little at a time. Stir with a glass rod until the solution is colorless. Add 1½ ounces of carbonate of soda to the solution. Put 10 pennyweights of carbonate of copper in a bottle with a little water and a tablespoonful of ammonia; slowly add dissolved cyanide to the bottle and shake until the copper carbonate is dissolved and the solution becomes a straw color. The gold solution is now heated to about 130° F., a 14-karat anode is suspended in it, the current is turned on fairly strong, and the process of plating may be begun. The copper solution from the bottle is now added slowly. It should be closely watched and when the right shade is obtained no more copper is added and the solution is ready for use. If the solution works right a bright 14-karat deposit is obtained that does not require polishing. For a Roman or fine gold solution proceed as given above, by dissolving the gold and filtering; then add one gallon of distilled or rain water and dissolve enough cyanide until the solution becomes colorless, when the solution is ready for use. A fine or 24-karat anode should be used. The amount of current used has considerable effect upon the color. A weak current will produce a lighter shade and a stronger one a darker and redder shade. It is sometimes necessary to scratch-brush the articles several times during the operation, so as to obtain the right shade. For enameled jewelry the solutions should not be too hot, as that would have a tendency to loosen the enamel, but a warm solution can be used, and it may be necessary to make the solution a little richer in gold. Enameled jewelry should not be brought from a hot solution and rinsed in colid water, but should be rinsed in warmed water. Sudden changes will crack the enamel. This rule holds good for potashing and washing.

QUESTION No. 2153.—**Lacquer to Prevent Tarnishing.**—*Can you tell me what lacquer I could use in order to prevent tarnishing?* *C. R. L.*

ANSWER:—This lacquering can be done in two different ways—by the so-called cold and by the hot lacquering. By the first method a layer of lacquer is applied evenly over the articles with a camel's-hair brush, and then the articles are heated moderately over a stove or in an oven. This requires only two or three minutes, when the work will be finished. By the hot lacquering method the articles are first heated to about the heat of a flatiron, as used by the laundress. The lacquer is then quickly brushed over the work in this state, after which it is subjected to the oven for a minute or a little longer. It is essential to know exactly the amount of heat to be applied, which will be learned by experience from the effect produced. Lacquer for brass is composed of the following: Shellac and gum juniper, of each six parts; annato, one part; turmeric, eight parts; alcohol, six parts. Another lacquer is made by dissolving in half a gallon of alcohol one-quarter ounce of gamboge, three-quarters of an ounce of aloes and four ounces of fine shellac. A pale lacquer is made from two ounces of gum sandarach, half an ounce of gum elemi and two and a half ounces of shellac in half a gallon of methylated alcohol. Dissolve in a glass bottle, expose to a moderate heat for a day or two, shaking the bottle from time to time. Finally pour off the clear part and add one quart of alcohol to the sediment, which in turn is treated as the previous mixture.

QUESTION No. 2154.—**White Metal Plates.**—*Kindly inform me where I can get white metal plates—something that is reasonable in price. They are to be used as name plates, etc. Also tell me what is the best process for oxidizing them* *D. A. S.*

ANSWER:—White metal name plates can be furnished by manufacturers of silver-plated ware, who will make them to order. It is best to have the plates lightly silver-plated at the factory, the reason being that the oxidizing is done quicker and better than if applied directly to the white metal. The oxidizing can be done in a solution composed of: Water, one quart; liver of sulphur, six ounces; ammonia, one ounce. Put the liver of sulphur in the water; heat almost to the boiling point, then add the ammonia. Use the solution hot. Have the pieces perfectly clean, string on a wire and immerse in the solution until black. Rinse off in water and relieve the black by brushing over with wet pumice, which may be rubbed with the hands. If the pieces do not come out black, or if they look spotted, they are not clean enough and must be potashed to remove all the grease, then brushed with pumice and water, rinsed and oxidized. When the right shade is obtained the plates should be well lacquered.

QUESTION No. 2155.—**To Clean Household Silver.**—*Will you please let me know what is the best substance with which to clean silverware?* *R. L. C.*

ANSWER:—The best medium for cleaning household silver is carbonate of lime, *i.e.*, precipitated chalk, which can be purchased at a moderate price from any druggist. This is moistened with alcohol or water and applied to the silver until dry, when a jeweler's brush or cotton flannel will do the rest.

Roy R. Spencer, a well-known watchmaker, died recently in Friendship, N. Y., aged 30 years.

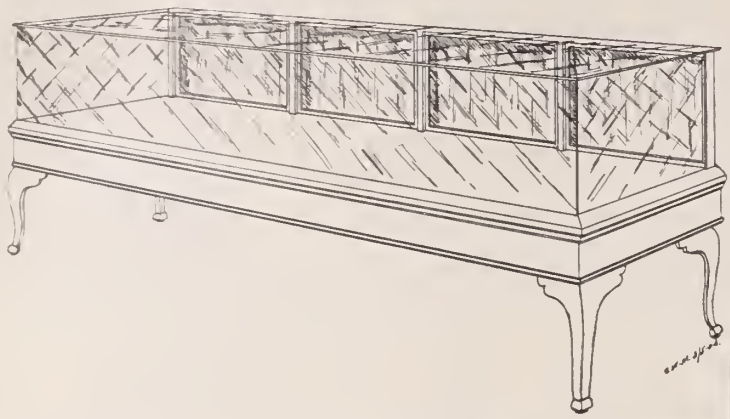
Takatori Ware in the Metropolitan Museum of Art

AMONG the many interesting exhibits to be seen at the Metropolitan Museum of Art, 82d St. and Fifth Ave., New York, is a collection of Japanese Takatori ware, some representative pieces of which are shown in the photographs herewith reproduced. There are many forms of pottery with many marks recognized as Takatori ware, but little information, however, is at hand by which the ware can be classified. Typical Takatori ware is a most characteristic pottery. Its fine clay, rich brown glaze and delicious over-glaze readily distinguish it from other kinds of pottery. The tea jars made of this ware are particularly refined and delicate.

RINSING BOWL AND BOTTLE, TAKATORI WARE.

The history of the production of this ware goes back to the latter part of the 16th century, when two potters from Korea were brought to Chikuzen, and there erected an oven—in Takatori village. These potters were known as Hachizo and Shinkuro. They were afterward assisted by a skilful potter named Igarashi Jizayemon, who is said to have come to Chikuzen as a wanderer. It is supposed that Hachizo and his son journeyed to Kyoto and there came under the instructions of a great master of the tea ceremony named Kobori Enshu. By his suggestion the potters carried back with them either the veritable objects or the suggestions of the kind of pottery and forms of utensils most desirable for the tea ceremony, and it was thus that the early productions of Takatori took such high rank.

The first illustration shows a rinsing bowl and bottle belonging to the Moore collection, which was bequeathed to the Museum in 1891. The rinsing bowl dates back to 1780. It has a round base and within the bowl is a dragon in relief in turquoise green enamel, over pinkish buff. The bowl is about four inches high and about the same width across the top. The bottle is mottled brown with a rich glaze dripping from the neck, and shot with a rich green bronze color. The lower part of the bottle is finished in imitation of bamboo and is round and slightly grooved. The bottle stands about 12 inches high.



TEA JARS, PRESENTED BY THE LATE CHAS. STEWART SMITH.

The second illustration shows selections made from the collection of Charles Stewart Smith, which he presented the Museum in 1893. These articles are tea jars and all have most delicate glaze and rich color. The one at the left of the top row is of special interest, because of its having an almost blueish-like tinge. Another tea jar has a composite glaze. It is smooth and satiny, and at the top, where the glaze runs into a bluish gray, it is softer and duller.

In late years there have been produced large numbers of pieces of Takatori ware, among which may be found many mythological figures, which are especially made for imported trade.

The store of Victor Bogaert, Lexington, Ky., was entered, June 1, by burglars, who escaped with a half-dozen gold rings and several pairs of cuff buttons.

F. D. Day & Co., Duluth, Minn., have begun to build an addition of 60 feet to their establishment. The new structure will give the building a total depth of 140 feet. The interior will be entirely remodeled and equipped with mahogany furnishings. Many novel features will be added to the store, which will have a silver room, a Tiffany and crystal room, silver plated room, etc.

Roman Pottery at Montrose.

THE last lecture but one of the series which James Curle, W. S., F. S. A. Scot., is delivering on "The Excavation of the Roman Military Station at Newstead, Melrose," as the Rhind lectures in archæology, was given in the Queen's Hall, Edinburgh, on April 8. The particular subject of the lecture was the finds of pottery and other ware. The most interesting of the fragments from Newstead were those of the red Samian ware. The great bulk of the ware came from Gaul, where potteries sprang up in the first century. Most of the vessels were without decoration. At Newstead the early ditch lying beneath the clay rampart of the later occupation made it possible clearly to distinguish the early pottery from the later. The Samian ware of the early ditch was of first century type. It was thin, hard baked, with a bright glaze.

Some 12 different types of vessels—cups, patterns and bowls—were represented. In the later ditches and pits, the ware was coarser. Three types of decorated bowls were found in the early ditch—the carinated bowl, the bowl with more or less straight sides, and the hemispherical bowl. The patterns employed on these bowls, so far as they could be identified, indicated that the first occupation drew its supplies from the potteries of La Graufesenque, Bannassac or Montans. The output of these potteries was believed to belong almost entirely to the first century. They were supposed to have disappeared early in the second century.

Specimens of decorated ware of both periods from Newstead were illustrated. A piece of typical Rheinzabern ware, probably dating from the end of the occupation, was also shown. Many potters' names were met with stamped on the botom of dishes, and a number of names and other marks of possession scratched on the glaze. The study of pottery in Scotland appeared to be distinctly advanced by the Newstead results, as two distinct groups—one early, the other late—could be noted. Such early pottery as was found at Newstead did not appear to occur at Birrens, suggesting that the early advance which passed through Newstead had no parallel there. On the other hand, both early and later types occurred at Camelon. Further north it was interesting to note that the small quantity of pottery found at Inchtuthill belonged entirely to the early period.

The vessels of coarser ware found were also illustrated. It was more difficult in dealing with them to distinguish early from later types, though on the whole the pottery of the early period was the finer. Vessels of castor ware decorated with scenes from the chase came from the ditches of the later period; they were known to have been manufactured in Britain, but it was probable that the earliest types came from the Rhine. Of larger vessels many fragments were found, such as Mortaria, which were used no doubt for culinary purposes. That these were sometimes imported from abroad was shown by the stamp "FLVGVDV," also found in London, indicating that the vessel bearing the mark was made in Lyons. Great amphoræ were also common. That such vessels were carried from one part of the empire to another was illustrated from the occurrence of the same makers' stamps in southern Gaul, in Rome and on the Rhine. The occupants of the fort possessed glass vessels and window glass throughout the whole period of its occupation. No vessel was found entire, though a number of well-known types could be identified from the fragments.—*London Pottery Gazette.*

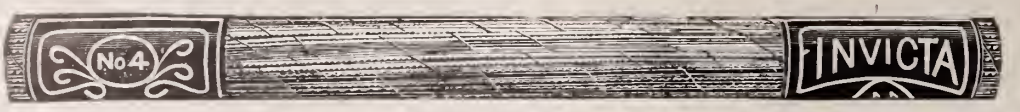
RICH AND ENGRAVED GLASS

A MOST attractive line of cut and engraved glass ware is now on exhibition at the salesrooms of C. Dorflinger & Son, 36 Murray St., New York. Among the offerings is a three-piece compot set. The larger of the three compots is about 5½ inches high and has a rounded base decorated with star effect under-cutting. A dainty stem supports a body cut in star and spray designs. The smaller compots are cut in the same style. Engraved stem ware is shown in a number of glasses of various shapes and sizes, with leaf wreath decorative circlets about the body of the glasses. Jewelers who are interested in cut glass punch bowls will find a varied assortment shown by the same firm, among which is an attractive Colonial punch set. The bowl is of clear glass and is slightly flanged at the top with a scolloped and notched edge. The cups are in the same style. A dainty sherry set, which includes a holder and six delicate glasses, is shown in most attractive cuttings, as is a champagne set, showing a tall pitcher, finely cut, and six glasses.

*

NOVELTIES IN CHINA.

W. H. DUNN & CO., 54 Murray St., New York, have on exhibition at their salesrooms an attractive line of dainty articles sure to meet with the approval of jewelers handling a line of china. Small plates with gilded borders surrounding figures of men and women dressed in colored raiment are seen, together with a set of six small dishes and a larger receiver. The set makes an attractive berry set. The decorative effects include a conventional design as a border, within which are shown flowers and fruit in their natural colors. Other plates offered by the same house show portraits of beautiful women in colors.



*

NEW DECORATIONS IN LIMOGES CHINA.

A NEW line of Limoges china now to be seen at the New York salesrooms of Charles Ahrenfeldt & Son, 50 Murray St., New York, has among other normal schemes in decoration scroll effects in a variety of patterns. This decoration is distinctive in the new line and is used to produce some very attractive designs. One plate is shown with panel work in green on the border of the plate and with raised gold in the centers of each panel. Plates in gold and white occupy a prominent place in the display. These plates having encrusted gold borders against the white china are distinctly attractive. Plates heavily incrusted in gold work are also shown, as are plates with hand painted roses in wreaths about the borders.

S. O. BIGNEY & CO.

MIRROR FINISH

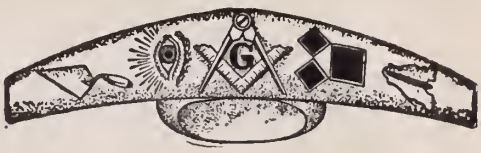
is the name which has been given to S. O. Bigney & Co.'s

HIGH GRADE GOLD-FILLED CHAINS

on account of the beautiful finish. After the links are soldered the gold is somewhat porous. In order to get a perfect finish, the only method known to the art is the method of burnishing. This we apply to our chains. It closes the pores, hardens the surface, gives the mirror finish, and will add one-third to the wearing life of the chain. This method makes for durability and excels all other processes of hardening finish.

Every retailer should have a good stock of our high-grade, gold-filled, mirror-finish Chains, Fobs and Bracelets.

We Make Bracelets of Every Description



Oval and Square, Side Swing and Hinge, beautifully finished and embossed. Pleasing to the eye, and rapid sellers.

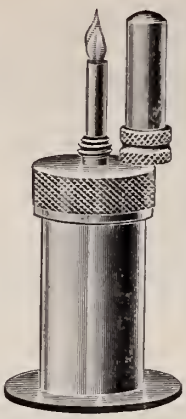
Pearl Setting Plier, No. 327

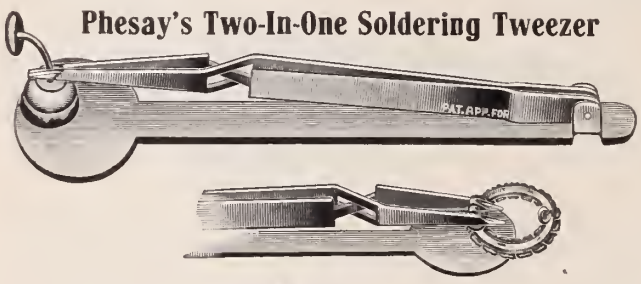
This tool should prove a useful addition to any jeweler's outfit. It is intended for setting half pearls or other stones of similar shape, which are imbedded in gold or other metal. It is used for cutting a burr and forcing it against the stone, either in brooches or rings, thereby holding the stone securely without liability of the tools slipping or breaking the stone, as is often the case with the use of other tools. The lower jaws are half round, to conform to the inner shape of rings. The work can be done more perfectly and under better control than with gravers or other tools used heretofore.



Made of best Swedish steel, nicely nickel-plated.

Price, each, $1.25

Randall Jewel Lamp

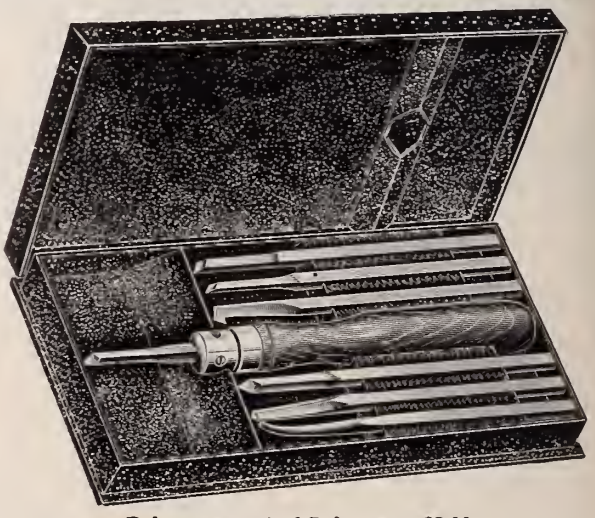


Cut is full size

Price, each, 50c.

Especially designed for work where very small flame is essential and very desirable when cementing roller and pallet jewels, for drawing temper of pivots and annealing small parts of watches. Made of brass full nickel plated. Has rubber washers inside of cap and under the hood to avoid leaking and evaporating.

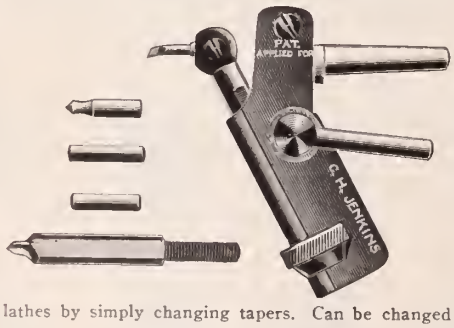
Phesay's Two-In-One Soldering Tweezer



Price, each, 75c.

By using Phesay's Two-in-One Soldering Tweezer the joint catch or Back is handled only once.

SAVES TROUBLE.—Phesay's Two-in-One Soldering Tweezers will solder plumb and true. Will not let article slide when solder flows. Will hold pieces of jewelry with rounded stones or flat surfaces with equal firmness.



Guaranteed "E.F.B." Turning Gravers No. 33

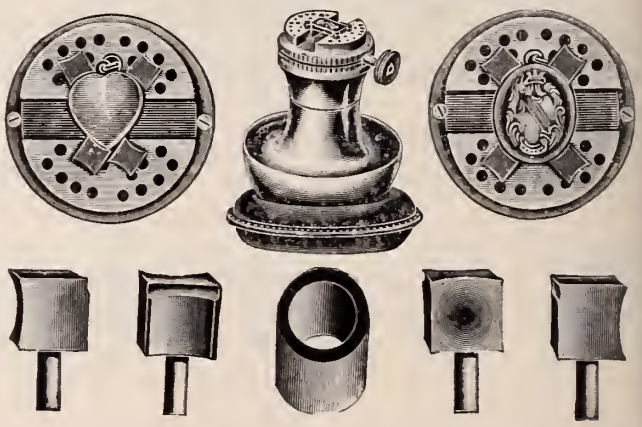
Price, per set of 7, in case, $3.00

The finest set of gravers on the market. Handle is of the finest cocobolo, fitted with nickel plated socket in which the gravers can be moved in or out as desired. The two set screws hold the graver rigid and prevent rocking or chattering. They will be appreciated by all users of fine tools.

Improved Turning and Jeweling Attachment No. 33

New Features

Adjustment for alignment, fine feed, with direct connected screw. Positive binder operated by slight movement of the thumb or finger. Cutters may be changed quickly. No small projecting parts to become lost or broken. Special cutters can be made from wire.



And Other Good Points

One tool may be used on different makes of lathes by simply changing tapers. Can be changed quickly.

All Standard Tapers in Stock

Each attachment is furnished with two cutters, one burnisher and two blanks. In ordering, please give name and size of lathe. **Price, each, $4.50**

"Ideal" Pins for Engraving Blocks

Per set of 4 with 4 pure rubber tubes, 50c.

The faces are milled to various shapes to take regular and irregularly formed articles. The few illustrations show their possibilities. Four pure rubber rings are furnished to slip over the pins when very delicate and highly polished articles are to be clamped. Made for all Standard Engraving Blocks. Please state name of Block when ordering.

EXHIBITION BULLETIN

16th Year WEDNESDAY, JUNE 17, 1908 Vol. VI. No. 4

Criticism is an excellent tonic. Administered conscientiously, and taken in good faith, it leads to betterment. At the beginning we criticised our designers and our workmen, but even while criticising, we worked with and aided them. To-day, their best efforts are their everyday efforts. They give all they know—put their whole strength of purpose into their work.

Our new PEARL AND DIAMOND COLLARETTE EFFECTS could only be created by a thoroughly harmonious and skilled organization such as ours. They will be unique; still we do not lose sight of the fact that commercialism and moderation in prices are essential.

When you visit our SIXTH ANNUAL EXHIBITION, to be held at our offices, from AUGUST 24th TO 29th, INCLUSIVE, you will see our thoughts fully expressed in every detail of all our productions. Our stock will be so comprehensive that one will see here all that the old or the new World produces, which merits a showing.

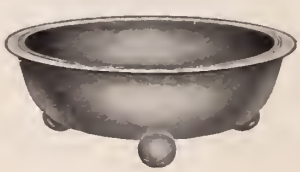
Sternau Ash-Receivers

have the elegance demanded by the jewelry trade. Made in unique shapes and handsome finishes, they delight the smoker, hence their popularity.



No. 880—Diameter 4⅛ in., made in Velvo, Old Brass or Silver-plate

Has two shutters forming an upper bowl into which the refuse is thrown. When the handle is turned the ashes or stub of cigar or cigarette fall to the bottom.

Send for illustrations and prices of many styles

No. 929—Diameter 3⅞ in. Made in Polished Brass.

With the parts nested.

Can be used for one, two, three or four persons, thus embracing economy as well as convenience.

No. 929
With the parts separated

ENGELSMAN'S PATENTED COMBINATION "GEM" DISPLAY RINGS and ADJUSTABLE STONE HOLDERS

MEET A LONG-FELT WANT

THEY ARE MONEY-MAKERS AND MONEY-SAVERS

UNMOUNTED STONES of any size and shape can be displayed advantageously, as is herein illustrated. Your investment in stock can thereby be *decreased,* as you need not mount them up in expensive settings. Your sales will also *increase* by being able to exhibit unmounted stones. The prices are *low* enough to induce you to buy them and *save* you from incurring frequent losses caused by the awkward handling of the tweezer when your customer desires to examine unmounted stones. Try them. For sale by all jobbers.

Due to greatly improved automatic machinery and reduced cost of production, we are now quoting these as follows:

Sets of 18 (full set), in box,			**$6.00**
" " 12		" "	4.00
" " 9		" "	3.00

Why Do Some Succeed While Others Fail?

People start in business with the same advantages and the same opportunities, yet you are no doubt acquainted with many firms who have been in business for twenty to forty years, and yet they do not progress, but are shipping $40,000 to $50,000 a year while we have been in business eight years and are shipping ten times that amount.

¶ There is a reason. Things don't happen in this country without a reason. ¶ The man who is generally considered lucky is the man who leaves nothing to luck. ¶ We are live-minded, red-blooded men of business, with eyes, ears and brains open all the year around for new ways to make a dollar. Come in with us, we may help you.

R. BLACKINTON & CO.

Established 1861 TRADE MARK SILVERSMITHS

FACTORY, NORTH ATTLEBORO, MASS.

We expect to occupy our new offices the last of June. Our Mr. J. R. Morss will be pleased to receive a call from his friends in the trade, and will be prepared to present our many new ideas for the coming season—which will be a large addition to our already popular line.

Here is another example from our leading line of Sterling Buckles and Belt Pins.

THE

"Merry Widow Earring"

is the latest addition to the list of attractive articles of feminine adornment, and one which is sure to be popular. We have them — as we always have everything that is in demand and up to date.

Earrings are becoming more stylish right along, and we carry a large line in screw, as well as pierceless. Write for selection.

Mr. RETAILER:

There is but ONE line of Raised Gold Decorated Watch Cases in this country.

You may see COPIES, IMITATIONS and HONEST ATTEMPTS,

BUT

the Raised Gold ARTISTS in America to-day are employed on the products of the SOLIDARITY WATCH CASE CO.

This is a bold statement, but you won't hear it questioned.

Our 1908 line far surpasses anything we have ever shown, and at no advance in cost to you. Your jobber will send selection upon request.

Sash Buckle Pins

AMONG THE NEW Summer Goods now coming from this factory is an impressive line of Sash Buckle Pins.

The demand is assured because Fashion decrees that they shall be an essential of feminine attire.

Style and quality are assured because the Buckle in all its forms has always been a notable specialty here.

THE DESIGNS are the very latest. Applied trim and Hand Engraving furnish many attractive decorations. Plain examples for those who choose simplicity. In some, well selected stones are used to advantage.

Altogether the line is seasonable, safe, moderately priced and profitable. What more need be said?

CAMEOS

KEEP abreast of the times and show a good line of Cameo jewelry for your Fall trade. It is not our intention to presume, but this is our advice to the Jobber.

Write to-day for our booklet showing the latest in Cameo Brooches and Scarf Pins. Except the penny for the postal, it is free for the asking.

10 KT. Some stick to an inferior grade because their fathers used it, others because they have given nothing else a fair trial; but when buying 10 K. jewelry why not insist that it be 10K.? The only absolutely sure way to protect yourself and trade is to demand stamped goods. For years our Trade-Mark has stood for honesty and quality in gold jewelry. Just give the W. E. R. Co. line a "look over."

Send for further information regarding our extensive line.

Roller Chain

OUR SPECIALTY

Do not forget that we will continue to show the best line of these goods on the market, in Fobs, Bracelets and Neck Chains. These wear longer, give better satisfaction than any metal fob made, and our designs are up-to-date. Also our line of chains of all kinds finds a ready market among the best trade, both in 1-10 and a medium wearing grade.

We also make a nice line of Brooches, Hatpins, Scarfpins, Barrettes, etc., that should demand your attention.

Ask your jobber, and if unable to obtain them from him, advise us who he is, and we will make arrangements for you to get them.

B. S. FREEMAN CO.

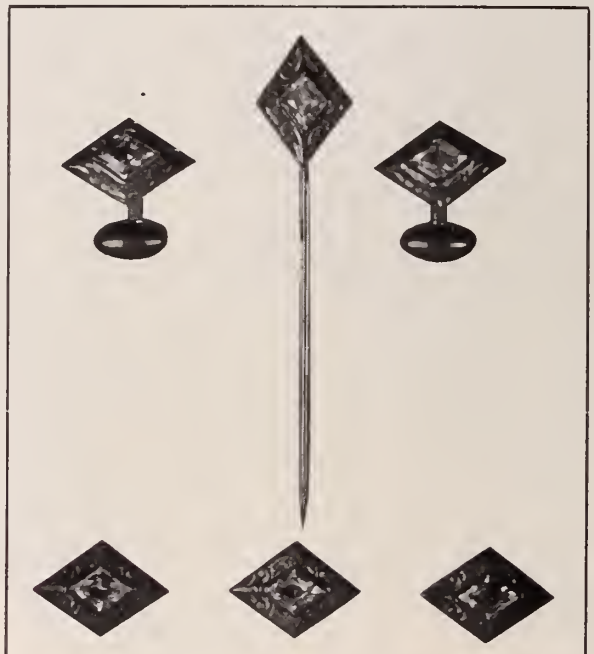
Jewelry which gives Distinct Pleasure to its Wearer



This can be truthfully said of the F. & B. New Fashion Collar Pin and Supporter. The lower pin and support are in one piece, the upper pin being movable, and the entire support is worn on the outside of the collar, thereby adding a dainty touch to the Ladies' neckwear, and at the same time doing away with uncomfortable inner support. With many unique designs we are now ready for the Spring Season's orders.

Salt Cellars.

By CHARLES A. BRASSLER.

SALT, as an accompaniment to food, is a necessity to the human race, and the use of it is older than civilization. Receptacles for this condiment were naturally among the first household dishes of the rich, and they were a no less indispensable accessory to the meals of the Egyptians, Assyrians, Greeks, and Romans than to the modern table. The ancients scattered salt over their sacrifices upon the household altars, taking it from the same vessel which held the supply for other uses, and the *salinum* was an object of veneration to the whole family. Even the people of the poorer classes took pride in owning a silver *salinum*, if their means would allow it. The salt cellar of the Greeks and Romans was probably a shallow dish with a foot, but it seems not to be absolutely identified among the household dishes which have been preserved.

The first accurate descriptions and pictures of salt cellars are from the period of the late Middle Ages, and existing specimens date back as far, perhaps, as the beginning of the 15th century. At that time, as now, there were large salt vessels for use in the kitchens, and smaller ones for the table. The former were made of wood, with a cover, and could be hung upon the wall. Frequently, they were carved. In the Cluny Museum is one of these, from the 15th century, which represents a clown's head, the cap forming the removable cover. The small salt dishes for the table were of wood, earthenware, glass, or metal. At the ordinary daily meals it was customary for each person to receive a piece of bread hollowed out and filled with salt.

Persons of wealth possessed costly salt dishes made of silver and gold, enamel, crystal, and semi-precious stones, in every conceivable form, and among them were masterpieces of the goldsmiths' art. In the inventory of the household possessions of the Duke of Anjou, 1368, 24 costly salt cellars were recorded. The City of Paris presented to Charles le Bel a large salt cellar in the form of a ship, the emblem of the city. Emperor Charles V. had a large collection of salt cellars, among them one, especially admired, of German workmanship, decorated with rubies and pearls. A clock was concealed in the foot, and on the cover was a little firearm of gold and enamel, so constructed that it could actually be fired. The salt cellar made by Benvenuto Cellini for Francis I., now in possession of the Austrian royal family, is celebrated, and has been made familiar in pictures. Such richly decorated salt cellars, in plastic forms, were placed in the center of the table as ornaments.

In the 17th century the monumental character, so to speak, of the salt cellar, began to disappear. The inventory of the household treasure of Louis XIV. describes 105 salt cellars, but the style now changes from large decorative table pieces to delicate little vessels for individual use. Granchez, Marie Antoinette's jeweler, brought into fashion charming little salt cellars of blue crystal in silver filigree holders.

There were recently sold at a prominent art sale three salt holders which showed the excellence of the work done from 1815 to 1845. One was of English make, about

SILVER GILT SALT CELLAR, XVII. CENTURY.

1820, in the form of a boat, made of the finest cut glass, the holder of silver, simply but beautifully shaped. Upon it appeared the lion, the emblem of London, a man's head, an anchor, and the initials M. B. T. The second one was made about the same time in Copenhagen. It was of cut glass and embossed silver. The third was from Berlin, about 1832. The foot and the shell-shaped dish, fire gilt, were embossed, the birds which made the decoration were each in two parts, soldered together.

The illustration appearing herewith shows a fine specimen from the collection of Prince Karl of Germany. It is of silver-gilt, square, with masks and scroll work, eight centimeters high, and was made some time during the 17th century.

W. W. Spaulding has purchased the business of Peter C. Peterson, Waverly, Kans.

The firm style of Samuel C. Evans & Son, Milford, Del., will hereafter be known as Evans & Sons.

A Notable Automobile Race Trophy.

THE Savannah Automobile Club Cup, which has been manufactured by the Whiting Mfg. Co., New York, for Theus & Co., Savannah, Ga., and of which an illustration appears on the cover of this week's issue of THE CIRCULAR-WEEKLY, is a noticeably important piece of presentation silverware. From a technical point of view it is a significant example of all that is best in modern silversmithing. Its design gives evidence in its suggestive symbolism of a very thoughtful recognition of the particular circumstances under which the challenge trophy is annually to be raced for. A markedly decorative value also has been imparted to the suggestions and ideas of S. E. Theus by the artists and craftsmen of the Whiting Co.

The City of Savannah is the home of the club presenting the cup—the leading seaport of the State of Georgia, whence are annually exported to the marts of both hemispheres many thousand bales of cotton. It is entirely fitting, therefore, that the very base of this Georgian trophy should consist of a conventional but artistic treatment of the cotton bales from which is derived so large a proportion of Savannah's wealth.

The body of the cup itself has afforded the designer an opportunity for an even wider range of suggestions. It was Gen. James Ogelthorpe who, early in the 18th century, conceived and executed the plan of founding an English colony between the Savannah and Altamaha rivers, to which was eventually given the name of Georgia, and so the stern visage of this former companion of the great Duke of Marlborough quite fittingly forms the decorative center of the ormentation of the body of the cup. This portrait and the frame which surrounds it are admirably modeled in relief.

Flanking the Ogelthorpe bust on either side are etched two contrasting scenes. The one shows the primitive method of transportation employed by the Creek Indians in the year 1783, when Ogelthorpe first landed at Savannah; the other represents a modern automobile speeding down a typical Georgian highway.

The minor details of ormentation are equally well thought out and considered. Branches of Palmetto, Live Oak, the latter picturesquely draped with the characteristic moss of the southern States, surround the relief portrait and the etched scenes. Bolls and leaves of the cotton plant, decoratively treated, mask the junction of the massive handles with the body of the cup.

The form of the magnificent vase-like cup, which is so appropriately decorated, is most effective; the proportions are excellent, and the lines majestic in their reticent simplicity. The cup is 21 inches high, or 26 inches, including the base, and 21 inches across the handles. It weighs 246 ounces.

Thief Throws Pepper in New York Jeweler's Eyes and Escapes With Valuable Earrings.

Wednesday of last week, about 5 o'clock in the afternoon, a man called at the store of J. Underhill Kip, 175 Greenwich St., New York, and succeeded in getting away with a pair of screw earrings valued at $250, after throwing pepper in the jeweler's eyes. He was pursued, but escaped.

Mr. Kip said that the man had visited his place at least on three other occasions and had each time inspected the earrings. The last time he called he brought with him a ring containing a stone weighing about five-eighths of a carat in a tooth setting, which he represented as wishing to exchange in part payment for the earrings. Mr. Kip said he would allow him $50 on the ring and the earrings were placed before the prospective customer. While the jeweler's attention was slightly distracted the man seized the jewelry, and, throwing red pepper at the jeweler's face, made his escape. Mr. Kip followed him to the street, but soon gave up the chase.

The earrings contained two stones, one of which was a little larger than the other. The man is described as being about five feet, five inches in height, of stocky build and weighing about 130 pounds. When he visited the Greenwich St. store he was plainly dressed, and Mr. Kip said he did not look like a man who could afford to buy earrings of the value of those taken. The police were notified, but as yet have found no clue to the missing man.

Sale of Ivory at London Shows Lower Range of Prices.

WASHINGTON, D. C., June 13.—Consul-General Robert J. Wynne, in response to a request, makes the following report on the quarterly sale of ivory in London on April 30:

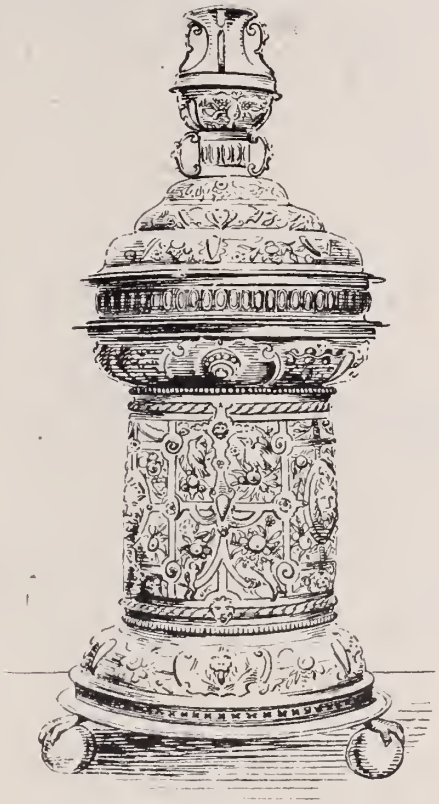
A total of 85½ tons of ivory was offered for sale, comprising 27 tons Zanzibar, Bombay, Mozambique and Siam, 7¼ tons Abyssinian, 32¾ tons Egyptian, 7½ tons West Coast African, one-half ton Lisbon, 10¼ tons "land carriage"; in addition there were offered for sale one-fourth ton sea-horse teeth, one-half ton boars' tusks, three-fourths ton rhinoceros horns and 7¼ tons waste ivory.

The feature of the sale was the preponderance of large and medium teeth from Bombay, Zanzibar, Egypt, etc., of which a good portion were of fine qualities. For these teeth the greatest depression was shown in the heaviest declines. Owing to the unusually heavy quantities catalogued—much in excess of requirements—a depressed tone prevailed throughout the sales.

During the sale considerable quantities were withdrawn. In all 37¼ tons were bought at the following prices: Zanzibar, Bombay, Mozambique and Siam, £40 to £72½ ($195.66 to $353) per hundredweight (112 pounds); Abyssinian, £42 to £71 ($204 to $346) per hundredweight; Egyptian, £35 to £70½ ($170 to $343) per hundredweight; West Coast African, £41 to £64½ ($200 to $314) per hundredweight; boars' tusks, 8d. (16 cents) per pound; sea-horse teeth, from 1s. to 1s. 9d. (24 cents to 42 cents) per pound; rhinoceros horns, 5s. 9d. to 15s. 6d. ($1.40 to $3.77) per pound.

REPOUSSÉ WORK AND CHASING*

ILLUSTRATED AND DEMONSTRATED BY AN EXPERIENCED ARTISAN



(*Continued from issue of May* 6.)

DURING the 16th century the practice was started in Germany of leaving the designing of gold and silver work to artists who were not craftsmen, and this has continued until the present day; the practice now being for one man to design a piece of work, another to do the smithing or "raising," another the fitting; if any ornamentation enters into the design it is handed on to another man, and so on, with the result that all individuality is practically destroyed. Among the more important of the designers may be mentioned Holbein, Dürer, Hopfer, Aldegrever and Altdorfer, and many of their original designs are still to be seen in the German and British museums. The engraving at this period in Germany reached a high standard of excellence, the heraldic work especially being very bold and quaint. One of the most famous of engravers at this time was Theodor de Bry, who, although a Belgian by birth, worked in Frankfort-on-the-Main. He, like the other so-called "small masters," confined himself to the working out of ornamental details, never carrying out a complete piece of work.

Before an apprentice was admitted as "master" by the Guild of Goldsmiths in Nuremberg, he had to make three pieces of work in proof of his ability. The most important of these was a lobed cup, the model for which was supplied by the Guild. Two of these so-called "masterpieces" are now in England—one in the British and the other in the Victoria and Albert Museum. They are similar to one another in general outline, differing only in details. The bowl of the cup in each case is based on the shape of the columbine flower, and is supported on a three-lobed foot with a stem carved with rams' heads, beautifully finished. That in the British Museum is often wrongly described as the "Cellini Cup."

Much of the secular plate made in Germany owes its origin to the custom that prevailed in the 16th and 17th centuries of presenting a cup at every local or domestic event of importance. During the 17th century many of the drinking cups were made in human or animal forms, the most important being the so-called *"Jungfrauenbecker"* (wager cups), in the form of an upright female figure holding a revolving cup above her head. When reversed, the figure itself formed the larger cup, and, both being filled, the gentleman had to drink the contents of the large cup and then turn the figure the right way up again and present the small cup to the lady without spilling any of the wine in the process.

The largest and most complete collection of German silverware of the Renaissance period now in existence is the treasure of Lüneberg, now preserved in the Kunstgewerbe Museum in Berlin. Although the largest still in existence of one town, it gives but a faint idea of the vast quantity of plate owned by the municipalities of the old German cities in the 16th and 17th centuries; the collection consists of 36 pieces, a small percentage only of the 255 pieces the old inventories show the town to have possessed in 1610. It is an interesting collection, as it shows the gradual transition from the Gothic to the Renaissance style.

STANDING SALT, SILVER GILT, 1586.

Most of the pieces were made for secular purposes in the 15th and 16th centuries.

The Green Vaults at Dresden also contain magnificent examples of German Renaissance work, including some of Wentzel Jamnitzer's and Dinglinger's best work. Germany has more secular plate of this period than any other country, owing to the extraordinary commercial prosperity and civic development which took place at that time, as a large proportion of the orders that the workshops received came from the various city corporations, or from persons desirous of making them gifts.

In England the "revival" made much more rapid progress in the artistic crafts than in achitecture. During the wars of the Roses, practically all plate and jewelry had been destroyed, and the crafts had sunk to a very low ebb; as regards church plate, much was destroyed at the time of the Reformation, and only a very few pieces of plate are now in existence earlier than the Tudor period. With the accession of Henry VIII., who was very wealthy, large sums were again spent by him and his court on plate and personal ornaments, and, following on the wars, a general revival took place. Holbein, who was a friend of John of Antwerp, working in London, designed much of the plate and jewelry during this reign; a design by him for a cup for Queen Jane Seymour is kept with a number of other designs for jewelry, etc., in the print room of the British Museum.

The marking of plate in Great Britain, already prescribed by statute in 1300, had become fully developed by the 16th century, when the date letter, the most important mark, which makes it possible to assign a piece of plate to a definite year, was in general use. Date letters are successions of alphabets, consisting of 20 letters, J, U or V, W, X, Y and Z being omitted; one letter being used in each year. The style of the letters vary, no two series of similar letters following consecutively, and discrimination has been rendered more sure by the enclosing of the letters of each alphabet in shields of distinctive shapes. An extensive knowledge is necessary for the identification of provincial plate, as provincial assay towns all have their separate marks and date letters.

To give some idea of the amount of plate possessed by the nobles and high dignitaries of the State at this period, it may be mentioned that Robert Amadal, the goldsmith of Cardinal Wolsey, in an inventory drawn up in 1518, enumerates, among other things, an image of Our Lady, 300 ounces; six candlesticks, made at Bruges, with leopards' heads and cardinals' hats, chased and gilt, 298 ounces; and of secular plate, 25 plates, 968 ounces; 22 dishes, 451 ounces, and three "chargeours," 197 ounces.

The reign of Elizabeth marked another period of colossal expenditure in gold and silversmiths' work and personal adornment. Elizabeth herself set the fashion in costly dresses and jewelry, as can be seen in portraits of her painted at the time. It is said that when, in 1559, the Earl of Arundel entertained her majesty in his palace, he presented her with a cupboard full of expensive plate that she had used for supper—an example which was speedily followed by other noblemen. She herself sent a case of gold plate to James VI. on the occasion of the baptism of Prince Henry.

Of secular plate of the Elizabethan period several fine specimens are still in the possession of various colleges (notably Corpus Christi College, Cambridge), corporations and museums. The "standing salt," of which a sketch is given, is in the Victoria and Albert Museum, South Kensington. It is a much larger and more imposing object than the salt-cellar of to-day, and, while nominally serving the same purpose, it fulfilled another function when on the table, in marking the honor due to guests of rank who were privileged to sit "above the salt," and among whom the best dishes were served. It is of silver gilt, and bears the London hall-mark for 1586-7. The decoration, which is very characteristic of the period, and carried out in repoussé and chased work, consists of strapwork, bunches of fruit, lions' heads, and birds and beasts. A finial, probably a figure or a lion, is lost from the top.

After the Reformation, the communion cup replaced the chalice. The difference in

shape was considerable, the bowl being much deeper and more beaker-shaped than in the chalice, and the knop was very much modified. The earliest examples date from the reign of Edward VI., but these are very rare, the majority dating from the Elizabethan period down to the Commonwealth.

Mazers, representing the best class of wooden cup, were in use in England until the end of the 16th century. They were without handles, and generally had a silver band with an inscription round the rim. Some of the monasteries had one for every brother, with larger ones for general use. Toward the end of the 16th century the bands round the rim became broader in order to increase the capacity of the cup; but Elizabethan mazers are very rare, only some 50 mazers surviving in all Europe, although they were in use for three centuries. W. S.

(To be continued.)

Miners' Diamonds Advanced in Condition, Held to be Dutiable at 10 Per Cent. Ad Valorem.

Appraiser T. S. Sharretts, of the Board of United States General Appraisers, handed down a decision, recently, overruling a protest by the Sullivan Machinery Co., New York, against the duty assessed on unset amorphous diamonds valued at from $70 to $100 a carat.

For years it has been the practice of the Treasury Department to admit the so-called "miners' diamonds," which are used extensively in the construction of rock drills, etc., free of duty as "miners' diamonds not set."

The department recently came forward with the contention that the diamonds are advanced in value by splitting or cutting, and that they accordingly come under the provision of Par. 435 of the Tariff Law, which calls for an *ad valorem* duty of 10 per cent.

In order to determine the correctness of the Government's action, a test case was brought, and the decision just rendered makes the "miners' diamonds" dutiable at 10 per cent.

The diamonds are technically known as carbonado, and those under protest were from two to three carats in weight, about the size of a small bean, and of a reddish color.

In handing down his decision General Appraiser Sharretts said in part:

The phrase "precious stones, including miners' diamonds," possibly is indicative of uncertainty as to whether miners' diamonds are precious stones. For tariff purposes, however, no element of doubt exists that under the provisions of Par. 545 they are included in such classification, and would seem to be subject to all of the conditions essential to the free entry of precious stones. The words "not set" must be given some force and effect, and were it necessary that all carbonado must be broken or split to size to fit it for use as miners' diamonds, we would reach the conclusion that by specific enumeration they were entitled to free entry. But such is not the fact. Indeed, the invoice now under consideration includes three stones in their natural state, suitable for and intended to be set in drills without being changed in condition by any process.

A reference to former tariff acts relative to diamonds and other precious stones throws light on this subject. The tariff act of June 6, 1872, placed upon the free list "diamonds rough or uncut, including glaziers' diamonds." This language was reproduced in the act of 1883, and under this provision it was held that glaziers' diamonds were free even though set. Mindful of this ruling, Congress, in the act of 1890, Par. 557, provided for "diamonds and other precious stones, rough or uncut, including glaziers' and engravers' diamonds, not set, and diamond dust or bort, and jewels to be used in the manufacture of watches." Manifestly, the inclusion of the words "not set" was to cure what Congress regarded as a defect in the prior act. Certainly there was no manifest intent that all miners' diamonds, whatever their condition, were to be free if unset, for the cogent reason that miners' diamonds were first provided for denominatively in the tariff act of 1894, while the words "not set" appeared in former acts, and were inserted, as already stated, to eliminate from the free list glaziers' and engravers' diamonds set.

Grammatically, all the qualifying words applicable to diamonds and other precious stones are alike applicable to the articles which by terms are included in the list of precious stones. Nor can we discover any intent on the part of Congress to give to the language employed any meaning different from the common understanding. It has been judicially held that the act of 1897 is a protective, as well as a revenue measure. To the cutters of precious stones in this country was given a protection of 10 per cent. to offset the cheaper labor of Europe. The cutting of miners' diamonds at home was an established industry at and prior to 1897. The industry required skilled labor and there is no plausible basis for assuming that Congress intended to protect the cutting industry in one class of precious stones and deprived another class of the same measure of protection. Indeed, we have a legislative interpretation that the contrary was intended.

The act of 1897, by the language employed, limited the free entry of the first class to such stones as were not advanced in value by a cutting process. Diamond dust or bort, which latter is not cut in this country, were allowed to remain free, while on jewels for watches or clocks a duty of 10 per cent. ad valorem was laid in Par. 191 to protect the domestic cutters. This would certainly seem to be indicative of congressional intent to protect the cutters of all precious stones in this country to the extent of 10 per cent.

An attempt has been made to show that the miners' diamonds in question have not been advanced in value from the original condition by any process, but the evidence upon this point clearly refutes this proposition. It is shown that the process of breaking or cutting miners' diamonds involves a loss in waste of from 15 to 30 per cent. besides the cost of cutting; hence, it follows that the stones in question have been increased in value to a corresponding degree. We accordingly find as facts that the articles in dispute are miners' diamonds, not bort, and that they have been advanced in condition or value from their original condition by cleaving, splitting, cutting or other process, and hold that they are excluded from free entry under Par. 545.

Exports of Jewelry, Clocks, Watches, Silverware and Kindred Lines from the Port of New York.

WASHINGTON, D. C., June 10.—The following were the exports of jewelry, silverware, optical goods, clocks, watches and kindred lines from the port of New York for the week just ended:

Auckland: 23 cases plated ware, $1,749; 1 case optical goods, $2.39.

Berlin: 23 cases clocks, $1,816; 70 cases clocks, $1,001.

Bremen: 1 case plated ware, $100; 1 case jewelry, $160; 1 case watches, $1,597.

Bombay: 25 cases clocks, $596.

Buenos Ayres: 10 cases plated ware, $1,208; 1 case optical goods, $556; 8 cases plated ware, $975; 1 case jewelry, $818; 1 case watches, $561.

Callao: 1 case silverware, $453.

Christiania: 13 cases clocks, $520; 1 case plated ware, $119.

Colon: 1 case watches, $150; 8 cases clocks, $132.

Copenhagen: 17 cases clocks, $573.

Grenada: 3 cases plated ware, $137; 4 cases watches, $252.

Guayaquil: 2 cases jewelry, $575.

Hamburg: 4 cases plated ware, $1,750; 36 barrels jewelers' sweepings, $1,034; 16 cases clocks, $624; 5 cases optical goods, $488.

Havre: 1 case optical goods, $149.

Havana: 1 case plated ware, $106; 8 cases watches, $573; 1 case precious stones, $12,222; 3 cases jewelry, $275; 21 cases plated ware, $1,387.

Hong Kong: 48 cases clocks, $1,226.

Liverpool: 7 cases silverware, $1,130; 1 case jewelry, $500; 49 cases clocks, $610; 13 cases clocks, $313.

London: 1 case watch cases, $400; 154 cases clocks, $3,878; 1 case silverware, $250; 1 case watches, $710; 1 case silverware, $1,000; 1 case plated ware, $700; 1 case clocks, $100; 33 cases clocks, $1,955.

Rio de Janeiro: 1 case optical goods, $216.

Shanghai: 8 cases watches, $1,128; 48 cases clocks, $840.

Sheffield: 1 barrel jewelers' sweepings, $1,300.

Southampton: 16 cases watches, $2,884; 29 cases optical goods, $22,903; 8 cases watches, $1,362; 2 cases silver sundries, $487; 1 case optical goods, $342.

Stockholm: 2 cases clocks, $118.

Stuttgardt: 2 cases optical machinery, $333.

Sydney: 48 cases plated ware, $2,046; 27 cases thermometers, $102; 96 cases clocks, $1,843; 27 cases clocks, $436; 20 cases clocks, $308.

Valparaiso: 2 cases optical goods, $335; 2 cases watches, $1,317; 2 cases jewelry, $317; 3 cases watches, $191.

Vienna: 1 case watches, $190.

Vera Cruz: 60 cases clocks, $955.

Wilhelm: 3 cases watches, $185.

Members of Pittsburg Jewelers' Duckpin League Hold Enjoyable Banquet.

PITTSBURG, Pa., June 12.—The Jewelers' Duckpin League gave a banquet at the Hotel Henry Monday night of last week, which proved a signal success. Albert Halstead, the donor of the Halstead Trophy, presented the handsome cup to Roberts Team No. 1, the winners of the bowling league. J. M. Wightman, of J. R. Reed & Co., was toastmaster. The league was formed principally for the purpose of creating a better feeling among the retail jewelers of Pittsburg and bring them closer together socially and in a business way. The movement, which was originated by J. C. Crawford, of W. W. Wattles & Sons, has done much toward achieving the desired object.

One of the most interesting features connected with the banquet was the reading of an original poem, prepared for the occasion by J. Frank Tilley. It made a great hit. After coffee had been served, Mr. Wightman was introduced as toastmaster and then Mr. Halstead presented the trophy to the Roberts team. Capt. Wm. Kline, of E. P. Roberts & Sons Co. responded, in a very happy vein and assured that the trophy would not go out of their hands without a hard fight.

The toast "The Champion Team for 1908" was responded to by Mr. Vogel. Mr. Crawford was the next speaker dwelling on the many splendid features, which have cropped out because of the formation of the league and the opportunity for enlargement of its usefulness. W. M. Fowler and F. S. Stitt responded to the toast, "Second Team and Wattles No. 1." Mr. Saran responded to the toast, "Roberts No. 2 High Team Score."

D. W. Brose, Mr. Kurtz; Albert Kunselman and Joseph Senn, of the Reed teams; D. F. Walton, of the Wattles Team No 2; Morris Rhin and Charles Munhall, of the Terheyden Team, and J. Magoriam and Leo Letzkus, of the Vilsack Team, all responded to toasts.

The store of David L. Goldberg, Saint Paris, O., was broken into one night a short time ago. A watchman heard the noise and fired several shots after the burglars, who succeeded in making their escape.

Art Jewelry Exhibited at the May Salon in Paris.

PARIS, May 29.—The exhibit of decorative art which includes gold and silversmithing, is, although much more extensive than that in the previous salon, of much the same general character. The workers in the precious metals appear to have followed on the lines originated by Lalique, Falize and a few other masters of the so-called Art Nouveau style, often a misnomer, for not only the jewelers but the furniture manufacturers and the imitation jewelry houses have debased the creations of these eminent masters of the craft.

These exhibits must be commended for their artistic environment, the exhibitors each endeavoring to devise something suitable for the display of their wares. They are contained in glass cabinets, the frames sculptured and of graceful form, not a vestige of a colored background marring the splendor of iridescent enamels, sculptured silver and repoussé gold work. Remarkable for its artistic character was an irregular-shaped frame of oxidized silver with at each corner a crocodile's head with wide-open jaws. Over the plate glass panel which it enclosed was thrown a veil of the filmiest crepy white chiffon as fine as a spider's web, and against its filmy purity were suspended the various objects. This idea might be easily carried out in the window of a jeweler. Everywhere the conception of ethereal lightness was carried out, veil-like lengths of tulle, or crushed masses against which reposed some artistic object. There was none of the heavy out-of-date velvet decoration once deemed necessary to show off jewelry. In M. Lalique's magnificent showrooms the cases are lined with creamy moire antique. Perhaps this soberness or lack of color is because the art workers of the new school generally impart a touch of opaque or translucent enamel of the most vivid tones into their creations, many of which are on a foundation of white or colored horn. This material is a prime favorite with such men as Falize, Lalique, Bastard, the Count de Suau de la Croix and others.

The Count de la Croix has originated many handsome objects in the form of belt clasps, necklace plaques and other showy ornaments, the stones mainly in brilliant ruby and sapphire tints reproduced in translucid enamels *au grand feu* in high relief in the form of cabochons. These enameled gems admirably reproduce the color and fire of precious stones, and are very effective. Count de la Croix shows a lovely bonbon box belonging to the Princess Eulalie. When open the light sifts through a cover of translucid ruby enamel covered with a delicate gold tracery and set with turquoise. A plaque for the front of a velvet throat band was of oblong shape thickly set with a design in flowers of ruby and sapphire enamel *en cabochon*. Another gorgeous ornament on the same order, but in the shape of a pendant, showed the identical coloring with the centers of tiny diamonds. A charming band bracelet in an openwork gold pattern was thickly encrusted with mock gems of enamel.

Lalique has a large cabinet filled with glowing color, not only articles of personal adornment, but paper cutters and other objects in his own peculiar style, which, however, has now a host of imitators. The light flashed on the iridescent hues of beetle and dragon fly wings set with great cut semi-precious stones; with topaz from the palest champagne hue to the rich smoky tints of sherry wine; with delicate aquamarine, the changeful sheen of opal matrix and the evanescent blue of turquoise with dull agates and amazonite.

White horn appears to be the preferred vehicle of this eminent art worker who has emphasized its vogue. A remarkable ornament at least a foot in length was of carven creamy white horn in the shape of an Egyptian scarab, the body of dark brown and the gauzy wings of translucent whitey brown veined with touches of orange. It was indeed a regal ornament fit for some Cleopatra-like beauty. A gorgeous necklace was composed of a series of plaques of raised and carven gold with a decoration of mandarin-colored enamel in a geometrical setting thickly encrusted with tiny diamonds with here and there a baroque pearl. A unique hair pin showed two swallows in creamy and brown horn carved in low relief, while thrown lightly over the top was a delicate spray of oats expressed in gold and tiny diamonds. Another ornament which might have been copied from the funereal ornament of some royal mummy was in a succession of dragon fly wings in ethereal blues and greens shading into white, with a great oval pendant of aquamarine. There were magnificent paper cutters which would add to the fairy-like suggestions of the Thousand and One Nights or the dreamy romance of Omar Khayam. One showed a knife of brown shaded horn encrusted with a pink-hued poppy with pale green stem and leaves relieved with touches of gold and enamel. Another in a distinctly different style which might impart a sea flavor to a Jules Verne tale of sea adventure showed a swordfish in clouded brown with rapacious head and gleaming topaz eyes.

Floral *motifs* are usually chosen by the workers in horn, as well as bird and butterfly and beetle suggestions. Lienard exhibits many lovely objects—for instance, a back comb of white horn in a design of dandelions with a center decoration of two big baroque pearls, one black and one white. A fuchsia necklace carved in shaded browns with a great pendant of aquamarine was fetching. Pansies in delicate tints of shaded mauve with diamond centers was another head decoration.

A corsage ornament was in brown enamel, and pendant from it was a long cluster of baroque pearls in the form of a bunch of currants, mingled with flowers of white enamel and pale green leaves.

André Royer distinguished himself by exhibiting a ring which might have been copied from that of Caligula or Nero; it was very wide and fashioned in the setting with tiny four-leaved flowers of red gold with ruby centers inclosing a great cabochon amethyst; it was among the few noticeable rings as finger ornaments give but limited scope to the artisan in precious metals.

Quite out of the common was the display of a Swedish exhibitor, Andersen of Christiania, in which was included a card receiver of the palest green translucent enamel with a network of gold wire and bordered with gold-veined lotus flowers in white enamel, while at the base were scarbei in deep purple enamel. The graceful handles were formed of the brown curved bodies of dragon flies with wide-open transparent wings. There was also an electric lamp shade of Russian blue translucent enamel, over which was flung a flight of butterflies in blues and greens, the effect heightened with cabochon gems of the same colors.

Lefevre's conception of a peacock brooch in *ciselé* gold, each eye feather set with a sapphire, with the great head formed of a single topaz, was good.

A very unique ornament which, although artistic, might not give such a suggestion, was a necklace made of plaques of yellow gold in the form of two horses' heads with a woman's form between guiding the fiery steeds by the reins. The center plaque was large, and each one diminished in size until they reached the back; each was connected by several strands of delicate gold and enamel chains. In the same case a rather ponderous but artistic parasol handle made of gold in a twisted and raised design in high relief, the top of a couple of leaves in white enamel from which apparently escaped fruit made of massed and small irregular pearls.

A strange ornament meant to be worn directly in front of the coiffure showed two curved Mephisto feathers in clouded lophophore tints set on a base of the same color and filled in with a pleating of vaporous white tulle. Begonias are a favorite with the art workers in horn and enamel, some exquisite combs and pendants taking this shape, the blossoms dyed a delicate pink or mauve against the creamy translucent background.

A charming and very tiny watch represented the half of an open chestnut burr with the dial plate on top. It hung from a chestnut leaf and half open burr. A pendant made of a number of locust wings of gauzy texture and of exquisite workmanship was in clouded green and white, with a brown body from which hung a topaz at least an inch in diameter; it was a much admired object, emanating from the workshop of Lefevre. A corsage ornament showed a butterfly as long as one's hand and of white, amber and brown horn, with a pendant of carved wheat ears in yellowish white, and as a pendant a splendid amethyst.

Lucien Gaillard displays a case in which was a necklace of idealistic conception made of shaded gold with berries of orange and black enamel and yellow brown flowers, each set with a smoky topaz, while depending from it were strange blossoms as long as the finger, set in a cluster and made of fine gold wire and tiny diamonds. Very remarkable were a pair of natural-colored brown tortoise shell side combs with a novel decoration flaring away on each side for at least three inches, and consisting of

Scientific Precious Stones

The making of a precious Ruby by scientific methods is to-day a fact, known to every layman. The HOPE SAPPHIRE is but a recent achievement, yet its importance is practically established.

These two stones are legitimate additions to the precious stone family; they have come to stay.

To increase your sales put our RECONSTRUCTED RUBY and HOPE SAPPHIRE in your line.

Carried in brilliant cut and cabochon; all shapes and sizes.

Louis J. Deacon, Cape May, N. J. Summer H'dqtrs

a carved oak leaf in brown and amber with dark brown acorns. Pine cones are also liked by *l'art nouveau workers*, a necklace made of tinted gold and pine cones in brown enamel being unique. A singular ring had a setting of a carved gold lamb and a clump of trees in gold and bronze, while the lamb was apparently browsing on a lawn made of an oblong green-clouded semi-precious stone. It was more original than beautiful.

There is a growing fancy for scarf pins with designs of animal or birds' heads in carved gold. In one case a man with a genius for animal portraiture showed a number of scarf pins, the delight of men with sporting proclivities. The Leo Gardey collection was interesting, with its lions, tigers, horses and dogs. In fact, the animals of the jungle and the domestic ones, with the birds of the forest and the barnyard, were amicably ranged side by side. There were, besides, objects for a lady's toilet table—shoe buttoners of tarnished silver, a strange one with the body and head of a sea horse, others with walrus, ram and snake heads, while an ash receiver showed a cat's head in oxidized silver. Pretty was a boudoir clock in the semblance of a Greek lyre, while two chubby Cupids reached up their hands in an effort to vibrate the strings.

There were a few artistic electric lamp shades, one showing two children in gold bronze holding an umbrella of ground glass turned inside out by the wind and acting as a shade to an electric pear. Another was of semi-transparent white horn, sown with immense brown beetles on a ground of white *craquelé* framed in paler brown, through which the light sifted with a delicious mellow radiance. An arrangement consisting of independent pieces which could be set anywhere on the dinner table were wheelbarrows of gilt wheeled by little boys and girls in quaint costumes of semi-nude, some overturned and others upright and freighted with flowers.

The display of fans must not be forgotten, for great originality was displayed in the designs. Bastard showed several, one with sticks of smoky mother-of-pearl with a design of blackberry leaves and fruit in iridescent pearl and enamel with gold veinings. G. Fleur has made a distinct innovation in fans of so delicate a construction that even the daintiest woman would hesitate to carry one, which, however, would not be of the slightest use as an air producer, being entirely of openwork. One was of transparent white horn, each connecting stick as slender as a silken thread in an open pattern, with over decoration of arabesques in some silvery metal, also *a jour*, while flying over the surface was a great and gorgeous butterfly of mother-of-pearl in changeful hues with smaller ones in brilliant red and green. Another was a trellis of metal *a jour* with a straggle of pink and white begonias and green leaves. Still another was of black pearl with green and red high lights, and with a marvelous decoration of carved Cupids dancing across the sticks. These fans revealed most artistic workmanship and were idealistic creations.

COUNTESS DE MONTAIGU.

A. B. Regnier, Marietta, O., has removed to Kansas City, Mo.

New Members Elected, Rewards Paid, and Warnings Sent Out by the Jewelers Security Alliance.

The regular monthly meeting of the Executive Committee of the Jewelers Security Alliance was held on Friday, June 12. The following members were present: Chairman Butts, Vice-President Champenois, Treasurer Karsch, Secretary Noyes and Messrs. Abbott, Alford, Bowren and Brown of the committee. The following new members were admited: Bastar & McGarry, Hammond, Ind.; William Friedlander, Portland, Ore.; E. A. Halbrook, Roodhouse, Ill.; Hammersmith & Co., San Francisco, Cal.; C. L. Heverly, Center Point, Ia.; R. P. Sharick, Chicago, O.; Windolph & Cords, Grand Island, Nebr.; H. W. Yaseen, Balhart, Tex.; Frank E. Alder, Brunswick, Md.; T. O. Phelps, Bradford, Pa.; Benjamin Rice, Tulsa, Okla.; White Jewelry Store, Wilmington, Del.; De Ferrari & Peters, San Francisco, Cal.; F. E. Jenkins, Santa Paula, Cal.; Albert S. Samuels, San Francisco, Cal.; Wm. Van Steenbergen, Sioux Center, Ia.; B. M. Shanley, Jr., Co., Newark, N. J.; Peter Johnson, San Francisco, Cal.; Ferd Saul & Co., Chattanooga, Tenn.; Winstead Bros., Great Bend, Kans.; R. S. Schindel & Co., Newark, N. J.; Strickler & Block, Kahoka, Mo.; Walter G. Watt, Barnesville, O.; Albert S. Reiser, Salt Lake City, Utah; Alexander & Jones, Culpeper, Va.; Stone & Lawson, Fort Collins, Colo.; Paul C. Saehrig, Troy, N. Y.; Juell Bie, Brooklyn, N. Y.

The following reward of $100 was ordeed paid:

No. 50—To Officer Fred Rose for the arrest and conviction of Herman F. Buttron and Thos. Farrell, two burglars, who broke into the store of W. P. Waters, Sheridan, Wyo., May 22, through a rear window from which they pried off the iron bars and stole jewelry valued at about $100. Officer Rose, to whom the reward was paid, noticed in passing that the lights were out and discovered one of the burglars at the back of the store, whom he captured after shooting him in the arm to prevent his escape. The other burglar meanwhile broke through the front entrance and escaped, but was captured shortly afterwards, and both were convicted and sentenced to five years in the Wyoming State Penitentiary.

The Alliance is warning the trade against a man named S. F. Langdon, who purchases goods and gives as security a $1,000 gold bond of the N. Y. & Pittsburg Air Line R. R. Co., which bonds are worthless, only about 20 miles of the railroad having been constructed, and there being no probability that it will be completed. He secured a diamond ring worth about $250 from a jeweler in Wilmington, Del., who is anxious to secure his arrest, and will be glad if any one on whom he calls will have him held for the Wilmington police. This man also visited jewelers in Baltimore, Philadelphia and Newark, N. J., about a year ago.

The Alliance also warns the trade against accepting a check from strangers, drawn on a local bank, which they will ask to have called up on the phone to ascertain whether the check is good or not. They have previously deposited a certificate of deposit on some out-of-town bank with this local bank and drew checks against it before it is discovered that this certificate of deposit is worthless. One of the parties is of light complexion, wears a light striped suit, derby hat; the other is of dark complexion and wears a tan suit and imitation Panama hat, lower front teeth are gold and poses as a granolithic contractor. They secured a diamond ring, three-quarter karat, marked "M. L." valued at about $160, and a plain gold, open-face watch, Waltham, 12 size, movement No. 12525958 worth about $33, from J. T. Allen & Co., Richmond, Va., who would be glad to have any information regarding them or the goods.

Creditors File Involuntary Bankruptcy Petition Against Maurice Brower, New York.

A petition in bankruptcy was filed against Maurice Brower, importer and dealer in pearls and precious stones, 12 John St., New York, in the United States District Court, last Saturday, by these creditors: H. Z. & H. Oppenheimer, $2,670; Oppenheim & Strauss, $2,500; Van Gelder Bros., $943.

The claim of H. Z. & H. Oppenheimer is for a debt upon a promissory note dated Aug. 15, 1907, and due June 15, 1908, on which no payment had been made. Oppenheim & Srauss held a promissory note dated Oct. 8, 1907, and due March 9, 1908, it is claimed. It is set forth in the petition that Van Gelder Bros. also hold a note dated Dec. 2, 1907, and due on Jan. 30, 1908.

The petition alleges that Mr. Brower owes debts to the amount of over $1,000 and is insolvent.

The petition also sets forth that within four months preceding the filing of the petition Mr. Brower admitted in writing his inability to pay his debts and his willingness to be adjudged a bankrupt on that ground.

Judge Adams, in the United States District Court, has appointed William Henkel, Jr., receiver of the assets under a bond of $50,000, upon application of E. A. Karelsen, attorney for Jacques F. Karelsen, a creditor for $6,236, who holds a note dated May 1, 1907, and due in 10 months.

It is stated that the assets are about $100,000 in stock and outstanding accounts. The business was incorporated in March under New York State laws, with an authorized capital of $20,000.

Maurice Brower was originally employed by A. J. Grinberg, and later by Robt. Schafer. In 1880 he began for himself.

He asked for an extension some months ago, and later in March offered a settlement at 50 cents. Several suits are pending against him in the Supreme Court, and a judgment was obtained against him last Friday for $3,227 in favor of the Bank of Prairie du Chien, of Wisconsin.

A man who gave his name as Joseph Farron, and who said he resided in Johnstown, Pa., recently pleaded guilty at a hearing before Burgess Scofield, South Fork, Pa., and was held for court on a charge of breaking into the jewelry store of Samuel H. Nederlander, South Fork, and stealing several watches.

Death of Capt. Henry Lomb.

ROCHESTER, N. Y., June 13.—Capt. Henry Lomb, who with John Jacob Bausch, founded the Bausch & Lomb Optical Co., and known locally as a philanthropist, soldier and one of the most public-spirited and best-loved citizens of Rochester, died suddenly at his country home in Pittsford this morning, aged 80 years. The news of his death was a shock to the city, and everywhere expressions of regret are heard at the death of the man whose whole career was one in which loving service and kindness for others predominated. Father of the Mechanics' Institute, one of the finest educational institutions in the country; one of the organizers of the Rochester Public Health Association and the German-American Society, Captain Lomb leaves these behind as a living monument which will make his name long to be remembered in the history of Rochester.

Mr. Lomb was born in Burghaun, Hesse Cassel, Germany, Nov. 24, 1828, and when nine years old was left an orphan. An uncle cared for him and apprenticed him to the cabinet-making trade. When 20 years old he came to America, locating at Rochester and working at his trade for four years after his arrival. During this time he became a staunch friend of John Jacob Bausch, who at that time was engaged in a small way in the retail optical business. Mr. Lomb had about $60 saved up and he loaned this to his friend to put into the optical business, with the agreement that as soon as business warranted it Mr. Lomb be taken in as co-partner. This came to pass in 1855. The first home of the firm was half a show window in Reynolds' Arcade, and from this little beginning the present corporation grew. At first Mr. Lomb looked after the business in Rochester and Mr. Bausch visited the surrounding towns. After a while Mr. Lomb learned to fit eyes, and he, too, made selling trips.

Business grew little by little, but was still struggling hard when the Civil War broke out. Sacrificing business for duty to his country Mr. Lomb on April 23, 1861, enlisted in Co. C, 13th Regt., New York State Volunteers, and went to the front. He was elected first sergeant, promoted to first lieutenant and finally made captain of the company. Among the engagements in which he took part were Bull Run, Yorktown, Antietam, Fredericksburg, Mechanicsville, Gaines Mill and Savage Station. With his company he was mustered out on May 17, 1863.

After being mustered out he returned to business, and two years later was married to Miss Emilie Klein, who survives him. In 1866 it was decided to abandon the retail business and devote all time and attention to manufacturing. Mr. Lomb was sent to New York as general sales manager. He remained in New York until 1879, when he returned to this city, and since that time residing here and taking an active part in every project for civic improvement and aiding everything which promised to be of benefit to the city or citizens. In 1903 the 50th anniversary of the Bausch & Lomb Co. was celebrated, and in the same year in November Mr. Lomb celebrated his 75th birthday, and on this occasion showed his true and practical spirit of philanthropy by making for each of the 2,000 employes of the firm a deposit in a local bank, presenting them with the bank books.

In 1883 Mr. Lomb assisted in organizing the German-American Society, which has been so beneficial in assisting German emigrants and those who need help. In 1884 Captain Lomb was elected chairman of the Flower City for Memorial Day, and has been re-elected each year and has done much in making the observation of Memorial Day what it is in this city.

So that young men and women could have the proper facilities for obtaining an education which would fit them for vocations, Mr. Lomb in 1885 founded Mechanics' Institute. He gave liberally to this object, and perhaps his greatest act was in establishing scholarships at the institute for children of poor parents and a scholarship for descendants of those who fought for the Union. He also paid for the tuition of many of his employes whom he found worthy.

Mr. Lomb was one of the organizers of the Rochester Public Health Association which has cared for the eyes and teeth of thousands of school children. As a member of the American Public Health Association, he offered through it prizes for the best essays on "Healthy Homes and Foods for the Working Classes," "The Sanitary Conditions and Necessities of Schoolhouses and School Life," "Disinfection and Individual Prophylaxis against Infectious Diseases," "The Preventable Causes of Disease, Injury and Death in American Manufactories and Workshops and the Best Means and Appliances for Preventing and Avoiding Them." These essays were published and distributed throughout the country and accomplished much good.

Captain Lomb was a member of Geo. H. Thomas Post, G. A. R., and took an intense interest in G. A. R. matters.

About three years ago Mr. Lomb went south on account of poor health. While on this trip he contracted typhoid pneumonia, with which he was ill for several months. Later he went to Germany, but only obtained temporary relief. On Decoration Day he took part in the parade and received ovations all along the line. On June 5 he was present at a meeting of the Rochester Public Health Association and appeared very well. Up to until Thursday he visited the factory every day and was in his usual spirits. On Friday he felt slightly indisposed and in the evening his condition was so that a doctor was called. He sank rapidly and the end came peacefully early this morning.

Besides his wife Captain Lomb is survived by two sons, Henry and Adolph Lomb, both active in the affairs of the Bausch & Lomb Co.

H. C. Hessler, Rockford, Mich., has been succeeded by P. K. Jensen.

J. T. Sauter, Patton, Pa., is receiving the condolences of his many friends in the trade owing to the recent death of his wife, Mrs. Mary Blanche Sauter. Mrs. Sauter died after an illness which continued for about three months.

Death of Ernest J. Fisher.

PHILADELPHIA, Pa., June 15.—Ernest J. Fisher, a widely known jeweler of this city, died, Saturday of last week, after a prolonged illness at his home, 4163 Ridge Ave., Falls of Schuylkill, where he conducted for the past three or four years a retail store. Deceased, who was 38 years old, is survived by a widow, Emma Fisher, and two children. The funeral services were held Tuesday, and interment was made in North Laurel Hill Cemetery.

Mr. Fisher was of a family prominent as jewelers in Wissahickon, Roxborough and the Falls of Schuylkill. A brother conducts a store in Roxborough. His father, who was a widely known jeweler and regarded as one of the most expert workers in the trade here, was killed by a fall downstairs about three years ago.

Before opening the Falls of Schuylkill store Mr. Fisher was employed as a jeweler by Simons Bros. & Co. He had been identified actively in civic betterment affairs, and was a member of the Young Men's Improvement Association. He was prominent as a secret society man, and was a member of Palestine Lodge No. 470, F. and A. M.; Oriental Chapter No. 183, R. A. M.; Wyalusing Tribe No. 56, I. O. R. M., and Maurice Hohlfeld Castle No. 25, K. M. C.

Schedules for Jewelry, Clocks and Kindred Lines in the New Tariff of Venezuela.

WASHINGTON, D. C., June 16.—The new Venezuelan tariff is based on the metric system and contains the following provisions relating to the jewelry trade:

Gold, silver and platinum, unwrought, .009c. per kilo.
Jet, unmanufactured, .144c. per kilo.
Glass and crystal ware, not specially provided for, .144c. per kilo.
Tortoise shell, unmanufactured, .241c. per kilo.
Amethyst, .241c. per kilo.
Knives, forks, etc., not elsewhere provided for, .241c. per kilo.
Figures and statuettes other than those of gold and silver, .241c. per kilo.
Spectacles, opera glasses, telescopes, eyeglasses, magnifying glasses and microscopes, except those mounted in gold and silver, but including glasses and lenses for spectacles, imported separately, .386c. per kilo.
Barometers, chronometers and other similar instruments, .386c. per kilo.
Card cases, purses, spectacle cases, except those having any part of gold or silver, .386c. per kilo.
Coral articles, except in gold or silver, .386c. per kilo.
Knives and forks with handles of German silver or white metal, .386c. per kilo.
Articles of German silver or white metal, .386c. per kilo.
Articles of bone, ivory, mother-of-pearl, jet, and their imitations, real and imitation tortoise shell, when not combined with gold and silver, .386c. per kilo.
Watch and clock movements, .386c. per kilo.
Imitation pearls and stones, not set, or set in any other metal than gold or silver, .386c. per kilo.
German silver articles, .386c. per kilo.
Imitation jewelry, .386c. per kilo.
Clocks, of all kinds, .386c. per kilo.
Precious stones, pearls and jewelry; articles wholly or partly of gold or silver; watches of any material, cases, $1.92 per kilo.
Clocks for public use, free.

T. M. Stein, Lancaster, O., has admitted his son into the business, the firm style being now T. M. Stein & Son.

J. G. Turner & Co. will be the firm style of the business heretofore conducted as Turner & Barber, Caldwell, Idaho.

THE NEWS FROM LONDON

Control of Egyptian ivory trade—Extraordinary prices realized for old silver and also for porcelain—Franco-British Exhibition opened but jewelry exhibits not yet ready

London, June 2.—Comment as to the condition of business in the jewelry and allied trades would be fruitless. The less said about it just now the better.

Customs returns show that Great Britain has practically got a monopoly of the so-called "Egyptian Ivory" trade. As a matter of fact there are no elephants or ivory-bearing animals in Egypt, the bulk of the ivory coming from Abyssinia, the Soudan and the Congo Free State, Egypt's part in the business being that of selling and shipping, the ivory being taken to Suez or Alexandria for shipment.

Some extraordinary prices have been realized in the past month in the sale room for old London hall-marked silver. Two of the finest pieces, a rose water dish and ewer bearing the London hall-mark of 1618, made by F. Terry, realized at the sale of Lady Conyngham's collection no less than £4,200. The ewer is only 14½ inches high, has a domed cover surmounted by a small figure of a Roman warrior. The decoration of the rose water dish is composed of Tudor roses, dolphins and groups of fruit quite characteristic of the period. In the center of the rose water dish is the bust of a Roman warrior wearing a typical Roman helmet with comb. Another piece in the same sale was a standing cup and cover of rock crystal mount[illegible] gold enameled in translucent colors. This was only 9½ inches high and 4½ inches in diameter, of 17th century French workmanship, but it fetched £1,995. A Louis XVI. tablet case in gold decorated with mother of pearl and enamel nymphs and cupids fetched £525, and a Louis XV. gold snuff box enameled with flower sprays, dolphins and fruit and having inside an enameled portrait of Frederick Prince of Wales, fetched £315. A silver group representing Diana seated on a stag caparisoned with strap work studded with precious stones, 17th century Augsberg work, fetched £1,312.

Old watch case papers which were used between cases of old double cased watches, are now fetching rather high prices. An old painted one fetched £2 the other day, and very many have sold from 5s. to 10s. and £1 apiece.

An old Sevres porcelain vase designed by Duplasis and decorated with garlands and sprays of flowers on a white ground divided into compartments by turquoise-blue, the same color being on the neck and handles, with white elephants' heads on the neck, sold for 2,200 guineas.

A rose pompadour cup and saucer by Buteux senior, date 1557, sold for 185 guineas, and a coffee cup and saucer by Capello, the gilding by Le Guay, dated 1781, fetched the large sum of 155 guineas. A Sèvres desert service in green and gold fetched 500 guineas and a pair of vases by Noël, dated 1557, fetched 600 guineas, while a pair by Bandouin, dated 1774, 19 inches high, fetched 480 guineas. A little Sèvres canister only 2½ inches high, with Boucher subjects on grass-blue ground, very finely gilded, fetched £200.

The Franco-British Exhibition opened, May 14, under very inauspicious circumstances. The day was dull and exceedingly wet, and as a consequence a regular "damper" was put upon everything, but nevertheless the function was as brilliant as it was possible to be under the circumstances. The Applied Arts building in which British jewelers, silversmiths and horologers are showing was not finished, many of the stalls not ready, and where they were very few goods were on exhibit. The same was the case in the French Palace of Applied Arts. I hear to-day that several parties of Continental trade journalists are coming over to visit the exhibition, while a large party of Parisian watchmakers and jewelers will be visiting the exhibition in July. The exhibition has been backward so far as exhibits are concerned, and I am therefore not in a position to say anything more with regard to them at present.

St. George.

Paris Pearl Market.

Paris, June 6.—There was a decided improvement in the pearl business here during May, and for the greater part of the month the market was lively, many transactions of importance being recorded; toward the end of the month business became somewhat quiet, but there is a distinct confidence in the market, and dealers seem to be disposed to buy whenever prices are favorable. Unless something unforeseen happens in the political or financial worlds there is no doubt that the Fall season will be a good one here, and the trade generally considers the crisis to be now at an end.

American round pearls have been in demand recently.

Cartier, the well-known jeweler, has taken over the business of the old house of Lemoine, a jewelry concern which has existed for over a century, and the two concerns have now been amalgamated.

Leopold Schiff and Fred. Schiff, both of this city, have suspended payment and have been declared bankrupts. Bethold Schiff and Hallerstadt & Singer, both of Berlin, who were closely connected with the embarrassed Parisian firms have also failed.

A. F. Cummings, Holyoke, Mass., Makes an Assignment Under State Laws.

Holyoke, Mass., June 10.—Adelard F. Cummings, a jeweler at 66 High St., Saturday last, filed a general assignment for the benefit of his creditors with the City Clerk. The assignment, which is made under the State laws, only becomes operative after the creditors have assented thereto. The assignees are George M. Boane, J. G. Williams and Oscar Lamontagne.

No schedules of the assets and liabilities has been filed, nor have the amounts been made public. But few of the creditors are in Holyoke, the balance of the merchandise indebtedness being outside of the city.

Mr. Cummings has been in business here for many years, and his assignment, which is said to be caused by the dull condition of business, has caused much surprise.

Sneak Thief Steals Rings Valued at $4,000 from Taylor Bros., Houston, Tex.

Houston, Tex., June 10.—The largest jewelry robbery that has occurred here since a clever thief stole a box of diamonds from the store of the J. J. Sweeney Jewelry Co., took place Saturday, when a thief got away with diamond rings valued at $4,000 from Taylor Bros., 605 Main St. The robbery occurred between the hours of 7 and 8 P. M., when the proprietors and clerks were busy waiting on customers. The thief evidently accomplished his work by reaching over the show cases, pushing open the glass sliding door and extracting the rings, which were in a small patent tray about four by eight inches in size. The theft was discovered about half an hour after it occurred and a description of the goods and the man suspected of taking them was immediately given to the police.

Taylor Bros. believe that the thief was a man who had been in the store early in the week and asked to see some jewelry. He said at the time that he would return later, and did so Saturday evening. At that time he looked at some articles, but again said that he could not decide definitely just what he would buy, but would wait in the store for the lady for whom the necklace, at which he had been looking, was intended. He said that she was to meet him at the store by appointment and with this excuse he stayed in the establishment an hour waiting around. Finally he went away without purchasing, and it is believed by the proprietors that he simply awaited an opportunity when no one was looking to carry off the missing rings.

The stolen rings number 24 and are described as follows:

Plain Tiffany ring, weight 2 1/4 1 16 1/32 1/64 carat.
Plain Tiffany ring, weight 2 1/8 carat.
Tiger claw ring, weight about 2 1/2 carat.
Tiger claw ring, weight about 1 3/8 carat.
Tiger claw ring, weight about 1 1/16 carat.
Tiger claw ring, weight about 3/4 carat.
Tiger claw ring, weight about 1/2 carat.
Tiger claw ring, weight about 1 1/8 carat.
Toothed Roman ring, weight about 1 1/2 carat.
Tiffany two-stone ring, weight 1 1/2 1/8 1-16 1/64 carat.
Tiffany ring, weight about 3/4 carat.
Tiffany ring, weight about 5/8 carat.
Tiffany ring, weight about 1/2 carat.
Tiffany ring, weight about 3/8 carat.
Belcher mounting ring, weight about 5/8 carat.
Belcher mounting ring, weight about 1/2 carat.
Fancy mounting ring, weight about 3/8 carat.
Three small rings in fancy mountings, weight about 1/4 carat each.
Turquoise and diamond cluster ring.
Princess ring, emerald center and two diamonds.
Plain Belcher ring, weight 1/8 carat.
Dog head design ring, diamond mouth, ruby eyes, weight of diamond 1/4 carat.

All of the above, with the exception of the dog ring, diamond and emerald and turquoise and diamond rings, have the letters TB with a number following. The numbers will be found between 400 and 629. All are white and nearly perfect stones.

Cummings & King, Chartley, Mass., Make an Assignment and Creditors File Bankruptcy Petition.

ATTLEBORO, Mass., June 13.—Cummings & King, formerly located in Attleboro, but now of Chartley, made an assignment last Thursday to Attorney Sullivan at Boston. Yesterday creditors began bankruptcy proceedings against the concern. The petitioning creditors are: E. M. Blunt, $400; R. C. Estes, $14, and Louis Wolf & Co., $243.

Mr. Cummings stated that he is in hopes that there will be a reorganization of the concern and that it will be continued. He is, however, not able at this time to give out any definite statement to the public.

The concern is a corporation of which Arthur B. Cummings is president, and Charles Billings is treasurer. The directors are: C. E. Ellis, New York; E. R. Graves, New York; J. W. Miller, Charles Billington, and George H. Randall, Providence, and A. B. Cummings, Attleboro. The authorized capital stock of the company is $250,000 and of this $138,990 was the amount paid in. According to the statement filed with the Secretary of the State in February last, the concern last November had assets of $182,622, and liabilities outside of the capital stock of but $26,994 in accounts payable and $16,638 in floating indebtedness.

The business was established in Jan. 1, 1908, at Attleboro, Mass., by Messrs. Cummings and King, the former had been previously employed by Rhodes Bros. & Rothschild, and the latter with several local manufacturers. The concern did a mail order business under various styles, among others, the Horton Watch Co., Union Watch Co., King Watch Co., etc. The business was incorporated under Massachusetts laws in April, 1906, with a capital of $200,000, and November last year, the capitalization was increased to $250,000. Fred E. King retired in November last year, and took over that part of the business operated under the style of the Union Catalogue Co., about the same time Cummings & King moved from Attleboro to Chartley.

Woman Believed to be Clever "Pennyweight" Thief Arrested at Washington, and Taken to Boston.

WASHINGTON, D. C., June 11.—Mrs. Paul A. Matchette, alias Fitzhugh, alias Annie Silver, who was recently sentenced to the workhouse as a vagrant, has been turned over to the Boston police to answer the charge of stealing a ring worth $750 from the Thomas Long Co., of that city, and has been taken there for trial.

Mrs. Matchette, who, with her reputed husband and another man, was arrested here, May 28, after they had visited a number of jewelry stores in F St., where their actions excited suspicion, is believed to be the woman who cleverly swindled jewelers of Boston, New York and other cities by substituting paste rings in the place of three-carat diamond rings which she inspected. Her photograph was sent to Boston and identified as that of the woman who called at the Long company's store, and her transfer to the Boston authorities followed. Her alleged husband, who is said to be known under the name of P. Albers Castleton, alias Paul Hall and other names, is now in the workhouse under a fine of $40.

Fred J. Little was arrested on suspicion at the time they were taken into custody, but was discharged for want of evidence.

MRS. PAUL A. MACHETTE, AWAITING TRIAL AT BOSTON.

BOSTON, June 12.—The proceedings in the case of Mrs. Paul A. Machette, alias Annie Silver, in the Superior Court to-day were in the nature of a brief hearing, and she was held for trial at a later date.

The prisoner, who is charged with the theft of a diamond valued at $750 from the Thomas Long Co., Summer St., is considered at police headquarters one of the most important captures made recently in this country. She was brought here a couple of days ago by Inspector Conway from Washington, where she was arrested after acting in a manner that aroused suspicion in some of the jewelry stores. The Washington police sent out photographs to other cities, and the diamond salesman at Thomas Long Co.'s store identified her as the woman wanted here.

She operated, it is believed, in company with two men, who did not appear in the store with her, but remained outside to receive the booty and vanish with it upon her exit. Being of fairly good address and well attired, and having funds for travel, she was particularly dangerous to the jewelry trade. She is said to be wanted in New York and New Haven, as well as in Boston and other cities.

It has been stated that she substituted an imitation diamond for the one abstracted, but that description of her method is incorrect, as far as this instance is concerned. She was shown a number of fine unset diamonds of high value, and the papers containing the stones lay on the display table as she arose to leave. The salesman unlocked the door of the diamond enclosure to permit her to depart, and while he was thus occupied she cleverly picked up one of the papers, leaving with it in her possession. The theft was discovered as soon as she got out of the store, but she made good her escape. Although she entered a technical plea of not guilty to-day, it is stated by the Thomas Long Co. that she has admitted her guilt.

The Machette woman's picture is identified by Ed. G. Morris, with Henry G. Morris, of the Jeweler's building, as that of a woman who called at that establishment about the time of the robbery of the Thomas Long Co. She aroused his suspicions by her insistence upon being shown high-priced stones in a Tiffany setting, as she would not consider anything else, she said. He was on the lookout for a substitution game on that account, but she got nothing there.

A portrait of Mrs. Paul A. Machette, arrested at Washington, D. C., to answer the charge of larceny, was shown to a member of the house of William Barthman, 1 Maiden Lane, Friday, and identified it as that of Mrs. Bittigan, who had visited the store, April 5, and ordered goods sent to a fictitious address. After she had disappeared a ring with an imitation stone was found in place of a three carat diamond ring in the tray shown to her. At the store of Charles A. Keene, 180 Broadway, the picture was also identified as that of a woman who had looked at some three carat diamond rings about the time of the Barthman robbery. At this store the woman was watched so closely that there was no chance for her to make a substitution.

The portrait was shown at the Fifth Ave. store of E. M. Gattle and was recognized as a good likeness of the woman who called there on April 27 and succeeded in exchanging an imitation diamond ring for a genuine one. At the store of the Reed & Barton Co., 320 Fifth Ave., the clerk who waited on the same woman who visited the Gattle store, at once recognized the photograph as the woman who had called at this establishment.

PAUL A. MACHETTE, ARRESTED AT WASHINGTON.

Preparations for the Annual Outing of the Jewelers' 24-Karat Club.

Arrangements are well under way by the members of the Jewelers' 24 Karat Club of New York for the annual outing and clambake to be held Saturday, Aug. 1, at the Port-au-Peck Hotel, Long Branch, N. J. This outing has always proven an event of much interest to the members of the club in past years, and it is expected that this year will rival all former occasions both as to attendance and the interest taken.

As the committee is desirous of finishing the athletic events before the clambake is served, it has been decided to leave New York on an earlier boat than it has been customary in the past years. The jewelers will leave Pier 10, North River, foot of Cedar St., on the 9:15 A. M. boat, which will bring them to Atlantic Highlands in good season; from there the trip will be made by train to West End Station, where conveyances will be on hand for transportation to the hotel grounds. The Athletic Committee will announce on the day of the outing the athletic events to be carried out. Prizes will be awarded as usual to the several winners of the different athletic contests. A cup, known as the "President's Cup," donated by Pres. H. C. Larter, will be competed for in some event to be announced later. This contest will be open to members of the club only. All other athletic events of the day will be open to both members and guests of the club. The Athletic Committee consists of J. Warren Alford, chairman; Percy H. Savory, Wm. H. Kenna.

The 24 Karat Club has held an enviable reputation in the past for the souvenirs which have been given at the several social gatherings of the club and this year the committee have decided on a handsome tankard which will be presented to the members and guests of the club, the orders to be issued at a later date.

The Board of Directors of the club wish to impress upon the minds of the members that the conditions at the dining room of the 24 Karat Club have been much improved, both in service and in the quality of the food. The matter has been taken up by the house management and a decided improvement is the result. At a recent meeting 30 associate members were added to the list of the club. There are at present applications for membership to fill out existing vacancies.

The outing committee consists of Charles L. Power, chairman, Archie Rutherford, Samuel Kramer, George T. Stebbins and Harry R. Conklin.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended June 13, 1908.

The U. S. Assay Office reports:

" 13	17,007.55
Total	$308,666.20

Pittsburg Police Arrest British Jewelry Salesmen—Large Amount of Jewelry Recovered — Smuggling Charge Lodged Against the Men.

PITTSBURG, Pa., June 12.—The Pittsburg police, Wednesday, arrested Albert John Walker, alias White and Ralph Waldman, alias Saunders, at the store of the John M. Roberts & Son Co., and it is probable that information charging larceny will be made against both men. The pair had been shadowed all day by detectives. They are believed to be implicated in some diamond frauds, but committed no wrong at the Roberts store. Their actions, however, excited suspicion. The police have recovered from the person of the men and at their room at the Hotel Schenley goods valued in excess of $5,000. The Washington police authorities have telegraphed for pictures of the men.

ANDREW J. WALKER.

RALPH WALDMAN.

British jewelry salesmen, now under arrest at Pittsburg, Pa.

According to a story given out by Capt. McGough of the detective bureau, the men are alleged to have smuggled diamonds into this country from England.

The men arrived in Pittsburg Wednesday and hired an automobile. They circled so many corners about the downtown district that they attracted the attention of detectives, who decided to watch them. The men had called at several jewelry stores. They went to the Roberts store in the morning and called again in the afternoon, when the police took them into custody.

Mr. Roberts made the following statement to THE CIRCULAR-WEEKLY correspondent: "The men came in here and exhibited a diamond ring of pretty good size. It looked as if they had stepped on it. One of the men said that he had fallen out with a girl and that she had returned the ring to him. Having just arrived in Pittsburg, he needed money, and offered to sell the stone for almost any price in order to get cash. I refused, however, to do business with him. I was not in the store when the men called the second time, but the police arrested them as they were leaving the place."

Among the stuff the police recovered were two four-carat diamond rings, one woman's ring with 21 diamonds, three diamond studs, three loose diamonds and two diamond pins. A few of the articles are alleged to have been disposed of here, but it is said that the disposal had not been handled properly.

Yesterday the two men made a confession to Superintendent of Police McQuaide. They said their correct names are Ralph Waldman and Andrew J. Walker. Waldman is from Kingston, Jamaica, and was formerly employed as a jewelry salesman by J. H. Milke & Bros., London. Walker, who first said his name was White, is a native of Salisbury Road, Birmingham, England, and was employed by Abraham Bros., of Birmingham. He traveled extensively through South America, Central America and the Bermudas, and it was while in Central America that he met Waldman.

"Waldman proposed to Walker," said Superintendent McQuaide, in talking the matter over with THE CIRCULAR-WEEKLY correspondent, "that they come to America and dispose of the goods which Walker had in his possession. They smuggled about $8,000 worth of diamonds, market value abroad, into this country by secreting them in the lining of a trunk. Walker says that the firm by whom he is employed does not know he is in this country. We have cabled to Scotland Yard for information about the men, but have not yet heard from there. We will hold the men, however. Walker told me that he had intended going back to Jamaica to get about $12,000 worth of diamonds and jewelry which he had left there, dispose of the stuff here, and then lose himself to the world. Just what possessed the man to do this can only be imagined. The men, I am told, sold some of the plunder to eastern jewelers, but it will be recovered. It is probable the men will be extradited."

It is stated by Superintendent McQuaide that the men were not betrayed by a "pal," which was the first story told when they were arrested. The police received word that the men were acting suspiciously and decided to watch them. All of the goods brought to Pittsburg by the men are now in the hands of the police. It is asserted that the men offered to give the diamonds to the police, if they would let them go, but the police would not listen to that proposition, although the men said they thought that was the way police did business.

Walker's employers will recover at least $20,000 worth of property, market value, because of the apprehension of the men here. In this connection the police are given a great deal of credit for the arrest.

PITTSBURG, Pa., June 13.—An information charging the fraudulent concealment and importation of a large quantity of rings, breastpins, stickpins, watches, diamonds and other jewelry to the total value of $5,000 was made to-day by Surveyor of Customs M. M. Garland against Walker and Waldman, and they have been committed to the county jail pending an investigation by the police into their alleged smuggling operations. The complaint was made before United States Commissioner William T. Lindsay.

It is said a demand for the jewelry alleged to have been stolen will probably be made by the custom officials next week. If it is found that the jewelry was stolen a new complication may arise. In such an event it is believed that the goods would not be confiscated, if stolen without the knowledge of the owner, which is said to be the case. At the surveyor's office the opinion was given that any goods brought into the United States from a foreign country would be subject to the payment of duty, as the Government is not required to make inquiry as to their ownership. The duty imposed is 60 per cent. of the value of jewelry and 10 per cent. on unset stones.

The two men have been committed to jail indefinitely.

PITTSBURG, Pa., June 15.—Supt. McQuaide on Saturday night received a cablegram from the chief constable of Birmingham, Eng., requesting him to hold Waldman and Walker, saying that a representative of Abraham Bros., Birmingham, would sail on Wednesday's boat for America to prosecute the men. It is expected that the men will be extradited. No further prosecutions will likely be entered here until Abraham Bros.' representative arrives.

Death of F. F. Heitz.

F. F. Heitz, one of the oldest retail jewelers in the Sixth Ave. district of New York, died Tuesday, June 9, at his home, 861 Sixth Ave., after a lingering illness.

Mr. Heitz was born Sept. 4, 1833, in Holland, and came to this country over 50 years ago. He was employed in this city for some time by the firm of Lounsbery & Co., and started in business for himself 48 years ago. He had been in business in the locality of his present address for nearly 50 years, and for 39 years had been located at 791 Sixth Ave. No near relatives survive the deceased. A nephew, Henry C. Becker, who has been connected with the business for 25 years, will continue it at the same address.

The funeral was held from the late home of the deceased on Thursday of last week. The interment was in Woodland Cemetery, Dr. Evans acting as officiating clergyman.

J. H. Redditt, Kissimmee, Fla., recently moved his stock into more commodious quarters.

Gems and Precious Stones Cloth, Postpaid, $1.00 Published by The Jewelers' Circular Publishing Co., 11 John Street, New York.

G. S. Mason is starting in the jewelry business at Edmonton, Alberta.

C. A. Senter is about to open a new store at 63 Main St., Brockton, Mass.

The Medford Drug & Jewelry Co. recently began business in Ainsworth, Nebr.

L. Jaccard is preparing to open a jewelry store in the Silva building, Livermore, Cal.

Geo. B. Skinner opened a retail business, June 1, in the new Masonic building, Los Angeles, Cal.

A. De Palmelaere, formerly of Bay City, Mich., opened a retail jewelry store, recently, at Gardena, Cal.

F. B. Hitchcock has engaged in the retail jewelry business in the Pico Heights district, Los Angeles, Cal.

Harry Rosen recently opened a store in Wheeling, W. Va., under the name of the New Goldmine Loan Office.

Wm. P. Hausen opened a repairing shop, last week, for the trade at 306 9th St., in the Burd building, Philadelphia, Pa.

Leon T. French contemplates opening a retail jewelry store in Congress St., South Framingham, Mass., in the near future.

O. H. Wilson, formerly of Los Angeles, Cal., has opened a new jewelry and watch repairing establishment in Redondo, Cal.

J. A. Dodds is opening a new store in Cedartown, Ga. He is making his headquarters at present with H. B. Philpot & Co.

The J. P. Turner Co. was recently incorporated in Buffalo, N. Y., to deal in watches, diamond jewelry, etc. The incorporators were Joseph P. Turner, S. J. Schlehr and John F. Reno.

The Diamond Palace Jewelry Co. has started in business in Dallas, Tex., with a capital of $20,000. The incorporators were: B. N. Clarke, D. L. and Lawrence Hendricks and Wm. Hogg, all of Dallas.

W. M. Chiles and W. C. Buoy, Lancaster, Pa., have formed a partnership and engaged in the jewelry business in the Odd Fellows building, in Springfield, Ill. The concern will make a specialty of diamond setting.

The Hanlon-Thornton Co., Boston, Mass., has been incorporated to deal in jewelry with a capital stock of $50,000. The officers are: John Hanlon, treasurer; Michael F. Hanlon, clerk, and William S. Thornton, all of North Attleboro.

The International Jewelry Co. is the name of a concern which contemplates engaging in the jewelry business in Meadville, Pa. Those interested in the enterprise are: Messrs. Murray, Owen and Coster. The proposed capital is $50,000.

Adrian J. Morais, who was formerly with Leonard Krower, New Orleans, for about 21 years, is about to start in business for himself, and on and after July 1 will occupy quarters in room 509, Godchaux building, New Orleans, La., where he will conduct business as a whole dealer in jewelry, etc.

National Wholesale Jewelers' Association Formed in Detroit, Mich.

DETROIT, Mich., June 12.—The meeting held Wednesday and Thursday in the Hotel Pontchartain resulted in the formation of the National Wholesale Jewelers' Association. Five cities outside of Detroit were personally represented by delegates, coming from 15 firms, while letters were received from 43 other wholesale and jobbing firms pledging their assistance to the organization.

In view of this, after the adoption of constitution and by-laws and the election of officers, it was decided to hold a convention in Chicago Sept. 1, at which time efforts will be made to get representation from all firms in the trade, which can possibly send members.

The officers are: President, Edwin Massa, of the Bauman-Massa Jewelry Co., St. Louis; vice-presidents, George H. Edwards, of Edwards & Sloane Jewelry Co., Kansas City, and Claude Seymour, of Otto

SNAPSHOT OF L. BAUMAN, J. G. SHOENTHALER AND M. R. PALMER.

Young & Co., Chicago; secretary, B. C. Allen, of Benjamin Allen & Co., Chicago; treasurer, Chas. A. Berkey, of Chas. A. Berkey Co., Detroit; directors (one year), A. W. Sproehnle, Chicago; Philip Present, Rochester; C. A. Kiger, Kansas City (two years); H. W. Burdick, Cleveland; W. C. Nock, Detroit; M. Eisenstadt, St. Louis.

No resolutions were adopted, although a number of suggestions were made in regard to trade conditions, which might be favorably treated by the national association. Neither were any set papers read, this having been left to the September convention. The general sentiment was in favor of postponing definite action until such time as a full attendance of all interested in the organization might be had.

Members of nine Detroit firms acted as a welcoming committee, Wednesday morning, as the outside wholesalers came in. They were Frank Kennedy, of the Kennedy Optical Co.; W. C. Noack and Theo. Gorenflo, of Noack & Gorenflo; Richard E. Rogers and Frank Kunz, of Kunz & Rogers; Henry Luths, of Luths, Dorweld & Haller; E. H. Pudrith, of the E. H. Pudrith Co.; Chas. E. Berkey, of Chas. A. Berkey Co.; F. P. Mathauer, of Mathauer & Koester; A. E. Charlesworth, of the Charlesworth Optical Co., and F. A. Drexel.

When the first session was called to order in the convention hall, Wednesday morning, there were present, besides the Detroiters, A. E. Sproehnle, B. C. Allen and Claude Seymour, Chicago; Edwin Massa, H. S. Allers, Al. Bauman and W. Schoenthaler, St. Louis; H. W. Burdick, Chas. F. Keim and C. C. Sigler, Cleveland, and Philip Present, Rochester.

Chas. A. Berkey was chosen as temporary secretary, and an organization committee, consisting of W. C. Noack, chairman; A. Bauman, C. Seymour, H. W. Burdick and P. Present was chosen to consider the draft of a constitution and report later. The name of George H. Edwards, Kansas City, was added later when he arrived after noon with C. A. Kiger, C. B. Norton and C. C. Hoefer, of that city.

At noon the visitors were invited to attend the weekly luncheon of the Wholesalers' Association, of Detroit, in the Penobscot Inn. The parcels post was discussed by members of the local association, and later A. W. Sproehnle spoke for the visiting jewelry wholesalers.

Consideration of the constitution was finished at 4 o'clock, when the afternoon session ended. Automobiles had been secured, and the entire party took a tour of the central portion of the city and then went to Belle Isle, where an appetizing dinner was served on the balcony of the casino.

The return trip was made by boat and an informal discussion was held during the evening on various points.

Thursday morning the constitution was brought up for adoption, and was passed after some debate. It was decided to limit the membership to those wholesalers or jobbers who dispose of the bulk of their goods through regular jewelry channels. Membership was fixed by firms rather than by associations, and it was agreed that no proxies should be allowed, the intention being to get wholesalers together in convention to promote better feeling and concerted action.

The election of officers then took place and the choosing of a city in which to hold the convention. There was some talk of holding the meeting in an eastern city, but it seemed to be the general opinion that more cities would be represented at a gathering in a central city than at one held near the Atlantic coast.

Each of the members pledged himself to work for the good of the organization and to help secure members. Satisfaction was expressed by all at the spirit of good feeling which had sprung up in so short a time and the friendly manner in which discussions of eradicating trade evils was conducted.

When the Thursday session had adjourned, the visiting wholesalers formed a party which went in turn to the various wholesale jewelry houses along Woodward Ave., calling upon the Detroit merchants and bidding them farewell. The delegates dispersed in all directions, some going upon trips while others remained over for a time.

The success of the meeting is a source of great pleasure to the members of the Detroit Jewelers' Board of Trade, which has been active since last November, in trying to inaugurate such an organization. Several suggestions for the correction of trade abuses will be put up to the September convention by the Detroit members.

Death of Edwin Bennett.

BALTIMORE, Md., June 14.—Edwin Bennett, president and founder of the Edwin Bennett Pottery Co., and one of the pioneer potters of the country, died at his home, 2510 St. Paul St., at 10 o'clock Saturday night. Death was due to heart failure, which had recently been aggravated by a fall and the resultant shock.

The deceased was 90 years old and, considering his age, had unusual mental and physical vitality. Until three weeks ago he took an active interest in his immense business and was at the pottery works almost every day.

Mr. Bennett was the pioneer potter of this country, having established the first pottery works in the Ohio Valley and carried the art of pottery making to a high degree. He came of hardy English stock, having been born at Newhall, in Derbyshire, England, in 1818, the son of Daniel Bennett. In 1841 he and his two brothers came to America to seek their fortunes in the pottery business. They went to East Liverpool, O., and there, on the banks of the Ohio river, built a small plant and began to make china ware. They met with success, but were hampered by a lack of proper shipping facilities. Three years later they moved the business to Pittsburg in order that they might ship their wares more easily to growing trade. A year after the removal to Pittsburg Mr. Bennett withdrew from the firm of Bennett Bros., and came to Baltimore, thinking that this city offered still better opportunities for the manufacture of pottery. The present factory stands on the original site, leased 50 years ago.

About 15 years ago the firm of Edwin Bennett was changed to the firm of the Edwin Bennett Pottery Co., Mr. Bennett taking into the business his son, Edwin H. Bennett, as vice-president, and Henry Brunt as manager. Mr. Bennett continued as president, and constantly exercised active supervision of the output of the works.

Death of John J. Armour.

John J. Armour, who was at one time well known in the jewelry trade in New York City, died recently near Doland, S. Dak. Mr. Armour was born in New York City, Oct. 31, 1825, where he spent his early life. He graduated from the Rivington St. Public School, No. 4, in 1840, and obtained his first position with a Division St. stationery store.

In 1844 he went with Peckham & Rumrill, 17 John St., as a traveling salesman in the Eastern States and New York City, and about 1875 he joined with his brother-in-law, Mr. Barnes, in a partnership, the firm style being Armour & Barnes, dealing in American watches. Reverses came in a few years, and Mr. Armour finally went west. The deceased is survived by one son, Lester Armour, who is at present in Chicago, and a sister, Mrs. Barnes, who resides in Brooklyn.

Mr. Armour will be remembered by the older generation in the trade as a pleasant-mannered, kind-hearted man, who enjoyed the friendship of a large circle in the trade.

LETTERS TO THE EDITOR.

As to So-called Scientific Sapphires.

NEW YORK, June 12, 1908.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

Will you permit the undersigned to take issue with your correspondent, A. A. Heller, in his letter published in last week's CIRCULAR-WEEKLY for criticizing your editorial of the previous week, and at the same time permit me to endorse the statement that you made therein.

While I do not intend that this should be taken as contradicting Mr. Heller's statement that the so-called "scientific sapphire" to which he refers is made in the same way as is the scientific ruby, and in fact, is in no way to be classed with the imitation stones which have been improperly imported and sold under the name of "scientific," nevertheless, I wish to call attention to the fact overlooked by Mr. Heller, that, although the stone is made on scientific principles, it has not the same claim to be called a scientific sapphire, or sapphire at all, as has the scientific ruby to be so called.

The scientific ruby analyzed gives exactly the same ingredients as the ruby of nature, namely, alumina about 97+, iron oxide 1+ and silica 1+, with approximately the same specific gravity as the ruby, *i.e.*, 3.97 to 4.05, the same hardness 9 and the same strong manifestation of dichroism. I have never seen the refractive power tested, but I understand that this is the same as the genuine ruby. On the other hand, the so-called "scientific sapphire," to which your critic refers while very near the sapphire in its ingredients, shows by your own analysis, published Oct. 9, 1907, some differences. The natural sapphire consists of alumina 97.5m, iron oxide 1.8, and silica .8, while your analysis showed the stone referred to by Mr. Heller to be made of alumina 99.501, and silica 0.423, with no iron oxide. However, the main difference between the natural sapphire and this "scientific" stone lies in the fact that the natural sapphire shows strong dichroism and this stone shows none. What is more, the natural sapphire has a hardness of 9 and this stone, or at least those that I have seen tested have a hardness of but 8 or less. The specific gravity of the natural sapphire runs from about 3.97 to 4.05 and the specific gravity of the stones in question which I have seen tested have run from but 3.62 to 3.77.

It will be seen, therefore, that except for composition the stone more nearly resembles the blue spinel than the sapphire, and in fact I understand it has been so classified as spinal by gem experts in London and this country. Personally I disagree with the classification, inasmuch as the composition of spinel consists of alumina 70.43, chromic oxide 1.12, magnesia 26.75 and ferrous oxide 0.73, a much less percentage of alumina than does this stone show, and also a large amount of magnesia, which, according to your analysis, is not present in the scientific gem of blue color.

Under the circumstances, therefore, I think that your editorial statement that the ruby is the *only* gem that has been made scientifically is absolutely sound, as the gem cited by Mr. Heller in his answer to you has neither all the properties of the sapphire, nor all the properties of the spinel. In fact, if it were to be given a classification among the gems, it would have to be put in a class between the corundum and spinel groups, and would best be described by a term which is to be mineralogically absurd, a corundum spinel.

Yours truly,
W. E. T.

An Explanation as to a Recent Patent Suit Decision.

NEW YORK, June 8, 1908.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

The item published in a recent issue of your paper regarding the litigation over the Hold-On Scarf pin guard has been misconstrued by some of your readers.

A suit was brought by the owners of the Hold-On scarf pin guard, claiming that the "E. Z." catch was an infringement of their patent. As we have been selling the "E. Z." catch, we were made parties to this suit. We were not manufacturing the "E. Z." catch.

After this suit was brought the owners of the Hold-On scarf pin guard offered their Hold-On clutch to us at such a price that we could sell it at the same price as we had heretofore sold the "E. Z." catch. Our attorneys then advised us that it would be unwise for us to spend money in litigation, when the only advantage that could accrue would be to the manufacturer of the "E. Z." catch. We therefore accepted the offer of C. P. Goldsmith & Co. regarding the Hold-On guard, and agreed that the suit brought on their patent should be settled. There was no trial of this case, and no money consideration whatever.

Trusting that you will publish this letter in justice to us, we are, yours very truly,

ABEL BROS. & CO.

From an Appreciative Subscriber.

KANSAS CITY, MO., June 10.

Editor THE JEWELERS' CIRCULAR-WEEKLY:

THE JEWELERS' CIRCULAR-WEEKLY is the greatest of all jewelry salesmen. The manufacturing jeweler who studies his business knows this. He knows that it reaches over 90 per cent. of the buyers of the trade. These buyers must and will have THE CIRCULAR-WEEKLY as their directory since it is a weekly guide to *live wires*.

The up-to-date jeweler has found this out, but his stagnant rival has not, so while the live man thrives the world goes away from the man who hasn't got time to look over his trade paper.

Yours truly,
SUBSCRIBER.

Utica.

James Redmond, a prominent jeweler in Springfield, Mass., and interested in jewelry manufacturing concerns in Providence and well known to the jewelry trade, was married here Wednesday to Mrs. Myrtle L. Wells, widow of Calvin J. Wells, of the C. J. Wells Co., Genesee and Liberty Sts. The wedding, a quiet affair, took place at St. Francis de Sales Church, Rev. Daniel Doody, the pastor, officiating. William A. O'Donnell, who has succeeded to the interests of Mrs. Wells in the Wells Jewelry Co., and Mrs. O'Donnell attended the bride and groom. A wedding breakfast followed at Boggs' Hotel, and after a trip through the Berkshires, Mr. and Mrs. Redmond will take up their residence at 258 Sumner Ave., Springfield. Mr. Redmond presented his bride with a check for $10,000 and a deed to the handsome home which they will occupy. Mrs. Redmond is a woman of many fine graces, together with rare business judgment. Since the death of Mr. Wells she has had charge of the jewelry business here.

Trade Gossip.

Cross & Beguelin, 31 Maiden Lane, New York, have just issued a most attractive tools and material pocket price list. Copies may be had by writing the firm.

The New England Watch Co. is mailing to the trade announcements of its new policy, which includes a cash discount to dealers, to go into effect Aug. 1.

Joseph Irons, 35 Maiden Lane, New York, has recently put on the market for the Middletown Silver Co., one of the finest lines of pierced goods made in silver plate. The line consists of every article for the table, and can be seen to advantage at the above address.

An attractive catalogue of opera and field glasses has just been issued by the well-known Paris manufacturing house of Lemaire. The catalogue contains a number of half-tone and colored illustrations on heavy glazed paper which are unusually clean cut. The catalogue is bound in heavy drab covers and contains an attractive inside cover page. A copy can be obtained from any jobber.

The *Silver Standard* for May has been issued by the International Silver Co., and as usual contains a large number of well chosen articles that bring out vividly the contrast as well as the similitude between the old days when the publication was established by Rogers Bros. and the present time. The articles are taken from the New York *Sun, Hunt's Merchants' Magazine* and other publications of the period of 1847. One of the most interesting, perhaps, is an article headed, "N. Longworth Is a Problem." In this article a sketch is given of the career of Nicholas Longworth, a lawyer, of Cincinnati. The writer of the sketch cites as a proof of Mr. Longworth's wealth that he had paid $17,000 in taxes in one year, the largest paid in that year by any individual in the United States, except Wm. B. Astor, who in the same year, paid $23,-116. Another article describes experiments with an atmospheric railroad. "The Kissing Habit" is the subject of an article written in an indignant vein. The writer is especially indignant because Amin Bey, the Turkish Ambassador, "had a grand time of it in the Governor's room in New York, having kissed more pretty women in an hour than he had ever seen before in his life." A page is given to an illustrated article descriptive of the store of R. C. Eldridge, Milford, Mass., who sold the company's silverware in the same store for 50 years. Mr. Eldridge's photograph is given together with a sketch of the changes taking place in the town during the half century that he has been in business.

That "Piano Advertising Plan" from Iowa

Pulls prosperity out of a lean year of panic. It never had an equal among advertising and premium propositions for building up trade in the teeth of a gale of adversity. It doubles sales for merchants and puts on subscriptions for the newspaper publishers. And it's brand new to-day.

The smallest merchant can work it just as successfully as the largest. The puzzle of it is that it does not cost the merchant one dollar, but actually makes him big money.

Nobody ever fails at this money-making enterprise who uses my plan and my pianos, which are of uniformly excellent quality. I superintend the manufacture of them myself, so I know.

And let me tell you it would be suicidal for any merchant to give away a cheaply made, inferior piano to any customer if he wants to reap a permanent benefit from the enterprise.

Here is a plan by which the merchant and publisher alike can turn hard times into hard cash, increase their business amazingly literally make two dollars grow where there was one before—and pocket no possible loss for their thrift.

Live Ones—Write me *Needy Ones—Wake Up* *I'll Show You How it's Done*

SALESMEN—Boys with Grit and "Go"—

IT'S YOUR CHANCE. I want a few Reliable Salesmen to Canvass the Retail Trade. Samples in coat pocket. Don't worry trying to revive dead lines. Get one with breath in it now. It's a boom year for you if you connect right. Get wise to the "Iowa Idea."

Kansas and Missouri Jewelers and Opticians Hold Joint Convention in Kansas City, Mo.

KANSAS CITY, Mo., June 13.—The joint meeting of the Kansas Retail Jewelers' Association, the Missouri Society of Retail Jewelers, the Kansas Association of Opticians and the Missouri Association of Opticians, was called to order in this city June 9, and continued three days. The convention succeeded in accomplishing much work, and although four different organizations met together, there were no complications of any sort, everything having been conducted systematically. The entire programme was a joint one, the executive meetings of each association taking care of all business which applied to that association to the exclusion of the others.

This meeting was the liveliest ever held by the Missouri and Kansas jewelers and opticians, was attended by more of them, and still it is stated that at least a third more would have been present if it had not been for the high waters of the surrounding country. Some were absolutely unable to reach this city and others were afraid to venture away from home fearing they would not be able to get back when they wished.

Practically every river in Kansas, Missouri and Oklahoma has overflowed, and railroad bridges have been washed away in every direction. This has badly crippled the transportation companies, and of course made everyone timid about starting on a journey.

The work of the executive sessions of the convention was largely given up to the consideration of plans for the building up of the membership and the preliminary work towards the fight for the passage of desirable laws in Kansas and Missouri next Winter, when the legislatures meet. Each association goes home with an active committee, which will not only be working at the time the legislature meets, but will be working during the election, so the senators and representatives elected will be well acquainted with their desires before they are elected, and will themselves have an opportunity to state which way they will vote on the required laws when presented. This seems like getting at the real inside of legislation, for it is late in the day to go before a legislature with the request that a law be passed, when no effort was previously made to make those elected to that body acquainted with the purpose of the law and the fact that people in all parts of the State were interested in its passage.

The joint meeting was called to order by R. D. Worrell, president of the Missouri Society of Retail Jewelers, and an address of welcome was delivered by C. L. Merry, president of the Kansas City Jewelry & Optical Jobbers' Association, to which Herman Mauch, president of the St. Louis Retail Jewelers' Association made reply.

After the roll call of the four associations, R. D. Worrell, member of the executive committee of the National Retail Jewelers' Association, made a short address, which closed the morning session.

The first address of the afternoon session was on the proposed "Amendment to the National Stamping Law," by George H. Edwards, of the Edwards & Sloane Jewelry Co.

The talk on "Optical Short Cuts," which was next on the programme, was passed over, as Mr. Gowenlock, Clay Center, Kans., who was to deliver it, was unable to reach the city, on account of the floods.

The next paper was by Charles E. Tieman, of California, Mo., on "Freight by Mail," in which he gave a very clear history of the parcels post movement up to the present time, and showed the reasons why the retail jewelers did not want such a law put on the statute books of this country. In summing up, at the close of the address, he said: "The whole matter resolves itself into the simple question: Shall the Federal government enter into a silent partnership with the mail-order concerns and help them to take from me a local patronage that I have long striven for and now rightfully expect to enjoy?"

This was followed by a talk on advertising, under the title of "Publicity," by L. Roy Curtiss, and the balance of the first day was taken up by the executive sessions of the two optical associations.

In the evening everyone went out to Carnival Park, in Kansas City, Kans., to view the sights.

The committee on resolutions, which was appointed by the chair, consisted of Dr. Hatch, Jefferson City, Mo.; Claude Wheeler, Columbia, Mo.; J. C. Haupt, Peabody, Kans., and Walter Sperling, Seneca, Kans. There was chosen one member from each association, and it was decided to have all resolutions coming before any of the associations referred to this committee, and be acted upon as a whole.

The meeting of Wednesday was called to order by Walter Sperling, Seneca, Kans., who is president of the Kansas Retail Jewelers' Association. The first address of the day was by R. S. Davis, Atchison, Kans., the subject being "As the Traveling Man Sees Us." This was followed by an address by Dr. S. W. Lane, on "Optical Legislation."

J. C. Haupt, Peabody, Kans., read the next paper, "Mail-Order Houses," and this closed the programme for the morning session.

The afternoon session was called to order by C. E. Range, president of the Missouri Association of Opticians, and an address was made by Jas. S. Coye, on the subject of watch inspection, advocating the passage of a resolution endorsing the present method of watch inspection.

This talk was followed by a paper on "Good Business," by Frank Yale, of the Kansas City Credit Men's Association, and then Secretary J. A. Runyan, of the Kansas City Manufacturers and Merchants' Association, read a paper on the "Relations of the Retailer to the Jobber, which closed the joint business session for the day.

At 5.30 P. M. the visitors took cars at the Baltimore Hotel, where all the meetings were held, and went out to Electric Park as the guests of the Kansas City Jewelry & Optical Jobbers' Association. They were shown the various attractions, and were given a little spread at Morton's restaurant, at the park.

The first paper on the programme at Thursday's session was "The Good of the Order," by H. C. Carpenter, South Bend, Ind., who was in the city as the representative of the South Bend Watch Co., and gave one of the best talks of the meeting.

This was followed by the address of Dr. B. W. Needles, Kansas City, Mo., on "The Eye in Relation to Health."

Charles S. Sands, Kirksville, Mo., drew the attention of those present, in a very forceful manner, to the fact that the jewelry workmen were not delivering the goods they were expected to deliver, and advocated a remedy in a paper entitled "State Commission for Watchmakers."

Then the joint programme was brought to a close with a few "Chunks of Thought" by S. J. Huey, Excelsior Springs, Mo., who made an extemporaneous address, and took occasion to pound a few homely truths into his fellow jewelers, and at the same time to acknowledge that he was just pounding some of them into himself, as well, and was going home to carry out many new ideas he had been gathering in the past three days.

The last paper of the programme, "The Laborer is Worthy of His Hire," was not delivered, as A. A. Marvin, of Blue Rapids, Kans., who had prepared it, did not happen to be present when it was called for.

At the executive session of the Missouri Society of Retail Jewelers a good showing was made in the way of increased membership, and the interest manifested in the proceedings by the membership is an indication that the association has gone far beyond the experimental stage and could now feel sure of its ground.

The officers elected for the ensuing year were: Claude Wheeler, Columbia, Mo., president; S. J. Huey, Excelsior Springs, Mo., first vice-president; Adam Hafner, Jr., De Soto, Mo., second vice-president; H. L. Raines, Maryville, Mo., secretary; Charles Bard, Sedalia, Mo., treasurer, and C. S. Sands, Kirksville, Mo., George Young, Moberly, Mo., C. J. Burkhardt, Jefferson City, Mo., and F. W. Baier, St. Louis, Mo., members of the executive committee.

The following delegates were elected to the National convention: Wm. Kemper, St. Louis; H. Mauch, St. Louis; C. E. Range, Trenton; Clay Clement, Springfield; G. E. Read, Lebanon; T. H. Baskett, Chillicothe; Chas. Tieman, California; C. S. Sands, Kirksville; Mr. Blanton, Paris; Otto Buder, St. Louis; A. N. Zerweck, St. Louis.

The alternates chosen were: W. W. Whiteside, Liberty, Mo.; Chas. A. Bard, Sedalia; W. H. Meyer, Lawson; E. L. Thurber, Warrensburg; Mr. Walker, Monroe City; Adam A. Hafner, De Soto; A. E. Pittinger, Kansas City; M. B. Gordon, Braymer; T. G. Burkhardt, Jefferson City; Chas. Mount, Marshall.

At the executive meeting of the Kansas

Retail Jewelers' Association it developed that the association had increased its membership during the past year by over 30 per cent., and a great part of this increase was made right at this meeting.

It was decided to affiliate with the National association, and as a result of this move the annual dues were raised from $1 to $2. The entrance fee remains the same, $1, so a new member will now have to pay $3 for his first year.

The following officers were elected for the ensuing year: President, L. E. Armel, Holton; first vice-president, J. W. Phillips, Chanute; second vice-president, Andy Manifold, Beloit; secretary-treasurer, C. C. Stevenson, Lindsborg. Membership committee—C. H. Paxton, Paola; F. O. McCoy, Conway Springs; C. H. Brassfield, Ness City.

The following delegates were selected to the National convention: Walter Sperling, Seneca, Kans.; F. M. Hunt, Burlingame; J. Q. A. Sheldon, Mankato; A. A. Marvin, Blue Rapids; A. D. Harry, Norwich; Alex. A. Detter, Mound Ridge, and J. A. Burton, Horton.

The alternates chosen were: J. Jay Baker, Moline; A. O. Dickinson, Hiawatha; F. E. Pirtle, Council Grove; Harry T. Baier, Salina; J. A. Mosher, Burlington; Geo. A. Killiam, Pittsburg; Louis J. Herzog, Phillipsburg.

The traveling representatives who attended the joint convention in Kansas City last week, realize from the enthusiasm shown by the retailers that these conventions are to be a regular thing in all sections of the country, and that they will be required to attend them regularly with their sample lines. They have been using their different rooms at the Baltimore Hotel this week, and have found this an inconvenient method. They feel that they should have their display at each convention in one large hall, where everything could be shown, and all could be in touch with the retailers at the same time.

The result of this feeling was the organization of the traveling men, themselves, for the purpose of furthering this idea, and to have a working organization for whatever purpose necessary. Ed. S. Villmoare was chosen president of the temporary organization, and C. T. Weibezahn, secretary. After passing a resolution thanking the jewelers and opticians of Missouri and Kansas for courtesies received at their hands, they proceeded to frame up the following, to indicate their views, for the guidance of those who make the preliminary arrangements for future conventions where their lines are expected to be shown:

To the Jewelers and Opticians, and Committees Having Exhibitions in Charge, of Missouri and Kansas, and all Future Conventions:

The travelers represented here, calling on the jewelry and optical trade, formed a temporary organization, nominating and electing Ed. S. Villmoare, chairman, and C. T. Weibezahn, secretary, for the purpose of discussion of mutual benefit.

Whereas, It has been suggested that perhaps, by a concentration of exhibits, better results to all concerned would be obtained, therefore, be it

Resolved, That we respectfully suggest to all future retail jeweler and optical conventions, that a suitable hotel or hall be secured, so that all visiting representatives and manufacturers, jobbers, and others having wares for exhibit, may display same to mutual advantage, in one continuous space.

Alfred Clark, with Oneida Community, Ltd.,
R. S. Davis, with Ansonia Clock Co.,
H. C. Carpenter, with South Bend Watch Co.,
Committee on Resolutions.

Copies of above resolution to be forwarded to the president and secretary of the various associations.

Signed: C. T. Weibezahn, S. O. Bigney & Co.; Ed. S. Villmoare, D. Allen & Co.; J. I. Minteer, Rockford Watch Co.; W. C. Vandel, Edwards & Sloane Jewelry Co.; C. L. Stange, L. Bauman Jewelry Co.; H. C. Carpenter, South Bend Watch Co.; Carl Wolff, New England Watch Co.; F. C. Merry, vice-president, Merry Optical Co.; C. N. Sheldon, secretary, Merry Optical Co.; J. H. Whitney, Edwards & Sloan Jewelry Co.; Jake Levin, Henry Paulson Co.; F. L. Gibbs, Dennison Mfg. Co.; Mr. Douglas, Dueber-Hampden Watch Works; M. C. Fish, Williamson Pen Co.; L. W. Arnold and W. J. Staunton, Western Clock Mfg. Co.; W. C. Schumann, C. B. Norton Jewelry Co.; P. R. Copeland, Rockford Silver Plate Co.; George Turner, Burley & Tyrrell Co.; E. O. Baumgarten, M. F. Barger & Co.; B. Gordon, Johnston Optical Co.; J. Smith, Buck Silver Co.; E. L. Donaldson, Edwards & Sloan Jewelry Co.; George W. Cureton, Henry G. Lefort & Co.; L. H. Foley, South Bend Watch Co.

The Resolutions.

The following resolutions were passed by the joint convention, after having been approved by the resolution committee:

Whereas, The National Retail Jewelers' Association, in convention assembled at Chicago, in September, 1907, passed a resolution denouncing the present system of railroad watch inspection, and,

Whereas, The subsequent developments have proved that the present system of watch inspection is fair to the trade in general, and,

Whereas, We feel that it is a matter that concerns only the railroads and their employes, therefore be it

Resolved, That the Missouri and Kansas associations instruct their delegates to use their efforts to have the National Association rescind its former action and to discourage any effort to enact laws to change the same, as such would prove disastrous to the profitable trade the jewelers are now deriving therefrom.

Owing to the fact that the passage of the proposed parcels post would place the mail-order houses in a position to increase their business a hundred fold at the lowest estimate, and encourage the establishment of a greater number of such houses, greatly to the detriment of the regular retail merchants as well as the retail jeweler, we desire to place ourselves on record as opposed to this law and to use all honorable means to prevent its passage by Congress.

Whereas, The Missouri Society of Retail Jewelers and the Retail Jewelers' Association of Missouri, at a joint convention in May, 1908, at St. Louis, Mo., most emphatically declared themselves against the use of the words "Solid Gold," as used in both the sale of and stamping of jewelry, as they believed the name to be a misnomer, having no bearing whatsoever as to the quality of the gold represented or stamped as sold gold, and

Whereas, They believed it to be to the interests of all parties concerned, be they manufacturer, jobber, retail dealer of the public, to have the quality of gold represented by the karat stamp only, and,

Whereas, The proposed amendment to the national stamping law would legalize the use of the term "Solid Gold," as it designates a low karat of gold as solid gold, and as we believe this not only wrong in naming low karat gold as solid gold, but we also believe that it will give material aid to catalogue and mail-order houses by having a legal standard of "solid gold," therefore, be it

Resolved, That this convention endorse the resolution passed at the aforesaid St. Louis convention, and place ourselves on record as opposed to the use of the term "Solid Gold," and that we favor only such amendment to the National Stamping Law as will insure the stamping of gold according to its karat fineness only.

We, your committee on resolutions, beg to report as follows:

That we do not favor the bill to regulate the stamping of gold filled, gold plated and electroplated cases in its present form, but we do favor a bill to that effect providing for the satmping of the thickness of gold, as outlined in the old bill, the stamping of the fineness of gold, as expressed in karats, in conformity with the National Stamping Law, and also that they bear a stamp indicating the length of time for which the various cases are guaranteed and for the providing of penalties for breaking any provision of the law

Death of Wm. H. Saxton.

BALTIMORE, Md., June 14.—William H. Saxton, one of Baltimore's leading jewelers, died suddenly Wednesday night, of acute indigestion, at his home, 1327 Mount Royal Ave. He had been at his store that day apparently in good health, and it was after returning from a walk with his wife that he was seized with the fatal attack. He expired before medical assistance reached him.

Mr. Saxton was born in this city, in 1841, and began his jewelry career with George W. Webb & Sons, then located at the corner of Baltimore and Light Sts. He later became a member of this firm, and when it was dissolved launched into business for himself not far from the old firm's location. In 1884 he opened an establishment at 30 E. Baltimore St., where he remained until the great fire of February, 1904. Shortly after the fire he located at 322 N. Charles St., where he remained.

Mr. Saxton was an artistic designer and an expert in judging stones. He designed many artistic and unique pieces in his time. He is survived by a widow and two daughters.

Death of Frederick S. Salisbury.

Frederick S. Salisbury, for a number of years treasurer of the Whiting Mfg. Co., silversmiths, died suddenly on Sunday on his yacht, *The Goblin*, while cruising about two miles from the Larchmont Yacht Club. Mr. Salisbury had been living at his Summer home in Larchmont, and with him on the yacht was his nephew, Grosvenor Parker.

Mr. Salisbury was to all appearances in his usual health and was sitting on the edge of the cockpit when he suddenly toppled over. A hasty examination showed that he was dead. Death was caused by heart disease.

The deceased, who was 57 years old, was a son of the late Henry Salisbury, who was a retail jeweler and spectacle maker in New York City in the early 50's. He was a graduate of Yale University in the class of 1866 and married Miss L. Aletta Wright, of Poughkeepsie, who, with two daughters, Miss Adeline Salisbury and Mrs. Harry T. Shriver, survive him.

Mr. Salisbury was a prominent member of a number of yacht clubs and of the University and Yale clubs.

The funeral will be held to-day (Wednesday) at Larchmont at 11 A. M.

Well-Known Pennyweight Thief Arrested in San Francisco, Cal.

SAN FRANCISCO, Cal., June 10.—The police in this city arrested, on Friday, a man who gave his name as Axel Green, but it is already known that he operated in Los Angeles and other points on the Coast under different aliases. His plan was to enter a jewelry store and ask to see an article. His most common requests were for diamond rings and sunbursts. When a tray of rings was shown to him he was very hard to please and, after a long examination, would go away without making a purchase and substitute a cheap ring for one of the diamond rings.

At other times he would ask to see a sunburst or jeweled locket, and after examining it would object to the price and depart. In a few days he would return and again examine the article, but fail to buy. Later it would be found that a worthless paste substitute had been left in the tray.

Green began to operate in San Francisco last March, but the police were not notified of the thefts until some time in May. Their efforts resulted in Green's arrest last week as he was attempting to dispose of a diamond sunburst in Attell's pawnshop, at Clay and Kearney Sts. Later he was identified by several of his victims and held for grand larceny. Before he was apprehended he had visited many jewelers of the city, and reports from Chicago say that he answers the description of a man wanted for similar offenses there. In this State he has already served terms for petty offenses. Some of the stolen goods were recovered.

W. P. HAMLIN W. E. HAMLIN

W. P. HAMLIN & CO.

Jewelry Auctioneers

W. P. HAMLIN.

THE MEN WHO MAKE THE PROFIT FOR YOU.

We are experienced Jewelers, rapid salesmen and experts in handling fine stocks. We can sell from $2,000 to $5,000 worth of goods a week, and will guarantee you a profit on each day's sales.

We will leave you refreshed, rejuvenated, ready for new achievements, augmented trade, enlarged ideas, your **bills paid,** and the **ready cash for new purchases.**

If you wish to retire from business, we will sell out your entire stock and fixtures to your satisfaction.

We have made the largest and most successful sales ever held in the United States or Canada.

A TESTIMONIAL

STEUBENVILLE, OHIO, April. 12, 1908

W. P. Hamlin & Co. have just closed a four weeks' sale for me, selling over $9,000 worth of goods. The sale showed a profit each day.

They are salesmen of exceptional ability and live up to all they promise. I recommend them highly to any one requiring their services.

FRED W. LABEN.

We just closed a sale for a merchant in Pennsylvania selling $11,000 in fourteen days at a profit of 20 per cent., mostly diamonds and high-grade goods. We can make the same kind of a sale for you.

We guarantee a success. If we fail to accomplish all we promise it will not cost you one cent to make the sale.

If you are interested in the subject of an auction sale, write us, tell us all about your stock, we will tell you what can be done with it and send our reference.

GORHAM WHIPS

A TIMELY HINT

¶ During the months of Summer the demand for Lash Whips and Riding Crops is never-failing and the sagacious Jeweler will therefore see to it that his stock of these is complete and attractive.

¶ Gorham Whips and Crops present in themselves the same recognized standard of excellence as does Gorham Silver. They include Whips of the choicest Holly, with handles in silver-mounted leather or in effectively chased and ornamented silver, as well as Riding Crops of distinctively good "form," whether it be the plain, sturdy, but attractive Man's Crop or the dainty pigskin-covered and horn-handled Crop which is the horse-woman's ideal.

IN another column we publish a letter from a correspondent, answering one published last week which criticized in general the editorial statement in THE CIRCULAR-WEEKLY that the scientific ruby was the only scientific stone that could be properly so called, and that though attempts had been made to reproduce other gems in the laboratories they have not been sufficiently successful to permit the product to be termed scientific gems. The letter published this week so thoroughly takes up the subject in answer to the correspondent who criticized our statement that we feel there is nothing to add on our own part.

Another Clever Thief in Custody.

ONE by one the thieves and swindlers who have been operating extensively in the jewelry trade are being gathered in by the police, and if the woman who was arrested in Washington and taken to Boston, as noted in another column, turns out to be the same party who has swindled jewelers in New York, Boston and other cities by substituting paste stone rings for genuine diamonds, practically the last of the crooks who have been operating recently in more than one State has been put under lock and key. There seems to be little doubt that the woman who Major Sylvester's officers took into custody on a vagrancy charge, is the party wanted, as her portrait has been identified by two or three jewelers of New York on whom she called, and was also identified by one of the victims in Boston. It was on the strength of the latter identification that the woman was brought to the Hub for trial.

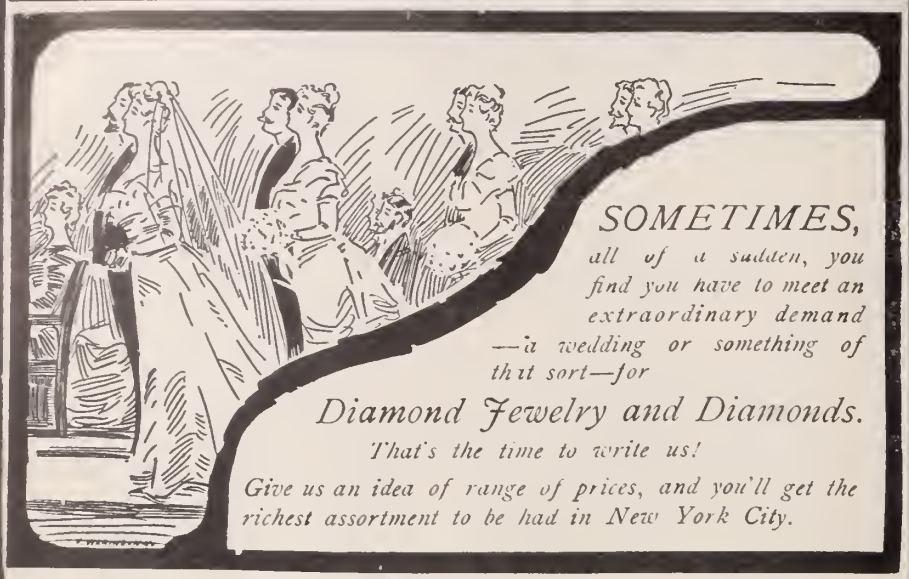
As a rule, considerable difficulty surrounds the obtaining of strong evidence against pennyweight thieves of this type, because it is seldom that they are actually caught in the operation of substituting an imitation for the genuine article, the theft being discovered only after it has been committed. For, although the jeweler may be morally certain of the guilt of the thief, because a substitution has occurred directly after his or her presence in the store, nevertheless such a *post hoc ergo propter hoc* conclusion has little weight with the ordinary court and jury, and it is only by introducing cumulative evidence of the same kind, namely, the testimony of other jewelers who had the same experience with the same party, that the presumption of guilt is made at all strong.

Therefore, whenever a member of the trade recognizes in the published picture of a crook, a man or woman with whom he has had unpleasant experience, it is no more than his duty to his fellow merchants to notify the police holding the prisoner, of his experience in question, as such evidence tends not only to confirm the presumption of a guilt against the accused, but also shows the prosecuting authorities that they have made no mistake and encourages them to use their best efforts to obtain a conviction.

Lemoine Must Now Produce Diamonds.

TO-DAY is likely to be the crucial date for Henry Lemoine, the so-called "diamond maker" of Paris, as this marks the limit of time given him by the French magistrate in which to produce a certain large diamond which he is to make by his alleged formula, he having failed to produce it on the date originally set. If this diamond is not forthcoming to-day the magistrate is likely to send Lemoine up for trial in the correctional court.

Lemoine, it will be remembered, is now under charges of obtaining money under false pretenses from Sir Julius Wernher from whom he is alleged to have received large payments on the promise that he would produce diamonds artificially by a certain formula which he had deposited with a bank in London. Though the hearings on Mr. Wernher's charges seemed to have established in the minds of nearly every one, a conviction that Lemoine is either a scientific enthusiast or a charlatan of the mose extreme type, and that his alleged manufacture of diamonds heretofore have been examples of clever chicanery, nevertheless the French court has given him every opportunity to disapprove the charge of false pretense and accepted his proposition to permit him to make an attempt to vindicate his claims by producing a diamond of specific shape and size by means of his alleged process.



The court originally gave him until June 9 to produce the stone, but when this date had arrived Lemoine lengthily explained to the judge the difficulties he had encountered in installing his electric furnaces, etc., accused people of being in conspiracy or in league with the plaintiff against him to prevent him from accomplishing his purpose and begged and pleaded for a little more time in which to comply with the conditions of the test. The judge remarked that the "best jokes were the shortest" and did not seem much impressed with the excuses, but gave the alleged diamond maker until to-day to produce his stone, summoning Sir Julius Wernher to be present to-day, intimating that the matter would be settled as far as the court is concerned.

Therefore, the news from Paris during the next week will be decidedly interesting, both to the scientific and gem world, and if the court decides that Lemoine is a swindler and trickster, it is to be hoped that French justice will not be slow in making an example of him and imposing a punishment commensurate with the sensational publicity which he has heretofore obtained for his claims.

To insure publication all changes of copy for standing advertisements must be received not later than Friday noon preceding date of issue.

L. G. Day, former clerk in the Southern Loan & Jewelry Co.'s store, Tampa, Fla., was last week convicted on two separate counts charging grand larceny, and was sentenced to serve five years in the penitentiary on the first charge. Day was accused of having stolen jewelry worth $400 from the Dombrowsky store.

JUNE WEDDINGS

SOMETIMES,
all of a sudden, you find you have to meet an extraordinary demand —a wedding or something of that sort—for

Diamond Jewelry and Diamonds.

That's the time to write us!

Give us an idea of range of prices, and you'll get the richest assortment to be had in New York City.

CROSS & BEGUELIN

Importers and Cutters of Diamonds and Precious Stones

43 Rue de Meslay, PARIS *Telephone, 480 John* *31 Maiden Lane, NEW YORK*

Trade-Mark

OUR guiding principle has always been to incorporate as much artistic skill and good material in the construction of our jewelry as possible. This is contrary to the skimming, economic operations so extensively practiced in the manufacture of inexpensive gold jewelry. In observing this standard we naturally sacrifice the petty profits resulting from the less exacting methods of others; nevertheless our jewelry is consistently low priced and of a quality away beyond the ordinary.

¶ *Ask to see it and look for our trade-mark—the imprint of originality and all that's good.*

85 Sprague Street
PROVIDENCE, R.I.

H. A. KIRBY

9-11-13 Maiden Lane
NEW YORK CITY

Newark.

Emil Fies, formerly of Paterson, is now in Hoboken.

M. W. Boyle, formerly of Bloomfield, recently moved to Monclair.

The Standard Art Metal Works, East Orange, N. J., has been incorporated to manufacture metal and brass novelties and specialties, with a capital of $100,000. The incorporators are: J. H. Gleim, T. E. Grimm, G. A. Rattenmaier, all of East Orange.

Frank Holt, of Frank Holt & Co., has been elected treasurer of the Optimist Club of New Jersey. The club has decided to send a delegate, probably President Charles F. Herr, to the convention of the National Prosperity Association, to be held soon in St. Louis.

The following jewelers of Passaic have agreed to close their stores at 7 P. M. Tuesdays, Wednesdays and Thursdays during June, July and August: W. B. Froude, Maiden Lane Watch and Diamond Co., H. Gerlach & Son, Charles Greeme & Son, M. Epstein.

E. P. Ledos, of the Ledos Mfg. Co., accompanied by his family, will be among the passengers on the French line steamship *La Savoie*, which sails for France to-morrow. They will visit Paris, Switzerland, Germany, Belgium, Holland and England, and will return about September.

Articles of incorporation of the Tiffany Jewelry Co., with an office at 129 Market St., Paterson, N. J., were filed at the office of the county clerk last week. The company is capitalized at $50,000. The incorporators are Raymond Tiffany, Arthur C. Clement and Frederic Beggs, each holding ten shares.

The will of Henry H. Bervoitz, the jeweler who committed suicide in Union Hill, has been admitted to probate. The will was executed at Newburgh, N. Y., where he then lived, on July 2, 1906, and he left all he possessed to his mother, Debora Golding. The executors named, Alexander Golding and William Z. Wygant, of Orange County, N. Y., renounced the service and Harry Golding was appointed administrator.

Work has been started on the foundation for a large manufacturing plant for Larter & Sons, manufacturing jewelers, on the northeast corner of Parkhurst and Austin Sts. The building, which will have three stories and basement, will be fireproof. The walls and floors will be of reinforced concrete construction. The building will have a frontage of 90 feet on Parkhurst St. and 50 feet on Austin St., and will be well lighted with windows on either side. The entrance will be from Parkhurst St. The basement is arranged for boiler and engine rooms, cold storage, and men's and women's wardrobes. An office is provided on the main floor, as well as a manufacturing room. The floors above will be open lofts. The building will be equipped with a modern heating and power plant and will also contain a freight elevator.

An interesting novelty is a combined magazine rack and hall clock made of reed. The timepieces give a refreshing appearance to Summer cottages.

New York Notes.

Ludwig's store at 497 Fifth Ave. has been moved to 907 Broadway.

Ralph M. Coen has resigned as manager of the S. Mfg. Co., 43 John St.

B. R. Fischer, a Chicago jeweler, has been visiting friends in this city.

W. R. Cooper, of S. H. Clausin & Co., Minneapolis, is a visitor in this city.

Selig Jacobs is no longer employed by Louis Kaufman & Co., 82 Fulton St.

The final dividend in the matter of Weinreb & Merker, bankrupts, has been paid.

Louis Freund, of Henry Freund & Bro., is spending a few weeks at Mt. Clemens, Mich.

S. Lindenberg, of Lindenberg, Strauss & Co., Cincinnati, O., was a visitor in town last week.

James Clausman has resigned his position as jewelry buyer for Stern Bros. department store.

W. W. Frederick, buyer of silverware for Stewart & Co., Baltimore, Md., was in town last week.

Joseph W. Mayer, of Powers & Mayer, 258 Fifth Ave., sails for Europe to-day on the *Lusitania*.

James W. Hagan, representing A. J. Hedges & Co., 14 John St., is in San Francisco this week.

Lewis Jaskow, of Bodenheimer & Jaskow, is seriously ill at the Wesley Hospital, Kansas City, Mo.

Woodbury Melcher, of Scofield, Melcher & Scofield, Plainville, Mass., was a New York visitor last week.

William Hurlbut, of H. O. Hurlbut & Sons, Philadelphia, Pa., was in the Maiden Lane district last week.

Theodore Kaufmann, buyer for Kaufmann Bros., Pittsburg, spent a few days in town during the week.

L. A. Mackown, Chicago manager for the Oneida Community, Ltd., is spending a short vacation in town.

Charles F. Wood & Co., Inc., have moved from 1 Maiden Lane to the Silversmiths building, 15 Maiden Lane.

David Feiss, representing Ingomar Goldsmith & Co., in the far west and Pacific Coast, is at present in the city.

G. B. Vitelli, of Borelli & Vitelli, will sail Thursday in *La Savoie* for Paris and Italy. He will return in September.

Ralph Dreyfus, of the Dreyfus Mfg. Co., 61 Gold St., returned recently on the *Kronprinz Wilhelm* from a trip to Europe.

Leopold Stern, of Stern Bros. & Co., accompanied by his wife and two sons, made a trip in his automobile to Chicago last week.

The June issue of *Building Management* contains a description and photograph of the new Silversmiths building, 15-17-19 Maiden Lane.

Irving M. Myers and Birket Clarke, of the S. F. Myers Co., have just returned from a two weeks' visit to the trout waters of Pike County, Pa.

A large street clock, made by the Seth Thomas Clock Co., has been erected during the past week in front of the Fifth Ave. Trust Co., 574 Fifth Ave.

David Gluck, 65 Nassau St., spent Saturday and Sunday at the Summer residence of Sigmund Stern, of Stern Bros. & Co., North Gate on the Hudson, at Cold Spring.

Mr. and Mrs. Philip Goldberg, Cleveland, O., are spending a short time in town. Mr. Goldberg was at one time a representative of J. J. Sommer & Co. in this city.

L. Lachmann, of the Aeme Plating Works, 17 John St., is on his annual trip through the west. Geo. Lachmann is in charge of the office and factory until his return.

The engagement of Adolph Pimsler, of Pimsler Bros., 51 Maiden Lane, to Miss Edna Lichtenstein is announced. Friends in the trade have extended congratulations to them.

Sydney Arnstein, who was formerly one of the Newark representatives of L. Heller & Son, 68 Nassau St., has severed connection with that firm. George J. Klinick will succeed him.

The Newman Jewelry Co. has been incorporated under the laws of New York State with a capital of $2,000. The directors are: Albert F. Merrifield and Nedhum Newman.

Wm. Lathrop Rich, who has for some years been general manager of the house of Black, Starr & Frost, Fifth Ave. and 39th St., has been elected vice-president of that corporation.

Announcement is made of the engagement of Emanuel A. Levy, of the E. A. Bliss Co. to Miss Florence E. Elbe, daughter of Mr. and Mrs. Isidor Elbe. The wedding will take place next fall.

The firm of Peter Eisenstein & Co. has been incorporated under the laws of New York State with a capital of $10,000. The directors are: Marcus M. Goldschmidt, Leo May and Henry Goldey, all of New York.

Henry Freund, of Henry Freund & Bro., 71 Nassau St., has returned from French Lick Springs, Ind., where he spent two weeks in company with E. H. Kortkamp, of the E. M. Kortkamp Jewelry Co., St. Louis, Mo.

Mitchell & Tillotson, jewelry auctioneers, during the past month, have conducted sales for S. M. Nathan, Fitchburg, Mass., and the Aldrich-Murphy Co., Winsted, Conn. Both sales are reported to have been very successful.

Carl H. Widemann, who, for six years, had acted as traveling representative of Borelli & Vitelli, is no longer associated with that concern. He has been succeeded by Geo. H. Nelson, who left last week for the west with a new line of coral goods.

The Jewelers Security Alliance has just issued a special bulletin to jewelers throughout the country, warning them against sneak thieves who are working in concert. Warning is also given to beware of window smashers, and well dressed "pennyweighters."

The *Saturday Evening Post* of June 13 contains an article on the care of gems, by Dr. Geo. F. Kunz, head of the precious stone department of Tiffany & Co. A second article by the same author, which will appear later, will explain the etiquette of gems.

G. B. Vitelli, of the firm of Borelli & Vitelli, recently presented to President Roosevelt a fine specimen of coral cameo, on which an accurate likeness of the President was cleverly carved. Vincent Borelli is now in charge of the New York office of Borelli & Vitelli.

The firm of H. Popper & Son, Inc., has been incorporated under the laws of the State of New York to manufacture medals, emblems, badges, etc., with a capital of $10,000. The incorporators are: Herman Popper, Samuel Popper and Ferdinand Popper, all of New York.

At the Fifth Ave. store of the Reed & Barton Co. there has been on exhibition during the past week a working model of a 23-jewel Waltham watch movement enlarged 10 diameters. The exhibit is encased in a glass case and has attracted much attention from passers-by.

A silver bowl and server with cups, which is intended for the 11th International Turnfest, to be held at Frankfort-on-the-Main July 18-23, has been on exhibition at the Fifth Ave. store of the Gorham Co. during the past week. The articles are presented by William Randolph Hearst.

O. B. Kartevold's jewelry business, which was recently sold to Juell Bie, was located at 237 Columbia St., Brooklyn, and not 61 Hamilton Ave., as stated in last week's issue of THE CIRCULAR-WEEKLY. The jewelry business at 61 Hamilton Ave belongs to Theo. Kartevold.

Directors of the International Silver Co. have declared a dividend of one per cent. on the preferred capital stock, to be payable July 1 to stockholders of record on June 17. Transfer books are to be closed to-day, June 17, at 3 o'clock P. M., and reopened July 2, at 10 o'clock A. M.

A petition in bankruptcy was filed on Monday against George Alexander, manufacturer of combs, 429 Broome St., by these creditors: Hub Gore Makers, $397; Rudolph A. Breidenbach, $88, and Edward U. Kahn, $31. It was alleged that he was insolvent and made preferential payments.

M. Ruttenau, 24 Stone St., reports that some person or persons are going about in the jewelry and silverware trade trying to obtain goods on credit by using his name. Mr. Ruttenau wishes to state emphatically that no goods are to be delivered to any person unless he has a written order signed by Mr. Ruttenau.

Tiffany & Co. have been advertising during the past week in an attempt to recover a valuable string of 77 pearls. It was lost somewhere between 28th and 80th Sts. The pearls are fastened with a diamond and pearl clasp. A reward of $500 is offered for their return. The necklace was probably lost by some customer.

Judge Holt has confirmed a composition in bankruptcy of Moritz Greenspan, 221 Broome St., under which his creditors receive notes due in six, nine, 12, 15, 18, 21 months. Those creditors who received a prior settlement of 10 cents cash receive 10 per cent. in notes, and the creditors who did not receive any payment in cash receive 20 per cent. in notes. The liabilities are $29,496.

After serving 20 years as clock and lock mender of the Police Department, Patrolman Charles E. Brewer, attached to the Bureau of Repairs and Supplies at police headquarters, died, Monday, at his home, 67 W. 128th St., of nephritis. He was 64 years old. Brewer was also the custodian of the

(Continued from page 63.)

Police Department flags. He was appointed a patrolman in 1874, and served more than 34 years.

J. K. Roumain, Baton Rouge, La., is in New York this week.

The 13th annual State convention of the Optical Society of the State of New York will be held in New York City, Monday, June 22, at the Savoy Hotel. The business and scientific sessions will be held from 9 A. M. to 5.30 P. M., and matters of vital importance to the profession of optometry will be thoroughly discussed. At 7:30 in the evening an elaborate banquet will be given, which should prove a democratic love feast for all who attend. The New York City committee in charge of arrangements are bending their energies to make this banquet a most memorable affair.

Tiffany & Co. have just completed two sterling silver cups, presented by Miss Giula P. Morosini, for champion trotters and champion pacers in the Spring matinee under the auspices of the Road Drivers' Association at the Harlem River Speedway. The prize for champion trotters is a tall and gracefully shaped cup. The body of the cup is decorated with chased concave flutes and a band of laurel leaves around the top. Two intersecting horseshoes pass through the stem at the foot just below where it joins the body and help to support the cup. The trophy has two handles and is 13½ inches high.

Under the amendment to the by-laws of the Jewelers Board of Trade adopted April 16 last, providig for a Good and Welfare Committee, President Wormser has appointed as such committee the following: M. D. Rothschild, of the American Gem & Pearl Co., chairman; Ira Barrows, of the H. F. Barrows Co.; M. L. Bowden, of J. B. Bowden & Co.; Wm. P. Chapin, of the Chapin & Hollister Co.; Louis Cohen, of Henry Freund & Bro.; E. R. Crippen, of the Philadelphia Watch Case Co.; Harry Durand, of Durand & Co.; Wm. H. Kinna, of the Elgin National Watch Co.; Samuel H. Levy, of L. & M. Kahn & Co.; Geo. D. Lunt, of the Towle Mfg. Co., and Fred G. Thearle, of the C. H. Knights-Thearle Co.

Charging that they stole 5,000 watches, Detectives Thelluson and McDonald, of the Oak St. station, have arrested three men on the charge of robbery. They recovered a number of watches, the property of the Ansonia Clock Co., which they allege were stolen from the warehouse of Baker & Williams, at 295 Water St., May 28. According to the police report of the robbery, 4,000 Mentor watches and 1,000 Guide watches, valued at $5,000, were stolen. The prisoners gave their names as Max Kronstad, 21 years; Samuel Steinman, 24 years, and Samuel Schey, 24 years. Kronstad was arrested at 451 Grand St., where he has what he calls a distributing agency. Here the detectives say they found 32 empty cases in which they declare the missing watches were packed.

At a meeting of the directors of the Jewelers' Safety Fund Society, held Tuesday of last week at the offices of the association, a number of new revisions to the policies issued by that society were adopted. The new revisions make more liberal offers to policyholders than have previously been offered. In the settlement of losses policyholders will receive 2½ per cent. more than formerly. The territory covered now embraces all the United States and Canada on the continent of North America. Many of the other clauses are made more liberal, and these changes will surely meet with the approval of the policyholders. The new revisions place no limit of 30 days on memorandum goods, and no limit of $25 as a minimum loss. The directors also passed a resolution to the effect that all the advantageous features of the new policies be valid for all existing contracts of insurance.

Early last Wednesday morning Adolph Woticky, a jeweler, of 443 E. 87th St., who was formerly in business in Jersey City, N. J., while on a Greenville car, in the latter city, was chloroformed, according to his story, and robbed of a satchel containing $800 worth of jewelry. When he regained consciousness at the ferry, instead of reporting the robbery to the police of Jersey City, Woticky decided to go across the river and report the matter at New York police headquarters. Arriving here, in some mysterious manner he bumped his head against a post hard enough to cause him to drop to the street senseless. When he again regained consciousness he found himself in the Jefferson Market Night Court, where he had been taken by a policeman who suspected him of being intoxicated. Woticky told the magistrate the story of the loss of his jewelry and of his accident, and the magistrate, believing him, discharged him.

From July 25 to 29, inclusive, and again from Aug. 15 to 19, inclusive, merchants' rates will be in effect to New York City from the territory of the Central Passenger Association. This announcement was made Friday by the Merchants' Association of New York, on whose application the concession is authorized. The special rate will be a fare and one-half for the round trip, granted under the certificate plan. The return limit will be 30 days, as heretofore. Central Passenger Association railroads traverse territory roughly described as follows: Points west of (but not including) Buffalo, Niagara Falls, Suspension Bridge and Salamanca, N. Y.; Pittsburg and Allegheny, Pa.; Bellaire and Marietta, O.; Wheeling, Charleston and Huntington, W. Va., and points on and north of the Ohio River and east of the Mississippi River, and south of a line from Keokuk, Iowa, to Chicago, Ill., including Cincinnati, Louisville, all towns in Kentucky on the Chesapeake & Ohio Railway, St. Louis, Keokuk, Chicago, Southern Peninsula of Michigan, and Canadian towns on the Michigan Central Railroad and Wabash Railroad. The circular giving full information as to the Fall rates will be sent to press. While copies of the circular will be mailed by the association within the next three to four weeks to the retail merchants in the sections from which the special fares apply, on request a quantity of the circulars will be supplied to such resident members of the association as desire to forward the announcement direct to their customers.

Pittsburg.

J. L. Freeburg, of Loftis Bros. & Co., has been on the sick list for the last six weeks, being afflicted with rheumatism.

The employes of Boggs & Buhl gave an outing at West View Park last Wednesday night, which was very largely attended.

N. L. Marsh, Sistersville, W. Va., was in Pittsburg last week on business, and reports that trade is improving in his part of the country.

It is proposed to install a jewelry department in the Carnegie Technical Schools, just as soon as the buildings now being constructed are completed.

The downtown jewelers who had not been closing at 5 P. M., last week signed a petition to do so, and now all the retail stores lock their doors each evening at the hour stated.

E. H. Kennerdell, Tarentum, has been quite ill for several weeks past, and his wife has recently undergone a serious operation, having been in the hospital for the last four weeks.

August Loch, who moved into his new building in Federal St., North Side, early in the year, gave an opening last Saturday, which was well attended. Some valuable souvenirs were given away, including a handsome grandfather's clock.

According to information given out here recently, E. L. Young, Latrobe, Pa., has offered to settle with his creditors, through the Jewelers Board of Trade, on a basis of 10 per cent. on the dollar. It is not known what his liabilities and assets are here, but he has some Pittsburg creditors.

The annual meeting of the stockholders of the Marsh, Brown & Mather Co. was held last week. J. R. Brown was elected president; W. W. Mather, vice-president; C. C. Marsh, treasurer, and W. O. Harrison, secretary. Mr. Marsh, who has been ill for some time, came to Pittsburg from Mt. Vernon, O., to attend the meeting. He has gained considerable in weight, but intends to rest for some time. He returned to Mt. Vernon last Saturday.

The Pittsburg Association of Credit Men is making rapid gains in membership, and last week a noon-day luncheon was served at the Hotel Lincoln. Enoch Rauh, the newly elected president, named his committees, Sol. Cerf, of Sol. Cerf & Co. being named on the entertainment committee. A large number of persons will go to Denver to attend the national convention, and several jewelers will be in the party. A large number of jewelers are now members of the association.

Market Price of Silver Bars.

The following are the quotations of silver bars in London and New York, as reported by Zimmermann & Forshay:

	London.	*New York. .999 Basis.*
June 9	24 7-16d.	$.55
" 10	24 1-2d.	.55⅛
" 11	24 5-8d.	.55⅜
" 12	24 5-8d.	.55⅜
" 13	24 5-8d.	.55⅜
" 15	24 7-8d.	.56

Johnson & Lysirger, Burlington Junction, Mo., will hereafter conduct business under the firm style of Johnson & Son.

Providence.

TRADE CONDITIONS.

There is a better outlook, so far as trade conditions are concerned, according to the expression of their views which local jewelers made public last week. The fact that more gold is being purchased from the local banks is regarded as a good omen. During the panic last Fall the demand for coin gold fell off appreciably and was practically dead during the Spring. For the past month there has been a steadily increasing demand for gold eagles, one bank selling almost as many as it did just previous to the panic. Local jewelers say that while the increased demand for gold is not an indication of heavier sales either in the retail or wholesale trade, yet it shows a feeling of greater confidence than has been felt in many months. It is estimated that the volume of business being done now is about 60 or 70 per cent. of the amount done in a corresponding period last year.

Owing to business interests to which he will give his personal attention in Florida, Frank C. Murray, president and manager of the Providence office of the Jewelers Board of Trade, has tendered his resignation. He will leave here July 1.

During the past week the following buyers were registered in this city: B. L. Hirsch, of Hirsch, Lauter Co., San Francisco; Louis and Edward Sickles, of M. Sickles & Son, Philadelphia; D. Harris and S. S. Wylie, Albany; Miss Henrietta Graff, H. Pichel, M. L. Schwab and Thomas Lyons, New York, and W. S. Hunkens, Minneapolis.

William A. Copeland, of the Martin-Copeland Co., who is one of the directors of the Union Trust Co., said last week that when that bank closed its doors last Fall it carried more jewelers' notes than any other bank in town. In spite of the fact that the financial crash came at a time when jewelers were heavy borrowers, these notes were all cleaned up before the bank reopened its doors.

In compliance with a circular letter sent out last week by the New England Manufacturing Jewelers and Silversmiths' Association, a number of the manufacturing jewelers of this city have manifested their willingness to shut down their shops for one week, beginning Saturday, June 27. The association recommended this shutdown, believing that during the period of idleness the proprietors could take an account of stock and the employes enjoy a week's vacation during the warm weather. Many of the larger shops have already decided to follow out this recommendation. The idea has been met with general favor.

A petition asking leave to sell the assets of the Newell & Fisher Mfg. Co. has been presented to the United States Court, and will be given a hearing this week. The concern recently made an assignment to Lewis A. Waterman, an attorney. Subsequently Albert Lorsch & Co. attached $600 which the concern had on deposit in a bank. The petition of the assignee for leave to sell the assets is made in view of the fact that there are no available funds with which to pay the creditors or contest the case brought by Albert Lorsch & Co. At a creditors' meeting held week before last it was shown that the liabilities were $12,475.25 and the assets only $249.90. The plant itself was only valued at $175. The case is attracting much attention in the trade.

Now that the time is approaching for the annual outing of the New England Manufacturing Jewelers and Silversmiths' Association, everything indicates that it will be one of the biggest and most successful gatherings of the sort ever held. The members and their guests will meet at the Masonic Temple at 11 o'clock A. M. Friday afternoon, June 19, and, preceded by the American Band, will march to the Crawford St. dock, where they will embark on the steamer *Warwick*, on which they will sail to Fields Point, where a clam dinner will be served. At 2 P. M. the boat will sail to Vanity Fair, where luncheon will be served in the College Inn, and where picked nines from the Providence and Attleboro jewelers will play a game of ball. The return to this city will be made at 6.30 o'clock. The committee which is arranging the excursion includes Frank B. Reynolds, chairman; George H. Holmes and Everett I. Rogers.

Attleboro.

TRADE CONDITIONS.

Business while not rushing is holding out well for this time of year, which is encouraging to the manufacturers who expect a fine Fall trade. Most of the jewelers believe that with Taft and Bryan the nominees, the election can be discounted, and that therefore business will not be suspended until after election, as is generally the case in Presidential years. We will have a good Fall is the optimistic cry of the manufacturers.

The N. C. Wallenthin Tool Co. has moved from 7 Maiden Lane to 36 Railroad St.

The W. H. Saart Co. gave its office help an outing down Providence Bay, Thursday.

H. M. Williams & Co.'s factory of Forest St., was closed the past week for inspection of boilers.

William H. Smith, formerly of Smith & Crosby, has closed his Attleboro home and moved to New York.

The many friends of Walter E. Hayward will be pleased to learn that he has recovered sufficiently from his recent illness to return from the hospital.

Edgar A. Remington, of Carter, Qvarnstrom & Remington, has been elected deacon in the Second Congregational Church as a successor to the late Charles E. Bliss.

W. Henry Blake, secretary of the James E. Blake & Co., is recovering at a Providence hospital from a recent operation. His friends will be pleased to learn that he expects to be out next week.

Ansel Sweet, a native of Attleboro, but now of Providence, observed last week his golden wedding anniversary in St. Paul's Church. Mr. Sweet was formerly connected with the Sweet, Fletcher Co., of Providence.

Emmons D. Guild attended a Prisoners of War reunion at Fields Point, R. I., yesterday. A sail down the bay and shore dinner was enjoyed. Of the 41 men taken prisoners with Mr. Guild in October, 1863, but four are living.

Everett S. Horton, Edward A. Sweeney, of W. H. Wilmarth & Co., Emmons D. Guild and Charles O. Sweet were named, last week, as members of the committee to arrange for the unveiling of a soldiers' monument on Saturday, June 20.

The James E. Blake Co. has decided to open a Chicago office July 1. It will be located with the M. S. Fleischman Co. in the Heywood building. Alexander Chadbourne will take charge of the office. M. Chadbourne has been the New England representative of the concern for some time and has also previously had charge of the shipping department.

Clelland J. McClatchey, treasurer of the Horton, Angell Co., has filed the following corporation report: Real estate, $34,69. machinery, $20,143; cash and debts receivable, $120,144; manufactures and merchandise, $48,455; merchandise, $67,071; total $290,512; capital stock, $160,000; notes payable, $25,014; surplus, $103,654; profit and loss, $1,844; total, $290,512.

Henry P. Wilmarth, treasurer of W. H. Wilmarth & Co., has submitted his annual return to the Commissioner of Corporations. The figures follow: Machinery, $3,400; cash and debts receivable, $9,425; manufactures and merchandise, $11,747; merchandise, $1,809; total, $26,381; capital stock, $14,000; accounts payable, $1,368; profit and loss, $11,013; total, $26,381.

A canvass of the Attleboro manufacturers reveals the fact that the great majority are unable to reconcile themselves to a closing from June 27 to July 6, the time set by the Providence jewelers. Boiler and other repairs to shops prevent several from closing in June, while others believe that the latter part of July and August is more acceptable from a business standpoint as well as more convenient for the help. Therefore, while there may be some exceptions, it is very likely that most concerns will close the latter part of July or the early part of August.

Boston.

Harry J. Ogden has removed from the Washington building to 275 Washington St.

The local retailers begin their early closing period this week. It will continue until Sept. 14.

The Waltham Watch Co.'s factory will have a five-weeks' vacation this year, beginning the latter part of this month.

C. E. Whittemore, the Bar Harbor jeweler, has been the guest for a few days of Henry G. Morris, of the Jewelers' building.

F. B. Chace, of the Jewelers' building, accompanied by George L. Whitehouse, of Dover, N. H., went to Wells Beach last week on a trout fishing trip.

George B. Owen, Jr., sales manager for the Wm. L. Gilbert Clock Co., has been in this city during the week and visited the Boston headquarters of the company.

Bernard Jacobson, a jeweler at 361 Hanover St., last week asked the police to aid him in finding his wife, Ida, who disappeared from her home June 7.

The South Sea Island Trading Co., of Boston, engaged in pearl fishing, has been incorporated with a capital of $100,000. The officers are: President, J. Brown; treasurer, H. A. Harrington, Providence, R. I.

Albert C. Lord, of the Lord Optical Co., Tilton, N. H., has been in Boston during the past week in connection with the opening of the concern's branch store in Boston, at 100 Boylston St., where they will make subscription work their specialty.

W. B. Sherratt has repurchased the C. B. Chrysler stock in the Opera House block, Lake Park, Ia., and will continue the business.

Philadelphia

S. W. Hart, Kennett Square, Pa., has been confined to his home with bronchitis.

William H. Thompson, Jr., 35½ S. 8th St., is making alterations and improvements to the exterior of his store.

H. S. Kratz, Souderton, Pa., is preparing to move before the first of July into his new store in the heart of the town.

C. F. Weber, 504 Race St., was operated upon at a hospital, last week, successfully, and is now reported to be convalescing.

Willis Porter, Burlington, N. J., returned, last week, from a pleasure trip to New England places of interest and resorts.

Commodore J. Clifford Wilson, of the Jewelers' Club, and Mrs. Wilson, have opened their cottage at Cape May for the Summer.

The Bailey, Banks & Biddle Co. secured judgment in the courts, last week, against Ella A. Bergner for want of an appearance for $443.97.

The entire traveling staff of H. O. Hurlburt & Sons is now at the home office in this city, having completed their trips, and will soon begin the vacation period.

Ralph F. Seltzer retired from the wholesale firm of H. F. Seltzer & Co., 925 Chestnut St., June 1. The business will be conducted as heretofore by Henry F. Seltzer.

Hugo Watson, Main St., Manayunk, accompanied by Mrs. Watson, sailed, Saturday last, from New York for a four months' pleasure tour of England and the Continent.

Seigmund Lubin, manufacturing optician, 8th St., near Chestnut St., and Felix Isman, real estate dealer, incorporated, last week, the Lubin Palace Co., a moving picture enterprise.

William P. Hansen, watchmaker, formerly with the Bailey, Banks & Biddle Co., and who has been in the employ of many prominent jewelers, opened, last week, a repair shop for the trade at 306 Burd building, 9th and Chestnut Sts.

James B. Whiteley, watchmaker for Calvin Solliday, Lambertville, N. J., was married Thursday last to Miss Hattie Marie Regan, of Pennington, N. J. Mr. and Mrs. Whiteley departed on a honeymoon trip and after their return will reside in Lambertville.

Frederick Schrapfer, watchmaker with H. O. Hurlburt & Sons, entertained all the employes of the firm at his home in Palmyra, N. J., Saturday. Athletic diversions and gastronomical treats occupied the afternoon and evening and the party returned to the city after giving their host a rousing send-off.

Leon H. Rowe, Daytona, Fla., was in this city, last week, visiting the trade, while on his way to his old home in Corry, Pa., where he will spend June and July. Mr. Rowe said that the business in Florida this year was not much below normal. He is accompanied on his travels in the north by Mrs. Rowe and his father and mother.

Visitors to this city's trade, last week, included: H. S. Kratz, Souderton, Pa.; J. W. Parrish, Newark, Del.; E. K. Bean, Lansdale; D. H. Krause, North Wales; M. E. Hunter, Beverly, N. J.; J. A. James, Swedesboro, N. J.; W. L. Roberts, Wilmington, Del.; W. L. Thomas, Phoenixville, Pa.; Howard Fritzsimmons, West Chester, Pa.

E. W. Laubach, retail jeweler, 7038 Woodland Ave., is receiving the felicitations of friends in the trade upon the announcement last week of his marriage Wednesday, to Miss Elizabeth Jones, of Bath. Mr. and Mrs. Laubach, after their return from a honeymoon trip, will make their home in the dwelling over Mr. Laubach's store.

A jolly party of jewelers went fishing Wednesday and Thursday of last week to Ledge Light in the lower Delaware Bay and caught 10 weakfish, two blackfish, two eels and a skate. The party included: Capt George Bowen, Bridgeton, N. J.; Fred Bolte, 1902 Market St.; R. C. Wilde, local representative of the Meriden Cutlery Co., and Andrew Smith, with L. P. White. Mr. Bolte in descending a rope ladder at the lighthouse to enter the waiting fishing boat missed his footing and his body swung pendulum-like for a while, until it rested. Then Mr. Bolte's position was secured and he lowered himself into the boat without further difficulty.

The theft of hundreds of dollars' worth of jewelry from the wholesale house of Moskovitz & Herback, 428 Market St., was frustrated last week through the alertness of policemen who early one morning discovered robbers at work in the store, and after obtaining reinforcements awaited developments. The robbers, two in number, packed sample cases with such pieces of jewelry as they could find, mostly plated ware, and as they were about to depart were held up at the point of pistols. They surrendered at once and were locked up. They were arraigned at Central Station and committed for court. Both gave fictitious names and addresses.

The Heyman Co., 158 N. 8th St., retailers, are looking for their watchmaker, Robert Ginsberg, who they say, mysteriously disappeared June 6, taking with him six watches left to be repaired, and some watchmaker's tools. Ginsberg is believed to be either in New York or Boston working at his trade. Mr. Heyman states that Ginsberg came to him five weeks ago, penniless and hungry and begged for employment. Sympathy led Mr. Heyman to give him employment. He worked steadily for three weeks and then disappeared. After leaving he mailed the pawntickets for the watches, two of which were pledged here and four in New York, all in the name of Freedman. The missing man is described as a Jew, about five feet five inches in height, weighing about 135 pounds, with dark complexion. Besides taking the watches and tools, Ginsberg is said to have ordered goods in the firm's name of Chicago houses to have intercepted the packages when they arrived.

Frank S. Fisher, Danville, Ill., recently moved into newly furnished quarters at 19 N. Vermilion St. The new establishment is handsomely equipped with attractive fixtures and furnishings.

Edward J. Gross, who covers the States of Kansas, Nebraska and Missouri for the Niagara Ring Mfg. Co., 534 Main St., Buffalo, N. Y., was married Thursday last and his bride will accompany him when he takes his Fall trip over his territory.

North Attleboro

Fred E. Sturdy is home from a recreation visit to Norcrosse, Me.

Donald LeStage has returned from a western trip for the H. D. Merritt Co.

Mr. Bloomer, western representative of E. I. Franklin & Co., is at the factory.

V. H. Blackinton & Co. have designed neat badges for the North Attleboro fire police.

H. H. Curtis has been appointed administrator of the Sally Eaton estate of Kingston, R. I.

Frank J. Ruggles is home from the west, where he has been traveling in the interests of W. H. Bell & Co.

Charles E. Riley, treasurer of the George L. Paine Co., is enjoying a pleasure trip through the mining districts of Pennsylvania.

Thomas Totten, formerly of Totten Bros., who now makes his home at Nestor, Cal., arrived in North Attleboro, Monday, to spend the Summer.

E. F. Miller & Son is a new manufacturing concern located in the Bliss building on Chestnut St. Emil F. Miller and his son Frank are the members of the concern. They will make a general line of jewelry.

S. Henry Dyer, who is to start manufacturing collar buttons, severed his connection with the T. I. Smith Co., Saturday evening, with which concern he has been connected for many years. He was presented with a handsome gold Masonic pin by the members of the department, of which he was superintendent.

Representing that she was in needy circumstances, Mrs. Marion Sargeant, widow of the late Frederick E. Sargeant, cashier of the defunct Jewelers' National Bank, was given a widow's allowance of $350 by the Probate Court. The estate is hopelessly involved, and claims amounting to over $200,000 have been filed against it.

Edward Trembley, who was alleged to have stolen 20 pounds of chain from the estate of O. M. Draper, failed to put in an appearance at the June meeting of the Bristol County Superior Court. He was accordingly declared defaulted and his bond of $300 forfeited. Trembley was tried last November, but a disagreement of the jury resulted.

Louis E. Freeman, of Straker & Freeman, is receiving messages of condolence owing to the death of his wife, Wednesday. The funeral was held Saturday. The bearers were Louis Morse, of the H. D. Merritt Co.; Wallace G. Franklin, of E. I. Franklin & Co.; George Whiting, of Sturtevant & Whiting, and John Thompson, of Thompson & Remmington.

The manufacturers of North Attleboro have not definitely determined what week will be taken for closing, but while there may be no concerted movement, it is likely that nearly all will shut down either the last of July or the first of August. Several firms, however, will take other periods. The Paye & Baker Mfg. Co. announces that its factory will be idle from June 27 to July 6.

J. W. Grainger, Rochester, Minn., has made extensive alterations to the interior of his store.

Kansas City.

F. J. Nevin, of Nevin Bros., has just returned from a short trip to St. Joseph, Mo.

Sam Bloom, with the Meyer Jewelry Co., left the city Monday, for his regular territory.

W. C. Schumann, with the C. B. Norton Jewelry Co., will soon go to Chicago for a few days.

P. N. Nelson, traveling representative with the C. B. Norton, Jewelry Co., left last week for a trip to Denver.

C. F. Nilson, Denison, Tex., has finished his course at the Kansas City Polytechnic Institute and left for home, where he will engage in business with his father.

Henry Metzger, a retail jeweler of this city, has issued invitations to the wedding of his daughter, Maybell, who will be married to-day, June 17, to Scott McLeod Leck.

C. B. Norton, C. C. Hoefer, Geo. H. Edwards and C. A. Kiger left this city, Tuesday evening of last week, to attend the Detroit meeting, called for the purpose of organizing a jobbers' association.

The substitution of a "phony" diamond for a genuine $375 stone at Cady & Olmstead's store took place about a week ago. A man giving the name of Carleton examined a number of diamonds and, by a clever feat of manipulation which is well-known, a "phony" diamond was substituted for a stone weighing a little over a carat and a half. The substitution was not discovered until late in the afternoon, when the police were notified.

All retail jewelers who were located in the district recently flooded have been through the experience before, and did not wait to be forced out of their stores. They just packed up and began moving when the danger appeared probable, and as a result their losses will be confined to the loss of business for a period and the expense of moving their goods around. T. L. Ricksecker, Armourdale, was one of the jewelers to pack early and move. Robert Hickman, 1062 Union Ave., was another, and E. Finklestein, of Central and James Sts., and J. A. Wilson, of 9th and Wyoming, also packed their stocks early, and hunted up a safe place.

Cleveland.

Captain R. E. Burdick returned from New York, Friday.

W. H. Alger, of the North American Watch Co., spent last Wednesday in Cleveland.

Chas. F. Keim, secretary and treasurer of the Scribner & Loehr Co., attended the Detroit meeting last Wednesday.

R. O. Carter, formerly of the Burt Ramsay Co., has joined the sales staff of Galley & Co., with offices in the Schofield building.

Mr. and Mrs. Webb C. Ball attended the commencement exercises at Wells College, Aurora on Cayuga, N. Y., last week. Their daughter Florence is a member of the graduating class.

H. W. Burdick, of Bowler & Burdick Co., and Gilbert Sigler, of the Sigler Bros. Co., attended the meeting held in Detroit, Wednesday, to organize a National Association of Wholesale Jewelers.

Following jewelers were in Cleveland during the past week: Ben Mosely, Willoughby, O.; J. L. Miller, Middlefield, O.; C. J. Duncan, Massillon, O.; O. J. Carter, New London, O.; F. G. Gilger, Norwalk, O.; H. H. Brainerd, Medina, O.; J. H. Wight, Wellington, O.; A. E. Kintner Painesville, O.

President Stobbins and Secretary Lightner, of the Ohio Retail Jewelers' Association, have called a meeting of the Cleveland jewelers to be held in the assembly room of the Holland Hotel on Monday, June 22, at 8 o'clock in the evening. Every retailer is urged and expected to be present, and a favor will be done these officers if each one who expects to attend will notify the president immediately.

Los Angeles.

S. Meyer, of S. Meyer & Co., visited adjacent towns on a business trip during the week.

T. L. Lyons, of the Lyons Gem Co., New York, is expected in the city within a few days.

The Pacific Gem Co. has leased the top floor of the building at 622½ Broadway, for four years.

R. H. Gilmore, Gilmore & Lee, has just returned from a business trip to San Diego, and vicinity.

A. E. Baranger has gone around "The Kite" on a business trip for his firm, the E. W. Reynolds Co.

All the wholesalers have agreed to give a half holiday on Saturday to employes during the Summer months.

W. C. Guerth, Redlands, and E. T. Lewis, Long Beach, were among the out-of-town jewelers in this city during the past week.

A. Weilfish, formerly with the Morgan & Allen Co., of San Francisco, Cal., is visiting in the city with his father, whose interests he will now represent, Mr. Weilfish being the proprietor of a cloak house.

Mr. and Mrs. Will G. Knapp have been spending a few weeks with friends here and in Pasadena. Mr. Knapp represents the Bigalke & Eckert Co., New York, and has combined business with pleasure while on his vacation.

Geo. L. Skinner, who opened up a retail store, June 1, in the new Masonic building, exhibits in his show window a clock of his own manufacture, which acts as a master-clock for an advertising clock outside of the building.

A. P. Wood, of the Los Angeles Gem Co., after an eight weeks' trip east, is expected home within a few days. Mr. Wood will bring with him all the new ideas in the jewelry line. These ideas will be used in designing trinkets for the holiday trade.

The cup to be given as first prize in the Transpacific Ocean race from San Pedro to Honolulu, July 4, has been designed and supplied by Montgomery Bros. It is valued at $500. S. Nordlinger's design for the second prize, valued at $250, was chosen. Montgomery Bros.' design is a punch bowl 16 inches high and 20 inches long, on a wooden capstan 14 inches high, inlaid in silver. The bowl is oblong in shape and the handles are dolphins. The foot of the bowl is embellished with nautical designs. The Nordlinger design is an urn-shaped cup, 20 inches high, on a base about six inches high. It is 10 inches across the top, with simple handles. Decorations of yacht racing will be around the upper edge. Crossed anchors on a ship's wheel surmount a panel in which is etched a representation of a yacht race.

Harrisburg, Pa.

Thos. K. Rife, a clock repairer of this city, was on the jury which acquitted two of the defendants in the second Capitol graft trial last week.

A number of local merchants will begin closing their stores during the Summer at 5.30 P. M. instead of 6 P. M., taking effect July 6. Half-holidays on Fridays will also be observed as in past years.

Frank C. McCarthy, the last of the five men wanted for the robbery of A. K. May's jewelry store in York some time ago, was arrested in that city last week by detectives and plain clothes men. McCarthy was indicted on the charge of the jewelry robbery by the April Grand Jury along with David Seager, Charles Beaver, Harry Mann and William Beaver. The others were previously arrested.

Robert Miller, alias Charles Higgins, a noted "yeggman," is somewhat of a white elephant on the hands of the local police department at present. He is retained in the county prison, although no charge has been preferred against him as yet. Miller forcibly entered the jewelry store of George A. Hutman on N. 3d St. over a year ago, and when captured by Detective Ibach rings and jewelry trinkets were taken from him. He was sentenced to 90 days in the local prison, upon the expiration of which time he was sent to Altoona to answer the charge of burglary, and was there pronounced insane and was committed to the insane department of the Blair County hospital. He was carelessly permitted to wander away and was at large for some time. Now he is resting in the jail here, and although Chief George has communicated with the police in other cities, asking whether they want Miller, nobody has offered to relieve this city of him.

Omaha.

T. L. Combs & Co. have organized a baseball team for the Summer.

J. C. Huteson, of the Huteson Optical Co., went to Lincoln, Nebr., last week.

H. M. Lockie has purchased the jewelry business of A. O. Lieber, at Utica, Nebr. Mr. Lieber has returned to York, Nebr.

A. Mandelberg received the contract last week for keeping the large clock in the Government building in repair for one year.

A. J. Dowding, Adams, Nebr., and Mr. Lockie, who recently purchased a store at Utica, were in this city purchasing stock last week.

After installing new fixtures, redecorating and making alterations in their store after the fire which occurred a month ago, T. L. Combs & Co. opened for business, Monday, June 8. A formal opening will be announced later.

Canada Notes.

The assets of A. Marks, Montreal, have been sold.

Guy J. Taylor, St. John's, Newfoundland, has assigned.

R. H. Ewert, Nelson, B. C., is disposing of his stock at auction.

W. A. Aston, Truro, N. S., has sold out his business and left that town.

A writ has been issued against Wm. H. Wallace, Dauphin, Man., for $160.

R. Hedrich, Galt, Ont., has given a chattel mortgage to Geo. G. Fisher for the sum of $109.

Henry Birks & Sons, Montreal, have obtained judgment against Geo. Phillips, Jr.

Albert W. Prior, Yorkton, Man., has given a chattel mortgage for $800 to T. Paul.

W. H. Rowlands, Port Elgin, Ont., has given a chattel mortgage of $600 to A. S. Levy.

E. Langlois & Co., Quebec, have assigned and V. E. Paradis has been appointed curator.

F. W. Dudley, Winnipeg, Man., has compromised with his creditors at 75 cents on the dollar.

C. J. Clark, Tweed, Ont., and bride were in Toronto, Ont., last week, on their wedding tour.

W. S. Bartley, Russell, Man., has given a chattel mortgage for $1,007 to the P. W. Ellis Co., Ltd.

Wm. Bramley, Montreal, has obtained judgment against Arthur Bunch, Weyburn, Man., for $211.

Coxford & Taylor, Cobden, Ont., have dissolved partnership, the business being continued by J. Coxford.

Out-of-town jewelers calling on the Toronto, Ont., trade, last week, included L. H. Doll, Calgary, Alba.; J. J. Hollingshead, Tottenham, Ont., and J. House, Welland, Ont.

J. H. Moore, late local manager of the Canadian Express Co., Hamilton, Ont., has accepted the position of Canadian sales manager for the Ontario Silver Co., of Niagara Falls, Ont.

James Ryrie, of Ryrie Bros., Ltd., Toronto, Ont., returned, last week, from an extended purchasing trip in Europe, in the course of which he placed large orders for diamonds and art goods.

J. C. Barlow, with the Waltham Watch Co., Waltham, Mass., was married a few days ago at the Church of St. James the Apostle to Christine Margaret Ross, daughter of Mr. and Mrs. George Ross, Montreal.

A much prized watch was lost the other evening by J. David Fraser, of Ontremont, Montreal, bearing the dates Nov. 25, 1854, and June 12, 1894. It was a presentation from Welcome Hall Mission, Montreal, and much prized on that account.

At the general election of members of the Ontario Legislature, which took place on Monday, June 8, W. K. McNaught, manager of the American Watch Case Co., Toronto, Ont., was re-elected as representative of North Toronto by a large majority.

On Saturday Augustus V. Cooper, residing at City Councillors St., Montreal, and employed in the dining car department of the Canadian Pacific Railway, was arraigned before Judge Choquet. The accused was arrested by two detectives who had been watching him for several days, and when searched 40 stones were found in his possession. He had six of the stones set in rings and pins, all of which he disposed of at much less than their real value. He had exchanged one stone valued at $200 for a watch and chain worth not more than $28. When Cooper was arrested and questioned he first stated he had bought the stones from a steward on board the steamship *Montezuma* for $350, but later said he had found them on a wharf.

The jewelry store of J. B. Roddick, Port Elgin, Ont., was entered on the night of Thursday, June 4, by burglars, who broke open the door on the main street with a chisel. They took goods valued at about $400. On the morning of Wednesday last Charles McCrae, believed to be one of the burglars, was captured at Owen Sound, Ont. The previous night McCrae had sold two gold watches and two rings to a Syrian woman who keeps a store at Owen Sound. She became suspicious and notified the police. Police Constable Shute early in the morning noted two suspicious characters and attempted to arrest them, when they made off. He fired after McCrae, who was stopped by another man and taken into custody. Watch chains and rings to the value of about $175 were found upon him.

N. H. Smith, Tilbury, Ont., was, on Wednesday, June 10, committed for trial on a charge of perjury under peculiar circumstances. Smith had arranged with G. W. Groves and W. Daison, sales promoters, of Buffalo, to conduct a sale for him for 15 days on a basis of 10 per cent. of the receipts. Becoming dissatisfied during the sale he arranged with Groves and Daison to give them $250 for the work they had done, paying $50 in cash and a check for $200. He afterwards stopped payment of the check and Groves and Daison brought a suit against Smith for the amount. When the case came to trial before Judge Bell, at Chatham, Smith put in evidence a telegram purporting to have been sent by Groves from Detroit to Smith, to the effect that his (Grove's) wife was ill and that he would have to go home. Groves stated that he had never sent such a telegram. The original was produced and D. McLachlan, of Chatham, and H. D. McKellar, Registrar of Kent County, were called as handwriting experts and expressed the opinion that the telegram had been written by Smith. Judge Bell asked Smith to write the words of the telegram in court, and as soon as he had done so ordered his arrest for perjury. The most convincing evidence of his guilt was that the word "another" was spelt "nuther" in both cases. Smith will be placed on trial at the Fall assizes.

Association Notes.

The Retail Jewelers' Association, of Texas, met in convention Thursday and Friday of last week at the Southlands Hotel, Dallas, Tex. Officers for the ensuing year were elected. The Texas Optical Society met in the same city on the same days in the parlors of the Commercial Club.

The retail jewelers of Virginia have been called to meet at the Jefferson Hotel, Richmond, Va., June 28, at 2 P. M., to organize for the branch of the American National Retail Jewelers' Association. I. M. Radabaugh, secretary of the latter association, who called the meeting, is sending out circulars, urging all the jewelers in the State to attend.

Frank Thompson, secretary of the Wisconsin Retail Jewelers' Association, is sending out circular letters announcing that the Milwaukee association is organizing the State into district associations in order that a closer fellowship may be obtained with the jewelers located in different parts of the State. The Fox River Valley district will be organized at Appleton June 24, and will include all the cities from Fond du Lac north to Green Bay and the surrounding towns within a radius of a few miles. The meeting will be preceded by a dinner given at the Sherman House. A delegation from the Milwaukee Jewelers' Club will accompany the secretary.

Connecticut

R. R. Kintz has assigned to the International Silver Co., Meriden, a patent on a novel bottle-holder.

Charles H. Tibbits and wife were recent visitors in Natick, Mass., where they attended the graduation of their daughter.

A. C. Sachs has assigned to the Wm. L. Gilbert Clock Co., Winsted, a patent recently granted to him on an alarm switch.

Edward De Borde, 58 Willow St., Waterbury, has resigned as foreman at the Bannatyne Watch Co. on account of ill-health.

Thomas F. Handrigan, for some time employed at the Bradley & Hubbard Mfg. Co., Meriden, died at his home, in Meriden, last Wednesday, after an illness which extended over a period of three years.

F. E. Camp, employed as bookkeeper for the past 17 years at the office of the New Haven Clock Co., New Haven, died at his home, 81 Edwards St., that city, June 7. The deceased is survived by a widow and two children.

C. Howard Daley Co. and F. L. Wilson Co., Danbury, displayed in their show windows, recently, the silver cups and trophies which were awarded to the winners of the various events of the field day meet at the Danbury field grounds, June 13.

The Bergen Cut Glass Co., of Meriden, filed a certificate of incorporation in the office of the Secretary of State, last week. The concern will manufacture and deal in cut glass. The incorporators are Walter Bradley, Paul Bergen and C. L. Bradley.

Bernhard Weiss, who claims to be a traveling representative for two Philadelphia concerns, was arrested in Hartford, on Tuesday of last week, and detectives found in his possession, among other things, a valuable thermometer which is alleged to have been stolen from Charles Rogers, an optician of Springfield, Mass.

Among the visitors at the recent Hillbom Art Exhibit at the Meriden Library, in Meriden, was Samuel Stohr, head designer in the sterling silver department of the International Silver Co. Mr. Stohr has recently designed a large bowl, which is being hammered out of sterling silver. It will be placed on exhibition at the Arts and Crafts exhibition in Meriden this week.

ENTERPRISING and successful jewelers everywhere are pushing the sale of some individual line of watches which they believe to be superior to all others, and upon which they can also make a satisfactory and justifiable profit.

This explains the growing demand for ILLINOIS WATCHES, in 0, 12, 16 and 18 sizes, by increasing numbers of leading jewelers throughout the United States.

If you are not familiar with the superior quality of—and advantages gained by handling—Illinois Watches, it will mean reputation and dollars for you to investigate.

Every one fully guaranteed.
Price List sent on application.

Vol. LVI. CHICAGO, WEDNESDAY, JUNE 17, 1908. No. 20.

Chicago Notes.

L. G. Busse, with M. A. Mead & Co., is on the sick list.

D. H. Keene, Fort Worth, Tex., stopped over in Chicago on his way east.

M. A. Johnson, Denison, Ia., recently sold his store there to Dr. L. M. Coon.

T. E. Carlson, Kewanee, Ill., was a recent visitor in Chicago, purchasing some new fixtures.

O. A. Starke, of the Star Watch Case Co., Ludington, Mich., was a recent visitor at the Chicago office of the company.

Raphael Lechenger, son of L. Lechenger, Houston, Tex., returned home last week after a two months' sojourn in Chicago.

F. H. Maugliers, who recently sold his store at Livingston, Ala., and has opened a new store at Gonzales, Tex., was in Chicago last week ordering stock.

Hyman, Berg & Co. have begun an attachment suit in the Circuit Court against Jane A. D. Martin for $4,074.75, a balance claimed overdue for jewelry purchased.

F. A. Chace, Jr., of the Chicago office of Charles H. Robbins Co., Attleboro, Mass., accompanied by Mrs. Chace, will visit the factory at Attleboro and eastern points.

O. P. Membard, of the firm of Memhard & Miller, Spokane, Wash., stopped over here a few days on his way home from an eastern trip. He was accompanied by Mrs. Memhard.

W. O. Bigwood and wife, Terre Haute, Ind., are visiting in Chicago. Mr. Bigwood, who is the son of J. M. Bigwood, Terre Haute, is giving some time to the study of optics while here.

The Chicago office of the E. Howard Clock Co., has sold for the court house at Goshen, Ind., a four-foot dial tower clock, hour strike, with 3,000-pound bell and automatic motor wind.

Sol Chase, of Rettig, Hess & Madsen, was seriously ill last week with a severe attack of appendicitis. He recovered without the aid of an operation and will be out in a few days again.

Otto Liebermann, of the diamond department of the Stein & Ellbogen Co., has just returned from a trip in the middle west. J. P. Ryan, of the same firm, is now getting ready for a trip to the northern States.

The W. D. Dreyer Co. has been incorporated, with a capital of $5,000, to do a general business in watches, diamonds and jewelry. The incorporators are M. Rosenheim, L. E. Rosenheim and W. D. Dreyer.

Elmer Johnson, who learned the jewelry business under F. W. H. Schmidt 10 years ago, has recently been employed by Mr. Schmidt as a salesman. Mr. Johnson was last employed at the San Francisco agency of Henry Paulson & Co.

Geo. Sippel, formerly with Moore & Evans, has formed a partnership in the jewelry business at St. Joseph, Mich., under the firm name of Sippel & Gilbert. Mr. Sippel is taking a course in optics to perfect himself in that part of the business.

Will Nisbett, Grand Rapids, Minn., was a recent visitor in Chicago. A picture taken last Winter shows his novel manner of carrying his stock of watches and jewelry among the logging camps of the northern woods by means of a sled drawn by two large dogs.

Among the buyers in Chicago the past week were the following: J. Felsenthal, Louisville, Ky.; F. H. Maugliер, Gonzales, Tex.; P. J. Kake, Grand Rapids, Mich.; L. J. Yeoman, Kenosha, Wis.; F. A. Marean, Belvidere, Ill.; F. Overstreet, Paxton, Ill.; T. N. Wilson, Miller, S. Dak.; F. E. Carlson, Kewanee, Ill., and C. F. Ingalls, Waukegan, Ill.

George H. Spies, of Spies Bros., will be united in marriage to Miss Caroline Hunt, daughter of Dr. George Hunt, on June 27. A three weeks' honeymoon trip will be made in an automobile. Fred A. Spies, of the same firm, is engaged to Miss Augusta Lehman, daughter of Mrs. Augusta Lehman, of the Fair. The date of the wedding has not been announced.

The annual meeting of the shareholders of the Elgin National Watch Co. was held here Wednesday, and the stockholders, besides reelecting directors, received the annual statement, showing net earnings equal to 13 per cent. on the outstanding stock. The Elgin company has a practice of charging off a large percentage for depreciation, and also setting aside funds for future contingencies, and hence the showing of the company is remarkable.

In the matter of Jones & Dreyer, in bankruptcy, on petition of Frank H. Jones, secretary of the American Trust & Savings Bank, the receiver, a sale of the accounts receivable, office furniture and bills receivable was made yesterday morning. An inventory of merchandise on hand has been made, but not valued as yet. A schedule of claims is in preparation and will be filed shortly. The bookkeepers and collectors of the concern have been retained by the receiver, and the instalments as they become due on open accounts are being collected.

The American Clock Co. has given a trust deed, securing an issue of $100,000 first mortgage 6 per cent. gold debenture bonds running 10 years. The Western Trust & Savings Bank is trustee. The issue is secured on the leasehold and buildings at the northwest corner of Wabash Ave. and 20th St., this being the property formerly occupied by the Home for the Friendless. The ground has a frontage of 130 feet on Wabash Ave and 168 feet on 20th St. The lease runs for 10 years from June 1 of the present year. The issue is for the purpose of discharging indebtedness and enlarging the plant.

The store of Hyman Berg & Co. was robbed Thursday of last week at about 4 o'clock in the morning. Two men hurled a brick, which was wrapped in a cloth, through the window, making an opening about five inches square. This permitted them to reach through and secure several watches. The value of the property stolen is about $500 and the loss is covered by insurance. Hyman Berg & Co. are now having heavy iron bars made, which will be put up each night around the windows and removed each morning. The thieves have not been apprehended, but the numbers of the watches have been given to the police department, and it is hoped that a search through the pawn shops will lead to the recovery of the stock and to the arrest of the culprits.

A sharper representing himself as connected with J. Milhenning, has been endeavoring to get diamonds from the trade on orders written on Mr. Milhenning's business card. He called on L. H. Shafer & Co. and asked a clerk to show him some half-carat stones. Mr. Shafer, who has had considerable experience in dealing with men of this kind, was suspicious and ordered that only two stones be shown him. This was not satisfactory to the would-be purchaser, who wanted to see a display, so he left. More recently he called on Chas. H. Seaman, Champlain building, looked at some half-carat stones and then selected a carat and a half diamond, which he said was wanted by a customer who he would bring in the following day. Instead he called up Mr. Seaman on the 'phone, telling him that he would send a boy for the stones. As this was unusual, Mr. Seaman took the stones himself to Mr. Milhenning's place, when he found that no one there

We Can Furnish You a Catalog

That is Bound to Increase Your Business from 50 to 100%

illustrating goods handled by you and arranged to meet your local conditions

Read Our Customers' Letters

STORE OF TAYLOR BROS., HOUSTON, TEXAS.

HOUSTON, Texas,
Jan. 13, 1908.

THE ARNSTINE BROS. CO.,
Cleveland, Ohio.

GENTLEMEN:—Now that the Holiday business is past, we take pleasure in writing you the result obtained through your Catalog. We unhesitatingly say that our business has been better in every respect, the goods giving more satisfaction and the Catalog being spoken of in very gratifying terms. Many who have seen it, and who are in a position to know good things when they see them, said that this is really a work of art and a business "getter."

Assuring you of our hearty indorsement of you and your work, and thanking you for the courtesies you have extended us, we are,

Yours for 1908,
TAYLOR BROS.

This firm used The Arnstine Bros. Company Catalog in 1907 and again placed order for 1908.

MT. CLEMENS, Mich., Jan. 18, 1908.

THE ARNSTINE BROS. CO., Cleveland Ohio.

GENTLEMEN:—In reply to yours of Jan. 15, in regards to benefit received from use of Catalog, will say that we consider the Catalog the most successful way of advertising we have ever tried.

This year we have made a very satisfactory gain over a year ago, in spite of the general business depression and the fact that Detroit Jewelers were offering large discounts, which drew some of our regular customers.

We are thinking of getting out a smaller Catalog of Souvenirs, etc., for the Summer trade, and will be glad to talk the matter over with your representative as soon as he calls.

Yours very truly, SWITZER BROS.

This firm used The Arnstine Bros. Company Catalogs in 1904, 1905, 1906 and 1907, and again placed order for 1908.

STORE OF SWITZER BROS., MT. CLEMENS, MICH.

Our Salesmen visit every State in the Union. If you are interested, and will notify us our representative will take pleasure in calling on you and explaining our method

THE ARNSTINE BROS. COMPANY

Originators of Our Exclusive Catalog Method for the Retail Jeweler

CLEVELAND, OHIO

had ordered them; in the meantime a boy had called at Seaman's shop with an order written on Milhenning's business card. The man is described as being a young Hebrew about 26 or 27 years old, with smooth face, black hair and very dark complexion, five feet seven inches tall, weighs 140 pounds and apparently well educated.

Milwaukee.

P. P. Peck, a well-known dealer in minerals, has been spending some time in the Wisconsin lead and zinc district in search of cameo stones and agates.

On returning from the annual excursion of the Merchants & Manufacturers' Association, of Milwaukee, June 14, the Milwaukee jewelers who accompanied the party of 85 expressed themselves as highly gratified with the results. The trip this year extended into southern Minnesota, South and North Dakota.

Final plans are being made by the Milwaukee Jewelers' Club for the entertainment of the Wisconsin Jewelers' Association a month hence. E. H. Warnke, manufacturing jeweler, was appointed head of the entertainment committee. There was appropriated by the club $250 to form the nucleus of an entertainment fund. At least $1,000 will be raised elsewhere, by individual jewelers and other business men.

More brilliant finds of pearls in the Mississippi River clams, off the western Wisconsin shore, are reported. The marketings for the week previous to the present one are said to have aggregated $5,000 or more. The richest find was made by Joseph Vavra, of Prairie du Chien, Wis., who picked up two perfect, round gems weighing 50 and 30 grains, respectively. John Peacock found an 80-grain pear shaped pearl perfectly white. The Mississippi is receding after being swollen by rains, making clam fishing easier.

Jewelers' clocks are making their reappearance on the streets of Milwaukee. Bringe, the 12th St. jeweler, was the first to re-erect his big clock. He secured a temporary permit from the city on the condition that the clock must come down if the council so demands. It was expected that other jewelers would not care to take this expensive risk, but now Charles H. Veicht, Grand Ave. and 6th St., has set up a new clock, standing 15 feet high, with a face 2 feet 8 inches in diameter, beyond the limit named in the sign ordinance that is now in committee of the council. A. Bloedel, Alsted-Kasten Co., Richard Seidel, and other leading jewelers have either already placed the clocks on their old pedestals or are preparing to do so.

G. Frank Twambley, of Geo. Edward Twambley, jeweler and optician, Saco, Me., was married in that city, June 1, to Mrs. Inez Cleaves, of Biddeford. They went south on a wedding trip.

The Geo. W. Meyer Jewelry Co., 822 Market St., Chattanooga, Tenn., will shortly discontinue business. It has been announced that the present premises of the concern have been leased by another firm and other desirable quarters have not been secured.

San Francisco.

F. W. Siefkes, San Jacinto, Cal., has moved to a new location on Main St.

G. F. Arnold, San Francisco, was in Los Angeles on a business trip last week.

J. P. Becker, with the Sorensen Co., 715 Market St., is at present on his vacation.

A. Jeggi, with the W. K. Vanderslice Co., 1606 Van Ness Ave., is now on his wedding tour.

N. P. Ravn, formerly with Peter Johnson & Co., is now with the Sorensen Co., in this city.

Wm. Glindemann recently moved into a new store in the Westbank building on Market St.

J. C. Glick, Stockton, who underwent an operation in a local hospital, recently, is much improved in health.

Mell Cohen, traveling representative for J. S. Lehrberger & Co., returned last week from his vacation at Mt. Reo.

W. A. Fay, a manufacturing jeweler of Chicago, is registered at the Victoria, having arrived here about a week ago.

Maurice Van Vliet, one of the members of the Baldwin Jewelry Co., is at present enjoying a rest at his bungalow at Willow Camp, Cal.

A. P. Lahmer, 118 W. Santa Clara St., San José, Cal., has given up his store and now conducts a watch repairing business in Room 4, Spring building.

Among the out-of-town jewelers who visited this city during the past week were Chas. J. Noack and U. J. Wachhorst, Sacramento; Geo. E. Pangle, Vallejo, and J. J. Hoien, Antioch.

George H. Remington, Providence, R. I., is at present in southern California investigating the new gem mines in the San Diego district. He will also test some of the stones found on the southern beaches.

The machinery is now being installed at the Butte diamond mine, near Oreville, Cal., and the work of sinking the main shaft will soon be resumed. The hoisting and washing machinery is almost ready for use.

A number of local jewelers joined in the Olympic Club walk last Sunday, among them being Harry Dana, Joe Catanich, Lester Hammersmith and Frank Allison. Mr. Sadler, with the Dennison Mfg. Co., represented the eastern trade on the jaunt. The party walked through Golden Gate Park to the beach, where they enjoyed a dip in the ocean.

Shreve & Co. will offer a trophy as a prize for the ocean yacht race, to take place June 21, from San Francisco Bay to the lightship off Point Reyes, on the coast. The race is to be between all the yacht clubs of the Pacific coast. The cup, which is now in the window at Shreve & Co.'s store, on Van Ness Ave., is of hammered silver with stag horn handles. It is about 16 inches high, 10 inches in diameter and is a very handsome trophy.

John O. Bellis last week had on display in his window at 1635 California St. a model of his conception for the silver service for the cruiser *California*. While the pattern was not accepted by the committee in charge of the funds for the set, it is highly artistic and has attracted much favorable comment. The principal piece of the set is the centerpiece to be used for fruits and flowers. This piece is 18 inches high on a 3½-inch pedestal. The tray is 25 inches in diameter, and the whole is of an appropriate nautical design, combined with ornaments emblematic of the State. The material used is hammered silver.

Lyman G. Matlock, a jeweler, who, until a week ago, was in the employ of P. C. Pulse & Co., Oakland, Cal., is in the city jail waiting for extradition papers to New Mexico to be signed by the Governor. Matlock is accused of stealing $200 worth of jewelry from his former employer, R. E. Tuppert, of Las Vegas, N. Mex., several months ago, when he immediately left the State. Since that time he has worked in Los Angeles as well as with the Oakland firm, where he was employed at the time of his arrest. His attorneys are fighting the extradition proceedings. The case has been continued until next week in the Oakland court.

St. Louis.

Sam Kober is now in Columbia, Mo., on a business trip.

W. D. Davis, Granite City, and the Feraud Bros., Madison, Ill., were in St. Louis, last week, and reported the rising waters of the Mississippi River nearly up to the front doors of their shops.

Among the out-of-town jewelers in this city last week were: E. Zimmerman, Stonington, Ill.; Earl Wetzel, Bluffs, Ill.; W. H. Jahn, Pacific, Mo.; N. P. Jansen, Marissa, Ill.; Capt. Klein, of Klein & Fink, Ft. Smith, Ark.

C. M. Powers, traveling representative for the Eisenstadt Mfg. Co., accompanied by his wife, is spending his vacation at South Haven, Mich. Otto K. Steinver, of the same firm, is spending a few days in Cincinnati, O., with his family.

Articles of incorporation for the J. F. Dailey Jewelry Co. were filed last week. The company now has a store at 604 Washington Ave. The articles are for a general jewelry business, with a capital stock of $2,000. The incorporators are: J. F. Dailey, R. Einrich and R. W. Welsh, one share each; J. F. Dailey, trustee for J. G. W. Schventhal, 17 shares.

Two St. Louis men were elected officers of the newly organized body—the National Wholesale Jewelers' Association—at its sessions in Detroit, Mich., Thursday. They are: Edwin Massa, vice-president of the Bauman-Massa Jewelry Co., who was chosen president of the national body, and Morris Eisenstadt, of the Eisenstadt Mfg. Co., who was placed on the executive committee for two years. Quite a number of St. Louis jewelers made the trip to Detroit.

Herman Mauch, who has just returned from the Kansas City convention of jewelers, declares that the meeting was the most successful one he had ever attended in the country. Mr. Mauch was one of the delegates from St. Louis, along with John F. Zeitler, Otto Buder, William F. Kemper and Arnold Zerweck, of East St. Louis. William Weidlich, of Wm. Weidlich Bros., and J. Stange, of the L. Bauman Jewelry Co., were also visitors to the Kansas City meeting.

The Nazareth (Pa.) Merchants' Protective Association is preparing a list of bad debtors of members of that body.

Indianapolis.

A. P. Craft, of A. P. Craft & Co., has bought a new Buick automobile.

After a short visit with friends in Logansport, Asher W. Gray, of Gray, Gribben & Gray, has returned home.

Harry Reed, who is associated with his father, J. H. Reed, is spending this week in Chicago. Mr. Reed is with the Marion Club, of which he is a member.

E. H. Frecking, for several years with Julius C. Walk & Son, has resigned to take a position with Charles B. Dyer, of the Arts & Crafts Shop, on Massachusetts Ave.

E. M. Craft, of A. P. Craft & Co., spent part of last week in Lafayette, Frankfort and vicinity on business for his company. He found conditions improving in that part of the State.

J. P. Mullally, president of the Indianapolis Retail Jewelers' Association, is in Knoxville, Tenn., this week, as a delegate to the national convention of the Order of Owls, representing the local nest.

The Marion County Board of Review, last week fixed the following valuations for tax assessments: Hoosier Jewelry Co., $1,000, increase of $400 from last year; I. Grohs Jewelry Co., $3,500; A. P. Craft & Co., $2,500.

Several Indiana jewelers were in this city, last week, buying stock. Among them were: C. H. Ankeny, Lafayette; S. B. Merrick, Plainfield; J. A. Miesen, Cicero; H. A. Roberts, Veedersburg, and J. W. Hudson, Fortville.

Invitations have been issued for the marriage of Edward F. Otto, Crawfordsville, to Miss Nelle Lee Byrd, of Waveland, at the home of the bride, June 25. Following a short wedding trip, Mr. and Mrs. Otto will reside in Crawfordsville.

Many of the down-town jewelers are decorating their places of business in honor of the 32d annual Saengerfest, which will be held here, all of this week. Thousands of visitors from all parts of the United States will be here, as it will be one of the most important musical events of the year.

James F. Smith, 80 years old and the father-in-law of J. H. Reed, died at the latter's home in this city, last week. He had lived with Mr. and Mrs. Reed for 15 years. After brief funeral services the body was taken to Paxton, Ill., for burial, Mr. and Mrs. Reed returning home Thursday afernoon.

Charles B. Dyer has received one of the two medals he made for the American Medical Association, for engraving, it having been awarded to H. T. Ricketts, a western physician, for the best research exhibit of Rocky Mountain spotted fever. The medals, which were designed by his father, G. G. Dyer, attracted considerable attention at the convention.

Efforts to have a big delegation from here attend the convention of the National Retail Jewelers' Association at Cincinnati, O., Aug. 4-7, are being made by the Indianapolis Retail Jewelers' Association. They are urging that the close proximity of the convention city and the fact that it will be during the dull season, together with the fact that the programme will be the most interesting one ever arranged, should be sufficient inducements for every local jeweler to attend. It is understood that Secretary of War Taft and Congressman Vreeland will be among the speakers.

Cincinnati.

A. A. Spiegel, of A. A. Spiegel & Co., has left on his regular trip south.

Mr. Powers, watchmaker for Abe Art, Zanesville, O., spent his vacation here with friends, last week.

James Haslam, of the John Holland Gold Pen Co., left, last week, on a business trip to California.

Lee Loeb and A. Herman, of Herman & Loeb, are making their respective business trips west and in Ohio.

C. M. Fogg, secretary and treasurer for the Keystone Watch Case Co., was a visitor in this city, last week.

H. Pelzer, with A. Sauer, Newport, Ky., leaves next week as a delegate to the Grand Lodge of Eagles at Seattle, Wash., July 1.

Arthur C. Jacobs, of D. Jacobs & Co., has been kept from the road for another week, owing to a serious accident to his hand.

Loring Andrews leaves this week for an outing in Newport and eastern resorts, after which he will sail on his annual trip abroad.

Frohman & Co. have received a card from B. S. Newman, of this company, saying he is touring Italy and having a most enjoyable time.

H. I. Jacobson, with A. & J. Plaut, returns, next week, from abroad. His family will remain awhile longer for a sojourn on the Baltic Sea.

C. W. Lucius, of the Frank Herschede Co., has returned from La Fayette, Ind., whither he went to witness the graduation of his son at the Purdue University, June 10.

W. H. Ueberschlag, manager of the Cincinnati Watch Case Repair Co., will leave, June 20, for Philadelphia and New York, where he will combine business and pleasure.

A. E. Johnson, Norwood, O., who had been out of business until he could find a suitable location, is opening a store in the National Bank building, on Main Ave., in that town.

Milford Fox, of the Gustave Fox Co., was crowned a member of the B. P. O. Elks, last week, and will attend the Elks' national convention in Dallas Tex, with the Cincinnati delegation.

A. L. Thoma, Piqua, O., spent a few days here with friends, last week. Mr. Thoma was the organizer of the Order of Ku-Kus at Piqua, and will install "Nest" No. 2 here the coming week.

Joseph Voss & Sons have moved from their old location in the Neave building to the second floor of the Methodist Book Concern, where they will have more commodious quarters for their business.

Lesley & Brakeman have discontinued business as watchmakers and repairers. Mr. Lesley has taken a position with the Herman E. Promnitz Co. and Mr. Brakeman has taken charge of the watch repairing part of Edward F. Kaelin's business.

There was a short session of the Cincinnati Wholesale Jewelers & Manufacturers Association, June 12, to discuss plans for entertaining the delegates who will attend the coming national convention. A committee has been appointed to determine the nature of the entertainment and will report later.

A. Klein, son of H. C. Klein, Muncie, Ind., has purchased a fine launch and is planning for his initial trip on one of the lakes in northern Indiana, where he has placed his boat.

Out-of-town jewelers here buying stock during the past week, included: J. M. Neth, Eaton, O.; E. Israel, Harrison, O.; W. H. Keller, Corydon, Ind.; P. W. Starks, Manchester, O.; A. C. Thomas, Sistersville, W. Va.; Mr. Duncason, Lynchburg, O.; L. W. Ensey, Dayton, O.

The large front window of L. A. Boli's jewelry store, Hamilton, O., was smashed last week and two watches were stolen. A policeman heard the noise and saw the thief run. He gave chase, but the thief fired at him and disappeared in the darkness. Later, a stranger, giving his name as Ben Morris, was caught at Cokeotto, with two watches in his possession.

Minneapolis and St. Paul.

E. C. Baxter, Minneapolis, and Alfred Gausel, with Rentz Bros., in the same city, are on the jury.

Charles A. Johnson has withdrawn from the Fisk-Johnson Jewelry Co., Minneapolis, and will seek a new opening.

Charles Olson, of Chas. Olson & Co., Minneapolis, has moved to his Summer home at Tonka Bay, Lake Minnetonka.

Among the recent jewelers in the Twin Cities were: August Melsness, Eagle Bend, Minn.; P. V. McCoy, Minot, N. Dak.; C. A. Sherdahl, Montevideo, Minn.; S. B. Millard, Duluth; H. J. Gronberg, Hoffman, Minn.

Mr. Clark, with Wm. M. Stone, Minneapolis, has left for a month's vacation. He will go to the Yellowstone Park, thence to the Pacific Coast, Vancouver, and on to San Francisco and Los Angeles, returning via the southern route through Ogden. He will be gone about six weeks.

I. M. Radabaugh, Hastings, Minn., secretary of the Retail Jewelers' Association of Minnesota, was recently in Minneapolis, making arrangements for the next meeting of the State association, which will be held in Minneapolis July 6, 7 and 8. The opticians will hold a meeting concurrently.

A man recently entered the store of Swan Swanson, Minneapolis, and declared his desire to buy a watch worth about $100. The jeweler showed him a timepiece, which was accepted by the purchaser, who then announced that he wished to have some engraving on the timepiece. After writing out the inscription the man drew forth a checkbook and wrote a check for $100, payable to the jeweler, after which he departed, saying that he would call for the watch on the following day. A prompt investigation by the jeweler, after the man had left, showed that the check was worthless.

Frank Hyde, Sioux Falls, S. Dak., has bought a store building, which he will remodel for his use.

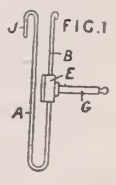
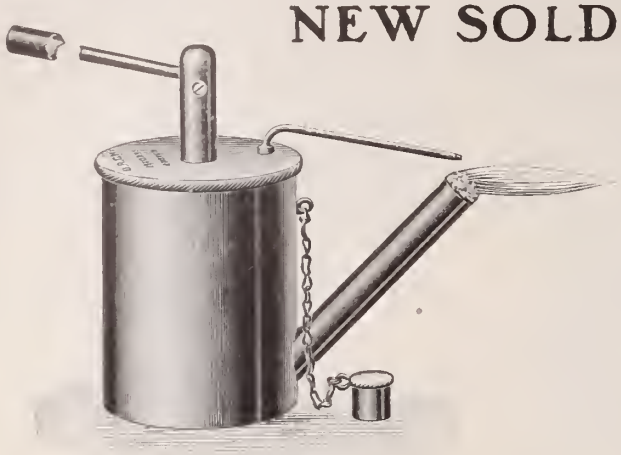
(Abridgments of Specifications, 1907, from *The Illustrated Official Journal.*)

ISSUE OF MAY 27, 1908.



2,665. CLOCKS. O. Junghans, Schramberg, Wurtemberg, Germany. Feb. 2.

Escapements.—To modify the irregular action of the mainspring in cheap clocks, the escape-wheel *e*, mounted loose, is connected to its arbor by a



helical or other spring *h*; to prevent this spring from being overwound, stop-pins *i*, *i*¹ are provided.

3,074. NECKTIE RETAINERS; STUDS. A. Gibson and E. W. Scrase, London. Feb. 7. Period for granting patent not yet expired.

A combined necktie retainer and stud allows adjustment of the necktie at any required height on

NEW SOLDERING LAMP and BLOWPIPE COMBINED

"An Apparatus of Merit"

The blowpipe is attached to the cover and can be turned in any direction. The cover consists of an air chamber which is filled one-third with benzine. The lower chamber is used for the alcohol, filling it one-half and is connected with the spout and wick. The wick can be regulated to give a large or small flame. When blowing into the air chamber through the blowpipe the air will mix with benzine vapor, which is let out of the chamber through the small tube on top, and passes the flame, making a sharp and intense flame.

SWARTCHILD & COMPANY
Heyworth Building, Chicago

SOLID gold jewelry at less than plated jewelry costs. I bought 5,000 pieces, including cameo scarf pins, brooches in real cameo and corals, veil pins, cuff pins, rings, etc., all at less than one-half the regular price, as I bought them in trade. Sale prices from 45 cents to $1.38 in scarf pins, cuff pins, etc., large fine solid gold cameo belt pins and brooches, $3.37 to $5.00. Sent on memo. bill to well-rated dealers. Sold for cash only.

Look them over, return what is not wanted, enclose your check in box for goods kept, no other way. I have fine coral and amber necklaces, 38 cents a string; diamond rings, $3 up to $300.00 each; ½ carat fine white diamonds, perfect, $60 to $85 carat. A few imperfect, $45 carat. Be quick for these bargains.

tbe collar. A flat metal strip A is bent into the shape shown and one limb is slotted to retain the head of the stud G, which is attached to a slider E, made of sheet metal and bent to embrace the limb. The sides of the slot are roughened to retain the stud. The hook J may be used for attachment to the cardboard, etc., backing of made-up ties. By altering the position of the stud, the necktie may be adjusted in position. The base of the stud is affixed after inserting the stud through the collar. In a modification, the slot is replaced by corrugations adapted to be engaged by a spring attached to the slider.

Rochester.

Jos. Kopelowitch has just recovered from an operation which kept him confined for several weeks. After a brief business trip to New York Mr. Kopelowitch will go to Mt. Clemens to recuperate.

James J. Ernisse, for many years located at 15 State St., will remove about Aug. 1 to 40 W. Main St., into larger and more commodious quarters. Mr. Ernisse is running a removal sale and doing some clever advertising in the local papers to bring it to the public's attention.

Albert H. Stearns, attorney for Ray S. Cogswell, the Rochester man arrested at Batavia and taken to New York on a charge of fraudulently obtaining a diamond chain valued at $10,000 from Herman Levy, a New York jeweler, has received word that no indictment was found against his client. After getting the chain Cogswell went into bankruptcy, making Levy's chances of getting his money rather slim. There is a civil action now in the courts to recover the chain or its value in money.

Max Levinson, jeweler and pawnbroker of 21 Main St., E., will be tried in Police Court this week on a charge of grand larceny. A watch had been stolen from Klee & Groh, jewelers, at 214 Main St., E., and it was supposed the watch had been pawned at Levinson's. A search warrant was issued, but the pawnbroker refused to let a search of his store be made. The officers went to headquarters, but came back again. This time Levinson opened the safe and said he never had the watch in possession. He was taken in custody, but released on $500 bail.

Syracuse.

Jennie Lifsky, a dealer in jewelry and musical instruments, at 250 La Fayette St., filed a petition in voluntary bankruptcy Friday, with liabilities of $3,274, all unsecured, and nominal assets of $2,799. Harry, Joseph and Dora Lifsky have claims aggregating $475 for services as managing clerk, clerk and bookkeeper, and if they are allowed they will have priority in the division of the assets.

H. G. Woolworth & Co., who operated 5 and 10 cent stores in various cities, filed schedules in bankruptcy last Friday under a creditors' petition filed about a month ago. The total liabilities are $122,265, of which only $5,318 is secured. The assets are valued at $85,566, stock and fixtures. Among the 100 or so creditors are jewelry, silverware and pen houses as follows: Diamond Point Pen Co., $26; Japanese Fan Co., $466; American Cutlery Co., $86; American Silver Co., $287; Atlas Shear Co., $45; American Ring Co., $48; Benedict Mfg. Co., $61.

George C. Smith, Watertown, N. Y., who recently went into voluntary bankruptcy, has applied for a discharge and a hearing was set for June 6 before Judge Ray at Norwich, N. Y.

W. E. Avery, for many years in business in Columbia, S. C., but who left that territory owing to ill health, has again returned and purchased the stock of A. H. Ball & Co., 1637 Main St.

Lancaster, Pa.

Miss Naomi McFalls has been added to the office force of the H. S. Meiskey Co.

E. R. Kant, of the Non-Retailing Co., is home from a trip through Ohio and West Virginia.

G. William Reisner, manufacturing jeweler, visited Philadelphia and Riverside, N. J., last week.

Martin Weaver, watchmaker for J. H. Young, Fort Wayne, Ind., is in Lancaster on a two weeks' visit to his parents.

Jack L. Straub sailed last week from New York for Bremen on the *Kronprinzessin Cecilie,* to be abroad a considerable time.

Charles Duffield, Louisville, Ky., spent several days last week with Lancaster friends, stopping en route on his way to New York.

Julius Mentzer has gone to Colorado for the benefit of his health. He spent most of last Winter there, and came back much improved, but lately his health has failed again.

H. F. Yergey, Jr., Oklahoma City, Okla., writes to his relatives in Columbia, his former home, that he has purchased his partner's interest and will hereafter conduct the business alone.

Miss Marguerite Wiley has been added to the office force of the Non-Retailing Co. Charles E. Foose, of this company, had as a guest last week W. F. Parker, of M. A. Mead & Co., Pittsburg.

T. Wilson Dubbs furnished the beautiful jewel which was presented last week to Simon W. Raub, by Lodge No. 43, F. & A. M., on the occasion of completing 50 years of membership in the order.

Louis Weber & Son are celebrating a double anniversary by making a splendid diamond display in their show windows. This is the 36th anniversary of the establishment of the business, and the first anniversary of their occupancy of their fine new store.

Lancaster County appears to be a favorite field for the bogus spectacle dealer. The Lancaster police last week received news of a man who had caught a number of gullible people in the lower part of the county by selling eyeglasses at $5 a pair, "solid gold" frames, which proved to be poorly plated brass, with bad glasses. The "faker" was not apprehended.

A representative of the Howard Watch Co., who was in Lancaster last week received the unusual privilege of being shown through the Hamilton Watch Co.'s factory, President Rood himself conducting him through the place. It is a fact worth noting that this factory has not reduced its force during the prevailing business depression, nor lessened its working time nor cut its prices, and there has been but one day's holiday this year. The stock for the increased capitalization in being issued now, preparatory to an enlargement of the plant. The new O sized movement will soon be issued. The company is also rapidly developing the 12 size watch. President Rood has just returned from a trip among the trade.

Secretary Charles S. Seamans, of the Scranton (Pa.) Board of Trade, has resigned to go into business for himself.

Now It's The Lord Elgin

The demand to-day is for thin watches.

The public have been waiting for a thin Elgin Watch—now it's here—the

LORD ELGIN

the thinnest watch made in America with enamel dial.

Like all Elgin Watches—it was not put on the market until worthy to carry with it the Elgin reputation for reliability.

Every Lord Elgin is cased at the factory and timed in the case—the most accurate thin watch in America.

Four grades—7, 15, 17, and 17 Jewels adjusted. 18K and 14K solid gold cases, also 25 year filled cases.

Furnished with metal dials, plain or engraved, gilt or silver.

Prices furnished on application by your jobber, or write the Company for only authorized price list.

THE HOROLOGICAL REVIEW

A CATECHISM OF THE LEVER ESCAPEMENT

Being an Informative and Instructive Series of Questions and Answers for Watchmakers and Apprentices.

(Written expressly for THE JEWELERS' CIRCULAR-WEEKLY by T. J. WILKINSON.)

(Continued from issue of May 27.)

QUESTION:—State another example of the errors discoverable by test C.

ANSWER:—Having adhered to the instruction contained in Rules I-II-III, the movement is ready for examination. Start

FIG. 71.

rotating the balance, thereby allowing drop or first lock to take place, as already described, and test as before by noting the extent we are able to lift the lever off its banking. Make a like test on the opposite side. We will assume that in both instances we are able to lift the lever an undue amount away from each banking. This excessive motion of the lever indicates considerable freedom betwen the corner of the lever notch and the roller jewel.

QUESTION:—What deductions would we make when we find too much freedom be-

FIG. 72.

tween the corner of the lever notch and the roller jewel, as shown by test C?

ANSWER:—The deductions according to indications are: (1) that the lockings of the escape wheel teeth are too deep on both pallets, or (2) that the roller jewel is not going deep enough into the lever notch.

QUESTION:—How shall we decide which may be the cause of error?

ANSWER:—An observation of the tooth and pallet lock will reveal the condition of the lock. Should the lock be found satisfactory then the fault lies in the depthing of the roller jewel in the notch of the lever, as before insisted on. Make use of other tests to confirm the findings before attempting alterations.

QUESTION:—Is it wise to make any alteration because some one test shows an escapement error present?

ANSWER:—No; all tests should in every instance be employed before attempting alterations. By following such a routine

FIG. 73.

we can positively decide the nature of the error.

QUESTION:—Describe the three results obtained by test C?

ANSWER:—(1) That position where we find normal freedom between the roller jewel and corner of lever notch, Fig. 71, lever at rest against its bank, determined by the extent we can lift the lever off its banking; (2) that position where no freedom exists between the roller jewel and corner of the lever notch, Fig. 72, it should be noticed that the lever is at rest against its banking; (3) that position where we find excessive freedom between the roller jewel and corner of lever notch, Fig. 73, the lever being at rest against its bank.

TEST D.

QUESTION:—Explain the nature of test D?

ANSWER:—This test is a sub-divisional test, being closely related to test C. Instead of being governed, as in test E, by drop of the teeth on the pallet, we employ test D from the standpoint of the unlocking action.

QUESTION:—Explain how test D is made?

ANSWER:—Commence tests A, B, C, and D by conforming to the rules given in I, II and III. Having done so, we will, as in test C, place a wedge under the balance simply because it makes observation easier and deductions more reliable, the balance being wedged slowly rotate it, thereby gently bringing the roller jewel in contact with the notch, as shown in Fig. 74. At the exact moment that the roller jewel comes in contact with the side of the lever notch cease rotating the balance. This is an important feature of the test, viz., that the roller jewel shall in no wise lift the lever off its bank, and hence we require only slight contact of the roller jewel with the side of the lever notch. The roller jewel being in contact with the side of the lever

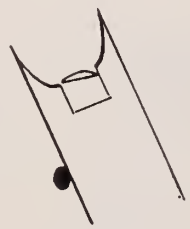

FIG. 74.

notch, as Fig. 74 shows, take a watch oiler and note the extent the lever can be lifted off its bank. This will show the freedom between the roller jewel and corner of the notch, K to N, Fig. 75. Follow this up by a similar test of the action on the opposite side of the notch.

QUESTION:—Suppose upon testing an escapement by test D methods we find no freedom between the roller jewel and the corner of the notch, what errors are indicated?

ANSWER:—We may have to deal (1)

FIG. 75.

with an incorrectly set pallet jewel, *i. e.*, in which the lock is too light, or (2) the acting length of the lever is too long or expressed; otherwise one side of the notch has too much contact with the roller jewel.

QUESTION:—As the results of testing another escapement by test D methods, we find that there is too much freedom between the corner of the notch and the roller jewel. What ereror would we look for?

ANSWER:—The following would be indicated: (1) that the lock of the tooth on

Lifting Watch so Dial Faces the Wearer

Watch worn on chain as a pendant, pinned to garment as additional security

Showing Watch Worn with Dial Outward

Brooch and Case Combined

Which Enables a Watch to Keep Correct Time

CANNOT BE LOST WILL NOT PULL OR WEAR OFF

Dubois Safety Chatelaine Brooch Watch Case

Patented U. S. June 9, 1908.
Patents Pending in Foreign Countries.

Watch worn as Chatelaine, showing it lifted to read the time

MERITS—Holds the watch firmly and securely, thus preventing the movement from being jarred, as there is no swinging or bobbing up and down while the wearer is walking or running. Protects both the case and garment from wear.

UTILITY—It can be raised so as to read the time, and reversed to have either the dial or back facing front, without removing brooch pin or watch from the garment. Can be worn on the shoulder, belt, chain or fob.

ARTISTIC AND PRACTICAL—The only brooch and watch combined. Affords absolute security, as it has a safety catch. Nothing to wear out, as it works on friction bearings. Eliminates the possibility of loss of the watch owing to either bow, hook, swivel or link wearing out, breaking or coming apart, as in the old style chatelaine. Does not interfere with either winding or setting of movement.

Licensed Under Wachter Patent. Patented July 25, 1905; May 21, 1907.

Watch worn on belt as Chatelaine, also long neck chain can be worn attached to it

the pallet is too deep, or (2) the roller jewel is not going deep enough into the lever notch. An observation will locate the cause of error, which should be confirmed by tests A, B and C.

QUESTION:—Are not the results of the finding of test D similar to test C?

ANSWER:—Yes. What applies to one applies equally to the other, but as each test is worked from a different standpoint each has its value.

TEST E.

QUESTION:—What is the purpose of test E?

ANSWER:—By test E we determine the condition of the inside and outside drop; that is, the wheel's free flight from the moment it is discharged by one pallet until another tooth drops on the opposite pallet. although described in a former paper, shall again be briefly explained.

QUESTION:—Explain how you would estimate the inside drop?

ANSWER:—To determine the inside drop allow a tooth to become discharged from the entering pallet. Its flight from moment of discharge until another tooth drops on

FIG. 76.

the locking face of the exit pallet represents the inside drop.

QUESTION:—How is the outside drop estimated?

ANSWER:—By allowing a tooth to be discharged from the exit pallet, its free flight from moment of discharge until another tooth is intercepted by the locking face of the entering pallet, represents the outside drop; both the drops should be equal in amount.

TEST F.

QUESTION:—What is the us of test F?

ANSWER:—It provides us with information relative to the inside and outside shake, or stated otherwise, that position of the escape wheel teeth with the pallet jewels where least freedom exists between these parts.

QUESTION:—How do we examine the inside shake?

ANSWER:—By bringing the tooth of the escape wheel down to the lowest locking corner of the exit pallet, as illustrated in Fig. 77; then observe the space between the back of the entering pallet and the tooth immediately behind it.

QUESTION:—How is outside shake estimated?

ANSWER:—By bringing the tooth of the escape wheel down to the lowest locking corner of the entering pallet in the manner shown in Fig. 77. Then observe the space which exists between the back of the discharging pallet and the tooth immediately behind it.

TEST H.

QUESTION:—What does test H determine?

ANSWER:—It determines the condition of the draw.

QUESTION:—How do we proceed?

ANSWER:—To determine if draw is present and its force the watch must be clean and all parts oiled. The balance should be removed and, with a small screwdriver, lift the lever off its banking, thereby bringing the tooth of the escape wheel into the position on the pallet that Fig. 77 indicates. Then release the lever and if draw is present the lever will return to its banking. Make a similar test on the opposite pallet.

TEST K.

QUESTION:—What does test K tell us?

ANSWER:—It informs us of the side shake or freedom of the roller jewel in the lever notch.

QUESTION:—How do we estimate it?

ANSWER:—By bringing the roller jewel to its greatest depth in the notch of the lever, the lever will then be found midway between the banking pins. With the parts in this position, place a finger on the balance, hold it steady and with a fine tweezer grasp the tail of the lever. From the side shake of the lever judge the amount of freedom the roller jewel has in the lever notch.

FIG. 77.

TEST L.

QUESTION:—Explain test L?

ANSWER:—This test means an observation of the lock of the teeth on the pallet jewels.

QUESTION:—How do we estimate the lock?

ANSWER:—We consider the total lock as divisible into two parts, namely, a drop or first lock and a draw or second lock. Therefore our first observation takes in the total lock, after which we separately observe the extent of the drop lock and of the draw lock.

TEST M.

QUESTION:—How do we employ test M?

ANSWER:—We use this test to find if a tripping error is present.

QUESTION:—Explain the method?

ANSWER:—To determine if an escapement can trip, we bring the guard pin in contact with the edge of the roller table. Then we observe that the tooth remains locked on the pallet's locking face; it must not enter in any manner on the pallet's impulse face. Examine all teeth on both the pallets in the manner explained.

TEST P.

QUESTION:—Explain the use of test P.

ANSWER:—This test is an important one; it informs us if the roller jewel can strike on the lever horns (single roller).

QUESTION:—How is it used?

ANSWER:—At a time when the roller jewel has passed beyond the tip of the lever horn, place a finger on the balance, thereby securing it. Then press the guard pin against the edge of the roller table. Keep it so pressed and slowly guide the roller jewel back into the notch. As the roller jewel passes the horn no contact should be felt between the parts. Note, however, that the moment the roller jewel passes the corner of the lever notch a slight contact will be felt. This is quite correct (read tests C and D). Make a test of the roller jewels wtih the opposite lever horn, when the same conditions should be found to exist.

QUESTION:—When making an escapement examination is it necessary to follow the routine as written?

ANSWER:—No; when making tests A, B and C the others really come in as part of the regular routinc, excepting test P, which calls for a separate examination.

QUESTION:—How long does it take to make an exhaustive test?

ANSWER:—Probably not more than five minutes, when one becomes familiar with the tests and deductions to be made. Again we desire to reiterate, do not attempt any alteration without confirming the findings by all other tests.

(To be continued.)

A Portable Sun Dial for Recording Civil Time.

WHILE in olden times and the middle ages the sun dial was the most important aid in determining the approximate and also the exact time, it has nowadays lost its practical significance and serves only occasionally for decorative purposes. This is due on the one hand to the perfection attained in. modern horology; on the other to the adoption of "mean" in place of "true" (solar) time. It is a well-known fact that the mean or civil time varies, as compared with the solar time, to an extent that changes from day to day. To obtain from a sun dial the civil time we must undertake not exactly a complicated, but for the public, inconvenient, if not impossible, calculation. In addition to this most countries since the end of the last century have adopted for their entire territory a standard time, which, according to the location of the place, is obtained by a correction, based on its geographical longitude. In central Europe, for instance, they are governed by the so-called central European time.

In spite of the inconvenience of the sun dial, as thus explained, it is to be regretted, remarks Dr. Alfred Gradenwitz, in the *Deutsche Uhrmacher Zeitung*, that this excellent means of controlling the movement or rate of a clock or watch should have been so completely abandoned, and it is therefore the more welcome that a French scientist, Viscount o' Aurelle Montmorin, should have made what appears to be a very successful effort to meet modern requirements in this direction.

The sun dial designed by him (Fig. 1) gives directly the civil, local or standard time when its adjustment, with the help of an inscribed curve, is constantly changed to a slight extent.

The equatorial dial plate of the new sun dial consists of a lightly-stretched wire and a half circle, the central point of which falls within the wire, and which bears a scale graduated in intervals of five minutes. This system is applied to two quadrangular frames, placed one within the other that can be revolved on axes placed at right angles to each other.

The New England Watch Co.

Waterbury, Conn.

ANNOUNCEMENT TO DISTRIBUTORS

¶ Our full line of *New England* Watches, including many new designs and the perfected *New England* movement, will be ready for delivery August 1st next.

¶ Half-tone cuts of the complete line are now ready for distribution. Distributors are urged to send in their lists early in order that all may be supplied in ample time for their own catalogues.

Material Jobbers

who are hustlers should order our new material catalogue plates for their new catalogue. It will pay to have our line in your book.

TRADE-MARKS

Manufacturers and Jobbers:

We now have in preparation a supplement to the second edition of "*Trade-Marks* of the *Jewelry and Kindred Trades*," and in order that it may be as complete and accurate as to new marks as it is possible to make it, we request every manufacturer and jobber to send us a list of such marks as he may *now use*, or *has ever used*, together with such information (the kind and quality of goods upon which the marks are used, etc.,) as may be germane to the subject. Send cuts of marks if possible. If not, send clear, printed impressions or drawings.

The earliest attention is solicited, as it is of utmost importance to every manufacturer and jobber to have his mark recorded in this supplement.

The Jewelers' Circular Publishing Co., 11 John Street, New York

One axis is horizontal and serves by means of a special graduation to place the wire at a certain inclination to the earth's axis; the other axis meets the wire axis and serves to give the time scale the displacement required for the equation of the time.

This displacement is controlled by the following arrangement: One edge of the outer frame is beveled off and presents an edge exactly parallel to the thin wire; the same applies to a setting or adjustment line, determined by two marks engraved in the inner edge of the adjacent surface. On this inner surface a small scale is laid out, on which the curves representing the time,

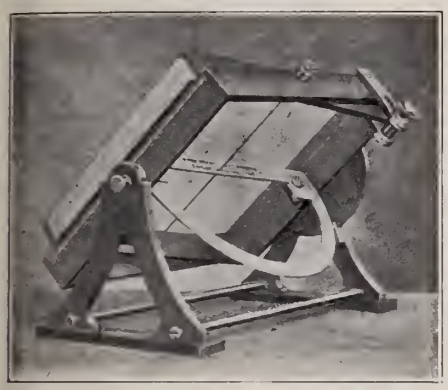

FIG. 1.

equation or adjustment for the different days in the year are drawn (Figs. 1 and 2). One curve is designed for the first and the other for the second half of the year. The vertical distances of this curve from the vertical central axis (the ordinates) give for that particular day the variation of the civil from the true time.

Finally, at the end of the scale are two divisions in minutes of time, which serve for the longitudinal correction. It is only necessary to bring the division representing the geographical longitude of the place opposite to the above mark, to effect this correction. It is sufficient to make the

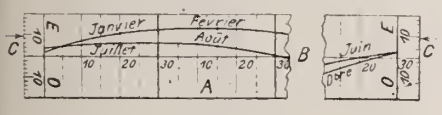

FIG. 2.

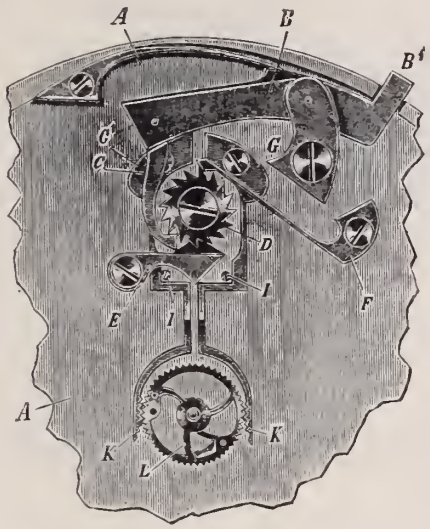
longitudinal correction but once, for all time; the correction for the time adjustment need only be made every two to three days.

The apparatus above described is not intended to serve as an instrument of precision for the regulation of astronomical clocks, but is only an arrangement suited for the purposes of the general public. The precise results to be obtained with it entirely meet the requirements of the laity, inasmuch as the deviation remains within a minute.



A suggestion made by the inventor facilitates the elaboration of this device in a unique manner in order to afford a permanent test as to the rate of a chronometer. For this purpose in place of the wire we must employ a narrow slit or crack and replace each dividing line representing a full hour with a selenium wire, connected with a battery and an electric bell. When the entire sun dial is now enclosed in a covering and the sun's rays can enter only through the narrow crack the electric bell will be rung whenever the sun's rays strike the selenium wire (which is very sensitive to light). Thus the hours will be recorded. By means of a second bell, of a different tone, the half hours may also be signaled.

If finally the current flowing through the selenium wire is made to operate the press button of a repeating watch, this watch would strike the hours exactly the moment when the sun's rays fell on the selenium wire, provided the watch was always timed to run a little fast.

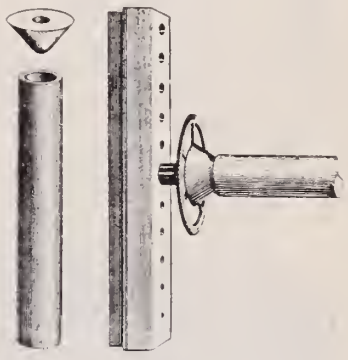
An Improved Chronograph.

THERE has just been patented by Oscar Friedrich Sjogren, of Switzerland, an arrangement which enables the inventor to diminish the friction of the chronograph wheel.

The chronograph wheel is essentially controlled by a lever, the elastic arms of which press toward this wheel in order to stop its motion. This action of the spring is very seldom equal on both sides of the lever, and therefore causes friction on the

SJOGREN'S IMPROVED CHRONOGRAPH.

pivots on which the chronograph wheel is staked. The illustration shows how the inventor avoids this fault. We notice here a fork, G G', of which the ends, K K, surround the stop wheel. Both sides of this fork are cut with the same size of teeth, as is the chronograph wheel. In I I are noticed two stop screws with conical heads, by which the adjustment and equalization of the fork and chronograph wheel are perfected. The other well-known parts are: B, the lever, which is pressed on the swing; C, the click, which moves the ratchet wheel d; E, the fork latch, and F, the click spring for the racket wheel D.



The pressing of the top, B', effects through intervention with the locker C, the wheel D, and the latch E the depthing of the fork, K K, and by this operation the chronograph wheel is either released or topped by snapping on the equally divided teeth on both sides.

Both sides of the fork must be adjusted so as not to reach the bottom of the chronograph wheel. It is only necessary for both sides of the fork to reach in the teeth far enough to bring the chronograph wheel to a standstill, when snapped in.

The benefit of this improvement is mainly derived from the fork which controls the chronograph wheel equally on both sides and through this all friction is avoided.

A Tool for Riveting a Wheel Vertically True.

SUFFICIENT importance is not generally attached to this little operation, which nevertheless requires great care for its proper execution. Many watchmakers find it quite natural to be compelled to straighten or readjust, by the arms, the wheel they have just staked. This is a mistake and a fault, says P. B. in *La France Horlogère;* a workman who is conscienti-

TOOL FOR RIVETING WHEELS VERTICALLY TRUE.

ous and skilful will not neglect to provide all possible precautions in order to avoid these retouchings, which invariably deform the mobile and cause a loss of precious time.

Very often, in this little operation, sufficient importance is not attached to the fact that, no matter how skilful of hand we may be, we will always rivet out of flat if we do not take the trouble to prepare the work well, and if we use poor tools; a pinion is fatally crippled when it has been hammered between a badly-shaped riveting hammer and a staking tool, in which the opening of the holes has become funnel shaped, as a result of use.

Nevertheless, even with faultless tools, some conscientious artisans only succeed with the greatest difficulty in holding the riveter sufficiently plumb to rivet accurately. For these I advise the use of the ingenious tool illustrated herewith, and which was suggested to me by Monsieur Petschel, formerly head workman for the late Mr. Rodanet.

This tool is composed of a shaft, having at one end a conical hole, into which fit small steel cones, pierced with holes of various sizes.

It is so to say a jointed riveter of which the extremity always remains perpendicular to the axis of the mobile to be riveted, even if the shaft of the tool is not held absolutely straight, and when the strokes of the hammer are not given directly vertically. I do not hesitate to warmly recommend the use of this tool, which has given perfect results. It is not offered commercially, but anyone can make it for himself without difficulty.

The Favorite Movement with both Trade and Public

The Omega Movement

stands in high favor with the trade, and is constantly increasing in popularity for the reason that the public is quick to appreciate its merits.

The man who carries an Omega is proud of it and misses no opportunity to sound its praises to his friends. He finds it invariably and uniformly reliable. He learns to depend upon it and it never abuses his confidence.

Ω OMEGA

Adaptable, Interchangeable, and Suited to all Requirements

The Omega is made in all sizes to fit regular American cases, besides a number of Swiss sizes. Every part is interchangeable, and all are made with lever escapements, double roller and pendant set. There are six different grades — from seven jewels to twenty-one jewels — adjusted to heat, cold, and five positions.

STORE KEEPING DEPARTMENT

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan which they are utilizing in connection with their business.

Unmistakable Indications of Renewed Prosperity

Economic and Agricultural Conditions That Spell Success

MUCH encouragement is felt in all lines, including the jewelry trade, in view of the indications of returning prosperity as manifested by the recent acts of some of the railroads, fertile crops and generally satisfactory agricultural conditions. According to the *General Merchants' Review* the managers of the railroads, having studied conditions carefully, look for big increases in business.

The New York Central has just placed an order for 2,000 steel cars. The Pennsylvania has instructed that all idle cars be put back into service at once.

Continued improvement is reported by the United States Steel Co., each month this year being ahead of the previous month. Another indication is the new high record for deposits made by the national banks of Chicago.

At the same time the best basis for expecting an immediate return of old-fashioned prosperity is the crop outlook. The conditions of grains of all kinds are even more encouraging than they were a year ago at this date. This applies alike to the Winter sowings and plantings.

In addition to such good prospects of a bumper crop it is a fact that crops are bringing good prices. Corn is above 70 cents; wheat is around the dollar mark.

Cotton prices are up, and are likely to remain so for some time. The prospect is that the southern farmer will make a liberal profit on this season's crop. Additional evidence of the better outlook is furnished by the advance in the stock market. Operators in this class of securities always discount the conditions which will prevail in the early Fall, and the way prices have soared in the past few weeks shows that these business men are confident of the future.

Especially where agriculture is the chief means of revenue of the consumer retail merchants have every reason to feel that splendid times are just ahead of them. Where manufacturing is the chief interest the good times may come a little more slowly, as they must be passed from the agricultural class to the manufacturing class.

Even the diamond market is looking up again. After many months of stagnation diamond merchants are again buying heavily for the New York accounts. When people are again buying diamonds it must be that money is plentiful.

When the revival does come it may prove to be so large that manufacturers and jobbers will not be able to promptly meet the demand. When consumers have let their personal belongings run low, and when retailers and jobbers have done the same, it means that all these stocks must be supplied again sooner or later. With such prospects ahead, the wise retail merchants will from now on be preparing to get full benefit of the big wave of prosperity which is even now almost upon us.

Cutting Expenses.

By XENO W. PUTNAM.

IT does not pay to cut the selling expenses down when trade seems light and money close, because then, of all times, is when we need to use our most strenuous efforts in stimulating the sluggish conditions. There is a limit to every business capacity, and the greater the margin between that limit and the business actuality the more room there is for profitable improvement on our part. It's when the bucket is empty that we need exert ourselves the most to fill it up again, not when it is nearly full. The man who would tell his customers he could not afford to sell goods any longer because times were dull would be regarded worse than childish. But why should he be more severely criticized than he who virtually refuses to sell them for the same reason, but without the formality of confessing his reason?

It will not do to cut down buying expenses, since it is not within the province of the legitimate merchant to sell "short," and a curtailment of supplies is sure to prove a boomerang to his selling capacity. No one can sell what he has not got more than water can rise higher than its source, and the merchant who turns away trade when trade seems just a little scarce because unwilling to invest the amount necessary to supply it is on a level with the laborer who refuses to earn his living lest the exercise tend to make him hungry.

It does not pay to cut down the operating expenses which are needed to properly maintain and nourish our business system any more than it would pay to cut off nourishing food from the physical body at a time of unusually strenuous exertion, and thus reduce its capacity for work.

In fact, about the only expense that the real live merchant can afford to cut down in seasons of financial stringency is the wasteful and extravagant odds and ends, the business leaks, that never had a legitimate place in the commercial scheme, and that require cutting out, not because of the times, but because of their nature, to the wastefulness of which the times have possibly first called our serious attention.

After all, an occasional tight money market is not without its uses in directing our attention to those wasteful little details that no business, however prosperous, can really afford in any kind of trade conditions.

How to Meet the Competition of the Mail Order House.

(*Continued from issue of April 29.*)

IT might seem useless to caution the retailer always to figure over every bill received from wholesale houses. But many retailers do not do this. They should contract the habit at once. Your wholesalers do not mean to over charge you, but their accounting departments are likely to make errors, and will gladly correct them as soon as their attention is called to the matter.

Make it your rule never to accept anyone's figures as correct without checking them over, and you will save a very respectable sum in the course of a year.

One of the great advantages the mail order house enjoys is that of having perfect methodical systems. The entire business moves without clash. Another advantage they have is the ability to advertise heavily, yet making the advertising cost light, owing to the large volume of advertising business transacted. Another of their advantages is the possibility of having skilled advertising men, so that all advertising is of the right kind. And it will be noticed that a great deal of money is spent by these advertising men in showing the buying public that their house is the best one to trade with.

The retailers located in a city large enough for a merchants' club to be formed, having financial strength enough to establish club rooms and employ a competent secretary, are more fortunate than many of them realize. Such club and its secretary can be made to counteract the above advantages of the mail order houses.

Such a club, with such a secretary, can

Storekeeping Department.

put forth great efforts to build up the city in every possible way. It can extend its trade territory, making all customers believe that it is the best point to trade at, thus doing the same work the mail order house tried to do.

The secretary should be a good advertising man, and should be continually getting out some new advertising matter which will convince the entire surrounding country that it would be more to their advantage to trade in your city than to send elsewhere for goods.

A part of the tools of this secretary should be a complete mailing list, covering everybody living in the territory your town wants to cover. And there is no reason why a good advertising man in such a position should not be worth three times what he would cost.

He can also be used as a handy man to whom to refer all people who want you to take advertising space in programmes, etc., which will use up your money without giving you any chance for returns. It is hard to refuse many of these people, especially good customers. But if all the merchants in the city agree to give the applicant a card to the secretary of the club, at the same time stating that he has charge of that kind of advertising for you, it effectually covers the ground. And Mr. Secretary can easily turn down the proposition. It will take but a few months of this kind of work to do away entirely with the programme advertising business in your city. And the writer ventures to say that the merchants of every city large enough to pay a good secretary already waste enough money on programme advertising each month to pay the salary of the secretary. For he would save you all that waste.

A good "ad." man in such a position should be very valuable to all club members in the capacity of advisor in preparing advertisements for the papers, etc. For all should advertise, and advertise rightly.

Your club should be the means of cementing a firm friendship among all members. The great enemy of the club, the same as of the individual members, is jealousy. The mail order house has but one head, and jealousy does not count. Each merchant in your club is the head of his own business, and most of them are jealous. Cut out this trouble and you will be able to beat all competition out of your territory with your club. Once business jealousy is overcome, every merchant will find the other fellow to be a good hustler for the common good. Every reader of this paper can do much to bring about this business harmony by refusing to believe evil of a competitor, but by going direct to him with his story, and talking it over. Try it.

[THE END.]

Impassable barriers ought not to be a real hindrance to one's progress in the line of duty. If a man has anything to do that he ought to do, he should do it, whether he can do it or not. The fact that a thing cannot be done that must be done is only an added reason for its doing.—*White's Class Advertising.*

Losing Trade.

MEN may endure more incivility than women, but they are more impatient of neglect. One morning I dropped into our suburban grocery. The old proprietor was alone behind the counter. A woman was checking over her monthly statement with him—in a friendly manner, but leisurely, interspersed with the gossip of the neighborhood.

A hale, prosperous looking man was pacing back and forth before one of the counters. How long he had been there I don't know, but he was evidently growing impatient—and the storekeeper paid no attention to him. Finally he stalked out—without a protest from the man behind the counter.

Why didn't the storekeeper excuse himself a moment from the woman and wait on the man—or give the latter a friendly assurance that he would serve him in a moment? It would have held the man—made a sale—perhaps cemented a customer.—*System.*

A Fool and His Money.

I ONCE had money and a friend
In whom I put great store;
I loaned my money to my friend,
And took his word therefor.
I asked my money of my friend,
But naught but words I got—
I lost my money and my friend,
For sue him I would not.
Now had I money and a friend—
In whom I put great store,
I'd keep my money and my friend,
And play the fool no more.—*Ex.*

Burglars stole jewelry valued at about $500 one night recently from the store of J. B. Roddick, Port Elgin, Ont.

A bursting water pipe caused damage last week of $100 or more in the store of Herbert S. Tanner, 68 Westminster St., Providence, R. I.

The Attractively Furnished Store of the Gabriel Jewelry Co., Mobile, Ala.

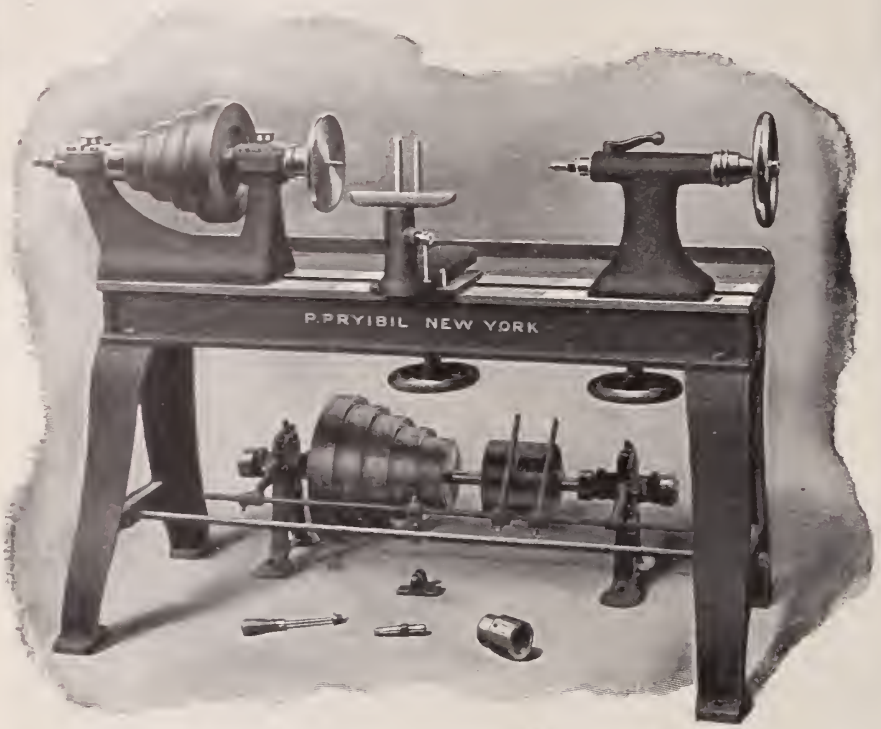
A VIEW of the interior of the attractively furnished store of the Gabriel Jewelry Co., Mobile, Ala., is shown this week. The establishment is located at 209 Dauphin St. The fixtures are all of mahogany and special trays have been designed for the large horseshoe-shaped case.

The ceiling is of metal and is designed to represent a number of artistically wrought panels from the center of which are lamps are suspended. Both gas and electricity are used to illuminate the store. Several electric lights are arranged to form an arch outside of the office, above the safes, making a very striking effect.

Gracefully designed wall cases extend the full length of the store on either side. The cut glass and silverware and other stock displayed in these cases shows up most attractively at night when the cleverly arranged lighting facilities are all utilized.

The office department is equipped with every modern device calculated to facilitate business.

INTERIOR VIEW OF THE STORE OF THE GABRIEL JEWELRY CO., MOBILE, ALA.



True Economy.

TRUE economy in advertising often means what apparently seems a lavish waste of money. No great advertising success was ever achieved without a liberal unloosening of purse strings at the right time and in the right place.—*Business Problems.*

A pearl which, it is claimed, weighs 53¾ grains and is perfectly spherical in shape, was recently found in the Illinois river, near Beardstown.

A window display which attracts no little attention is that of G. A. Schlechter, Reading, Pa., who shows the process of manufacturing hand-made rings.

A. C. Smith, well known in New York, and at present conducting a retail jewelry store in the City of Mexico, Mex., was a recent visitor to Laredo, Tex.

WORKSHOP NOTES AND QUERIES

[Answers are also solicited from our readers to the questions published on this page.]
No attention paid to communications unless accompanied by full name and address of the writer.

QUESTION No. 2156.—**Pressure Blowers for Soldering.**—*I note your article in a recent issue of* THE CIRCULAR-WEEKLY *on jewelers' soldering appliances. Will you kindly publish illustrations and descriptions of various machines used by power for the production of the high pressure on other than foot bellows, as I have seen in some plants? I should also like to know how this pressure is produced by these machines, as it interests me and doubtless would a great many other jewelers. There are doubtless many other ways for using this air besides for soldering, and if you will name these uses it may enable me to decide as to whether it will pay to install one in a small repair shop. Will water power or electricity operate these machines?*

R. L.

ANSWER:—The leading machines in use at the present time for producing air pressure for soldering purposes are the pressure blowers, or air pumps. See Fig. 1. A small-sized blower would be very serviceable for a jeweler or any metal worker where there is much soldering or brazing. The machines of small size require about one horsepower to drive them, which may be furnished by water motor or by an electric motor. If run by water power or a water motor, then the connection can be made by belting the two together; but if run by electric power a counter shaft is necessary in order to reduce the speed. A direct belting would run the blower too fast. There should be some pipe fitting to carry the air to the workbench, with proper valves and nozzles for the securing of the rubber tube, and so the pressure can be regulated by turning on or off as required. Several valves should be provided on the pipe so one can attach two or more lamps which are sometimes used for soldering large articles. The blower or motive power need not be in the store or repair shop, but can be placed in a basement, or may be hung overhead in a shop. The pipes with the air can be led to the workbench from any point, also the power can be arranged so it can be turned on or off at a handy place near the workbench. The price of blowers suitable for jewelers would be about $20. The freight, setting up and piping and cost of making connection by a gas fitter would be from $5 to $8 additional. This is exclusive of appliance to furnish power for the blower. A blower of this description can be used for other purposes in addition to soldering—for instance, for sand-blasting glass, brazing and for frosting jewelry with a sand-blast attachment. Another desirable blower is that shown in Fig. 2, which is a blower and electric motor combined. It gives sufficient air pressure for soldering purposes for a large jewelry or repair shop. Where electric current is available the attachments and connections are easily made, so that the expense of the machine and connection would cost about $60. The blower can be had for about $45, leaving about $15 for installation. This style of blower is easily regulated, can be turned off or on readily and would make a good addition to a repair shop. Where there is a shaft which furnishes power for other machines a blower of less cost could be installed, such as that illustrated in Fig. 3. This machine gives enough air pressure for five or six ordinary soldering lamps, and requires very little attention. The blower can be purchased for about $6, and the only additional expense would be a belt and a drive pulley. The above described devices are suitable where gas is available, or where the gas is made on the premises out of gasoline or oil. It is very convenient for a jeweler. He simply turns on the gas, lights his soldering lamp, turns on the blower valve and proceeds to solder. He can give all his attention to the job, and is able to do the best of work very rapidly. It is not so tiresome as it is if one does the blowing himself with a blowpipe and an alcohol lamp. A repairer supplied with a good soldering outfit can save time by preparing a number of jobs ready for soldering by placing them on the soldering blocks and then taking up the jobs one after another. By following this method a repairer becomes more proficient and can do more work than he could by repairing a piece through all its stages before taking up another piece. It will pay a jeweler to go to the expense of putting in the modern appliances if he has sufficient work to warrant the investment. There will always be running expenses with the machine, such as power, oil and repairs, which must be taken into consideration. If there is not enough business then the appliances described in our issue of April 22 last are available. Any of the soldering lamps illustrated therein can be used with the above described machines.

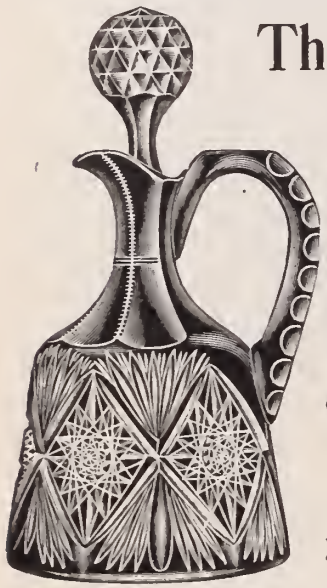
FIG. 3.

New Method of Depositing Copper Upon Glass.

A NEW method of depositing copper upon glass has recently been discovered by an English investigator, says the *Brass World*. A mixture of one part of freshly distilled phenylhydrazine and two parts of water is heated until the solution is clear. A warm solution of cupric hydroxide in ammonia is then added (made by precipitating sulphate of copper by potash, washing and dissolving in ammonia). The cupric hydroxide is reduced to cuprous hydroxide with evolution of nitrogen gas.

A hot 10 per cent. solution of caustic potash is then added until a slight precipitate of cuprous hydroxide takes place. If the solution, in this condition, is brought in contact with a clean glass surface a bright deposit of copper forms upon it. This is thin and perfectly reflecting.

The copper thus deposited is washed after an hour or so with water, then with alcohol, and finally with ether, in order to dry it without rupture. It is then coated with lacquer or varnish.



A handbag containing a pocketbook was snatched one day last week from Mrs. Ludwig, wife of Wm. H. Ludwig, a jeweler at Chambersburg, Pa., while she was walking in S. 2d St. The police were notified, and after getting a description of the thief arrested "Bill" Braxton, a diminutive colored bootblack. The missing pocketbook was found when he was searched. He was held for trial.

Glass Cameos.

IN the May number of the London *Pottery Gazette* a member of the staff of that journal writes an interesting article on "Glass Cameos," referring among other things to the work of an artist in this line now in the United States. He begins by speaking of the instructive paper, "The Portland Vase; Its History and Its Effects on Cameo Work," recently read by Owen Gibbons, Hill Literary Society, and then says:

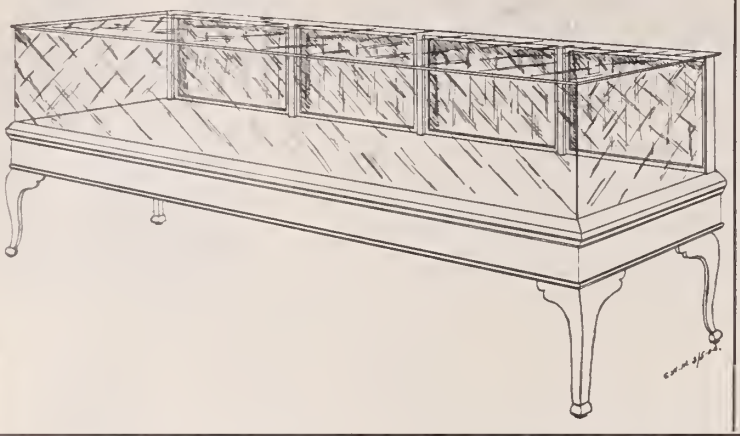
"One of the objects kept in view by Mr. Gibbons right through the paper was to stimulate the production of the best types of artistic glass. The district in which the paper was read is the home of artistic glass ornamentation, and there is reason to believe that Mr. Gibbons' explicit description of cameo work in glass has encouraged the patient artists who make it their specialty. They need encouragement, their labor is a long-continued mental strain, but 'the end crowns all,' and the true artist feels amply repaid when success crowns his work. Mr. Gibbons said: 'There are a number of artistic sides to glass manufacture and decoration, but cameo cutting undoubtedly is the art in which it is possible to reach the very highest artistic excellence in glass.' Interest in the revived art of glass cameo cutting wants stimulating, and those who pursue the art deserve to be encouraged. Art classes and art schools are doing much in this direction. Art education is advancing in all directions, and it is hoped that the public taste will soon be trained to a more just appreciation of the artistic merits of glass cameos.

WHAT IS A CAMEO?

"Strictly speaking a cameo is a precious stone cut in relief—more particularly a stone composed of different colored layers, having a subject in relief cut upon one or more of the upper layers—the under layer forming the ground. Certain precious stones possess these natural characteristics for the purposes of the cutter. The onyx—particularly the banded onyx—the garnet, the opal, the turquoise and other well-known precious gems are all natural materials for cameos. Judged by this standard, some of the early cameos, the Graeco-Roman and mediæval cameos, and even those of the Renaissance, must be reckoned as 'imitations.' But the word has a wider significance now, and the qualification of a 'cameo' as a jewel, or as a precious object, is estimated quite as much by the skilful artistic work upon it, as by the value of the material itself. Mr. Gibbons very clearly explained what glass cameo work is, and how the labor and skill demanded in its production give it a value equal to that of cameos proper.

"For the purpose of this article the writer paid an interesting visit to the British Museum. There are priceless specimens of these old gems, some looking as fresh as

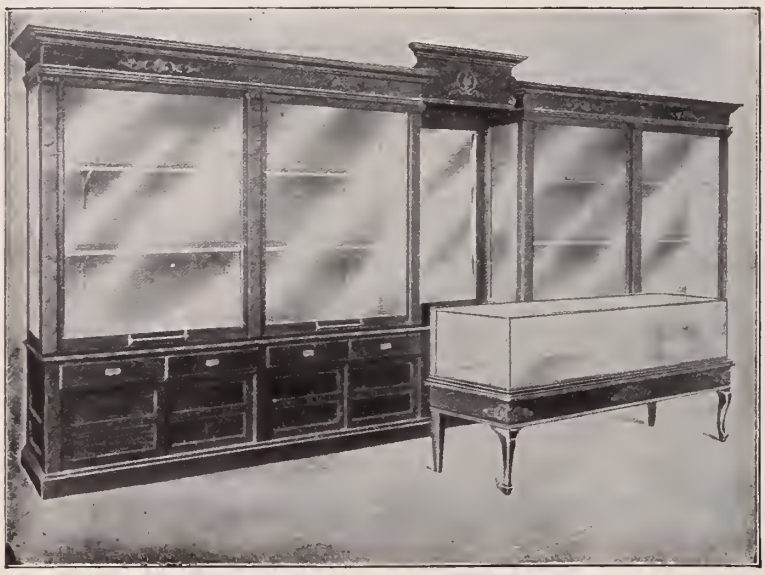
VASE "THE MUSES," BY F. CARDER.



they must have looked when they first came from the hands of the cutter, and that is estimated at 4,000 years ago. Among them are small, delicate and beautiful profiles, apparently portraits. These are strictly cameos. But the British Museum sets quite as much store by a number of 'glass cameos.' They are ordinary crystals, colored with metallic oxides. How these old pastes were made nobody knows. Onyx is imitated by layers of variously colored glass, showing that in early Roman times there were skilful glass makers and glass cutters. Cameo cutting was at its perfection in Rome during the first two centuries of the Christian era. The examples of this period that have come down to us are portraits of the reigning families and allegorical illustrations of their achievements. But contemporaneously with the best productions in Oriental precious stones, pastes or imitations in glass were made in incredible numbers, apparently to meet the requirements of those who could not afford the other, and more costly, luxuries.

"Both in perfection of material, and in the artistic merit of decorative manipulation, these imitations were, in the best period, of recognized extraordinary excellence. Today their value is enhanced by the halo of centuries. There are many smaller example of these ancient glass cameos, but the Portland vase (also in the British Museum), remains one of the finest examples of the skill of both the glass worker and of the engraver on glass of ancient times.

MODERN GLASS CAMEOS.



"In recent years, Stourbridge glass makers, particularly Stevens & Williams, of Brierley Hill, and Thomas Webb & Sons, Ltd., of Dennis Glass Works, Stourbridge, have revived the production of glass cameos, and they have a number of skilled workers. The names of Northwood and Woodall have long been known in connection with beautiful glass cameo engraving. Of course, there are other workers on the same lines, and within the last few years the name of Carder has been in creditable evidence in this connection. In the paper I have referred to, Owen Gibbons mentioned Frederick Carder, who took high honors in the National competition at South Kensington, receiving first a silver medal for a small vase, and then a gold medal for a large vase entitled 'The Muses,' Mr. Carder was formerly with Stevens & Williams Glass Works, Brierley Hill. He was for a time art instructor at the Wordsley School of Art, but is now associated with the Steuben Glass Works, Corning, N. Y.

"The vase is of oviform shape, 22 inches high, with figures and other ornamentation on deep, transparent blue ground, and the allegorical figures in the upper panel and the conventional ornamentation in the lower sections and the foot are beautifully executed. The vase itself was made in transparent blue, then it was coated with opal glass and the theme was disclosed by cutting away just as much of the opal as would leave the figures, etc., in bold relief. An in-

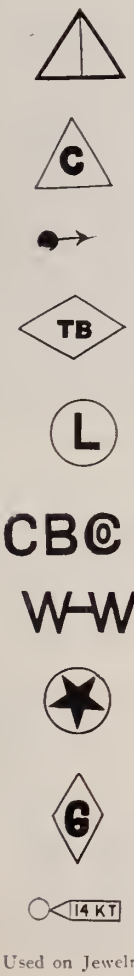
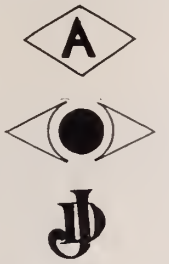
teresting feature in this production is that it was executed by Mr. Carder under the tuition of Owen Gibbons.



"Glass cameo cutting is now essentially an English art; indeed it seems to be an hereditary one. It is one that should be cultivated by expert glass cutters more than it is. For a long time the art had not been pursued here, but now that it has been revived means should be taken to popularize it. It is very beautiful and should appeal to every person of refined tastes. It is a little surprising that a cameo vase or a cameo plaque is not frequently chosen for presentation purposes. Kept from breakage, it would retain its beauty for generations. If we cannot compete with the foreigner in tumblers and glass dishes, he cannot compete with us in the production of artistic glass cameos."

TRADE-MARK INFORMATION WANTED.



The following marks have been forwarded to THE CIRCULAR-WEEKLY for identification, but so far, searches of our records and inquiries among manufacturers have failed to disclose the owners or users thereof. The publishers will be greatly obliged to any subscriber who can forward any information whatsoever as to the marks that will lead to the discovery of the manufacturer who has used or is using any of them.

BRONZE FIGURES AND OTHER NOVELTIES.

FERDINAND BING & CO.'S Successors, 10 Washington Place, New York, include in the wide assortment of interesting exhibits to be seen at their salesrooms a line of small French bronze figures with bisque heads and feet, which are proving an attractive line to jewelers. The figures are of various sizes and represent different subjects, among which is that of a young woman feeding chickens. Singing and dancing girls are also prominent among the other subjects used. The display of electric lamps with beaded glass and silk lamp shades is also most attractive as are the offerings in dainty jewel boxes. The jewel boxes are made in Vienna bronze and real bronze, and on the porcelain and ivory tops are hand-painted figures of beautiful women. Among the French bronze offerings in electroliers is one representing an Arab horseman mounted on an oblong base. Across the saddle is slung the results of the day's hunt. Figures in bronze of Indian warriors in battle and on the chase are also shown.

*

ATTRACTIVE BRONZE ELECTROLIERS.

ATTRACTIVE bronze electroliers are now on exhibition at the salesrooms of J. D. Bloch & Co., 44 West Broadway, New York. Among the offerings is one representing a rural maid standing beneath a cherry tree. The figure of the woman is mounted on a rough base, and at her feet is a lamb. She is holding on one shoulder a water jug and stands beneath the tree. The effect is heightened by the use of small ruby electric bulbs representing cherries. Another subject at the same salesrooms shows a shepherd standing beneath a cluster of electric bulbs half hidden in the foliage of a tree. The man rests on a shepherd's crook and at his feet is one of his flock. THE RAMBLER.

A sudden demand for charms as souvenirs has developed an almost endless production of designs for these little articles, and the workmanship displayed upon them places them in the front ranks of the Spring novelties. For use in wedding cakes there are gold and silver mittens, diminutive thimbles, plain and twisted guard rings, tiny shoes for good luck, and silver or gold bachelors' buttons. As favors for other occasions there are also wonderfully wrought bulls, bears and lambs for the Wall St. man, cigar cutters and pencils in the form of dogs' heads, a natural four-leafed clover or a fishing fly—the latter surrounded by a gold fishing line—encased in crystal, golden automobiles, champagne bottles and lucky coins.

The Proof of the Pudding

THE story of our success for the past six months proves the value, to the jeweler, of our work as auctioneers.

During the last ten days of December we realized $14,900 for the Ayres stock at Elmira, New York.

This was $8,300 more than the best offer they had been able to secure for it.

In the month of January we sold, for Taylor Bros., of Houston, Texas, three times as much as they had sold in two other sales, both of which were conducted by auctioneers of national reputation.

For five weeks, during March and April, we averaged nearly $1,000 per day for The Henricksen Jewelry Company, Duluth, Minn., breaking all records for that city.

During the past month we have made very successful sales for S. M. Nathan, Fitchburg, Mass., and The Aldrich-Murphy Company, Winsted, Conn.

We not only sell your expensive goods, but **all your dead stock,** leaving your stock absolutely clean.

Our sales invariably show a profit.

If you wish to retire from business, we stay with you until everything is sold.

We leave you free to close your sale at a moment's notice if you are not satisfied with our work.

We give each sale our personal attention and never send substitutes.

We substantiate all our statements with the written words of those we have served.

Their testimony is yours for the asking. Write us now for early dates.

S. O. BIGNEY & CO.

MIRROR FINISH

is the name which has been given to S. O. Bigney & Co.'s

HIGH GRADE GOLD-FILLED CHAINS

on account of the beautiful finish. After the links are soldered the gold is somewhat porous. In order to get a perfect finish, the only method known to the art is the method of burnishing. This we apply to our chains. It closes the pores, hardens the surface, gives the mirror finish, and will add one-third to the wearing life of the chain. This method makes for durability and excels all other processes of hardening finish.

Every retailer should have a good stock of our high-grade, gold-filled, mirror-finish Chains, Fobs and Bracelets.

We Make Bracelets of Every Description

Oval and Square, Side Swing and Hinge, beautifully finished and embossed. Pleasing to the eye, and rapid sellers.

Office and Factory, Attleboro, Mass.

New York Office, 3 Maiden Lane

Flat Belcher ring as received with claws badly worn.

How the same ring looks when stone is reset without new claws. Stone is not secure and point is below inside of ring.

How we splice settings and solder in new claws; seams do not show and rings are as perfect as when originally made.

How ring looks with new claws and stone securely reset. Entire ring is finished like new.

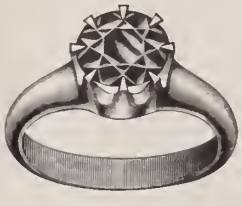
When we tell you that we have received as many as 75 diamond rings in one day for new claws and settings, you will not think us extravagant for using a full page in THE JEWELERS' CIRCULAR to exploit this feature of our business, but will wonder if you are getting your share of claw work.

99 out of every 100 owners of diamond rings willingly pay $1.50 to $5 for new claws or settings on their rings, but would not buy new mountings for $5 to $25.

It is worth while to familiarize yourself and your employees with this work, as it is one of the important little things that helps to make your business profitable.

WENDELL & COMPANY

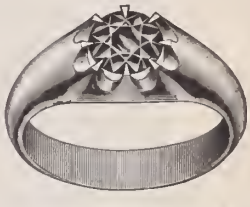
The firm that did much to change the repair end of the Retail Jewelry Business from a source of worry and dissatisfaction to one of pleasure and profit.



103-105 William Street
New York

TWO WONDERFUL SHOPS

57 Washington Street
Chicago

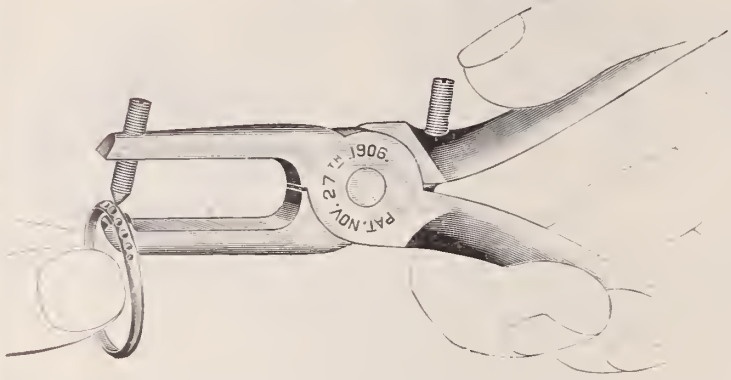


Tiffany ring as received with worn off claws. Stone cannot be reset, as it would be too low to look well and the point would come below the inner circle of ring.
(See cut No. 2 of flat belcher.)

How same ring looks with new claws and stone securely reset. Entire ring is finished like new.

Oval Belcher ring as received with claws badly worn. Stone cannot be reset, as it would be too low to look well and the point would come below the inner circle of ring.
(See cut No. 2 of flat belcher.)

How same ring looks with new claws and stone securely reset. Entire ring is finished like new.



THE PRICES QUOTED ABOVE FOR NEW CLAWS AND SETTINGS ARE SUBJECT TO OUR CATALOGUE DISCOUNT.

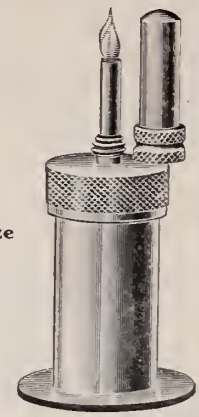
WE CAN PUT NEW CLAWS AND SETTINGS ON MOUNTINGS TAKEN IN TRADE AND REFINISH THEM SO THEY WILL BE AS GOOD AS NEW.

WE RETIP CLAWS AND MAKE NEW SETTINGS FOR CLUSTER MOUNTINGS SO THEY ARE AS GOOD AS WHEN ORIGINALLY MADE, AT PRICES THAT MAKE IT ADVANTAGEOUS FOR THE OWNERS TO HAVE THIS WORK DONE.

Carrying no diamonds in stock, entering and tagging each piece of diamond jewelry as received, then giving to each workman but one ring at a time, which is returned before he receives another, prevent any possibility of diamonds being exchanged while in our possession.

Pearl Setting Plier, No. 327

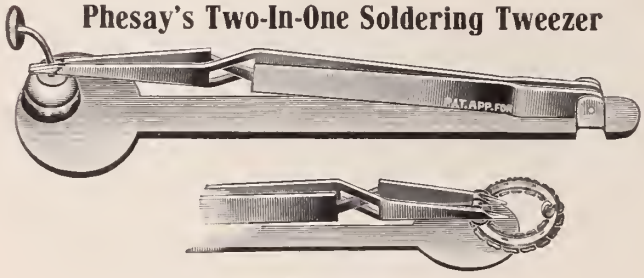
This tool should prove a useful addition to any jeweler's outfit. It is intended for setting half pearls or other stones of similar shape, which are imbedded in gold or other metal. It is used for cutting a burr and forcing it against the stone, either in brooches or rings, thereby holding the stone securely without liability of the tools slipping or breaking the stone, as is often the case with the use of other tools. The lower jaws are half round, to conform to the inner shape of rings. The work can be done more perfectly and under better control than with gravers or other tools used heretofore.



Made of best Swedish steel, nicely nickel-plated.

Price, each, $1.25

Randall Jewel Lamp

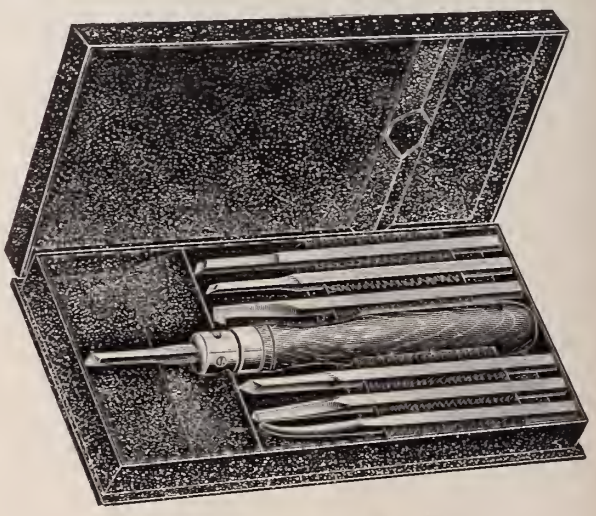


Cut is full size

Price, each, 50c.

Especially designed for work where very small flame is essential and very desirable when cementing roller and pallet jewels, for drawing temper of pivots and annealing small parts of watches. Made of brass full nickel plated. Has rubber washers inside of cap and under the hood to avoid leaking and evaporating.

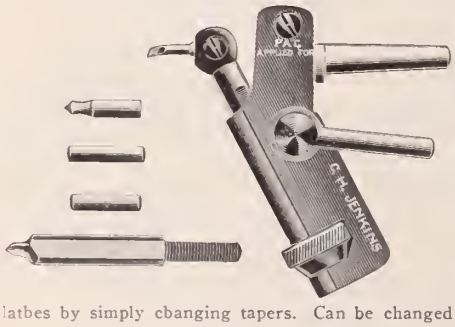
Phesay's Two-In-One Soldering Tweezer



Price, each, 75c.

By using Phesay's Two-in-One Soldering Tweezer the joint catch or Back is handled only once.

SAVES TROUBLE.—Phesay's Two-in-One Soldering Tweezers will solder plumb and true. Will not let article slide when solder flows. Will hold pieces of jewelry with rounded stones or flat surfaces with equal firmness.



Guaranteed "E.F.B." Turning Gravers No. 33

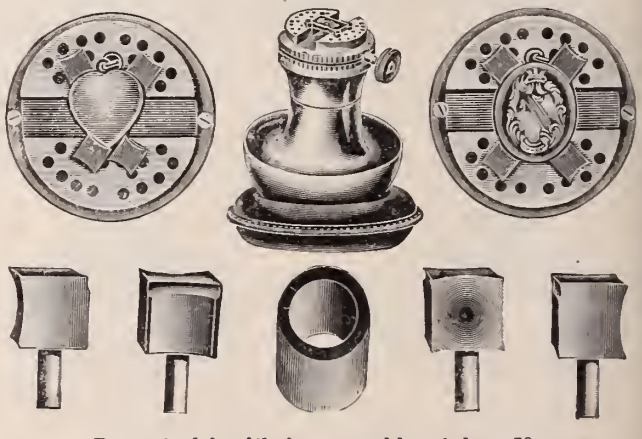
Price, per set of 7, in case, $3.00

The finest set of gravers on the market. Handle is of the finest cocobolo, fitted with nickel plated socket in which the gravers can be moved in or out as desired. The two set screws hold the graver rigid and prevent rocking or chattering. They will be appreciated by all users of fine tools.

Improved Turning and Jeweling Attachment No. 33

New Features

Adjustment for alignment, fine feed, with direct connected screw. Positive binder operated by slight movement of the thumb or finger. Cutters may be changed quickly. No small projecting parts to become lost or broken. Special cutters can be made from wire.



And Other Good Points

One tool may be used on different makes of lathes by simply changing tapers. Can be changed quickly.

All Standard Tapers in Stock

Each attachment is furnished with two cutters, one burnisher and two blanks. In ordering, please give name and size of lathe. **Price, each, $4.50**

"Ideal" Pins for Engraving Blocks

Per set of 4 with 4 pure rubber tubes, 50c.

The faces are milled to various shapes to take regular and irregularly formed articles. The few illustrations show their possibilities. Four pure rubber rings are furnished to slip over the pins when very delicate and highly polished articles are to be clamped. Made for all Standard Engraving Blocks. Please state name of Block when ordering.

EXHIBITION BULLETIN

16th Year WEDNESDAY, JUNE 24, 1908 Vol. VI. No. 5

Our Brooches and Pendants now finished, as well as those in course of construction, are different in detail from those exhibited by us last Fall. Our peculiarly independent position, maintaining, as we do, a perfect organization of trained designers and skilled craftsmen, lifts our productions above and beyond the narrower restrictions of the customary methods of the trade.

Each separate Brooch and Pendant presents that embodiment of distinction obtainable only through originality and creative genius, fostered by persistent and continuous practice. We do not deem it expedient to tell you the constituent features of novelty in these Pendants. Rather would we have you accept this as a personal invitation to view them—especially at our SIXTH ANNUAL EXHIBITION, to be held in our offices from AUGUST 24th TO 29th, INCLUSIVE.

Our Mr. Josh W. Mayer, who is now abroad, is making his customary purchases in view of the fact that we anticipate a large business this fall.

QUALITY IN SILVERWARE

THE word quality in its broadest sense is descriptive of all Smith Silverware.

Quality in the beauty of design.

Quality in the excellence of finish.

Quality in workmanship and material.

Quality in our trade-mark which stands for the highest art of the Silversmith—it is a veritable hall-mark of quality.

Hollowware—Flatware—Pieces of Special Design

ENGELSMAN'S PATENTED COMBINATION "GEM" DISPLAY RINGS and ADJUSTABLE STONE HOLDERS

MEET A LONG-FELT WANT

THEY ARE MONEY-MAKERS AND MONEY-SAVERS

UNMOUNTED STONES of any size and shape can be displayed advantageously, as is herein illustrated. Your investment in stock can thereby be *decreased,* as you need not mount them up in expensive settings. Your sales will also *increase* by being able to exhibit unmounted stones. The prices are *low* enough to induce you to buy them and *save* you from incurring frequent losses caused by the awkward handling of the tweezer when your customer desires to examine unmounted stones. Try them. For sale by all jobbers.

Due to greatly improved automatic machinery and reduced cost of production, we are now quoting these as follows:

Sets of 18 (full set), in box,	**$6.00**		
" " 12		**" "**	**4.00**
" " 9		**" "**	**3.00**

Sash Buckle Pins

AMONG THE NEW Summer Goods now coming from this factory is an impressive line of Sash Buckle Pins.

The demand is assured because Fashion decrees that they shall be an essential of feminine attire.

Style and quality are assured because the Buckle in all its forms has always been a notable specialty here.

THE DESIGNS are the very latest. Applied trim and Hand Engraving furnish many attractive decorations. Plain examples for those who choose simplicity. In some, well selected stones are used to advantage.

Altogether the line is seasonable, safe, moderately priced and profitable. What more need be said?

THE JEWELERS' WEEKLY THE JEWELERS REVIEW

VOL. LVI. WEDNESDAY, JUNE 24, 1908. No. 21.

Silver Service Presented to the United States Cruiser California.

The silver service for the United States cruiser *California*, which was recently presented to that vessel during the assembly of the great naval fleet at San Francisco, is a handsome example of the work of our western silversmiths, as the pieces were designed and made by Shreve & Co., of San Francisco.

As recently noted in THE CIRCULAR-WEEKLY, the movement to collect a fund to purchase this present for the cruiser as a memento from the people of the State, after which it was named, was started shortly before the great fire, but owing to the general disturbance of business by the catastrophe that visited California the matter was abandoned until a few months ago, when it was brought to the Governor's attention. Sufficient money was then subscribed to procure the service in time for presentation, when the fleet arrived here.

The silver is plain hammered, each piece ornamented with two massive shields, one bearing the coat-of-arms of California and the other the seal of the United States Navy, each in solid gold. The name California appears on each piece in raised solid gold letters. The nautical feature is expressed by the use of rope, which rests against the border of heavy silver. There are 21 pieces, the most prominent being the punch bowl, the cover of which is surmounted by a massive gold bear; the covers of all the other pieces are similarly mounted with gold bears proportionate to the size of the article.

The design is particularly Californian inasmuch as the main motive of its decoration is a heavy shield, modeled after designs which were found in the old Spanish Armada. This, with the golden bear, the emblem of California, create the individuality of the set. Both the gold and silver which were used in their construction are the products of California mines. The cost of the set so far has been about $7,000.

It is expected that further pieces will be added later to the set which at present consists of the following pieces: One punch bowl, ladle and tray; two water pitchers, one soup tureen, two round 14-inch entree platters, one gravy boat and tray, four compotes, two serving trays, two vegetable dishes, one 24-inch well and tree platter, one 22-inch platter, two bread plates, one salad bowl, fork and spoon, one A. D. coffee pot, sugar and cream pitcher and one wine cooler.

Several other handsome pieces presented to the officers and fleet during the recent festive occasions are the handiwork of Shreve & Co. The handsome trophy, in the form of a silver loving cup, presented to the victors of the Army-Navy baseball series, played in San Francisco on May 11, 12 and 13, is the most magnificent of these. It was donated by Wm. R. Hearst, and is of hammered silver, 17 inches high and 16 inches in diameter. It is elaborately ornamented with oak leaves and decorations emblematic of the army and navy.

Shreve & Co. made for the Hellenic Colony of San Francisco a classic loving cup, presented to the American Navy as an expression of the honor in which it is held by the Greeks. On either side of the seal of San Francisco, which is the distinctive ornament of the cup, and embedded in the cup itself, are two famous Grecian coins of the time of Alexander the Great, which are in an excellent state of preservation.

At the Citizens' Banquet, given to the officers of the American fleet at the St. Francis Hotel, San Francisco, May 8, some handsome souvenirs were prepared for the guests. A silver champagne goblet with the seals of the navy and San Francisco inlaid in 18-karat gold upon them was presented Rear-Admirals Evans and Thomas and Secretary Metcalf. At the same time all the other officers present received a municipal flag of San Francisco done in enamel on solid gold.

The beautiful onyx and gold punch set presented to the battleship *California* was illustrated and described in the issue of May 27.

The vessels of the United States Navy whose presentation services have been illustrated and described in THE CIRCULAR-WEEKLY, and the dates of the issues in which these illustrations and descriptions appeared from time to time, are as follows:

Gold Cup for the Countess of Cromer.

A MOST unusual design for a presentation cup is that which has been selected for the gold cup to be presented to the Countess of Cromer by her European friends in Egypt. This cup, which will be

GOLD CUP FOR THE COUNTESS OF CROMER.

of pure gold, consists of a tazza supported by two symbolical female figures, standing on a lotus of ancient Egypt.

An idea of the design, which was the work of the Countess Fedora Gleichen, may be had from the illustration which was made from a photograph of the clay sketch of the cup that has been accepted.

AUTOMATIC IN ACTION

One of the strongest points of the Larter Shirt Stud is that it is automatic in action. The back does not have to be pushed or pulled into place, so that the stud will not slip out of the shirt.

The strong spring in the Larter Shirt Stud carries it to the proper place, and thus avoids the annoyance of working out of either a button-hole or eyelet-hole shirt.

The above illustration is a copy of the cover of a little booklet just published showing 125 different patterns of the Larter Shirt Stud in 10K. gold and 14K. gold filled. If you have not received one of these booklets send us a postal, and we will mail you one at once.

Statistics as to Wages Paid in the Manufacturing Lines of the Jewelry Trade.

WASHINGTON, D. C., June 18.—An interesting resumé of the earnings of American industrial employes shows that the highest average earnings for men are those in the lapidary interest. Taking 187 such workers at wages varying from $20 to $25 per week, gives an average of $21.68, nearly $5 higher than wages paid men in other industries. The principal occupations in this industry—those which control the rates—are connected with the cutting, polishing and setting of diamonds and other precious stones. Even when assisted by the use of power-driven machinery, occupations of this character require exceptional skill, and the responsibility incident to the possible errors in judgment when manipulating the material tends to increase the compensation.

Of 73 men employed in the manufacturing of gold pens wages varied from $15 to $20, or an average of $16.05 per week. The average wage for women in the same industry is $10.50.

Of 2,740 men employed in the manufacture of watches, wages run from $15 to $20 per week, with an average of $16.16, while for women it is $10.30 per week. In the watch industry, as well as in the manufacturing of gold pens and other articles, women are employed where a high degree of skill and deftness is required.

Out of a total of 26 establishments where clocks are manufactured in the United States, employment is furnished to 4,239 persons, to whom is paid a total of $47,449. Out of that number 2,751 men received $36,930. Out of that number seven received less than $3 per week, 19 received between $3 and $4, 42 between $4 and $5, 68 from $5 to $6, 111 from $6 to $7, 128 from $7 to $8, 161 from $8 to $9, 224 from $9 to $10, 382 from $10 to $12, 615 from $12 to $15, while 840 received from $15 to $20, 118 received from $20 to $25, and 36 received $25 per week and over.

The total number of women employed in these 26 plants was 1,284, to whom is paid a total of $9,655 per year. Out of that number six received less than $3, 21 from $3 to $4, 65 from $4 to $5, 161 from $5 to $6, 181 from $6 to $7, 296 from $7 to $8, 336 from $8 to $9, 156 from $9 to $10, 56 from $10 to $12, four from $12 to $15, and two $15 or over.

Out of 204 children under 16 years of age, 15 receive less than $3 per week, 77 from $3 to $4, 82 from $4 to $5, 23 from $5 to $6, and seven from $6 to $7.

From the statistics for these 26 establishments it appears that the average weekly earnings of all employes is only $11.19; for men over 16 years of age, $13.42 per week, for women, $7.52, and for children, $4.24. Of the men, 30.5 per cent. of the total are being paid from $15 to $20 per week; of the women, 26.2 per cent. receive from $8 to $9, and of the children, 40.2 per cent. earn from $4 to $5 per week. These are the highest percentages, in each instance.

Out of five clock manufacturing plants in Connecticut the average weekly earnings of all employes is $11.31—of men, $13.65; women, $7.73, and children, $4.27. In these five establishments there are 3,540 employes with wages amounting to $40,034; of that number 2,257 men are paid $30,804, 1,085 women receive $8,385, and 198 children $845. Here, again, the highest percentage of men, $32.9 per cent., receive wages running from $15 to $20 per week, 29.2 per cent. of the women earn from $8 to $9, and 40.4 per cent. of the children receive from $4 to $5 per week. Of course these statistics cannot be given for States where it would disclose one particular firm's business, as it would where only one or two are located.

In 229 establishments engaged in electroplating the total number of employes was reported at 1,389, receiving $16,186. Out of that amount 1,301 men receive $15,705; six were reported as receiving less than $3, 27 from $3 to $4, 46 from $4 to $5, 59 from $5 to $6, 57 from $6 to $7, 63 from $7 to $8, 50 from $8 to $9, 90 from $9 to $10, 173 from $10 to $12, 288 from $12 to $15, and the climax 389 received from $15 to $20, while 45 are reported as earning from $20 to $25 and eight over $25. Fifty-one women were employed, earning $342; the greatest number, 17, earn from $6 to $7, and the highest wages reported for women in this industry was $12 per week. Thirty-seven children were employed, of which the largest number received from $3 to $4 per week, with a maximum of $6.

In 657 jewelry plants, where 15,783 persons are employed, the total weekly wages amount to $184,506. Of that number 11,024 men are employed, earning $152,944 per week. Again the largest number, 453, are earning from $15 to $20 per week, 82 are paid from $20 to $25, and 27 received $25 or over. Women to the number of 4,374 earn $30,207; the largest number, 763, earn from $5 to $6 per week, but quite a large number of women employed in this industry are well paid. For instance, 582 receive from $7 to $8, 506 from $8 to $9, 316 from $9 to $10, 292 from $10 to $12, 199 from $12 to $15, and 66 receive $15 and over. Of the 385 children employed, earning $1,133, the largest number, 135, receive less than $3, although they run all the way up to $8.

In 89 optical instrument establishments there is a total of 3,356 persons employed, receiving $30,422 per week. Out of that number there are 2,382 men, receiving $25,198. These run all the way from 24 men earning less than $3 per week up to a like number earning $25 and over, with 481 earning from $12 to $15 weekly; 790 women are employed, earning $4,611, the largest number earning from $6 to $7, and the highest wages paid being from $12 to $15; 184 children are employed, earning $613, 147 of whom earn from $3 to $4 per week, the highest amount being $6 per week, only one receiving that sum.

In 33 plated ware plants 2,301 persons are employed, earning $29,481, and out of that number 1,998 men receive $27,752. Wages run all the way from 28 receiving less than $3 to 31 at $25 and over, with the highest number, 652, earning between $15 and $20 per week. Of the 256 women employed, earning $1,534, 15 earn less than $3, and two earn from $15 and over, with 68 receiving $6 to $7 a week. Forty-seven children are paid $195, four receive less than $3, 14 from $3 to $4, 16 from $4 to $5, 12 from $5 to $6, and one is paid $6.

One of the largest industries is silversmithing and the manufacture of silverware, in which in a total of 53 plants 6,448 persons are employed, earning $78,523 per week. Of that number 5,607 are men who are paid an aggregate of $75,635 weekly. Wages start at 26 earning less than $3 per week. From that there is almost a steady increase, the climax being 1,423 who earn from $15 to $20, and 225 are paid $25 a week or over; 744 women are employed at $4,551, and again we find the largest number, 207, earning from $6 to $7 per week. In this industry nine are reported as earning $15 a week or over. Ninety-seven children earn $337, of whom 44 earn from $3 to $4 and six earn from $6 to $7 per week.

Eleven plants are engaged in the manufacture of clocks and watch materials, and in these plants 314 persons are employed at $2,949. Out of that number 176 are men, earning $2,038, and in this cise none receive less than $3 per week, the scale showing five earning from $3 to $4 and four earning over $25, with 40 earning from $12 to $15. Of the 135 women employed, earning a total of $898 weekly, the scale runs from nine earning less than $3 to one earning $15, with 29 earning from $9 to $10 as the medium.

Of 12 plants engaged in the manufacture of watch cases the average payroll numbers 2,126 persons, receiving $22,836. Out of that number 1,543 are men who earn an aggregate of $19,457 per week. Of that number 28 are reported as earning less than $3 per week, and 33 earning $25 a week or over. In this industry we find the greatest number, 380, earning from $15 to $20 per week. The total number of women employed is 542, earning $3,265. Of that number 17 earn less than $3, 112 from $5 to $6, and the highest mark reached is four earning $15 and over. Of 41 children employed 25 receive less than $3, the highest being from $4 to $5, with single exception of one earning $7.

In seven watch factories there are on the payrolls an average of 5,214 persons, earning $66,368. Out of that total 2,740 men earn $44,269, and out of this number the wages begin at six earning less than $3 per week, 35 earn from $3 to $4, 72 from $4 to $5, 34 from $5 to $6, 64 from $6 to $7, 62 from $7 to $8, 51 from $8 to $9, 123 from $9 to $10, 201 from $10 to $12, 384 from $12 to $15; again the greatest number earn from $15 to $20, the number shown under that rating being $1,057, while 479 earn from $20 to $25, and 172 earn $25 a week and over. The average weekly wage paid to the 2,474 women is $22,099, and in this instance wages paid to women average a higher scale than any other in which we are interested. Of the total number employed, 16 earn less than $3, 76 earn from $3 to $4, 117 earn from $4 to $5, 149 earn from $5 to $6, 213 earn from $6 to $7, 389 from $7 to $8, 312 from $8 to $9, 445 from $9 to $10, and 465 from $10 to $12, while

Look Out for This Man Who Is Wanted in Washington to Answer a Larceny Charge.

WASHINGTON, D. C., June 10.—Jewelers of the country are asked by the local police to look out for and cause the arrest of one Samuel Cohen, alias Dr. Cohen, who is wanted in Washington for grand larceny. His method is to visit a jeweler several times, buying cheap watches and selling him old gold and silver. After a few visits he calls on the jeweler and states that he has a customer for a watch or piece of jewelry, and asks permission to take it out on approval. He then pawns the article and leaves the city.

On April 10 this man obtained from Louis Abrahams, 433 9th St., N. W., this city, one 18-karat watch on memorandum. He claimed that he had a customer for the timepiece in Bluemont, Va., and that he would return the watch within four days if it did not suit his customer. Four days passed and Mr. Cohen did not show up, and an investigation disclosed that he had pawned the watch the same day he got it from Mr. Abrahams.

The man wanted is 50 years old, five feet nine or 10 inches high, stout build, weighs about 200 pounds and has a red, pock-marked face. He speaks broken English and is a great talker; he has a husky voice. He sells eyeglasses and cheap jewelry and watches around small towns.

Jewelers who may hear of this man's whereabouts are requested to notify Major Sylvester, Superintendent of Police, of this city.

The jewelers and pawnbrokers of this city have been asked to be on the lookout for a sapphire and diamond necklace which was lost or stolen between May 7 and May 22. The necklace is mounted in gold and contains 13 sapphires and diamond clusters, three diamonds being set between each cluster. The sapphires weigh, respectively, 12½ and 13/64 carats and the diamonds weigh 18½ carats.

Albert S. Smythe, traveling representative with J. Engel & Co., Baltimore, Md., and Miss Sadie Shields were recently united in marriage. The couple left after the wedding for a honeymoon trip to the north. Upon their return they will make their home at 1804 North Ave., Baltimore.

An Interesting Decision as to Right of Express Companies to Limit Their Liability.

WASHINGTON, D. C., June 18.—The Interstate Commerce Commission, in an opinion rendered by Commissioner Lane, has announced its decision in the matter of "Released Rates."

Since the passage of the Hepburn Act the Commission has been in receipt of numerous requests for an administrative interpretation of that part of section 20 which deals with the liability of carriers. Before undertaking to set forth its position in concrete form, the Commission deemed it advisable to hold an *ex parte* hearing in order to give carriers and shippers alike an opportunity to express their views. Pursuant to that purpose a hearing was held in Washington attended by the representatives of both interests. Inasmuch as the Commission does not take jurisdiction over claims for damages to goods in transit, it must be recognized that this problem is essentially one for the courts. But the validity of so called "Released Rates" is dependent upon its solution, and, if a definite statement of the Commission's position can meet with general acceptance, it will tend to eliminate much troublesome controversy and make for uniformity in railroad practice. The Commission takes occasion at this time to give expression to its views in the hope that they may be of advantage both to the railroads and the shipping public.

The conclusions of the Commission in this matter are: If a rate is conditioned upon a shipper's assuming the risk of loss due to causes beyond the carrier's control, the condition is valid. If a rate is conditioned upon the shipper's assuming the entire risk of loss, the condition is void as against loss due to the carrier's negligence or other misconduct.

If a rate is conditioned upon the shipper's agreeing that the carrier's liability shall not exceed a certain specified value (a) the stipulation is valid when loss occurs through causes beyond the carrier's control; (b) the stipulation is valid, even when loss is due to the carrier's negligence, if the shipper has himself declared the value, expressly or by implication, the carrier accepting the same in good faith as the real value, and the rate of freight being fixed in accordance therewith; (c) the stipulation is void as against loss due to the carrier's negligence or other misconduct if the specified amount does not purport to be an agreed valuation, but has been fixed arbitrarily by the carrier without reference to the real value; (d) the stipulation is void as against loss due to the carrier's negligence or other misconduct if the specified amount, while purporting to be an agreed valuation, is in fact purely fictitious and represents an attempt to limit the carrier's liability to an arbitrary amount.

A carrier may lawfully establish a scale of charges applicable to a specific commodity and graduated reasonably according to value; but these rates must be applied in good faith, regard being had to the actual value of the property offered for shipment. A carrier must not make use of its released rates as a means of escaping liability for the consequences of its negligence, either wholly or in part.

It is a mischievous practice for carriers to publish in their tariffs and on their bills of lading rules and regulations which are misleading, unreasonable, or incapable of literal enforcement in a court of law; and a stipulation that an additional charge of 20 per cent. shall be collected on property that is shipped not subject to limited liability is unreasonable.

In concluding the Commission said: "We entertain no doubt as to the legal strength of these conclusions, and it is a source of satisfaction to us that they are in accord with public policy and the dictates of justice."

Recent Decisions by General Appraisers on Jewelry, Gems, and Kindred Lines.

Decisions of the Board of United States General Appraisers, New York, in cases involving duties on toy clocks, reconstructed rubies and kindred lines have been announced in the last week as follows:

ORNAMENTS—PINS—TOYS.—Protests of Levi Bros. and protests of Samstag & Hilder Bros. The protests related to millinery ornaments and trimmings, imitation precious stones, pins, toy necklaces and similar articles, in respect to which the Board sustained the importers' contention to the extent authorized by G. A. 6374 (T. D. 27382) and G. A. 6658 (T. D. 28391) and other decisions.

HAT PIN HEADS—MANUFACTURES OF WAX.—Protests of Veit, Son & Co. Hat pin heads imitating pearls were held dutiable as manufactures of wax under Par. 448, Tariff Act of 1897, as claimed by the importers.

TOY CHAINS.—Protests of B. Illfelder & Co. Protests sustained as to toy chains. G. A. 6658 (T. D. 28391) followed.

TOY BRACELETS.—Protests of B. Illfelder & Co. Protests sustained as to toy bracelets. G. A. 6658 (T. D. 28391) followed.

COMBS.—Protests of Scruggs, Vandervoort & Barney Dry Goods Co. Combs classified as jewelry were held to be dutiable as celluloid articles under Par. 17, Tariff Act of 1897, as claimed by the importers. The protest was overruled as to other merchandise, consisting of velvet, jewelry, etc.

CORAL BEADS.—Protest of Cohn & Rosenberger. Protest sustained as to coral beads. G. A. 6584 (T. D. 28131) followed.

CORAL—RECONSTRUCTED RUBIES—WAX BEADS—IMITATION PRECIOUS STONES.—Protests of American Bead Co., protest of Cohn & Rosenberger, protest of Garreaud & Griser, protest of Loeb & Co., and protests of Albert Lorsch & Co. These decisions related to wax beads, coral for jewelry purposes, reconstructed rubies, and imitation precious stones. The protests were sustained on the authority of G. A. 6336 (T. D. 27278), G. A. 6584 (T. D. 28131), G. A. 5687 (T. D. 25329), and G. A. 6639 (T. D. 28297).

The authorities throughout the country have been notified to watch for James Burke, an escaped convict from the jail at Kingwood, W. Va. Burke was incarcerated for having robbed a jewelry store at Terra Alta, Md.

Chalice for the Pope Fashioned Out of Jewelry Contributed by Philadelphians.

WHEN Henry J. Thuron, professor of composition at the Academy of Fine Arts, Philadelphia, sailed, June 6, for Europe, he took with him a magnificent gold and richly jeweled chalice for presentation to Pope Pius as a gift in honor of his jubilee from the Association of Perpetual Adoration and Work for Poor Churches. The piece is illustrated herewith.

What is particularly noteworthy about the chalice from the point of view of the jeweler is the admirable manner in which it has been contrived out of a miscellaneous assortment of gold and jewels generously contributed for the purpose by the Catholics of Philadelphia. In the contributions were many heirlooms of great intrinsic value and rich in sentiment to their possessors, but they with other jewelry and pieces were surrendered with enthusiasm, since it is known that eventually the chalice will find a place on the altar of a chapel the Pope shall name. This has been the manner in which many magnificent ostensoria and other altar adornments have been obtained. So far through the efforts of the Philadelphia branch of the association 73 churches have been given chalices. But the chalice just fashioned for the Pope is regarded as the handsomest as well as the most costly of all.

The piece was designed and made by the William J. Feeley Co., Providence, R. I. The Providence jewelers had a great mass of gold, silver, diamonds, garnets, amethysts, rubies, opals, turquoises and other gems with which to work. The gold was melted down and the best thought of skilled artisans used to contrive the chalice. Out of the gold and jewels has been made a chalice nine and a quarter inches high. The cup has a depth of three inches and a diameter of four inches. It sets into a petal-like receptacle, whose base is six and one-quarter inches in diameter.

MAGNIFICENT CHALICE SENT AS A PRESENT TO THE POPE.

In front of the cup an opal as large as a split pea points to the inscription, *"Hoc est enim calix sanguinis mei."* At the knop of the stand is a circle of turquoises. The base is divided into six spaces, separated by scrolls and tracery. In one space is a cross of solid gold an inch long and five-eighths of an inch broad, set with diamonds, with an opal where the arms cross. In the space at the right is the coat of arms of Pope Pius X. To the left is the seal of the Tabernacle Society. Amethysts, garnets and opals are set in other portions of the base, on the lower side of which is the inscription "Association of Perpetual Adoration and Work for Poor Churches, Philadelphia, United States of America." On the reverse of the paten the Last Supper, after Da Vinci, is skilfully engraved.

The delicacy and beauty of the design is noticeable from the illustration. While rich and weighty, the makers have been careful that chasteness and delicacy should not be lost. The chasing and engraving has likewise been done perfectly. Philadelphia jewelers who were given an opportunity to inspect the piece before it was sent to Rome at the Convent of Notre Dame, 19th and Walnut Sts., pronounced the chalice to be one of the finest pieces of ecclesiastical jewelry made in recent years.

Mr. Thuron, who was named to take the chalice to Rome, is a member of the association. He will be presented to the Pope by Cardinal Vincent Vanutelli.

Annual Convention of the Oregon Retail Jewelers' Association Held at Portland.

PORTLAND, Ore., June 17.—At the annual meeting of the Oregon Retail Jewelers' Association, held recently in the Chamber of Commerce auditorium, the following officers were elected to serve during the ensuing year: President, L. Alva Lewis, Klamath Falls, re-elected; first vice-president, F. M. French, Albany; second vice-president, P. A. Staples, Portland; third vice-president, G. Heitkemper, Portland; secretary and treasurer, H. M. Leffert, Portland. An executive committee, consisting of the following members was also elected: Herman W. Barr, Salem; E. J. Jaeger, Portland; L. W. Ross, Wasco. C. H. Williams, of Condon, was elected delegate to the convention of the American National Retail Jewelers' Association, which meets at Cincinnati, Aug. 4-7.

In his annual address President Lewis referred to the progress the association has made during the past year, the membership in that time having been doubled. Mr. Lewis recommended that an effort be made to have a law passed to license watchmakers as a protection both to the public and the practical watchmaker. It was his opinion that this is necessary by reason of the fact that the public cannot form an opinion as to the workmanship on so delicate a piece of mechanism as a watch and has a right to protection, and also in order that the practical watchmaker need not be forced to enter into competition with a workman who has no practical knowledge of the craft. He asserted that the prejudice against watchmakers is caused to a large extent by the incompetence of many workmen.

Modern Cameos

The first samples of the MODERN CUT CAMEOS were brought over by us about two years ago.

Confident of the ultimate success of the stone we never tired in our efforts to acquaint the trade with its merits. Its immense popularity now attests to our correct foresight.

The same effort has been exerted on the other side in improving the quality as well as securing an adequate supply. We have succeeded also in this respect, and our Cameos are unexcelled in the matter of superior engraving, and precision of size and finish—and at right prices.

ONYX CAMEOS in MODERN and CLASSIC DESIGNS on hand in all sizes and colors for immediate delivery.

Silver Service Selected for Cruiser Colorado to Consist of Many Pieces of Practical Utility.

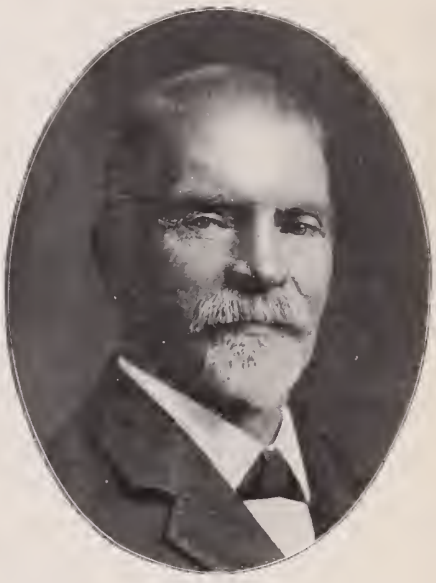
DENVER, Colo., June 17.—The committee composed of Ex-Gov. Jesse McDonald, Ex-Gov. Alva Adams, Meyer Friedman, John McDonough, Randall Wray, Colorado Springs, and Gov. Henry Buchtel, met at the State Capitol, Monday, June 8, at 4 P. M. to open up bids for furnishing the silver service for the cruiser *Colorado*. After looking at various designs and bids, the committee started out to inspect the different silver services that were here on exhibition for their benefit, and after looking at all of them decided to adjourn until Wednesday, giving the different jewelers time to rearrange their bids so that all might show in their bids the same class of goods.

At the meeting on Wednesday the committee was unanimous in deciding that the Syman Bros. Jewelry Co. should be awarded the contract, as they had the only set which was complete in all its details, the hollow ware as well as the flat ware being of one design. The set which was chosen is in the Paul Revere design, made by the Towle Mfg. Co., Newburyport, Mass. The punch or banquet service is considered the proper thing, but the committee appointed for the purchase of this set, decided that it would be much better to give something useful as well as ornamental.

The purchase price of the service is $5,000, and the set consists of 597 pieces, as follows: Two candelabra, two covered entreé dishes, two covered vegetable dishes, two entreé dishes, two compotes, four compotes, two fish platters, two meat platters, two serving trays, four bread trays, 36 service plates, two water pitchers, A. D. coffee pot, sugar bowl, cream pitcher, coffee set tray, coffee pot, tea pot, sugar bowl, cream pitcher, waste bowl, kettle, tea set waiter, 18 peppers, 18 salts, two meat platters, 72 teaspoons, 36 dessert forks, 36 table forks, 18 tablespoons 36 dessert knives, 36 dinner knives, 36 soup spoons, 36 coffee spoons, 36 sherbert spoons, 36 oyster forks, 36 individual salad forks, 36 individual fish forks, 36 butter spreaders and one chest.

The Syman Bros. Jewelry Co. is to be congratulated upon receiving the contract in competition with so many firms, as is also the Towle Mfg. Co. The set will be on exhibition in the former's store in Denver between Aug. 8 and Aug. 10, when it will be shipped to San Francisco, where it is expected the cruiser *Colorado* will be in port, as it is due to sail from there Aug. 25 for the Philippines.

PART OF THE SILVER SERVICE TO BE PRESENTED TO THE UNITED STATES CRUISER "COLORADO."



additional ornamentation will consist simply of the seal of the State and the word Colorado. Ernest Lunt, manager of the Chicago office, also Mr. Samuelson, the western representative of the Towle Mfg. Co., were out here in the interest of their company. Mr. Lunt displayed the Paul Revere service at the Brown Palace Hotel, and great credit is due him for the way in which the service was displayed, also the many good talking points which he brought out in favor of the design.

This is the first time in history that a service of this kind has ever been presented to any battleship or cruiser, as ordinarily a

A meeting of the creditors of S. T. Nichols & Co., Smith R. Nichols and Frederick W. Nichols, Indianapolis, Ind., was held June 19 in room 507, Indiana Trust building, 117 E. Washington St., at 9 A. M. The trustee of the estates of the above mentioned has filed the petition for authority to fully compromise and settle certain controversies, and this petition was heard and passed upon at the creditors' meeting.

Last Honors Paid to the Late Henry Lomb, at Rochester, N. Y.

ROCHESTER, June 18.—The last honors were paid to Capt. Henry Lomb by Rochester and its citizens on Tuesday, June 16. The body was brought from Pittsford, where he died, to Convention Hall early in the morning and between 10.30 A. M. and 2 P. M., during which time the body lay in state, thousands of men, women and children, representing people from every walk of life, passed by the bier to look for the last time upon the features and pay the last respects to Rochester's most useful citizen. Every flag in the city was at half-mast and the colors of every military organization

THE LATE HENRY LOMB.

which fought in the Civil War were furled in crepe.

Never, in the history of the city, was the memory of a male resident honored as was that of Capt. Henry Lomb. The officers of the Bausch & Lomb Optical Co. shut down the factory out of respect for their business associate from Saturday until Wednesday and on the day of the funeral the 1,500 employes of the firm marched from the factory to Convention Hall and were present at the memorial services. The flag-draped casket was guarded by veterans of the old 13th, the regiment of which Mr. Lomb was captain.

Dr. Rush Rhees, Herman Pfaefflin and Dr. Algernon S. Crapsey made eulogistic addresses, after which the procession went to Mount Hope Cemetery, headed by the Park Band, members of the old 13th Regiment, the Spanish veterans and the Sons of Veterans. At the grave the services were conducted by Dr. A. S. Crapsey and Dr. Rob Roy Converse.

Recently Captian Lomb presented to Glidden Camp, S. O. V., the guns to be used in firing the salutes over the graves of veterans and the first salutes were fired over his grave. Three volleys were fired, then the thousands of mourners silently departed from the grave and the last tributes had been paid to the memory of Capt. Henry Lomb.

Bremen: 3 cases watches, $1,659.
Callao: 3 cases jewelry, $452; 1 case watches, $310.
Calcutta: 1 case clocks, $969; 12 cases clocks, $232.
Christobal: 1 case watches, $150.
Colon: 8 cases plated ware, $1,562.
Hamburg: 42 cases clocks, $1,470; 1 case jewelry, $500.
Hamilton: 1 case silverware, $1,500.
Havana: 11 cases clocks, $238; 1 case plated ware, $1,968.
Havre: 4 cases stereoscopes, $1,140; 1 case plated ware, $109; 4 cases jewelry, $157.
Lagos: 14 cases clocks, $173.
Liverpool: 25 cases clocks, $522; 2 cases jewelry, $1,000; 1 case plated ware, $100; 1 case silverware, $100.
London: 65 cases clocks, $1,613; 9 cases clocks, $305; 1 case jewelry, $120; 2 cases watches, $105; 1 case optical goods, $58.
Manchester: 34 cases clocks, $363.
Maconis: 1 case silverware, $253; 2 cases jewelry, $268.
Manila: 4 cases clocks, $125.
Melbourne: 67 cases clocks, $1,338; 1 case optical goods, $900; 19 cases plated ware, $1,867; 11 cases stereoscopes, $1,184; 41 cases clocks, $856.
Para: 8 cases clocks, $163; 2 cases optical goods, $379.
Paramaribo: 1 case watches, $162.
Port of Spain: 3 cases plated ware, $201.
Rio de Janeiro: 246 cases clocks, $4,230; 54 cases clocks, $556.
Santiago: 4 cases plated ware, $523.
St. Johns: 19 cases clocks, $343.
Savanilla: 3 cases clocks, $123.
Southampton: 1 case jewelry, $1,000.
Sourabaya: 7 cases clocks, $144.
Smyrna: 36 cases clocks, $353.
Sydney: 5 cases optical goods, $1,249; 1 case jewelry, $100.
Tampico: 2 cases plated ware, $113.
Turks Island: 34 cases watches, $143.

Involuntary Bankruptcy Petition Filed Against Abraham Lippard, Pittsburg, Pa.

PITTSBURG, Pa., June 18.—A petition asking that Abraham Lippard, who conducts two stores, one at 511 Wylie Ave. and the other at 615-17 Wylie Ave., be adjudged a bankrupt, has been filed in the United States District Court. The court granted an order setting June 30 to hear the arguments in the case. The appointment of a receiver was also asked for and Samuel Weinhaus, of S. & B. C. Weinhaus, was named, but this was done for the purpose of carrying out certain regulations regarding the bankruptcy laws.

The petition asking for the appointment of a receiver sets forth that on May 11, Lippard having become financially embarrassed, caused a circular letter to be issued setting forth he had $18,500 worth of merchandise on hand and asked that his business be placed in the hands of a trustee; that on May 11 negotiations had been carried on with creditors with a view towards placing his assets in charge of three trustees and that about 75 per cent. of the creditors were under the belief that trustees were administering the estate; that since that date Lippard has remained in charge and but $1,200 has been paid out on account of his indebtedness. The petition asked for the appointment of a receiver as necessary for the preservation of the estate, and on June 16 Mr. Weinhaus was named. He gave bond in the sum of $15,000 for the faithful discharge of his duties, but on the same day S. & B. C. Weinhaus filed a petition asking that Lippard be adjudged a bankrupt, and the court made the order setting the date for the hearing.

Just what Lippard's liabilities are could not be learned. He is said to own his own residence, which is in the East End.

Liabilities and Assets of Maurice Brower as Shown by His Schedules in Bankruptcy.

Schedules in bankruptcy of Maurice Brower, 12 John St., New York, were filed in the United States District Court Friday and show the liabilities were $435,196 and assets $81,918, of which $80,000 is property in reversion. The stock in trade is set down at $1,000 and debts due on open accounts $518.

Among the secured creditors are the National Park Bank, $10,900; Alphonse Kahn, $5,018; S. Wyler, $4,936; R. Reinach, $10,200; Maurice Grenberg, $4,875; State Bank, $24,000; Market and Fulton National Bank and Merchants' National Bank, Newark, N. J., $24,389. These debts were contracted during the year 1907 and are secured by stones and pearls.

Among those whose claims are unsecured are several foreign creditors, among whom being: D. Cohen, $10,000; Herman Goldsmith, $1,043; Sociata Perlifera Italiana, $7,013; N. Nersesian, $2,348; Richard Fischoff, $2,652; E. L. Gordon & Son, $3,755; A. & I. Isaacs, $6,800; H. Kramer, $2,500; L. Rosenthal & Bros., $5,417; Adam Levi, $35,932; Lindenbaum & Weil, $21,502; I. Farchy, $4,024; Philip Robinson & Co., $1,336; I. Kaufman, $9,412.

Among the creditors in this country are: Bank of Prairie Du Chien, $3,060; Henry Ostendorf, $816; Chas. V. Miller, $2,347; Ed. Miller, $1,661; E. F. Janes, $1,250; Ben Howes, $1,250; J. M. O'Hara, $1,500; Joseph Frankel's Sons, $7,087; A. M. Laird, $150; I. E. Anthony, $1,050; B. Yoldberg, $1,640; Ferdinand Hotz, $420; Oppenheim & Strauss, $8,736; R. Reinhart, $3,137; Arnstein Bros., $3,327; H. Z. & H. Oppenheimer, $2,670; S. J. Speyer & Bro., $1,911; Central Auction Co., $2,777; Van Antwerpen & Van den Bosch & Co., $2,341; Van Gelder Bros., $20,105; E. A. Rabon, $225; John Schumacher, $162.

Reward of $50 for Recovery of Three Diamonds Lost at Nashville, Tenn.

NASHVILLE, Tenn., June 17.—Bernstein Bros., jewelers at 510 Church St., this city, are offering a reward of $50 for information which will lead to the recovery of an express package containing diamonds which was lost here Monday night, while being taken to the depot express office. The police have been notified, circulars have been sent out throughout the country to the trade and every effort is being made to trace the stones.

The package, which contained three unmounted, perfect, white diamonds, each weighing over a half carat, was addressed to J. R. Wood & Sons, New York, and on the package appeared the name and address of the sender, Bernstein Bros. It was thought that the party who found the package would either mail it or return it to the sender, but as this has not been done, the dealers have been sending out circulars offering the reward above mentioned.

As the finder may attempt to dispose of the diamonds as they are, or present them to some jeweler to be mounted, members of the trade are requested to be on the lookout for them, and if they learn anything as to the whereabouts of the stones they are asked to send information immediately to Bernstein Bros.

Retail Jewelers of Virginia Meet at Richmond and Form State Association.

RICHMOND, Va., June 19.—The retail jewelers from many sections of Virginia met in convention at the Hotel Jefferson yesterday and formed a State association which will become affiliated with the American National Retail Jewelers, Association. Forty jewelers responded to the call and were present when J. P. Archibald, of Blairsville, vice-president of the Jewelers' Association, called the meeting to order. Letters were received from about 100 jewelers who were unable to attend, but who expressed themselves in favor of the organization.

After effecting organization the association adopted the constitution and by-laws of the Pennsylvania association unanimously making but a few alterations therein. The following officers were elected:

President, R. L. Winston, Richmond; first vice-president, A. F. Jahnke, Jr., Richmond; second vice-president, Jesse Spreague, Newport News; third vice-president, W. D. Martin, Rocky Mount; fourth vice-president, D. B. Ryland, Lynchburg; fifth vice-president, J. C. Lang, Staunton; secretary, O. S. Harding, Petersburg; treasurer, J. S. James, Richmond; executive committee, Jos. E. Allen and C. F. Kohler, both of Richmond.

R. L. Winston, A. F. Jahnke, Jr., of Richmond, and W. D. Martin, Rocky Mount, were elected delegates to the Retail Jewelers' convention at Cincinnati, August, 4-7. A. F. Jahnke, Sr., was elected first honorary member of the Virginia Association.

Thanks were extended to Mr. Archibald for organizing the association in Virginia. A. Weidman and V. C. Regan, of South Bend, Ind., gave interesting talks about the manufacture and sale of jewelry.

There will be a meeting of the executive Committee, Monday evening, to discuss plans and set a date for the annual meeting to be held in Richmond.

A. Bach, Sandusky, O., is about to discontinue business owing to ill health.

Thieves recently broke into the retail jewelry store of Charles F. Starck, Callicoon, N. Y., and escaped with a small amount of jewelry and some cash. Three men were subsequently taken into custody, accused of the crime.

ADDISON W. WOODHULL, President.
FRANK K. HUFF, Vice-President.
GILBERT T. WOODHULL, Treasurer.
WILLIAM J. McQUILLIN, Secretary.

Retail Jewelers of Texas Hold First Annual Convention at Dallas.

DALLAS, Tex., June 17.—The first annual meeting of the Retail Jewelers' Association of Texas took place at Hotel Southland in Dallas, on June 11 and 12. Alternate sessions were held with the Texas Optical Association which met at the Commercial Club rooms.

President A. A. Everts called the meeting to order. After reading the minutes of last year's meeting, Secretary Ryman reported 17 new applications for membership; these were all elected. He also explained that owing to illness and general demoralization of the trade last Winter he had done nothing toward increasing the membership which with the 17 just elected makes a total of 54.

The by-laws were amended to allow membership to managers of retail jewelry stores; the meeting went also on record as endorsing Congressman Vreeland's measure for regulating the stamping of gold filled and plated watch cases, and after full discussion it was resolved that same would prove beneficial to the trade and the public generally. The association recommended its passage by Congress.

The secretary was instructed to prepare a complete list of all legitimate retail jewelers in Texas.

It was also resolved that the association recommend goods on which the manufacturer had established a minimum retail price that it was for the best interest of the trade to confine themselves as much as possible to price protected lines. The secretary was instructed to furnish each member with a complete list of all belonging to this association also with the code of ethics as adopted.

The election of officers resulted as follows: A. A. Everts, Dallas, president; P. S. Park, Mexia, vice-president; H. W. Baunds, Dallas, treasurer; H. M. Ryman, Calvert, secretary; Hy. Iverson, Corsicana, member of board of directors.

Messrs. Shuttles Bros. & Lewis treated the delegates and friends to an automobile ride and a theatre party, both of which were greatly enjoyed, and proper resolutions of thanks and appreciations were passed. Resolutions thanking the Hotel Southland for the use of the hall were also passed.

Before adjournment an invitation from Linz Bros. to an automobile ride and theater party for the evening was accepted with thanks.

The following new members were elected: R. H. Johnson, Cameron; George Krengel, La Grange; Arthur Threadgill, Marlin; J. J. Crundwell, Morgan; L. Levytansky, Yoakum; H. D. Leffel, San Angelo; W. A. Peck, Denison; L. E. Miller, Goldthwaite; C. H. Allen, Mart; A. E. Richmond, Seymour.

The committee on constitution and by-laws, composed of Simon Linz, C. H. Allen and P. S. Park, submitted some amendments, which were adopted. With the morning session the association adjourned finally. The time and place of the meeting next year will be selected by the executive committee.

The Texas Opticians' Association met in annual session in the parlors of the Commercial Club June 11, with 28 in attendance. Officers for the ensuing year were elected as follows: John A. Cravens, of Waco, president; A. F. Thompson, Dallas, first vice-president; H. F. Cohen, Houston, second vice-president; R. A. Terrell, Dallas, secretary, and George Krengel, La Grange, treasurer.

The following constitute the new executive committee: L. E. Whitmore, of Dallas, chairman; H. F. Cohen, Houston; G. H. Aronsfeld, Galveston; A. F. Thompson, Dallas; Charles Lord, Fort Worth.

A resolution was adopted that no person connected with a jobbing house shall ever be eligible to any office in the association.

I. Block, retiring secretary, stated that he had been threatened with prosecution by oculists in Waco for fitting glasses for astigmatism on the ground that astigmatism is a physical deformity, and that an optician undertaking to treat it is practising medicine without license. Mr. Block submitted a draft of a bill for a law to "define and regulate the practice of optometry in Texas and for the creation of a State board of examiners in optometry."

Death of John D. Nesler.

NEWARK, June 18.—John D. Nesler, veteran manufacturing jeweler, was laid to rest to-day in Mt. Pleasant cemetery, the last silent summons coming after years of leisure and retirement.

Mr. Nesler was born Aug. 1, 1822, in Savannah, Ga., and was the son of David Nesler. In early youth he came with relatives to the north. He lived a few years in New York State, and then came to this city when 16 years of age. The remainder of his life was spent here.

In 1850 his ambition to become a jewelry manufacturer on his own account was realized, and he started business in the top floor of a building on Mulberry St., near Beach. Later, as the demand for his goods grew, he removed to more commodious quarters, and took as a partner John C. Jennings. The latter passed away many years ago, and the place was taken by Charles Nesler, his brother.

Under the style of J. D. & C. L. Nesler, they built up a large and prosperous enterprise on Oliver St., and made a line of medium-priced jewelry.

Thirty years ago Mr. Nesler retired from business. His home claimed his chief attention, as he joined no fraternal orders, and took part in few outside enterprises. Until he was 80 years of age Mr. Nesler was a conspicuous figure in the community, partly owing to his massive physique and notably striking features. The past six years, however, were marked by gradual decline in health until age and infirmity caused his demise. Last September the brother who had been his partner in the jewelry business died, and about a year ago his wife was suddenly taken from him. Of late Mr. Nesler had made his home with a half-brother, James C. Bioren, of 67 Sherman Ave., alternating with brief stays at Asbury.

W. J. Crockett has moved his stock of jewelry from the old location in Almira, Wash., to Waterville, Wash.

Death of William Farr.

PHILADELPHIA, Pa., June 17.—William C. Farr, who years ago was one of the best known and most active jewelers of the city, but who has lived in retirement since 1877, died at his Summer home in Chelsea, N. J., June 12, at the age of 82 years. Mr. Farr had been so long out of active business that few jewelers of to-day knew him, except by repute. Deceased entered the wholesale watch and jewelry business with his father at 324 Chestnut St., 60 years ago. The firm passed successfully under the name of Farr & Thompson and Farr & Bro. After becoming a director of the Farmers and Mechanics' Bank, and part owner of the Gloucester Ferry, Mr. Farr retired from the jewelry business in 1875. Since then he has devoted himself to his financial interests solely.

Of a charitable disposition, Mr. Farr in his later years interested himself in established institutions in the city, and was a liberal contributer to them. He was of old fashoned Philadelphia stock, quiet, conservative, but forceful. Throughout his life he had lent his best efforts to the upbuilding of creditable enterprises, and soon gained the confidence of the business community, so that in later years his judgment was sought by many of the most influential men of the city.

He was one of the founders of the Union League, the famous political club of the city, and had been continuously a member of it since the days of the Civil War.

Quick Passage Urged of Canadian Gold and Silver Marking Act.

OTTAWA, Ont., June 18.—In the Canadian Senate to-day progress was reported on the bill to amend the Gold and Silver Marks Act. Two sessions ago, a bill was enacted fixing 10 karats as the minimum of articles to be called gold, and this act was to be brought into force by the government, but it was not proclaimed.

The following session a bill was put through fixing the minimum at nine karats, and providing that the bill should come into effect after a year. Recently, it is claimed that United States manufacturers have made large inroads upon the Canadian market and Canadian manufacturers who had been unable to agree as to the minimum gold standard, in the face of the recent situation, made up their minds that they want a bill to go into force immediately, and they are willing to leave it to the government to decide whether the minimum standard should be nine or 10 karats.

The government has finally decided to fix the minimum at nine karats as the one for which the greatest number of manufacturers are in favor, and that standard is now likely to go into force, although Senator Kerr is of opinion that dealers and importers should be given an opportunity to be heard on the bill.

Subscriptions are being raised for a new town clock to be erected in Muncy, Pa. The amount of $300 has already been subscribed. The timepiece will be supplied by the Seth Thomas Clock Co.

Members of the New England Manufacturing Jewelers' and Silversmiths' Association Engage in Parade, Sail, Shore Dinner and Baseball Game.

PROVIDENCE, R. I., June 22.—There may have been more enjoyable outings than that of the New England Manufacturing Jewelers & Silversmiths' Association last Friday, but the memory of the oldest member of the organization goeth not back to the day. It was an ideal day from start to finish, the weather, the dinner, the arrangements and everything else connected with the event being all that could be desired. There were about 400 who turned out to do honor to the occasion and not one was disappointed unless there may have been some in the Attleboro contingent who were a little touchy over the fact that their ball nine was defeated by the aggregation of ball tossers representing Providence. It has come to be a habit with the Attleboreans to win this game, and they were naturally somewhat perturbed when the end of the contest came and it was found that they were on the losing end.

As in past years the parade before embarking on the trip "down the river" was a feature, the line being marshalled by Everett I. Rogers. About 200, approximately speaking, were in line and the usual Japanese umbrellas were in evidence, the line making a picturesque appearance as it moved up the principal street of the city, after assembling at Free Masons' Hall on Dorrance St. at 11 o'clock.

A brief street parade was followed by a sail to Field's Point on the steamer *Warwick*. After the party had been photographed for the benefit of future generations, the members and guests proceeded to the dining halls where a special dinner was served by Col. Atwell. It was of the "shore" variety and was one of Col. Atwell's best. To those who know the reputation that Col. Atwell enjoys as a caterer that is enough to explain its excellence.

While the diners were performing marvelous gastronomic feats, President Harry Cutler called to order and Secretary E. L. Spencer read letters of regret because of inability to be present from Gov. Higgins and Mayor McCarthy, of Providence.

A feature that had not been expected and which added considerably to the enthusiasm of the occasion was a telegram from George H. Holmes, a member of the executive committee who was attending the Republican convention in Chicago. In this wire Mr. Holmes wished the association every success and expressed the hope that the outing would be an enjoyable one and concluded with the expression of the hope that under William H. Taft the trade would enjoy a period of prosperity such as it had never seen before. The mention of Taft's name was received with cheers and applause and a toast to "Success and Prosperity" followed the reading of the telegram.

As with all good things an end of the dinner was reached at last and when everybody had satisfied the inner man the party again boarded the boat and proceeded to Rocky Point, where the annual ball game between the Attleboro and Providence teams was played. Those who had looked forward to seeing anything of a farcical character in this were disappointed, for the game was of the strenuous kind and, although some of the men showed a lack of practice, and probably the majority of them felt the next day as if they had been run over by a steam roller, nevertheless there were some really good plays pulled off, plays that would have done credit to any team. There were, too, just a sufficient number of misplays to keep everybody on the alert.

Attleboro lined up as follows: D. LeStage, catcher; William Maintien, pitcher; W. C. Sherman, shortstop; F. B. Hartman, 1st base; C. E. Emerson, 2d base; H. B. Fisher, 3d base; H. L. Robinson, left field; Fred Greene, center field; James Baker, right field. Providence relied upon the following, and as it proved, not in vain: Ralph Ostby, pitcher; William Almy, 3d base; G. Brown, 1st base; Howard Doherty, shortstop; Parker Ford, catcher; Robert Carpenter, left field; Howard Andrews, cener field; William Turner, right field; George Briggs, Jr., 2d base.

The first ball was pitched by President Harry Cutler, quite in major league form, and Umpire George H. Kettlety started in on a few very busy minutes. That he got away with his decisions without a riot being precipitated speaks well for his diplomacy as well as for his knowledge of the game.

It was immediately seen that the teams were very evenly matched and it was anybody's game right up to the very close, the Providence team finally pulling out a 7 to 6 victory at the close of the sixth inning when, by mutual agreement, the game was called. Captain Briggs, of the Providence ball tossers, and Captain LeStage, of the Attleboro aggregation, shook hands and the game of 1908 was a matter of history.

Right after the game the party boarded the steamer once more and had a sail down the bay, the steamer proceeding almost to Newport. No landing was made, but the party enjoyed itself in listening to the concert by the band and musical numbers by George Dover and members of the minstrel "troupe" of the Edgewood Yacht Club, which recently gave a benefit performance at the Providence Opera House. Luncheon was served on board, another detail that showed the thoroughness with which the committee of arrangements had carried out its task.

Some of those present at the dinner and on the trip down the bay were W. C. Penfold, New York, Collector of Customs George W. Gardiner, A. P. Wood, Los Angeles, Cal., Secretary Marcus W. Morton, of the Jewelers' Board of Trade, George F. Gilmore, New York, Ex-Mayor Thresher, Central Falls, Dr. H. W. Kimball, of this city, Frank T. Pearce, Fire Commissioner Ira Winsor, Archibald G. Loomis, Ernest T. Wilson, New York, W. H. Ryder, Boston, Park Commissioner William A. Walton, James Baker, Cincinnati, George Frey, Flatbush, Long Island, Brig. Gen. Herbert S. Tanner, W. C. Penfold, New York, Frank T. Pearce, Joseph H. Fanning, J. H. Collingwood, United States District Attorney Charles A. Wilson, Ald. Henry Fletcher, William A. Copeland, S. A. Baldwin, A. D. Thayer, Franklin, Mass., John M. Buffinton, L. H. Carpenter, New York, Roswell C. Smith, Frank A. Chase, Jr., Boston, John Heathcote, Horace A. Carpenter, and scores of others.

The general committee in charge of the arrangements was composed of Frank E. Reynolds, George H. Holmes and Everett I. Rogers, the officers of the association being Harry Cutler, president; Albert A. Bushee, George K. Webster and Theodore W. Foster, vice-presidents; H. M. Mays, treasurer; Everett L. Spencer, secretary; Roswell C. Smith, William A. Schofield, Frank B. Reynolds, Everett I. Rogers, T. S. Carpenter, William P. Chapin, Arthur O. Ostby, Everett L. Spencer, directors; T. E. Carpenter, Charles T. Paye, Arthur O. Ostby, William A. Schofield, membership committee; Ralph S. Hamilton and George H. Cahoone, auditing committee.

The Career of the Late John H. Grant, Troy, Pa.

TROY, Pa., June 17.—Troy lost one of its oldest residents and one of its former prominent jewelers when death last Wednesday removed John H. Grant, a veteran business man of this village. Deceased, who was 78 years old, had been in poor health for two years, and had grown worse rapidly for a week before his death. He was an honored and respected citizen and had been a resident of Troy for more than half a century.

Mr. Grant was born, Jan. 5, 1830, in Geneseo, Livingston County, New York, and spent his early life in Cortland, N. Y., where he received an academic education. He came to Troy as a young man, and in 1853 started as a jeweler and optician, in which business he continued, first alone, and then with his son, Edwin H., under the style of John H. Grant & Son, until his ill-health forced him to retire two years ago.

Deceased was married Sept. 16, 1857, to Marian Dobbins, of this town, who died a few years later, and in 1870 he married Orpha Dewey. By each wife he had two sons; by the former, Frederick, deceased, and William, who is now a jeweler in Seattle, and by the latter, Albert, of New York, and Edwin H., who is now also in Seattle. Two daughters also survive by his second wife.

Mr. Grant was prominent in the affairs of this village for many years and was for 15 years a school director, many years of that time being treasurer. He was Burgess two terms and was a member of the Common Council for about 10 years, being also treasurer of Bradford County from 1879-1892. In politics he was a Republican and was a presidential elector on the Harrison and Morton ticket in 1888. He was also prominent in religious affairs, and was Senior Warden of St. Paul's Church and a prominent Knight Templar.

David A. Caldwell & Sons, Miami, Fla., are no longer in the jewelry business.

AMERICA'S NEWEST GEM

AMATRICE

THE MOST REMARKABLE, BEAUTIFUL AND INDIVIDUAL MATRIX PRECIOUS STONE EVER OFFERED TO JEWELRY WEARERS

Entirely superior to any other matrix gem in permanent jewelry merit.

COLOR Wonderful shades of green combined with infinite forms of matrix effects in shades ranging from subdued pink through tans and light browns down to very dark brown. Peculiarly adapted to gold jewelry.

HARDNESS AND POLISH Matrix and color polish equally and brilliantly, and there is no roughness nor any porosity in the polished matrix. Amatrice is materially harder than turquoise.

INDIVIDUALITY The unequaled variety of matrix effects makes each stone an individual gem. Exact duplicates do not exist, but beautiful matching effects for sets are obtainable.

SALABILITY At retail the most salable of matrix gems, because the range of color combinations and innumerable matrix effects appeal strongly to the individual buyer.

RETAILERS SHOULD REQUIRE MANUFACTURERS TO SUPPLY DIFFERENT TYPES IN EACH LOT BOUGHT.

Amatrice Positively Does Not Fade Nor Change Color.

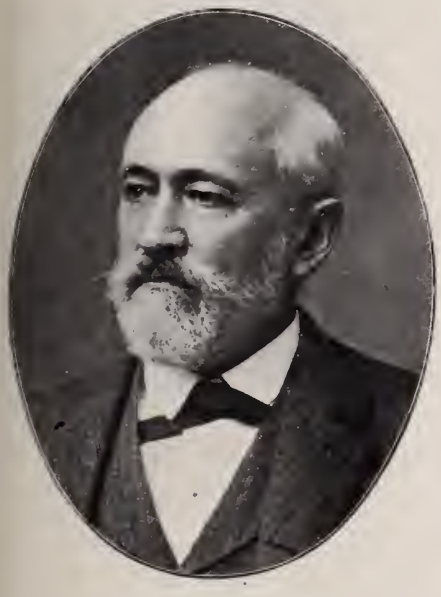
MOST SUCCESSFUL SALES BY RETAILERS HAVE ESTABLISHED THE POPULARITY OF AMATRICE.

BUY THROUGH THE REGULAR TRADE.

ONLY ONE AMATRICE MINE IN THE WORLD OWNED SOLELY BY

OCCIDENTAL GEM CORPORATION

216-217 Dooly Block Salt Lake City, Utah



A. J. Bruneau, Secretary, will be at Manhattan Hotel, New York, until July 15th, 1908.

Descriptive folders for distribution to public furnished by manufacturers with each lot of Amatrice jewelry.

Death of Edwin Harris.

WASHINGTON, D. C., June 18.—Edwin Harris, one of the oldest and most prominent jewelers of this city, as well as one of the leading business men of Washington died Monday evening last at his home, 1008 H St., N. W., and the funeral services were held this afternoon, at his late residence, the Rev. Randolph H. McKim, rector of the Church of Epiphany officiating. The interment was in Oak Hill Cemetery.

Mr. Harris, who was one of the founders of the firm of Harris & Schaefer, had been ill for a long time, and though his condition was known to his friends in the trade, nevertheless the news of his death came as

THE LATE EDWIN HARRIS.

a severe shock to the concerns in which he had been prominent for over half a century.

Deceased was a native of Charles County, Md. There he was born March 23, 1831, and was the descendant of an old and respected family of the town. At the age of 19 he came to Washington to seek employment, and went into business with Thomas B. Griffin, who kept a shoe store on Pennsylvania Ave. Two years later he became a partner in the concern, but the firm dissolved and Mr. Harris then went into the clothing business. He left this to go into the jewelry trade in the employ of N. W. Gault, and remained with Mr. Gault until 1879.

In that year, with Chas. A. Shafer, Mr. Harris started the business which has borne his name ever since. The firm began in a small way at 1113 Pennsylvania Ave., where the business still remains. Through the efforts of Mr. Harris and his partner, Mr. Shafer, the concern soon claimed recognition, and the business grew until it reached its present large proportions, the firm being succeeded by a corporation known as Harris & Shafer Co., of which Mr. Harris was president and Mr. Shafer the secretary and treasurer.

Mr. Harris was married May 20, 1862, to Augusta Allen, and is survived by his widow and three children, George M. Harris, of New York; E. A. Harris, who is connected with the Harris & Shafer Co., and Miss Louise Blanche Harris, of this city.

Mrs. Paul A. Matchette, Noted Pennyweight Thief, Sent to Prison at Boston, Mass.

BOSTON, June 19.—The case of Mrs. Paul A. Matchette, alias "Miss Fitzhugh," "Annie Silver," "Ethel Sullivan," "Miss Lee," and other names, with which she has masqueraded for some time past, came up to-day in the Superior Criminal Court in this city, before Judge Pierce.

Mrs. Matchette is the young woman who, as noted in THE CIRCULAR-WEEKLY last week, was brought on from Washington, a short time ago to answer to the charge of theft of a diamond valued at $750 from the Thomas Long Co. It was brought out in statements made to the court that she comes of respectable parentage, her home having been in Concord, N. H., and an effort was made to have her placed on probation, with the case left on file. The plea was put forth that association with men of a criminal character, who used her as their accomplice, was responsible for her being led astray.

Judge Pierce, however, declined to take this view of the matter, and sentenced her for an indefinite term in the reformatory for women at Sherborn.

It is stated by the Thomas Long Co. that she admitted having pawned the diamond for $200, a Providence pawnbroker having received the stone.

Edgar P. Albright, jewelry buyer of the Scruggs-Vandervoort & Barney Dry Goods Co., St. Louis, Mo., will sail for Europe from this city, Saturday, on the *Canopic*.

Barney I. Levenson, Pittsburg, Pa., Files a Voluntary Petition in Bankruptcy.

PITTSBURG, Pa., June 19.—Barney I. Levenson, whose place of business is at 932 Liberty Ave., has filed a petition in voluntary bankruptcy in the United States District Court. His liabilities are $4,497.86 and his assets $4,087. The schedule which he filed shows that he owns lots 6, 7, 20 and 21 in the Sunnyside Plan, Greentree borough, and that they are worth $1,600, there being a mortgage for $500 against the property. His stock, he says, is worth $1,200. He has open accounts to the amount of $535, and owes $250 in wages to employes.

Fybush Bros., several days ago, secured judgment against Levenson, and George H. Bonner went into court and secured an order restraining the carrying out of the execution in order to protect all of the creditors and place them on an equal footing.

A list of those creditors whose amounts are $50 or over follow: J. Sherman, $87; J. Rogers Silver Co., $63; Ades Bros., $96; Warington & Gebner, $50; Leon Hirsh, $89; Fybush Bros., $200; Pittsburg Jewelry Mfg. Co., $90; J. Silverman Co., $352; Grafner Bros., $80; Shimouira & Co., $100; Buegeleisen & Jacobson, $158; Biggard & Co., $93; Edward Tyron & Co., $99; Alpern Bros., $125; W. S. Maxey, $100; D. Robinson, $350; I. Isenberg, $685; O. Isenberg, $100 for money advanced. Levenson owes $366 rent. He has no money in bank.

Albert J. Walker and Ralph Waldeman Arrested at Pittsburg, Held Temporarily Upon a Charge of Smuggling Jewelry.

PITTSBURG, Pa., June 18.—Albert J. Walker and Ralph Waldeman, arrested in Pittsburg, last week, were arraigned this morning at 10 o'clock before United States Commissioner W. T. Lindsay and held in the sum of $1,000 bail each on a charge of smuggling diamonds and jewelry into America. Walker was held on the direct charge of smuggling and Waldeman was accused of having goods in his possession on which no duty had been paid and also of concealing them for the purpose of defrauding the government.

Abraham Bros., Birmingham, England, and for whom Walker worked, cabled to Pittsburg that their manager sailed on yesterday's steamer for America. It was further stated in the message that Walker left Birmingham last February and at that time diamonds and other jewelry valued at £3,500 were charged up to him, and that when he was last heard from their account showed he still held goods valued at £3,000.

Supt. of Police A. McQuaide took the stand and testified that Walker said he had met Waldeman in Kingston, Jamaica, where Waldeman lives, and that he induced him to come to America and that Walker gave the jewelry to Waldeman, who carried it into this country, part of which was brought on his person for the reason that he, not being a British subject, he would not be liable to be searched.

The jewelry found in the men's apartments at the Hotel Schenley, was spread upon the table and the customs officials said it was worth $5,000. It was stated in court that Walker admitted to the police that he had jewelry worth $10,000 in bond at Kingston and intended to return there and bring it to this country, as soon as they disposed of the stuff in their possession here.

The men were defended at the hearing by Attorney Lawrence B. Cook and are preparing to put up a stiff fight. Mr. Cook tried to show that the government had not made out a case, but his efforts were of no avail.

Neither of the accused men took the stand in their own behalf, but some of the police officials testified that Walker admitted to them that he was sick and that he was induced because of weakness to come to this country to dispose of the goods. Waldeman told the police that the jewelry belonged to Walker and one endeavored to blame the other for the apparent wrong committed.

The men sold one stone in Baltimore and had endeavored to sell some of the goods to L. J. Marks, John M. Roberts & Son Co., and other Pittsburg jewelers, but did not succeed. The men had in their possession 91 rings, several brooches, gold watches and other articles of jewelry as well as a few unset stones.

The men are making an effort to get bail, but it is not likely to be of any use if they do, as the police intend to hold both until the arrival of Abraham Bros' manager, who is expected to lodge informations against the men after he gets to this city.

BUY FROM THE CUTTERS

DIFFICULT ORDERS FOR PRECIOUS AND SEMI-PRECIOUS STONES

¶ We carry a large stock of American and imported rough precious and semi-precious stones.

¶ We solicit difficult orders and are thoroughly equipped to cut special designs or shapes, to match stones and to fill orders for stones that will harmonize or agreeably contrast with any fabric or gown.

¶ We turn out work with dependable accuracy and orders are usually filled the day they are received.

¶ We are continually cutting all kinds of cabochon and facetted stones, and manufacturers will find this branch of our stock especially interesting to them.

¶ We carry every precious and semi-precious stone but the diamond.

Henry Lemoine, the "Diamond Maker," Vanishes and the Formula Which He Gave to Sir Julius Wernher Proves Worthless.

(Special Cable Despatch to the New York *Sun*.)

PARIS, June 17.—This was the day on which Henry Lemoine, the alleged diamond maker, who has been under arrest in Paris since last January, though out on bail most of the time, on a charge of swindling Sir Julius Wernher, of the De Beers Mining Co. out of a large sum of money by pretending to be able to make genuine diamonds, was to have appeared before Judge Poittevin to produce a diamond of a certain size and shape to prove that he could really make diamonds. He failed to appear and Judge Poittevin, who is the examining magistrate in the case, said that Lemoine had fled.

Lemoine was to produce the test stone on June 2, but two extensions of time were granted on various excuses, the last expiring to-day. He had rented a building at St. Denis, installed in it a large amount of electric and other apparatus and apparently made every preparation for a bona fide attempt to demonstrate that he was not a swindler.

The comedy terminated at the close of the court hearing, when the envelope containing the formula for making diamonds, which represented Sir Julius Wernher's security for the $320,000 that he advanced to Lemoine, was opened and found to contain nothing more valuable than the button found when Mme. Humbert's safe was opened.

Sir Julius and his co-complainant, Feldenhcimer, reached the law courts at 1 o'clock precisely. Judge Poittevin arrived at 1.50. The latter was not surprised by the non-appearance of Lemoine. He said he had learned that the accused had been missing since Monday evening. He had issued a warrant for his arrest last night.

Judge Poittevin then invited the complainants into his office, where he found a letter from Lemoine saying he was not coming to court as he had failed in the St. Denis factory owing to the interference of his landlady. He intended to continue his studies elsewhere, and if he succeeded he would bring a diamond.

Judge Poittevin explained that Lemoine had not been under special surveillance, as the courts wished to give him perfect liberty for his experiments. He would now send the case before the Correctional Court, where Lemoine would be condemned to the maximum penalty of twenty years imprisonment. If he were not arrested in that time, the case would be barred by the statute of limitations.

Experts Bordas and Kling having arrived at the court the famous envelope was opened. The formula was lengthy, but summed up it said: "Place powdered carbon and sugar in a crucible in an electric furnace. Use a current of from 1,500 to 1,800 amperes under a tension of 110 volts, and so heat to 1,600 degrees. Then put pressure on the cover of the crucible and diamonds should be found therein."

Everybody laughed except Sir Julius Wernher.

The New York *Times* sums up the history of the proceedings on the Lemoine case as follows:

Lemoine first approached Sir Julius Wernher, a member of the great diamond firm of Wernher, Beit & Co. in London in May, 1905. He told him that he could produce genuine diamonds, undistinguishable from natural ones, by means of an electric furnace. The secret formula, he stated, was contained in a sealed envelope, which he had deposited in the Union of London and Smith's Bank.

Sir Julius believed that there was something worth inquiring into and paid a visit to Lemoine's house in the Rue Lecourbe, Paris. There Lemoine performed his experiments and convinced his visitor that he had actually manufactured some diamonds which were found in the furnace.

Lord Armstrong was also invited to see the experiments, and was equally certain that no trick had been performed.

The result of these experiments was that Sir Julius Wernher gave Lemoine $320,000 for the establishment of a laboratory at Pau. A regular contract was drawn up, and it was agreed that the mysterious envelope in the Union Bank, which the inventor said contained his secret, was to remain unopened until his death, and was then to become the property of Sir Julius.

However, suspicions soon got afloat, and last January Lemoine was arrested in Paris and charged with fraud at the instance of Sir Julius. A great point was made of the envelope in London. The prisoner was defended by Maitre Labori, and he resisted every attempt to have the envelope opened. Mme. Lemoine was sent to London to stop the bank from giving it up, and Sir Julius immediately started in pursuit to secure the document before she could get an injunction to prevent him.

As the trial went on all sorts of revelations were made. The prisoner accused Sir Julius of conspiring with him to force the De Beers Co. to buy the secret for $25,000,000. It was alleged, on the other hand, that Lemoine was preparing to make money by buying De Beers shares as soon as they dropped on the publication of the stories about his success.

It came out that before he went to Sir Julius Wernher, Lemoine had obtained money from Edgar Cohen, one of the directors of Harrod's stores in London, and had also got $2,000 out of an American named Siegman upon the same pretext. Paris took sides upon the question.

Meanwhile Sir Julius offered Lemoine an additional $80 000 for his formula, and when he refused insisted that he should not be allowed out on bail. He was held prisoner for over two months, and the contest was removed to London, where a legal fight took place for the possession of the envelope lying in the bank. At first the magistrate at Bow Street refused to allow any one to remove it from where Lemoine had placed it, but on April 30 the Court of the King's Bench reversed his decision and authorized the bank authorities to hand it over to the French court.

Then Lemoine played his last card. He declared that he had no objection whatever actually to manufacture diamonds to prove his ability to the court, but he could not consent to have his secret formula read and published. He was allowed until June 9 to make good his claims and was afforded every facility.

On June 9 he appeared in court and announced that unforeseen circumstances had prevented the success of his experiments. He professed still the utmost confidence, and asked for an extension of time. He was granted another week, which expired Wednesday.

Programme of Forthcoming Meeting of the Michigan Retail Jewelers' Association.

ITHACA, Mich., June 17.—The programme of the meeting of the Michigan Retail Jewelers' Association, which will be held Wednesday and Thursday, July 8-9, at Detroit, has just been made public by Secretary J. C. Morse, and from this it is evident that there will be many features of distinct interest to the jewelrs of this city who will attend. The meeting will follow shortly after that of the meeting of the Michigan Optometrists, which will be held in Deroit at Convention Hall, Tuesday, July 7.

The programme is as follows:

PROGRAMME OF THE MICHIGAN RETAIL JEWELERS' ASSOCIATION.

Wednesday, July 8, 1908.

Wednesday, July 8, 1908—Morning Session.

Registration at headquarters of secretary. Payment of dues. Informal discussions of interest.

Afternoon Session.

2 P. M.—Call to order. President's address, Sandy MacKay, West Branch, Mich. Minutes of last meeting, Secretary V. C. Morse, Ithaca, Mich. Appointment of committees on credentials, resolutions and grievances.

3 P. M.—General discussion, "What Should Be the Extent of the Jeweler's Guarantee?" led by Max Jennings, St. Clair, Mich.

4 P. M.—Address, "Salesmanship," H. C. Carpenter, sales manager, South Bend Watch Co.

5 P. M.—Address, "The Vreeland Bill," Fred Russell, Mt. Pleasant, Mich.

Thursday, July 9, 1908—Morning Session.

9 A. M.—Discussion, "How Does the Organization of Retail Jewelers Benefit the Legitimate Jobbers?" led by A. B. Hull, Belding, Mich.

10 A. M.—Executive session, members only. Report of secretary-treasurer, V. C. Morse, Ithaca, Mich. Report of Committee on Credentials. Report of Committee on Resolutions. Report of Committee on Grievances. Election of officers, also delegates to National Convention. Discussion of matters of interest.

12 M.—Adjourn for lunch.

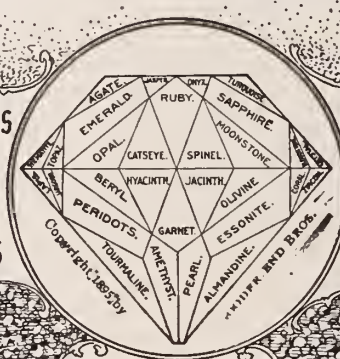
Afternoon Session.

1:30 P. M.—General discussion, selection from Question Box.

2 P. M.—Address, "Why We Did It," A. L. Sackett, of the Buck Silver Co.

3 P. M.—Discussion, "What Constitutes Fair or Just Competition and How Can We Secure It? (a) "In the Cities," L. J. Liesemer, Detroit, Mich.; (b) In the Smaller Towns," S. D. Thompson, Shepherd, Mich.

4 P. M.—Address, "Mail-Order Problem and How to Combat It," John Gilbert, Chicago, president Anti-Retail Mail-Order League.



5 P. M.—General discussion.

6 P. M.—Adjourn.

The items on the programme are subject to discussion, and it is desired to obtain the opinion of those present. Any subject which it is desired to bring before the convention may be placed in the hands of the secretary.

Samuel K. Reich Brought to New York for Trial.

Evidence Against Alleged "Short Change" Man Not Sufficient to Hold Him in Syracuse and He Is Rearrested by Officers from New York.

SYRACUSE, June 17.—As was expected, there was insufficient evidence to hold Samuel K. Reich, the "money switcher," for examination before the Grand Jury here on the charge of swindling Adolph Berg, a local jeweler, out of $714 worth of diamonds. As soon as he was discharged Reich was arrested by Detective Busby, of New York, and after a few somewhat sensational scenes the noted jewelry swindler was started for New York in irons. He left here on the Southwestern Limited at 11.15 o'clock last night.

Reich's case was again called in Judge Ryan's court yesterday morning. There was but little evidence submitted by the prosecution. Judge Ryan held that as the evidence of Rolf's clerk was of such a weak character and wholly unsupported it would be impossible to hold Reich for the Grand Jury. He then discharged the prisoner.

Reich started to leave the court room with his attorneys, Lavine & Bondy. His freedom was of short duration, as the swindler was at once arrested by the New York officer on a grand larceny warrant sworn out by Simpson & Co., of Brooklyn, who accuse Reich of stealing $800. The prisoner became greatly excited when placed under arrest the second time. He was taken into Chief Codin's office, where Reich had a talk with his lawyers. Detective Busby was present.

One of the lawyers gave Reich a letter which the firm had received. It was in Yiddish, and while Reich was reading it Detective Busby made a grab for the communication, thinking perhaps it contained material evidence. Reich and the detective had a rough and tumble struggle. The prisoner tore up the letter and tried to swallow the bits. The detective choked Reich until he spat out the torn letter.

During this row Reich's cries could be heard about the police headquarters. The detective refused to give up the letter. Reich's lawyers claimed that it was their property and that the detective had no right to keep it, but the detective insisted on keeping the letter.

An interpreter was secured and the letter read. It proved to be from Mrs. Lipke, 188 Suffolk St., New York, addressed to Lavine & Bondy. Mrs. Lipke, in the letter, told Reich that she had no money and could not help him in his trouble. Mrs. Lipke is believed to be Reich's sister-in-law. He recently sent a letter to her. It was an appeal for assistance, contained threats and proves to the satisfaction of the police that others are implicated in the diamond swindles.

It is understood that Reich has a brother, who resembles him very much, who is in the same line of work. It is believed that they have worked the game together.

It was expected that the charge here against Reich would prove insufficient, as Jeweler Rolf's clerk was a poor witness.

Samuel K. Reich, who was arrested in Buffalo some time ago, was brought to Brooklyn Tuesday night of last week by Detective Busby to answer a charge of grand larceny here. It is alleged that he obtained $1,350 worth of diamonds in February by working the short change game on the Robert Simpson Co.'s pawn shop, on Myrtle Ave., Brooklyn. Here he purchased diamonds valued at $1,370 and handed the roll of money to a clerk, who, after counting the money, discovered a shortage. The money was recounted by the alleged swindler and one dollar added and returned to the clerk. The man then took the diamonds and departed. It was afterward found that the roll contained only $19.

The prisoner was held on a charge of grand larceny by Magistrate Dooley in the Adams St. court. The examination was set down for 2 P. M. Monday, but was adjourned until to-morrow. The prisoner is at present in the Raymond St. jail.

Annual Meeting of the North Dakota Retail Jewelers' Association.

JAMESTOWN, N. Dak., June 18.—The annual meeting of the North Dakota Retail Jewelers' Association began yesterday, and has proven decidedly interesting to all members who attended, and has showed the marked growth of the association since its first meeting, held at Grand Forks, last year.

The meeting was called to order early yesterday morning in Elks' Hall by President Reighart, who delivered an interesting address to the members. The morning session was of somewhat informal character and little was done outside of the reading of the minutes and an exchange of greetings among the members. At the afternoon session, Mayor Blewett delivered an address of welcome, which was responded to by O. M. Varnson. Following the reports of the secretary and treasurer and committees, the members listened to a number of interesting addresses and papers by A. O. Wold on the "Possibilities of Jewelry Organizations," and W. A. Persey on "Advertising from the Jeweler's Standpoint," and others. After an auto ride through the city the members sat down to a banquet last night and the session was resumed this morning.

The principal address of to-day's session was on the "Detached Lever Escapement," the lecturer being Chas. Higgenbotham, of the South Bend Watch Co. Other papers of interest were on the "Proposed Watch Case Stamping Law," by A. G Tellner, and one which took up the question of "Compensation for Skilled Work," by J. B. Pederson. The afternoon session included an address on the subject of "Examining Board for Watchmakers," by F. B. Starke, and a discourse on "Engraving," by L. R. Douglass. The officers were then all re-elected.

The organization has now about 75 members on its roll, but this number is to be greatly increased in the next year.

Suits of Wm. I. Rosenfeld Against Several Watch and Watch Case Companies Settled Out of Court.

It became known last week that the suits which have been pending between William I. Rosenfeld and several of the watch and watch case manufacturing companies had been amicably settled out of court, and, although the suits were still on the calendars of the New York Supreme Court and the United States Circuit Court and no order of discontinuance had been formally entered, that the suits would never be brought to trial. In speaking of the matter Monday afternoon, Major F. R. Appleton, of Robbins & Appleton, who were among the defendants, stated that the action had been settled under an agreement which was mutually satisfactory to both sides, and that the suits were practically at an end.

The actions were in the New York Supreme Court and in the United States Circuit Court, and were brought by Mr. Rosenfeld against the Keystone Watch Case Co., Crescent Watch Case Co., Philadelphia Watch Case Co., Elgin National Watch Co. and Robbins & Appleton, and grew out of the fact that Mr. Rosenfeld had been cut off the list of jobbers who handle the defendants' products. The first suit was brought in the New York Supreme Court, June, 1905, and asked $150,000 damages.

The complaint and the answers in the actions have already been published in THE CIRCULAR-WEEKLY.

Members of the Arkansas Optical Association Meet at Little Rock.

LITTLE ROCK, Ark., June 17.—The members of the Arkansas Optical Association began their annual convention at 9.30 A. M. to-day at the Hotel Marion, Vice-President Charles Mosby presiding in the absence of President Ellis, caused by the death of his daughter.

Most of the morning session was taken up with the reading of the minutes of the last convention. In the afternoon after the routine reports of the officers the following papers were read: "Refraction," by B. I. Friedman, of Jonesboro; "Frame Fitting," by John L. Green, El Dorado; "The Ophthalmoscope," by Miss Rosa Rowland, Hot Springs.

All the officers were re-elected as follows: T. J. Ellis, Jonesboro, president; Charles Mosby, Batesville, vice-president; R. E. Mosby, Jonesboro, secretary, and John L. Green, El Dorado, treasurer. Mr. Green was also elected delegate to the national convention of the American Association of Opticians, to be held at Philadelphia, Aug. 9-13.

It was decided to hold the next annual convention in conjunction with the Arkansas Jewelers' Association, as many of the opticians are members of both organizations. Secretary George R. Brown, of the Board of Trade, addressed the convention and invited the association to meet in Little Rock next year.

The stock, fixtures and machinery of the G. W. Drake Cut Glass Co., Corning, N. Y., were sold at public auction by Referee in Bankruptcy D. M. Darrin on Tuesday of last week to Edgar E. McGee for $22,000.

30 MAIDEN LANE, - - - NEW YORK CITY

Strange Disappearance of Meyer Newman, Jewelry Salesman, Followed by "Black Hand" Letters Demanding Ransom for His Return.

Meyer Newman, a jewelry salesman for his brother-in-law, Louis Kappelman, who is a jobber in Baltimore, Md., left his home at 1555 Fulton Ave., Borough of the Bronx, New York, Tuesday, June 16, to meet, it is supposed, a customer from St. Louis who, he expected, was going to buy a considerable quantity of jewelry. Since that time nothing has been heard from the jewelry salesman. He had jewelry valued at about $1,500 with him when he disappeared. His friends and relatives fear foul play.

Mr. Newman and his wife are both natives of Baltimore, Md., from whence they moved some time ago to Tupper Lake, N. Y., later coming to this city, where Newman has been in the habit of selling jewelry. His work lay almost entirely among seafaring people, and it is thought that when he left his home on Tuesday he was bound for some vessel. This theory is based on the fact that he told his wife that he had a customer who had been introduced to him by a seafaring captain. Newman is known to have been friendly with many seafaring people. It is known that he intended to go to Perth Amboy before returning home.

When the salesman failed to return his wife became anxious and communicated the facts of his disappearance to the police, but without result thus far.

On Thursday morning a letter was received by Stern Bros. & Co., 33 Gold St., and read as follows:

This is to notify you that Meyer Newman is being held captive for a ransom of $10,000. Which must be put in a tin can at the Bronx Park entrance before the 30th of June.

BLACK HAND.

On Saturday a second letter was received, adding that Mr. Kappelman and friends be notified. The first letter was on small notepaper in lead pencil and was neatly written with no seeming attempt to disguise the handwriting. The letter was turned over to the detectives. The second letter was written in ink. This letter was also turned over to the police. The first letter bore the postmark of Station L, 150th St. and Third Ave.; the second letter came from the Sub-Station at 125th St.

It was said at the factory of Stern Bros. & Co. that Newman had no business dealings with Stern Bros. & Co. and that he obtained his goods through Mr. Kappelman, of Baltimore, who first bought the goods from Stern Bros. & Co. They account for the fact that the letters were sent to them on the supposition that Mr. Newman had in his possession a bill which bore the name of Stern Bros. & Co., which had been turned over to him.

Mr. Kappelman came on from Baltimore on Thursday with Mr. Newman's brother, a jewelry salesman at Scranton, Pa., now in New York. There is no suspicion of dishonesty attached to the disappearance of the jewelry salesman, as he has always had a good reputation and could easily have obtained much more jewelry than he had when he disappeared.

The latest development in the case is a letter received Monday morning by Stern Bros. & Co., posted at the 125th St. Station. The letter is as follows:

Stern Bros., Last Warning, To Whom it May Concern: If the money is not coming by the 30th of June, $10,000, Meyer Newman will be killed. Hope Mr. Kappelman or some one will pay the money soon.

(Signed) (†) BLACK HAND SOCIETY.

The letter was written on notepaper and contained a crude drawing of a heart pierced with a dagger and also a figure of a man who had also been pierced by a dagger.

The missing man is described as being about five feet in height and weighing about 115 pounds. He has dark brown hair and brown eyes. When last seen he was dressed in a dark blue serge suit, white tie and a blue shirt with white stripes. It is the opinion of those who are closely in touch with the case that the Black Hand letters are simply a ruse to mislead the police. It is thought that possibly river thieves have attacked the salesman and killed him. He was not strong and has had a slight cough for some time.

Mr. Newman is married and there are three small children in the family. His wife is prostrated with grief and fear that her husband is dead.

Little significance is attached to the demand for ransom. The detectives regard the threat of death as a blind. Some of those interested in the matter are of the opinion that the man has been robbed and the body disposed of.

Death of George Windhurst.

BALTIMORE, Md., June 18.—George Windhurst, for several years engaged in the jewelry business on Baltimore St., near Pine St., this city, died suddenly, a short time ago, at Hamilton, Va. The deceased was on a business trip and was going to catch a train when he fell and expired.

Mr. Windhurst lived in Baltimore about four years ago, and since that time was engaged in business in Philadelphia. He was a member of the Wilson Post, G. A. R., and the Veteran League. Burial was in Baltimore Cemetery.

Death of Col. James Sheafer.

PITTSBURG, Pa., June 22.—Col. James Sheafer died this morning at one o'clock at the Homeopathic Hospital, where he had recently undergone an operation. His death was a shock to his family and friends, for it was thought that he was fully recovering.

Col. Sheafer was a partner in the old firm of Wattles & Sheafer, his partner being Warren W. Wattles. Upon the retirement of the latter, the firm became Sheafer & Lloyd. When it was dissolved on the retirement of Mr. Lloyd, Col. Sheafer also retired from business. The store of the firm was situated in Fifth Ave., and was one of the prominent houses in its day in Pittsburg. Col. Sheafer was known as a judge of precious stones, and even after retiring from active business, he was frequently consulted because of his knowledge. He was well acquainted throughout the Pittsburg district, and especially in the east, New York in particular.

Col. Sheafer was born at Carlisle, Pa., Nov. 8, 1834. He spent his boyhood there, but later went to Baltimore. Some years before the beginning of the Civil War, he came to Pittsburg. When the first call for volunteers was made by President Abraham Lincoln, he became active and raised Company A, 101st Pennsylvania Volunteers. He went to the front with the rank of First Lieutenant. Col. Sheafer served until the close of the war, being mustered out with the rank of colonel.

Shortly after the close of the Civil War, Col. Sheafer married Miss Sophia Louisa Miller. He was for many years a member of the First English Lutheran Church, and treasurer of the congregation, as well as a member of the church council, and a teacher in the Sunday School. Besides his widow, he is survived by two children, a son, Thomas Lane Sheafer, and a daughter, Miss Annie Laura Sheafer, and four grandchildren.

STRICTLY A COMMERCIAL BANK ACCOUNTS SOLICITED

Receivers Appointed for Welsh & Bro. Co., Baltimore, Md.

BALTIMORE, Md., June 22.—A receiver has been appointed for Welsh & Bro. Co., one of the oldest and best known firms of local jewelers. This makes the fifth concern whose financial troubles have forced them into court recently, each attributing the cause to the recent financial stringency. The action against the Welsh & Bro. Co. was taken, last Friday, before Judge Gorter in Circuit Court No. 2, the bill of complaint being filed by David C. Townsend and Innes L. Townsend, trading as David C. Townsend & Co., stating that the Welsh Co. owes them $32,000, payment of which has been demanded, but which, the company states, it is unable to make. It also stated the Welsh Co. is unable to realize on its assets in time to meet obligations as they become due. They also contended that it would be essential to the interests of all the creditors that a receiver be appointed to insure the preservation of the assets. The answer of the company admitting the allegations of the bill of complaint and consenting to the receivership, was filed with the following paper:

BALTIMORE, June 19.

I, Frank E. Welsh, president of the Welsh & Bro. Co., Baltimore City, do hereby certify that at a special meeting of the directors of the company, held this date, the following resolution was unanimously adopted:

"Owing to the stringency in the existing financial conditions, this company is unable to realize on its assets in time to meet its obligations as they become due, and whereas certain creditors have indicated their intention to apply for the appointment of a receiver or receivers for this company.

"This company is unable to pay its debts on maturity, and is willing to have a receiver appointed therefor, and to that end the president be, and he is hereby authorized to sign a writing to this effect."

In pursuance of the power and authority invested in me by the foregoing resolution, I hereby certify that the Welsh & Bro. Co., Baltimore City, is unable to pay its debts on maturity, and it is willing to have a receiver appointed therefor.

FRANK E. WELSH, President.
HARRY SCHLARB, Acting Secretary.

The court appointed Frank E. Walsh, Jr., and Albert E. Donaldson, receivers, fixing their bond at $300,000. An order was signed by Judge Gorter, Saturday, authorizing the receivers to continue the business for 30 days, and to employ the necessary help for that purpose. Mr. Donaldson stated to-day that a list of the creditors was not completed, but that the Townsend Co. was possibly the largest creditor. He further stated that the assets of the Welsh Co. would exceed $160,000, and that the liabilities would average about $98,000, which looks bright for the company, but that definite figures could not at this time be given.

The Welsh & Bro. Co. is one of the oldest and highest rated concerns in the city, having succeeded the Canfield Bros., a little over 25 years ago. The Canfield Co. was established about the time of the Civil War, and when the Welsh brothers —Frank E. and Thomas—succeeded to the business, they were located at the corner of Charles and Baltimore Sts. They formed under the head of Welsh Bros. and moved to 3 W. Baltimore St., later moving next door, where they remained until the great fire of February, 1904.

After the fire they secured a temporary location on north Charles St., until they located permanently in the Professional building, at 330 N. Charles St. A company was formed in 1903, taking into partnership some of the younger men in the establishment. Thomas Welsh died in February, 1904, just a week before the great fire. The officers of the company are: Frank E. Welsh, president; Harry Schlarb, vice-president; George W. Richards, secretary; Henry B. Coulson, treasurer.

Referee Decides That Bankruptcy Petition Against Maurice Dreshfield Is Defective.

In the course of the proceedings against Maurice Dreshfield, against whom a petition in bankruptcy was filed some time ago, and who, it was alleged, was connected in transactions with George H. Carpenter by which $182,594 worth of diamonds were obtained from Rudolph A. Breidenbach, a technical question has risen as to the validity of the petition. Special Master Olney, before whom the hearings have been held, has submitted a report in which he said, in part:

I reported that after having taken considerable testimony upon the issues involved from the examination of Rudolph A. Breidenbach, one of the petitioning creditors, it appears that the said Breidenbach alleged that he had transferred certain promissory notes held by him, endorsed by the alleged bankrupt, Maurice C. Dreshfield, under such circumstances as to raise the presumption that in transferring one was for the purpose of making or qualifying one Henry C. Morath, a petitioning creditor, and the other was also transferred to his sister-in-law, Lynn Wagner, under the same conditions, to qualify her as a petitioning creditor, that both the said Morath and Wagner were employes of the said R. A. Breidenbach at the time of the alleged transfer. It appears from the examination of R. A. Breidenbach that these notes after having been transferred by him to Morath and to his sister-in-law, Lynn Wagner, has been retransferred by Morath and Mrs. Wagner back to Breidenbach, and that he is now the owner and holder of the notes.

The point was made by counsel for the alleged bankrupt, M. C. Dreshfield, that the petition must be dismissed as the court was without jurisdiction to entertain the proceedings upon the ground that there was not three creditors to the petition and as there were more than 12 creditors of the alleged bankrupt, the petition must be made by at least three creditors.

In the finding of facts in his report Special Master Olney reports: "Said Henry C. Morath was not a bona fide creditor of the alleged bankrupt at the time of the examination of the alleged acts of bankrupt referred to in the petition herein." He also reports the same thing in regard to Lynn Wagner, the other petitioning creditor, and continues in his finding of facts by stating that "said Breidenbach split up his claim for the purpose of having three petitioning creditors in the bankruptcy proceedings."

In the conclusions on the law in the report Special Master Olney says "that the involuntary petition in bankruptcy was not made by three creditors of the alleged bankrupt but was a petition signed by Breidenbach himself and that there being more than 12 creditors of the alleged bankrupt the involuntary petition in bankruptcy herein must be signed by three creditors and that the petition should be dismissed upon the ground that the court is without jurisdiction to entertain these proceedings."

The argument on the motion to confirm the report came up before Judge Holt Monday and was adjourned for a week.

The report of the Special Master must be passed on by the judge and in case he should uphold the referee the matter will in all probability be appealed at once.

Attorney Oppenheimer, representing the petitioning creditor, said that a settlement had been offered in the Carpenter matter, but that no terms had as yet been reached.

Chester Billings & Son Put Corporate Stock in Hands of Voting Trustees.

It became publicly known through announcements made in Newark, N. J., Saturday, that the stock of Chester Billings & Son, diamond importers and manufacturing jewelers, of 58 Nassau St., who have a store at 353 Fifth Ave., New York, had been placed in the hands of voting trustees for two years. It was said that the concern is in good condition, but that, in common with many diamond firms, it has suffered temporary embarrassment during the financial depression.

Uzal H. McCarter, president of the Fidelity Trust Co., of Newark; Mr. Van Clief, a banker, and Aug. Oppenheimer, head of a diamond importing house of New York City, are the voting trustees representing the creditors. They have full control of the property and expect to be able to realize upon the assets in a short time. Mr. McCarter, whose company represents somewhat less than $100,000 in claims, said that the move was the result of overstocking and failure to make sales, owing to a falling off in demand. He believes the firm is entirely solvent.

Henry B. Billings, of Newark, is the president of Chester Billings & Son. Among the creditors is P. Sanford Ross, father-in-law of Mr. Billings, whose claims are said to be $100,000.

Association Notes.

The Tennessee Optical Society will hold its seventh annual meeting July 7 and 8 in the convention room of Hotel Patten, Chattanooga, Tenn. H. J. Cook, president, and Weakley Ruth, secretary and treasurer, are sending notices of the meeting with an accompanying official programme, telling of many interesting features for which this convention will be noted. The Tennessee Retail Jewelers' Association will meet in a joint convention with the opticians, but the jewelers will meet in the afternoon of July 7 and the forenoon of July 9.

The Pennsylvania Retail Jewelers Association is making great progress at the present time, and this is in great part due to the personal efforts of the officers, not only of President Graul, but also particularly of Secretary Wiley and Vice-President Archibald, who have been sacrificing time and energy in visiting the jewelers throughout the State to interest them in the work of the organization. The members and officers are now distinctly optimistic of the future and are making great efforts in perfecting arrangements for the coming convention which will be held in Philadelphia, Aug. 12 and 13, at the time of the meeting of the American Association of Opticians. All jewelers of this State are invited to participate in the proceedings, and much work of interest, it is expected, will be accomplished.

GORHAM SILVER

"THE POWER OF BEAUTY I REMEMBER YET."—*JOHN DRYDEN.*

¶ There is a compelling power in beauty of every description which may be turned to commercial advantage.

¶ Thus it is that the value of the beauty which is ever to be found in all Gorham achievements can be reckoned in absolute dollars and cents.

¶ Gorham silver is not only of the highest technical excellence and of the strictest integrity of material, but it is, from the most insignificant trifle to the most elaborate special piece, of the most striking beauty.

¶ That is why the public buy it in preference to any other.

AS old as the jewelry trade itself, or older, is the use of scarabs as ornaments, and despite the many revivals in popularity of this form of engraved stone, there is much about the history and symbolic significance of the scarab that the jeweler should know, that has never been placed before the manufacturer or retail jeweler. The present popularity of Egyptian style and ornamentation and of the scarab in particular, will, no doubt, make the article upon "The Ancient Egyptian Scarab and Its Symbolic Significance," which will appear in the next issue of THE CIRCULAR-WEEKLY, interesting, as well as instructive to our readers. The many points about the sacred beetle which the author brings out, while in no way new to the antiquarian, have heretofore been practically out of the reach of the jeweler unless he wished to look for them amidst a mass of data of no use to him in a commercial way. The article will put the jeweler and his clerk in a position to talk intelligently upon the scarab to customers who are interested in gems in this form.

The Lemoine Farce Comes to an End.

THE Lemoine diamond farce has ended in a way that everyone familiar with the subject who had followed the proceedings had expected and predicted. Lemoine is a fugitive in justice, discredited in the eyes of even his strongest friends, and his much talked of diamond formula has been exploded, and to use the words of the Paris despatches to this country, "has proved to be simply a jumble of fantastic and senseless phases" with no meaning or any scientific value.

When Lemoine failed to appear in court, Wednesday, the date at which the time limit given him by the court to produce diamonds, according to his formula, had expired, little surprise was expressed even by the examining magistrate himself, and the "comedy," as it was termed by some papers, was ended by the court ordering that the formula, which had been brought into the court's possession from London, be opened. When the alleged formula was read before the court and the witnesses, among whom was Sir Julius Wernher (on whose charge of obtaining $320,000 under false pretenses, the proceedings against Lemoine were instituted), there came an end to a great swindling farce equalled only by that of the famous Madame Humbert case. The judge, after explaining that he had received a letter from Lemoine, saying that he had failed at his St. Denis factory, but intended to continue his studies elsewhere, ordered the case to be sent before the Correctional Court, by which Lemoine would be given the maximum penalty of 20 years' imprisonment by default.

That the jewelry trade throughout the world hails with satisfaction this final exposure of such a charlatan and trickster as Lemoine goes without saying, though the reasons ascribed for this feeling in the trade by the daily papers are far from correct. It is safe to say that despite the world-wide publicity given in the press to Lemoine and his alleged experiments and the credence given to his claims by the many of the writers of these articles, there was hardly an intelligent jeweler in any part of the world who feared that either Lemoine or those who worked by his alleged formula, would ever be able to menace the market for genuine diamonds in any way. What they did fear, however, was the effect produced upon the public by the silly articles which the lay and pseudo-scientific papers of the world published speculating upon the effect of Lemoine's alleged discovery. The satisfaction among jewelers at the ending of these proceedings lies in the fact that these newspapers have had practically to eat their own words, and the lesson that they have had in the Lemoine case may teach them a little caution as to giving publicity to sensational claims by alleged scientists who think they can turn out, artificially, in the laboratory, in a few hours, what Nature has taken thousands and perhaps millions of years to produce.

The bees that get the honey don't hang around the hive. Advertising presents to the merchant new fields for operation.

Attend the Trade Conventions.

AGAIN the season of conventions in the jewelry and optical trades is upon us and the State associations will continue to meet until the annual convention of the American National Retail Jewelers' Association takes place in Cincinnati, Aug. 4-7, and in the optical trade until the annual convention of the American Association of Opticians, which takes place at Philadelphia, Aug. 11-13. It is to be hoped for the sake of the trade in general that all these conventions will be well attended, for as we have often pointed out, they result in benefit to the craft in ways outside the work of the organization by bringing jewelers together on a fraternal basis and giving them an opportunity of interviewing one another outside of the sphere of business. This intercourse cannot fail to give merchants a personal interest in their competitors and fellow members in the trade and establish relations which will tend to mitigate the bitterness which sometimes arises in competition.

Our advice to every jeweler who has the time and opportunity to do so is to attend these conventions, whether or no he be in sympathy with the association movement. No harm can come from contact with fellow merchants in one's own line, and, what is more, the opportunity to see and talk with the other fellow and hear what he has to say, formally and informally, is bound to result in giving a merchant a better idea of his craft as well as give him hints and suggestions that he never had before. We doubt if any man, no matter how much he knows about his trade, can attend a convention of serious-minded merchants and go away without learning something of interest

JUNE WEDDINGS

SOMETIMES,

43 Rue de Meslay, PARIS *Telephone, 480 John* *31 Maiden Lane, NEW YORK*

Trade-Mark

OUR guiding principle has always been to incorporate as much artistic skill and good material in the construction of our jewelry as possible. This is contrary to the skimming, economic operations so extensively practiced in the manufacture of inexpensive gold jewelry. In observing this standard we naturally sacrifice the petty profits resulting from the less exacting methods of others; nevertheless our jewelry is consistently low priced and of a quality away beyond the ordinary.

¶ *Ask to see it and look for our trade-mark—the imprint of originality and all that's good.*

to him. Again we say to all who can do so, attend the conventions and your State societies and learn what your brother jewelers are doing.

Boston.

M. Fein, 280 Hanover St., is spending the summer at Nantasket Beach, where he is a guest at the Hotel Rockland.

Samuel Hoyt, stock clerk with D. C. Percival & Co. for some time past, has severed his connection with the establishment.

Ralph Patrick, salesman for C. A. Aldrich Co., has been in camp during the past week with his regiment of the State militia.

Hyman Kaufman, a watchmaker at 108 Court St., recently filed a voluntary petition in bankruptcy with liabilities of $1,952. There are no assets.

The Eastern Minerals Co., Boston, Mass., was recently incorporated to deal in jewelry with a capital stock of $25,000. The officers are F. W. Johnson, president, and J. H. Green, secretary, Stoneham.

Charles H. Crump, of the Shreve, Crump & Low Co., will go abroad this Summer, as usual, but may not start until the return of A. W. Armington, who will sail the last of this month for the diamond centers of Europe.

Geo. E. Homer, 45 Winter St., has received an order for 400 sterling silver souvenirs for the Master Plumbers' Association, which meets in this city next month, which will cost $500. Mr. Homer also has the exclusive handling of the K. P. official badge.

George Wagoner, of the Wilcox & Wagoner Co., New York and Attleboro, was married to a fair daughter of Massachusetts this week. His son, who came on with him to attend the ceremony, had the misfortune to be taken seriously ill with appendicitis, and was operated on Friday at the Parker House, in this city.

The store of A. J. Landry was entered one night last week and robbed of between $500 and $600 worth of jewelry. There is no clew to the perpetrators, who gained access to the store, presumably with a key, as the door was found open by the watchman. Mr. Landry's lease expires next month, and he will retire from business, going to Pemaquid, Me., where he has a country place.

The sender of the registered package containing three diamonds valued at $275 which was lost and found at Springfield under unusual circumstances, was a firm of jewelers of this city, and the consignee was I. J. Cattelle, of Harrison Ave., Springfield. Though the diamonds were eventually found after the package had been lost, the gold mountings sent with them, valued at $5 were not recovered. It is believed that a small boy found the package, kept the mountings, and threw away the diamonds.

T. Edwin Shaw, who is the advertising manager of Chas. F. Damm's trade publication known as *Manufacturers' News Designs*, has been the recipient of considerable newspaper publicity and the subject of many favorable comments for his advertising story known as "Winning His Bride," which was published in the Buffalo *Times*.

New York Notes.

I. Michalson, Montreal, Can., was a visitor in town last week.

Wm. Allen Young, London, Ont., was a visitor in this city last week.

Thomas Marshall, Toronto, Can., was in town last week, buying goods.

W. T. Gough, of Carter, Howe & Co., sails to-day on the *Mauritania* for Europe.

A. H. Pond, of A. H. Pond & Co., Syracuse, N. Y., called on the trade in this city last week.

Chas. Balliard, of the Metropolitan Museum of Art, will sail for Europe on *La Provence.*

Henry Jacobson, of Jacobson Bros., sailed Tuesday of last week for Europe on the French liner *La Savoie.*

Chas. H. Eulhardt, for a number of years with the Dreyfus Mfg. Co., has opened an office at 2 Maiden Lane. He will do a jobbing business in jewelry.

Judge Holt has appointed Edward F. Brown receiver in bankruptcy for George Alexander, manufacturer of combs, metal novelties, etc., 429 Broome St. The liabilities are $10,000.

Among those who went to the annual outing of the New England Jewelers and Silversmiths' Association last Friday from this city were Frank Somes, George Frey and James McDonald.

The Anton J. Anderson Co. has been incorporated under the laws of New York State, with a capital of $20,000. The directors are Anton J. Anderson, Alban J. Lindblad and William Ohlson.

The Weinman Buckle Co., New York, has been incorporated, with a capital of $10,000, to manufacture buckles. The incorporators are: I. Weinman, Hyman B. Lefkowitz and Leonard Day, all of New York.

George Yingling, buyer for the Swigart Optical & Watch Co., Toledo, O., was in this city last week. He received many congratulations from his friends on his recent escape from the fire in the Hotel New Evaline at Fort Wayne, Ind.

The Sanford & Bennett Co., New York, has been incorporated under the laws of this State to manufacture pens, with a capital of $25,000. The directors are: Wm. W. Sanford, Newark; Frederick D. Bennett, Freehold, and E. D. York, Flushing, L. I.

Edgar P. Albright, buyer for the jewelry department of the Scruggs-Vandervoort-Barney Dry Goods Co., St. Louis, is a visitor in town this week, stopping at the Imperial. He sails from Boston Saturday on the *Canopic* for a trip to Italy, Germany and France

Among the graduates of the New York Law School who received degrees at the commencement exercises held at Carnegie Music Hall, New York, on the evening of June 18, was A. H. Rubenstein, son of I. M. Rubenstein, of Rubenstein Bros., 14 Maiden Lane. Young Mr. Rubenstein is a graduate of the Plainfield High School in the class of 1905.

A peculiar error, for which THE CIRCULAR-WEEKLY is in no way responsible, crept into the announcement of the engagement of Miss Florence E. Elbe, daughter of Isidor Elbe, who is to be married next Fall to Emanuel A. Gardner, with the E. A. Bliss Co. In the announcement Mr. Gardner's name was given as Levy, the error being made in transcription. Mr. Gardner has been the recipient of many congratulations from his friends in the trade on his engagement, though he and his fiancé were subjected to considerable annoyance through the mistake in the name in the note originally published.

Everard Stocker, a second-cabin steward on the steamer *Zeeland,* was arraigned, Thursday, before United States Commissioner Shields, charged with smuggling as the result of an investigation by special agents of the Treasury Department. The *Zeeland* arrived here Tuesday morning of last week and the steward has been watched since then; for the past two or three days the detectives claim that they saw that he was offering diamonds for sale and that the diamonds were found on him. He had in his possession 37 uncut stones of different sizes. The diamonds were seized. Examination was waived and he was held in $2,500 bail for the action of the United States Grand Jury.

In one of the large show windows of Lambert Bros., 58 Third Ave., have been several beautiful prizes which were competed for by the North American Skat League, Monday evening at the Grand Central Palace, in this city. Among these trophies are a silver service, valued at $250, from *Das Morgen Journal;* chests of silver from skat clubs in Brooklyn, Detroit, Altoona, Pa., and from the Arion and Staten Island Skat clubs, New York; crystal punch bowl and glasses from the Milwaukee Skat Club, and a loving cup from the Freundschaft Skat Club, New York. The League is holding its 11th annual congress, which began Sunday.

A cobblestone was recently hurled through the plate glass show window of Kiefer Puleski's jewelry store, at 25 Cook St., Brooklyn, and a gold-filled watch, worth $50, was carried away. When the proprietor reached the street the thief was gone. Policeman Michel, of the Stagg St. Station, was informed that Joseph Sackoliski and Henry Hirshoefer, two 16-year-old boys, knew something about the robbery. The boys were arrested on a charge of grand larceny and locked up. When they were arraigned before Magistrate O'Reilly, in the Manhattan Ave. Police Court, the boys said that they did not know anything about the theft. The boys were paroled in the custody of Lawyer Roesch.

During the coming Summer season merchants' rates to New York will be effective from points in the State of Vermont reached by the Rutland Railroad and the Delaware & Hudson Railroad, and in the State of Massachusetts from towns and cities on the line of the Boston & Albany Railroad west of, but not including, Springfield, and the North Adams Division. These rates, which will be in effect on Aug. 15-19, inclusive, and Aug. 29 to Sept. 2, inclusive, with a 15-day return limit, have been arranged by the Merchants' Association of New York. The special fare will be the same as that applying from other sections of the country, namely, a fare and one-half for the round trip, effective under the certificate plan. The association will, as heretofore, issue a circular giving full information as to the concession, this circular to be forwarded to the retail merchants in the territory affected. Copies of it will also be supplied to resident members on request.

"Abe" Rothschild, who was arrested last March in this city by detectives and post office inspectors charged with conducting a scheme under the name of the *Successful Business Man,* a fictitious journal, and who is believed to be the swindler of that name who served a term for cheating several jewelers, was convicted last week in the United States Circuit Court and sent to the Tombs to await sentence. Rothschild was identified in court by Post Office Inspector Mayer as "Abe" Rothschild, a notorious swindler. When called for sentence, Monday, Rothschild and his associate escaped a prison term, but each was fined $500. Some years ago the convicted man operated in the South Atlantic States and at that time THE CIRCULAR-WEEKLY was directly instrumental in causing the notorious crook's capture in 1895.

The 22-story Silversmiths building, 15, 17, 19 Maiden Lane, which was completed about May 1, has settled slightly, causing cracks to appear in the buildings adjoining. The front of the Hayes building on the east is being torn out so that the crack in the wall facing the street may be done away with. The other building on the west shows less signs of disturbance. At the offices of Clinton & Russell, the architects of the new building, it was said that the settling was only what might be expected from any new building and that no danger of any nature would result from it. They said that the building had in all probability not settled more than two and one-half inches, and had settled on a level. In conformance with the law, the clients of Clinton & Russell will bear the expense of repairing the damage incurred.

A hearing in the suit brought by Joseph Irons against the S. L. & G. H. Rogers Co. for $15,000 for alleged breach of contract was held before Refere Beatty, of Beatty & Burlingham, 43 Cedar St., last Thursday. The suit was first brought in the Supreme Court of New York and the Rogers concern made a motion in the United States Circuit Court to set aside the summons on its local representative on the ground that this did not bring it in the jurisdiction of the New York courts. In the opinion handed down by Judge Lacombe the motion to set aside the summons was denied, but he stated that if the defendant believed that it could show the agent to be a mere solicitor who had no power to contract and if the defendant were willing to pay the expense of a hearing before a master to establish that fact, an order of reference would be made. This order, which permitted a hearing before a referee, was asked for and a hearing came up before Referee Beatty. The point of contention raised between the two litigants is as to whether the representative of the Rogers concern is simply a solicitor who has no power to make a contract, or whether he has the power to make an absolute sale by which the factory would be bound. At the hearing before Referee Beatty very little new evidence was offered

New York Notes.

(Continued from page 61.)

on either side and the attorneys were directed to submit the briefs in 10 days, at which time the matter will be settled.

Ludwig Nissen, of Ludwig Nissen & Co., will sail June 30 on the *Hamburg* on his annual European trip to the diamond markets.

Leo Cahn, general representative of F. De Simone & Son, 76 Nassau St., will start out on his western trip the latter part of this week.

I. Ira Foster, connected with the firm of Milton L. Ernst, 12 Dutch St., left Southampton for his return voyage to this city on the *Amerika* last Friday.

Directors of the Gorham Mfg. Co. have declared the regular quarterly dividend of 1½ per cent. on the preferred stock payable July 1 to stockholders of record June 30.

F. De Simone & Son, manufacturers and importers of coral, 76 Nassau St., New York, will open a factory in New York, about July 15, for the manufacture and repairing of coral jewelry of all kinds.

Friends in the trade will be pleased to learn that William Bardel, who was at one time in business in the Maiden Lane district, has been promoted from American Consul at Bamberg to the consulate at Rheims, France.

Jacob Rothschild, 51 Maiden Lane, was married Sunday to Miss Eva Ringlein. The marriage ceremony took place at the home of the groom's mother, who was sick and thus unable to attend the wedding unless at her home.

Declaring that he was worth $100,000 only a few years ago, and that he was at one time in the jewelry business in Maiden Lane, a man, who gave the name of Richard Heller, was taken before Magistrate O'Reilly in the Manhattan Court, on June 19, on a charge of vagrancy.

E. W. Loomis, formerly with Herbert K. Smith, Richmond Hill, Jamaica, and Far Rockaway, N. Y., has gone to Halifax, Nova Scotia, on a vacation. Mr. and Mrs. Loomis will remain until Sept. 1 before returning to their home. Mr. Loomis will open a first-class jewelry store in Jamaica, N. Y., on his return.

William Henkel, Jr., receiver in bankruptcy of Maurice Brower, wholesale dealer in pearls and precious stones, at 12 John St., said Monday that he had obtained an order from Judge Holt directing the creditors' committee, who have about $80,000 worth of goods in their possession, to turn over the goods to the receiver.

While leaning out of her front window last night, on the fifth floor of 533 W. 45th St., Mrs. Tessie Voiland, said to be the wife of a jeweler, was shot and instantly killed. A man in the street had shot in the air, the bullet entering her heart. Albert Farrell and James Farrell were arrested on suspicion of having done the shooting.

Ludwig Nissen, of Ludwig Nissen & Co., is one of the directors of the reorganized Brooklyn bank, which opened again for business this week with money enough to pay all depositors. Mr. Nissen was a member of the old board of directors which, with the officers, resigned before the bank's reorganization. All of the resignations were accepted with the exception of that of Mr. Nissen, who was asked to continue in the new regime.

Harry M. Reiner, 1553 Third Ave., went around to his shop Sunday to see if everything was as he left it at 9 o'clock Saturday night. He found that yeggmen had drilled a solid piece out of the side of his safe and taken away between $4,000 and $5,000 worth of diamonds and jewelry. A partition runs across the store, dividing the shop proper from the optical fitting and examining department. Reiner's safe had stood against this partition in plain sight from the outside of the store when he closed up on Saturday. He found that the robbers had gained access to the rear room by sawing out two iron bars in a small window and had then moved the safe around back of the partition. A section six inches by four inches had been carefully drilled out of the back of the safe, leaving a hole large enough to permit of the insertion of a hand. The yeggmen's plunder had consisted of several loose diamonds wrapped up in tissue paper envelopes, set diamonds, watches, pins and various knickknacks of jewelry. There was $250 in cash in the safe, but that was in another compartment and not accessible.

Newark.

J. F. Crane, of Mandeville, Carrow & Crane, 332 Mulberry St., sailed for Europe last Thursday on *La Savoie*.

The F. Brunner Co., Rutherford, has been incorporated with a capital of $100,000 to deal in gold, silverware, jewelry, optical goods, etc. The incorporators are: Frederick Brunner, Robert A. Brunner and Ferdinand Brunner.

After an illness of six months, Harry J. Kerntopp died at his home, 299 Littleton Ave., recently. He had been employed in the jewelry business for about nine years, and at the time he was taken ill held a position with Allsopp Bros.

The suit of Harry D. Austrian against Julius Laubheim, which began before Judge Vail and a jury, in Jersey City, June 15, went to the jury room and has resulted in a verdict for the plaintiff. The suit follows a criminal action, as Laubheim is under indictment and was brought to Jersey City from New York after a stubborn opposition. It is a check case. At its conclusion, Austrian, who had been swapping checks with Laubheim, was out $6,200. Laubheim was a wholesale jeweler on Maiden Lane, New York, and failed about the time that the checks came back to Austrian.

Vice-Chancellor Howell on June 16 signed an order directing the firm of Wakefield & Seiler, manufacturing jewelers, 109 Oliver St., to show cause why a receiver should not be appointed. The application for the rule was made by Frederick H. Tetgen, counsel for George B. Adams, who has claims amounting to about $600 against the firm. In the bill it is said that the firm is insolvent. Various claims against the firm are mentioned, one of which, amounting to $70.50, has been reduced to a judgment. The company was incorporated on Oct. 30, 1905, with a capital of $10,000, and began business with $4,000 paid in. Ralph Wakefield and Herman Seiler are the principal incorporators.

Canada Notes.

J. G. Taylor, St. John's, Newfoundland, has assigned.

The firm of L. N. Pare & Co., Montreal, has dissolved.

Thos. Paul, Yorkton, Saskatchewan, has sold out to A. W. Prior.

H. Winberg has opened a jewelry store at 322 Yonge St., Toronto, Ont.

Arthur Burch, Weyburn, Saskatchewan, has been succeeded by R. J. Armit.

A. M. Thomas, Ottawa, Ont., has given a chattel mortgage to M. A. McAdam.

L. B. Stokes, Estevau, Saskatchewan, has been succeeded by C. G. McLean & Co.

The stock of E. L. Norton, Rock Island, was advertised for sale by the bailiff June 16.

F. Pyman, Enderby, B. C., is in financial difficulties and asking an extension of time.

T. L. Coughlan, of St. John, N. B., has given a bill of sale on his goods for $1,822.

The assets of A. Marks, Montreal, Que., who recently made an assignment, have been sold.

Robt. D. Baker, Milton, Ont., has given a chattel mortgage to Taylor & Mulvaney for $71.

A meeting of the creditors of the Crystal Glass Co., New Westminster, B. C., was held June 23.

F. W. Dudley, Winnipeg, Man., has compromised with his creditors at 75 cents on the dollar.

F. A. Kent, of Ambrose Kent & Sons, Ltd., Toronto, Ont., has gone on a month's vacation to the Georgian Bay.

A. E. Cuff, of the diamond department, and C. McDiarmid, mail-order department, of Ryrie Bros., Ltd., Toronto, Ont., have gone to New York on a purchasing trip.

Out-of-town jewelers calling on the Toronto, Ont., trade, last week, included: J. S. Beck, Brampton, Ont.; G. D. McLaren, London, Ont., and E. Lamarche, St. Hyacinthe, Que.

A. J. Allen, of A. J. Allen & Co., Montreal Que., recently had as guest at his summer residence at Longueuil, P. Q., Col. C. H. McPharlan and Capt. G. H. McPharlan, who went to South Africa during the Boer War. The colonel and the captain are presently on their way to Australia by the way of Vancouver and Honolulu.

The business of the late Wilson Oplinger, Weissport, Pa., will be discontinued.

Burglars recently broke into the retail jewelry store of C. B. Engel, 217 Lackawanna Ave., Scranton, Pa., and escaped with jewelry valued at about $500. It is believed that the thieves gained entrance to the store by means of skeleton keys.

The report comes from La Crosse, Wis., that the receding waters of the Mississippi River, after the flood stage had passed, had left many shells on the banks, and that $5,000 worth of pearls have already been found in them around Prairie du Chien, and also valuable finds are reported from Genoa, Lansing, Victor and other river points.

Andrew S. Smith, with L. P. White, will spend the Summer with his family at Wildwood, N. J.

S. H. Goldberg, Woodbine, N. J., has opened a retail store for the Summer trade at Holly Beach, N. J.

D. Ross, 1602 Market St., who has been confined to his home a week seriously ill is reported to be out of danger.

S. Huberman, late with Aisenstein & Gordon, 4th and South Sts., has started in business for himself as watchmaker for the trade at 731 Sansom St.

T. D. Bentley, retailer, 1107 W. Girard Ave., has planned to spend the Summer at his usual retreat "far from the madding crowd" at a Chesapeake Bay resort.

James M. Orr, watchmaker, 18 S. 10th St., moved, last week, into a pretty new home which he purchased in Tioga, on Sydenham St. above Erie Ave.

David Atlas, of the firm of Atlas & Fisher, this city, sailed June 17 on the *Adriatic* on a business trip to Antwerp. He will also visit Amsterdam and Paris.

Aug. C. Frank, medailleur and die sinker, 732 Sansom St., is making improvements and alterations to the building which he recently purchased, a portion of which he sublets.

Green Bros., watchmakers for the trade, 719 Sansom St., who succeeded Boris Oster, whom they bought out, have taken larger quarters better adapted for their business, in the same building.

William Todd, a retired watchmaker, now managing a small farm at Riverton, N. J., was in this city last week renewing old acquaintances with the trade. He is looking the picture of good health.

The Jewelers' Baseball Club, made up of Sansom St. jewelers and workers, met and defeated the Woodland Athletic Club nine at 65th St. and Chester Ave., last week, by a score of 10 to 5.

Andrew S. Smith, with L. P. White, returned, last week, from a canvass of the Washington, Baltimore and eastern shore district. Mr. Smith reports business in the National Capital as excellent.

William H. Doebele, manufacturing jeweler and diamond dealer, 722 Sansom St., has leased quarters in the new building of L. J. Meyers, silver plater, 809 Sansom St., and proposes to move to his new quarters about Sept. 1.

Among the visitors to this city's trade during the week were the following: C. F. Rudolph, Wilmington, Del.; J. B. Ray, Conshohocken, Pa.; A. M. Kendall, Millville, N. J.; T. C. Kremer, Phoenixville, Pa.; F. X. Lieberman, Foxe Chase, Pa.; L. S. Caldwell, Wildwood, N. J.; B. Foster, Bristol, Pa.

Seigmund Lubin, manufacturing optician, 8th and Chestnut Sts., was in Atlantic City, last week, to attend the festivities attending the wedding of his daughter, Miss Emily Dixie Lubin, to Ira Morrell Lowry. The marriage was performed by the Mayor of Atlantic City at the Chelsea Hotel.

Lynn Thomas, a prominent Wilmington jeweler, while driving his automobile, last week, in the face of a driving rainstorm, was so blinded by the rain that he failed to see a mortar box in his path and crashing into it wrecked the automobile, but fortunately escaped personal injuries.

I. B. Braveman, individually and trading as the Keystone Jewelry Store, of Reading, was discharged as a voluntary bankrupt in the United States District Court in this city, last week. Most of Mr. Braveman's creditors had been wholesalers of this city, but the amount of his indebtedness was not great.

S. Kind, of S. Kind & Sons, 1110 Chestnut St., sailed for Europe last week on the North German Lloyd liner *Bremen*, by way of Plymouth and Cherbourg, and will be gone the entire Summer, during which time he will make purchases in the old world centers of art objects and diamonds for the Fall business here.

Col. J. Warner Hutchins, president of the Philadelphia Jewelers' Club, was the guest last week of Commodore J. Clifford Wilson, of the Cape May Yacht Club, on the latter's yacht *Clisade* in a cruise along the lower Delaware Bay. Col. Hutchins reports the catch of three drum fish. The largest weighed 65 pounds and the smallest 40 pounds.

Carl A. Doubet, a prominent Washington, D. C., jeweler, was in this city last week attending the obsequies of his father-in-law, James O'Rourke, Germantown. Mr. Doubet was on his honeymoon when he and his bride were recalled from a Niagara Falls trip on account of the fatal illness of Mr. O'Rourke. The trade of this city to whom Mr. Doubet is well and favorably known has extended him their sympathy on account of the sad termination of his wedding trip.

A pearl necklace valued at $5,000, which had been lost by Mrs. Henry Howard Ellison, Jr., of 2020 Locust St., was returned to her last week after she had given up all hope of recovering it. It was found in the street by a little girl, who played with it as a bauble until its value was ascertained by her parents and a search instituted for its owner. Jewelers say that the pearls which make up the necklace are so admirably matched that it would be difficult to replace the necklace had the owner so desired, even at its original cost.

Miss Ethel Chodowski, who was graduated from the University of Pennsylvania, June 17, with the degree of Bachelor of Science in Biology, is the youngest sister of Hugo Chodowski, wholesale jeweler of 3 N. 4th St. Miss Chodowski received senior honors, a class prize for the most meritorious work in the German language and literature over the regular course; the Henry Reed prize, founded by the Associated Alumni for the best English essay on "The Poems of Thomas Bailey Aldrich"; the George Schleicher prize for the best student in German literature and the German language, and honorable mention in the contest for the Alliance Francaise prize for meritorious work in French. She is also the author of "The Diary of a Birthday Doll," published during her college course, under her pen name of Ethel C. Dow.

All the prominent West Philadelphia retail jewelers have entered into an agreement to close Wednesdays at 1 P. M., from June 1 to Oct. 1. The movement was actively supported by William Gibbons, 40th and Market Sts.; L. A. Spoerhase and Lyons & Wilkinson, of 4082 Lancaster Ave. All the other retailers eagerly agreed to the proposition. This is the first time that the retailers of any section of Philadelphia have agreed upon closing a half day during the Summer months. The agreements among sectional retailers have so far been only to close on a certain evening throughout the Summer at 6 o'clock. Even in this Kensington and Richmond retailers have been unable to agree. The example set by the West Philadelphia retailers, it is believed, will be followed by retailers in other sections, and will be effective in promoting agreements for early closing during the dull Summer months.

Frank L. Davis, a leading jeweler of the 52d St. section of West Philadelphia, and who has a store on Market St., near 52d St., has been active in promoting "A Get Acquainted Week" beginning July 1, and embracing all of Market St., between 50th and 53d Sts. Mr. Davis is president of the 52d and Market Sts. Business Association, and much of the credit for the boom for his section as the "Commercial Hub of West Philadelphia" is due to his indefatigable efforts. The July carnival is to be opened by the Mayor of the city, and the festivities include parades, a balloon ascension, porch parties and the like. Mr. Davis says: "Get Busy! This is our motto. Do something and the people will buy from you rather than go into the department stores." Other jewelers in the city are watching with interest the success of Mr. Davis' project.

New York and Philadelphia members of the Jewelers' Club, of this city, played yesterday afternoon their annual baseball game at the grounds of the Philadelphia National League Club, Broad and Huntingdon Sts., before such an assemblage of jewelers from all parts of the east as has seldom been gathered to witness an outdoor sport of the kind before. Nearly a thousand "rooters" lustily cheered for the success of either team and were largely influenced in their enthusiasm by the location of the houses they represented, whether they were of this city or of New York. In the grand stand were many of the wives of the jewelers, and they rooted, too, with all their might as favorites in the club and of the trade came to bat or fielded in such a way as to deserve applause. Color and interest in the game was contributed by the unexpectedly large attendance of the fair sex. The game was still on when THE CIRCULAR-WEEKLY went to press.

New and unique novelties furnish an excellent opportunity to stimulate interest and increase sales during any dull season when regular staple goods are moving slowly. As evidence of this, an enterprising jeweler of Elizabeth, N. J., reports the sale within the two weeks of somewhat over a dozen of practical and convenient new style of Waterman's Ideal check books, in combination with the index loose leaf memorandum books recently brought out by this concern, as a novelty of a useful character. These books are neatly bound in a fine quality of watergrained leather, each book being indexed with leather tabs and fitted with a small check book pen adapted for that purpose.

Members of the Optical Society of the State of New York Hold Important Annual Convention Followed by a Banquet.

The Optical Society of the State of New York held its 13th annual convention at the Hotel Savoy, New York, Monday. The convention was attended by over 100 enthusiastic opticians from different sections of the State, and the result of the meeting was a success in every respect, as was the banquet, which took place that evening. Edward E. Arrington, of Rochester, N. Y., who framed the new optometry law enacted by the last Legislature, and who is the president of the society, arrived in this city in good season, and the delegates were on hand at the opening of the convention.

The meeting was held in the spacious parlor on the first floor, and during the morning the opticians registered. At 10 o'clock the first session began. The meeting was called to order by the president, who spoke a few words of welcome and then called for the minutes of the last meeting, which were read by P. A. Dilworth, secretary of the society. This was followed by a financial report read by J. P. Simcox, the treasurer, and then came the report of the Executive Committee, of which H. M. Bestor is chairman. The reports of the Legislative Committee and of the Legislative Finance Committee were followed by the annual address of President Arrington, who welcomed the opticians to the convention and spoke at some length on the success of the society in getting through the State Legislature the optometry bill which legalizes the profession of optometry.

President Arrington spoke with force and eloquence. He said in part: "Every one who goes to an optician to have his eyes examined after Jan. 1, 1909, will be able to tell by the optician's certificate whether the latter is competent to examine his eyes and rectify his defective vision with glasses."

President Arrington is highly esteemed by the members of the society, and much praise is due to his untiring efforts as a result of which the bill was passed.

Following the address of President Arrington special committees were appointed for the day and other necessary business transacted.

The second session of the convention opened at 2 o'clock in the afternoon, the first speaker being Charles F. Prentice, of New York City, who spoke on the "Education of Future Optometrists."

A. J. Cross, president of the New York School of Optometry, during his remarks to the society said that they were not infringing on the practice of oculists and medical specialists, but are merely protecting hundreds of people—often poor and ignorant—who purchase glasses in any shop where they see the sign, "Eyes Examined Free." The new optometry law enables people to make sure that their eyes will not be permanently distorted through wearing incorrect glasses.

The following resolutions were adopted by the Optical Society of the State of New York, at the convention:

PREAMBLE.

Whereas, The Optometry Law is the direct result of the efforts and ambition of this society to elevate the standard of qualification and proficiency among non-medical practitioners of optometry in the State of New York; and

Whereas, The Optometry Law, through provisions of its paragraphs, 209-a and 209-1, specifically applies only to the regulation of non-medical practitioners who practice optometry without the use of drugs; and

Whereas, The Optometry Law was framed with sufficient though unwarranted laxity to exclude physicians from its regulations, and merely in deference to their exaggerated opinion that, "as the eye is a part of the human anatomy, physicians have the right to practice upon the eye by any agents, instruments, or even lenses, whether or not physicians have any optical knowledge or experience whatsoever;" and

Whereas, Certain physicians vigorously opposed enactment of the Optometry Law, even though it does not in the least infringe upon their legitimate prerogatives in the true province of medicine; and

Whereas, Even medical eye specialists are not collegiately qualified in optics, nor even required to qualify in optometry before the Regents of the State; and

Whereas, In Par. 209-b, line 15, of said Optometry Law, it is stated that examiners "shall also possess a sufficient knowledge of practical optics," in the mechanical technique of which physicians are, however, likewise known to be inexperienced; therefore be it

Resolved, That this society place upon record its most respectful, though emphatic protest with

MEMBERS AND GUESTS AT THE BANQUET OF THE OPTICAL SOCIETY OF THE STATE OF NEW YORK.

the Honorable Board of Regents, against its seriously entertaining any proposal that it may receive, or that it may have already received from physicians to procure appointment upon the Board of Examiners in Optometry; further, be it

Resolved, That this society, in its most earnest and sincere efforts to aid the Honorable Board of Regents in its choice of examiners to the Optometry Board, respectfully recommends: W. W. Bissell, Rochester, N. Y.; Charles F. Prentice, New York City; H. C. Watts, Syracuse, N. Y.; R. F. Williams, Buffalo, N. Y.; F. E. Robbins, Elmira, N. Y. Alternates—P. A. Dilworth, H. F. Pitts, J. P. Simcox, C. F. Mason, G. R. Bausch, as eligible non-medical candidates of recognized technical ability and high moral character, who also enjoy the universal confidence and esteem of optometrists throughout the State; and also be it

Resolved, That a copy of these resolutions, duly executed and signed by the president and secretary of this society, over its official seal, be immediately filed with the Honorable Board of Regents of the State of New York.

Signed in convention, this 22d day of June, in the year of our Lord, 1908.

EDWARD E. ARRINGTON, President.
(Seal.) P. A. DILWORTH, Secretary.

These resolutions were accompanied by the following letter:

To the Honorable Board of Regents, State of New York:

Gentlemen—As your Honorable Board is about to comply with the provisions of the Optometry Law, by appointing those who shall constitute the Board of Examiners, and which will, therefore, have a direct influence upon the efforts and interests of the Optical Society of the State of New York, I am instructed to officially inform you that this society cheerfully tenders its services to aid your honorable board in every possible manner to facilitate execution of the intent of the law.

As, however, insufficient time elapses between the meeting of your honorable board and the convention of this society, in which to place its opinions before you, through personal attendance by an accredited committee, the society has been obliged to-day to express its opinions through conventional resolutions, copy of which your honorable board is respectfully requested to accept herewith.

The Optical Society of the State of New York has at all times during the past 12 years been ready to arbitrate with its opponents among medical men, who have failed, however, even to respectfully consider its proposals at any time.

As a consequence, the society was reluctantly forced, during the controversy in Albany, to publicly expose the astounding fact that, even oculists among medical men are not collegiately qualified in optics, therefore not being required to qualify in optometry before the Regents, and wherefore it should also be conclusive that physicians should not be admitted to membership upon the Board of Examiners in Optometry; at least not until medical eye-specialists shall also have been forced to qualify under the Optometry Law, which your honorable board may at some future time even recommend, and which, if accomplished, would meet with the unqualified approval of this society.

In the meantime I most sincerely add my personal appeal to have your honorable board construe the Optometry Law as intended by this society so as to educationally elevate non-medical practitioners of optometry, and to distinctly separate the practice of optometry from that of medicine.

In this expectation I have the honor, gentlemen, to subscribe myself, Very respectfully,

The following amendment to the by-laws of the society, presented by B. B. Clark, was adopted:

Be it Resolved, That any member of this society who shall be chosen by the Honorable Board of Regents to serve upon the Examining Board and who shall in consequence expose to public view or knowledge any verbal or implied notice of such appointment in any form whatsoever, shall without previous notification from this society, have immediately waived his right and credentials to membership in this society, and it shall be the duty of the Executive Board to at once make public announcement of the discredited status of the offending member in the daily press at the place where said member may be engaged in the practice of optometry.

Resolutions were also passed to extend from the society a vote of gratitude and thanks to Governor Hughes and to the members of the State Assembly.

The following officers were re-elected for the ensuing year: Edw. E. Arrington, president; A. M. Kenney, vice-president; P. A. Dilworth, secretary; J. P. Simcox, treasurer.

THE BANQUET.

The banquet began at a little after 8 P. M. and was a most enjoyable function. At the front of the room at a long table was President Arrington, and at either side were A. Jay Cross and C. F. Prentice, together with other officers of the society with ladies and guests.

The tables were tastefully decorated with flowers. When all had found places the diners stood and sang the "Star Spangled Banner," and then the feast began after a photograph was taken. The menu was as follows:

Little Neck Clams.
Chicken Gumbo, a la Creole.
Olives. Radishes. Celery.
Turbent of Sole, Joinville.
Cucumbers.
Spring Lamb en Casserolle, Bourgeoise.
String Beans Panachee. Potatoes Rissollee.
Stuffed Tomatoes.
Sweetbreads Braise, a la Toulouse.
New Asparagus Tips, Chantilly.
Sorbet Chartreuse.
Broiled Spring Chicken on Toast.
Mixed Salad.
Plombiere Glace au Fruit.
Fruits. Assorted Fancy Cakes. Cafe.

The feast was interspersed with songs. Miss Irma Jacobson favored the assemblage with two solos which were received with much pleasure. The diners sang several songs in concert, among which was "Arrington, That's Him!" which proved very popular.

With the arrival of coffee and cigars came the speeches. A. Jay Cross was the toastmaster of the evening and called on a number of speakers, who entertained the assemblage with anecdotes and stories interspersed with remarks relative to the society and its work. President Arrington spoke at some length, and when presented by A. J. Cross with an envelope containing an expression of the esteem in which he is held by the society, he replied in well-chosen words and said he was going to give the envelope to his wife, his sweetheart.

Among the other speakers were Chas. F. Prentice, H. C. Watts, W. W. Bissell, B. B. Clark, E. LeRoy Ryer, Mark Goldberg, A. M. Kenney, P. A. Dilworth, Capt. A. Costello, A. M. Frankel and others.

Manufacturers in general and inventors in particular will be interested in a new publication known as *Patent Progress*, published by the Manhattan Technical Publishing Co., 19 Park Row, New York, the first number of which appeared under the date of May 30. The publication, which is a weekly devoted entirely to patents, trade-marks and similar subjects, gives an illustration and description of all the principal patents issued by the Government, grouped according to general heads, such as agriculture, electricity, etc., and in addition gives pithy patent news of a general character. The paper is designed essentially for the busy man interested in but a few lines of manufacture, and affords him an opportunity of getting in touch with the inventions in these lines without going through the 500 or more patents issued each week.

News Gleanings.

A. M. Meyer & Bro. have moved from 915 E. Main St. to 317 E. Broad St., Richmond, Va.

Arthur Cohen, Oklahoma City, Okla., has moved his business to larger quarters at 14½ N. Robinson St., opposite the Chamber of Commerce, where he has nearly four times the former amount of space and greatly increased facilities for his growing business.

Harold N. Collins, who, for the past three and a half years, has been with C. D. Gardner, Manistee, Mich., has purchased the jewelry business of W. H. Seibert, Petoskey, Mich., which he will conduct in the future, carrying out the policy of his predecessor.

The South Bend Watch Co. recently entertained and showed through its modern factory at South Bend His Excellency, Wu Ting Fang, Minister Plenipotentiary from China. Consulting Superintendent C. T. Higginbotham conducted him through the factory and he showed much interest in all details pertaining to watch manufacture. Among other concerns visited while in South Bend was the Studebaker Bros. Mfg. Co.

Helen French, 22 years old, employed as a bookkeeper by T. R. J. Ayres & Sons, Keokuk, Ia., committed suicide June 7 at her home, 521 Morgan St., Keokuk, Ia., by shooting herself three times, twice in the side and once in the brain. The young woman, who was highly regarded in Keokuk, was believed to have had no reason for the act, which it is thought was committed during a moment of mental aberration, as she had acted queerly for sometime. A letter which she wrote before she shot herself clearly indicated that she was insane at the time.

The home of Alfred C. Terry, a watchmaker for August Jacobs, Quincy, Ill., was entered, June 6, by a clever burglar, who got away with a diamond and sapphire ring valued at $175, a pearl and sapphire ring worth $30, a pair of diamond cuff buttons worth $25 and a $5 bill. The robbery occurred in the daylight, and the burglar, who was met at the door as he was leaving by a friend of Mrs. Terry, tipped his hat to the latter and went on his way. It was only after the friend had remarked to Mrs. Terry about the man she had seen leaving the house that the burglary was discovered.

The police of Newburyport, Mass., are sending out the description of a man named Harry Brooks, a Russian Jew, who is under indictment in that city on a charge of receiving stolen goods. Brooks, who is about 32 years old, is said to look much older. He is about 5 feet 10 inches high, weighs between 190 and 200 pounds, has very dark hair, dark complexion, and has a slight, stubby mustache, though sometimes his face is clean shaven. He has a protruding stomach, is portly and pompous, and in walking he puts his right foot forward and drags his left foot up. He takes half steps, but is not lame. By occupation he is a pawnbroker, but has been conducting a restaurant, and may also now be in the moving picture business. He escaped from Newburyport after being released on bail.

Attleboro.

The Finberg Mfg. Co. is installing a large fireproof vault.

Willard A. Engley is enjoying an outing at Harwichport.

The Robinson building will probably be closed the first week in August.

J. E. Dunn has returned from a western trip in the interests of Austin & Stone.

S. O. Bigney & Co. will close for the annual Summer vacation from Aug. 1 to Aug. 10.

Roy McPherson left, Monday, on his initial trip through the west for the Standard Button Co.

Sidney O. Bigney was a member of the committee that notified Secretary Taft of his nomination for President.

Frank A. Chace, Jr., Chicago representative of the C. M. Robbins Co., and his wife are making a short visit to Attleboro.

The D. E. Makepeace Co. building will close July 1 until July 6 for the annual inspection of boiler and making of necessary repairs.

An encouraging report is made by Fontenau & Cook, who claim to have done more business in May than in the same month last year.

Mr. and Mrs. Charles Tappan, with a party of friends, are enjoying a vacation at Mr. Tappan's Maine home at North Monmouth, Me.

Emmons D. Guild was marshal of the Grand Army parade which was a feature of the dedication of the Soldiers' Monument, Saturday.

In the Jewelers' Baseball League, Saturday, the R. F. Simmons Co. team beat the Horton-Angell nine 8 to 6. D. F. Briggs Co. won from Bates & Bacon, 14 to 8.

Thomas E. McCaffery, of the Electric Chain Co., is planning to go with several of the Rhode Island delegates to the national convention of the Democrats at Denver. Afterwards he will go to Dallas, Tex., to attend the national gathering of the Elks as the delegate to Attleboro lodge.

J. W. Luther Co., through its treasurer, Lewis C. Luther, has made the following report to the Commissioner of Corporations: Machinery, $21,000; cash and debts receivable, $17,500; manufactures and merchandise, $10,500; total, $49,000; capital stock, $35,000; accounts payable, $14,000; total, $49,000.

The first hearing in the bankruptcy proceedings of Cummings & King is expected to be held the last week in July. Attorney Ralph Estes, who is one of the petitioners, states that the liabilities of the concern amount to about $46,000. The assets amount to about $46,000, consisting mainly of machinery and stock and $15,000 in outstanding accounts. The assets are figured, it is said, as a going concern, and if the firm is stopped it might be difficult to realize anywhere near the true value.

The employes of the Horton-Angell Co. enjoyed their annual outing Friday afternoon at the Warwick Club. The outing was conducted under the auspices of the Horton-Angell Benefit Association. During the afternoon Major Everett S. Horton appeared and insisted generously upon paying the entire expenses of the trip. An interesting programme of sports was carried out. A ball game between the married and single men resulted in a tie of 8 to 8. In addition there was a fat men's race, 100-yard dash, quarter-mile run and other games. Suitable prizes were given. Fred Bullock, Joseph Brohan and Joseph Heywood constituted the committee of arrangements.

Connecticut.

The factories of the Wm. L. Gilbert Clock Co., Winsted, closed for three weeks June 20.

C. D. Morris and C. W. Leavenworth Wallingford, last week, returned from a pleasant sojourn in Maine.

C. M. Parker, optician, is now settled in newly furnished quarters at 810½ Chapel St., New Haven. Mr. Parker until recently was located at 812 Chapel St.

The Summer home of Samuel Kirby, at Silver Sands, near New Haven, was used as a meeting place of the Rockland Club, Friday.

E. T. Goldberg, who for many years conducted a jewelry store at 92 Cannon St., Bridgeport, has moved to 159 State St., where he has more spacious quarters.

Foster E. Harvey presided at the June meeting of the Hartford Business Men's Association, held June 15. There will be no meeting during the months of July and August.

Henry Kohn and wife, Hartford, accompanied by his son, Edwin Kohn, Newark, and his wife and daughter, are making an automobile tour through New England and New York.

The fire brigade of R. Wallace & Sons Mfg. Co., Wallingford, will hold its annual outing next Saturday, June 27, at Mansfield's Grove. A special car will leave for that place at 8 A. M.

Burglars broke into the store of F. L. Smith, 1265 State St., Bridgeport, on Monday night of last week and stole several stick pins and a 14-kt. gold ring. Thus far no clue has been obtained.

Frank G. Hale, Boston, was the guest of his parents at Norwichtown, on Tuesday of last week. Mr. Hale, a well-known jewelry designer, was at one time a student at the Norwich Art School, studying later in Europe.

Warren W. Wilcox, who recently broke a window in the store of Mr. Goldstein, New Haven, and made off with a tray of diamonds, upon being released from jail, June 11, was taken to Weathersfield to serve an additional prison term.

William E. Sessions, in behalf of the Bristol Trust Co., Bristol, has obtained a lease of a strip of land extending along the south side of Riverside Ave., Bristol, owned by the American Silver Co., and on which there are now several places of business.

George M. Curtis, George H. Wilcox, C. F. Dodd and Dr. C. Arthur Hill, composing the Street Committee of Meriden's Business Men's Association, represented the association at the meeting to consider Mayor Reilly's $200,000 street improvement plan, held last week.

The Yale graduating commencement class, properly known as "The Historical Class of 1492," held its dinner this year on the afternoon preceding commencement. The graduating committee of the dinner include Walter Camp, president of the New Haven Clock Co.

The Rhodes Year Clock Co., Hartford, on Monday of last week signed a certificate of organization with the Secretary of State, with a capital stock of $30,000, divided into 1,200 shares of a par value of $25 each. The president, C. M. Rhodes, Westfield, Mass., holds 180 shares; the secretary and treasurer, C. F. Wood, Hartford, 40 shares; W. W. Momroy and M. A. Bardee, 40 shares each. The concern's main office will be at Hartford.

North Attleboro

G. Cheever Hudson is home from the west.

Anthony H. Bliss, of A. H. Bliss & Co., has gone to Europe.

Harvey Clap enjoyed a short outing at Lewiston, Me., last week.

Frank J. Ruggles, of W. H. Bell & Co., was in New York, last week.

Harry S. Wilmarth is in the south in the interests of V. H. Blackinton & Co.

Mr. Acker, traveling representative for F. M. Whiting & Co., is at the factory.

Edward D. Sturtevant, of Sturtevant & Whiting, has been enjoying an outing in New Hampshire.

Stephen Stanley was elected vice-president of the Seventh Massachusetts Regiment at its annual reunion held in Taunton last Saturday.

William F. Maintien, of Maintien Bros. & Elliot, has been elected a water commissioner by the town of Plainville. A new system is being installed.

Fred S. Gilbert and Charles H. Fuller, of George H. Fuller & Son Co., with their wives, recently enjoyed an automobile trip through the White Mountains.

The Attleboro Falls Mfg. Co. has contracted for additional room in the factory where it is located on Mount Hope St. In order that the concern secure the extra room it is necessary for Stephen Stanley, who conducts a tool-making shop, to secure other quarters.

Gas leaking into the windpipes caused an explosion Wednesday noon in the Manufacturers' building. Considerable piping was destroyed, particularly in the quarters of E. I. Franklin & Co. and Maintien Bros. & Elliot. Work was not delayed by the accident. The real damage was small.

Elton E. Whiting, treasurer of Miller, Fuller & Whiting, presents the following figures in his annual corporation report: Machinery, $15,732; cash and debts receivable, $20,515; merchandise, $17,243; miscellaneous, $6,610; profit and loss, $6,369; total $66,469. Capital stock, $60,000; accounts payable, $6,469; total, $66,469.

The A. L. Lindroth Co. is the name of a new concern that is planning to open a factory in north Attleboro just as soon as an available place may be obtained. The new company has been incorporated under the laws of the State of Rhode Island. The capitalization is $16,000. G. Herbert French and Alton H. Riley, of North Attleboro, and A. L. Lindroth, of Providence, are the incorporators. A general line of jewelry will be manufactured.

Milwaukee.

Chas. H. Veicht, of this city, is another jeweler who has recently set up a street clock.

J. W. Buehler, with the P. A. Clemmer Co., Cresco, Ia., was here, recently, accompanied by his wife.

F. H. Coburn, East Troy, Wis., is erecting a new store and flat building, and expects to be located there within a month. Mr. Coburn was a recent visitor in this city.

The Milwaukee council voted to reimburse the W. & E. Schmidt Co. to the amount of $250, owing to the recent destruction of their street clock. The Milwaukee city attorney and comptroller are now opposed to the idea and refuse to accede to the payment.

John Armbruster, Cedarburg, Wis., has recently erected a street clock in front of his store. The timepiece was secured from A. J. Stoessel, Milwaukee, at the time of the clock razing here, when Mr. Stoessel was forced to remove his clock. Mr. Armbruster was in this city last week.

E. H. Warneke, well known jewelry manufacturer of Milwaukee, has just returned from the trip through South and North Dakota and southern Minnesota with a delegation of the Milwaukee Merchants and Manufacturers' Association. Mr. Warneke says that the recent hard times have not materially hampered the jewelers in the territory traversed by the excursion, and that business there is satisfactory.

The plan to establish mutual burglary insurance among Milwaukee jewelers has been dropped by members of the Milwaukee Jewelers' Club, the latter having decided that the plan is impracticable, owing to the high rates. The jewelers were heartily in favor of the mutual insurance plan, but the investigation in the matter of the rates has made the success of the plan impossible for the time being, say the jewelers. The matter has been before the Milwaukee Jewelers' Club for more than a year and has been the subject of discussion at nearly every meeting of the organization.

The following jewelers, not elsewhere mentioned, were recent visitors in this city: J. B. Kimball, Waukesha, Wis.; C. E. Doolittle, Brodhead, Wis.; W. Dukelow, Lodi, Wis.; W. F. Notbohm, Oconto, Wis.; T. Bruhy, West Bend, Wis.; Sig. Hoffman, Jefferson, Wis.; A. D. Calkins, Hillsboro, Wis.; H. Lappley, Mazo Manie; Otto Mueller, Wausau, Wis.; H. Manecke, Wausau, Wis.; A. Kuckuk, Shawano, Wis.; F. P. Beswick, Racine, Wis.; O. E. Ellefson, Tomah, Wis.; E. A. Meckelberg, Two Rivers, Wis.; H. W. Butzine, Port Washington, Wis.; A. D. Calkins, Ladysmith, Wis., formerly of Hillsboro, Wis., and R. Hille, of Menominee Falls, Wis.

The Milwaukee jewelers' clocks will again be erected to indicate the time of day on the city streets. Some of the enterprising jewelers have already put up their timepieces. The council committee on finance in the Milwaukee council recommended the passage of the Fass ordinance which permits the erection of the clocks, and now the council body has passed the measure. The ordinance provides that the timepieces shall be erected at curb lines and that they shall not be less than 14 feet nor more than 20 feet above the curbing. It was proposed that the clock question should be included in the ordinance regulating street signs, which is now being drafted by City Attorney Kelley, but pressure was brought to bear, the clock feature was eliminated and the special ordinance was drafted and passed.

Kansas City

F. Goodholm, Lindsborg, Kans., stopped over here on his way home from a short stay at Sulphur Springs, Ark.

J. J. Johnson, of Estherville, Ia., on his way back from the east, stopped over in this city for a few days last week.

The following jewelers were here last week: R. B. Erwin, Canda, Okla.; H. B. Myers, Cherokee, Kans.; I. E. Griffin, Elk City, Kans.

Mrs. A. E. Pittenger, wife of the manager of the Kansas City Horological and Optical School, has returned from a visit to relatives in Medford, Okla.

Carl Miller, who, six weeks ago, opened a jewelry store in Fruita, Colo., has sold out to H. L. Ford, of this city. Mr. Ford is a former student and graduate of the Kansas City Polytechnic Institute.

The building at Grand Ave. recently collapsed, destroying a saloon and grocery. Following the collapse five buildings in the same block were condemned as unsafe, among them being the building at 1425 Grand Ave. occupied by the Franklin Jewelry Co.

Baltimore.

Receiver Regester has been selling out the stock of G. W. Boettinger & Son at auction during the past week.

H. W. Eyster has opened a new store at Emmettsburg, Md. He was formerly with his brother, G. W. Eyster, of Emmettsburg.

The Baltimore Optical Co. has added considerably more space to its establishment at 28 W. Lexington St. It has also installed more machinery.

Samuel Jacobson, a jewelry salesman residing at 303 N. Broadway, this city, was taken into custody last week and held under bonds of $10,000 on charges of obtaining jewelry by false representations.

Jacob Engel, of the J. Engel Co., with J. J. Bartholomee and Captain Urie have jumped into prominence as fishermen and are getting considerable notoriety over the fact that they caught 762 perch within four hours at Middle Ground Shoals of Tochester Beach, Wednesday afternoon. The fish ranged from five inches to one foot in length. Mr. Engel is a member of the executive committee of the Baltimore Retail Jewelers' Association.

Thieves recently broke into the store of M. J. Gallagher, 205 N. Union Ave., Pueblo, Colo., and escaped with $1,000 worth of watches, rings and other jewelry. A reward of $25 for the capture of the thieves and $25 for the discovery of the stock has been offered by the jeweler.

Joseph Cohn has opened a new store in Fort Collins, Colo.

J. O. Williams has engaged in the retail jewelry business in Whigham, Ga.

F. C. Clements has commenced business in Pleasant Hill, Mo., with a new stock.

J. Y. Aullen has opened a jewelry repairing shop in the Empire Arcade, Toledo, O.

Henry W. Meaders has opened a watch and jewelry repairing shop in Maysville, Ga.

The Manistee Watch Co. was recently incorporated in Manistee, Mich., with a capital of $100,000.

R. J. Lattimer recently engaged in business as a gold and silver plater at 119 S. Tilden St., Saginaw, Mich.

S. Huberman has started in business for himself as a watchmaker for the trade at 731 Sansom St., Philadelphia, Pa.

Wm. F. Morrison, formerly of Huntley, Ill., is a newcomer in Elgin, where he has opened a watch and jewelry repairing establishment in the Glazier building.

The Eastern Minerals Co. is the name of a new jewelry concern in Boston, Mass. The capital is $25,000. The officers are: President, F. W. Johnson; treasurer, J. H. Green.

A. Godshaw, formerly manager for the J. F. Dailey Jewelry Co., St. Louis, Mo., has opened a shop of his own in Room 409, Commercial building, at 6th and Olive Sts., in the same city.

F. A. Williams recently engaged in business in Columbia, S. C., as an optician. Mr. Williams was at one time in the employ of Sylvan Bros., of whose optical department he had charge.

New Orleans, La.

William Shepherd, a jeweler at 4225 Magazine St., is said to have suffered damage to his stock of about $3,000 in a fire which recently took place in this city. About $2,000 worth of damage was also done to the building which he occupied.

Judge Sommerville, of the Civil District Court, recently rendered a judgment against Louis Moss in the suit brought by Wm. Frantz & Co. against Moss and Jacob Fink to recover diamond earrings valued at $1,477. Frantz & Co. alleged that on April 4, 1906, they delivered two pairs of earrings to Moss on memorandum, the title remaining with the concern, but that Moss never returned the gems, but instead pawned them with Jacob Fink. Frantz & Co. sued for the full value of the earrings or their return. The judgment rendered is against Moss in favor of the plaintiff, but is not against Fink, with whom the earrings were pawned.

Fred M. Leitheiser, South Bethlehem, Pa., returned recently from a three months' trip to Europe.

ENTERPRISING and successful jewelers everywhere are pushing the sale of some individual line of watches which they believe to be superior to all others, and upon which they can also make a satisfactory and justifiable profit.

This explains the growing demand for ILLINOIS WATCHES, in 0, 12, 16 and 18 sizes, by increasing numbers of leading jewelers throughout the United States.

If you are not familiar with the superior quality of — and advantages gained by handling—Illinois Watches, it will mean reputation and dollars for you to investigate.

Every one fully guaranteed.

Vol. LVI. CHICAGO, WEDNESDAY, JUNE 24, 1908. No. 21.

Chicago Notes.

W. E. Thomas succeeds W. F. Hanna at Jefferson, Ia.

Leon Hirsch left, the latter part of last week, for a trip to New York.

A. H. Holtz, manager of the Rockford Watch Co.'s factory, was married, June 6.

"Tom" Stanek, of Graffe & Stanek, made a week's trip to northern points, last week.

Adolph Weiss, of Heinrich, Hermann & Weiss, left, last week, on an extended trip east.

A. R. Oughton, with the Jennings Bros. Mfg. Co., made a trip to Michigan and Wisconsin, last week.

The Rockford Watch Co. announces that it will close its factory this year between June 26 and July 6.

K. H. Milligan, a former salesman with E. A. Dayton & Co., has severed his connections with that concern.

The Newman Clock Co., a New York clock corporation, has obtained a certificate to do business in this State. The capital is $100,000.

W. H. Rogers, New York, who recently moved his factory from New Jersey to Muncie, Ind., was a recent visitor to the trade here.

W. R. Stevens, representative of the Bay State Optical Co. here, has returned from a western trip. He attended the convention at Kansas City.

It is reported from Elgin, Ill., that all the employes of the Elgin National Watch Co. would have to be vaccinated or produce a certificate that they had been.

Sol. Hess, of Rettig, Hess & Madsen, is gradually recovering from his recent illness. He is now back at his desk, and hopes soon to be in as fine trim as ever.

In the matter of F. C. Happel Co., in bankruptcy, the receiver has now been discharged, the compromise settlement having been confirmed some time ago.

Frank B. Harris and family, Lincoln, Nebr., stopped over here a few days last week, on their way to New York, from which point they will shortly sail for Europe.

A dividend of 25 per cent. was paid to the creditors of the Shourds-Adcock-Teufel Co., last week. A further dividend of from 30 to 35 per cent. will be paid in the course of two to three months.

The M. S. Fleishman Co. has located two of the diamond rings that were short in the samples returned by a former salesman, James McMenamin. They were recovered in a pawnshop in San Francisco.

In the matter of the estates of Giovanni Faraco and Conrad Heen, in bankruptcy, these affairs will not be closed for some months, the dividends being so small that possibly no payment can be made.

L. D. Cole, president of the Towle Mfg. Co.; Frank Berdine, of the same company, of Newburyport, together with George D. Lunt, of the Chicago office, visited the Chicago office last week and attended the Republican convention.

W. E. Hayward, manager of the Chicago office of the Alvin Mfg. Co., is making a visit to the home office, New York. W. W. Beckwith and M. G. Cook, salesman from the local office, are off from the road and are now enjoying well-earned vacations.

Joseph M. Rosenbach, with the Rockford Watch Co., represented that corporation at the recent jewelers' convention held at the Hotel Baltimore in Kansas City, and after the convention was over installed a fine display of Rockford watches in the show windows of Oppenstein Bros.

An attachment suit for $10,500 was brought in the Municipal Court recently by the jewelry firm of C. D. Peacock against Mrs. Maud A. Chance, widow of J. C. King, a Chicago millionaire, and heiress to a large portion of his estate. The jewelers seek to collect for goods sold to the defendant.

After giving 83 years' work to the Elgin Watch Co.'s factory between them, George F. Marshall and his brother, Moses N., have resigned their positions in the machine shop and intend going to Chicopee Falls, Mass., to make their future home. George had been with the company 42 years and Moses served 43 years.

Josef Smaha, 510 W. 18th St., filed a voluntary petition in bankruptcy, scheduling the following claims of jewelers: L. Witsenhausen, $475; Wm. A. Burrows, $78; John Eulenberg, $145; Wm. J. Allsopp, $125; A. C. Becken & Co., $69; Calumet Watch Co., $42; M. A. Eisman & Bro., $30, the total debts scheduled amounting to $3,390.19, of which $1,100 is secured. The stock on hand is $247.14, tools and machinery $79.25, accounts receivable $105.60. The bankrupt claims exemptions of $414.89.

A new and curious variety of the gold ingots which passed as money in the pioneer days of California has come into the possession of Virgil M. Brand, of Chicago, a leading United States coin collector, who has been attending the Gschwend sale during the past week. This hitherto unknown specimen is in the form of a rectangular ingot, in contrast to the circular gold coins struck by private mints in the days of '49, and is simply a slug of unrefined California gold, on the face of which is stamped its weight in pennyweights and grains, the value, $36.55, and the name of the assayer, F. D. Kohler. He conducted the California State Assay Office in the early '50's and issued many varieties of similar pieces, which had active circulation.

Among the out-of-town jewelers here during the past week were the following: J. B. Johnson, Goodland, Ind.; J. S. Pieringer, Bedford, Ia.; C. K. McCain, Kokomo, Ind.; T. L. Coombs, of T. L. Coombs & Co., Omaha, Nebr.; C. S. Barrett, of Emerich, Barrett & Co., Freeport, Ill.; E. I. Morey, son of O. W. Morey, Valentine, Nebr.; A. F. Boylan and Mrs. Boylan, Denison, Ia.; O. E. Tuttle, Marshalltown, Ia.; J. M. Seifert, Mulberry, Ind.; H. C. Schultz, Hays City, Kans.; W. R. Cooper, of S. H. Clausin & Co., Minneapolis, Minn.; Geo. C. Gobet, Blue Island, Ill.; E. W. Buhl & Co., Memphis, Tenn.; F. W. Harris, Lincoln, Nebr.; G. W. Fess, Kearney, Nebr.; Jasper W. Thompson, Danville, Ind.; Mr. Olin, of Olin & Olson, Janesville, Wis.; Harry Hanson, of the Hanson Jewelry Co., Princeton, Ill.; Theo. Ernst, Ft. Madison, Ia.; A. Micheel, Green Bay, Wis.; D. A. Stocking, Kalispell, Mont.

Pacific Coast Notes.

The machinery at the new diamond mine at Oroville, Cal., was started, last week, and is working smoothly. The work of sinking the main shaft is now in progress.

Lee Jackson, Oakland, Cal., was stabbed in the back four times by a negro on the morning of June 12 as he was walking down 8th St., in that city. The weapon used was a small pocket knife. The wounds are not serious.

F. C. Puro, who was recently arrested in San Jose while trying to dispose of some jewelry stolen from the store of T. F. Sourrisseau, of that place, has been turned over to the Los Angeles police, who will prosecute him on more serious charges.

Simon Braude, a jeweler who came from Fort Worth, Tex., to San Diego, about four months ago, died suddenly at the latter place, June 14. The circumstances surrounding his death point to poisoning and the case is being taken up by the coroner.

A HIGH-GRADE CATALOG, CONTAINING 36 to 200 PAGES OR OVER IS BOUND TO INCREASE YOUR BUSINESS

STORE OF H. J. KUECHLER, STOCKTON, CALIFORNIA

Read Our Customers' Letters

(Extracts from letter.)

STOCKTON, Cal., Jan. 20, 1908.

THE ARNSTINE BROS. CO.,
Cleveland, Ohio.

Gentlemen:—In regard to Catalogs, I wish to state that it was my first experience and I am somewhat at a loss to state the result in business. I believe the Catalogs helped and would have helped more if the financial flurry had held off until later; however, on the whole, I am satisfied with my first trial and, so far, it is my intention to do it over again the coming year, but not so late. I am,

Respectfully yours,
H. J. KUECHLER.

This firm used The Arnstine Bros. Company Catalog in 1907

LA SALLE, Ill., Jan. 17, 1908.

THE ARNSTINE BROS. CO.,
Cleveland, Ohio.

Gentlemen:—In reply to your letter of recent date, we will say that we will indorse anything you say regarding the benefits derived from your Catalog. We were very well pleased with the results; although our business did not come up to last year, we know it was on account of the financial difficulty.

Yours very truly,
BECKER & RAMAGE.

This firm used The Arnstine Bros. Company Catalogs in 1906 and 1907, and again placed an order for 1908.

CLEVELAND, OHIO

IN WRITING US PLEASE MENTION THIS ISSUE "JEWELERS' CIRCULAR-WEEKLY"

San Francisco

TRADE CONDITIONS.

That June has brought with it a noticeable improvement in the jewelry trade is the report of the leading dealers, both wholesale and retail. The improvement in the business of the wholesale men is the most pronounced and is the most significant feature of the returning stability of the trade in the west. The orders which the wholesale houses are receiving from dealers in San Francisco and from all points on the coast have increased considerably during the past two weeks, and the orders for future delivery for the Fall trade are causing much favorable comment among the trade on account of their increased size.

J. J. Alexander, with Burr W. Freer, is away on his vacation.

During the past week F. J. Stumm, Benicia, was a business visitor here.

Sam Hammond, with Nordman Bros., is at present absent on his vacation.

E. V. Suns, accompanied by Mrs. Suns, is spending his vacation in the south.

Gus Radke, of Radke & Co., and wife are on a pleasure trip to Yosemite Valley.

Mr. Overhoser, with Radke & Co., has been ill for a week, but is again at his place in the store.

Lester Hammersmith and wife took a trip to San Jose in their new auto, on Sunday of last week.

Mr. Cohn, of A, B, Cohn & Bro., Los Angeles, is in San Francisco, on business for his house.

Arthur Nordman and bride returned last week from their honeymoon in the east and will make their home in this city.

Joseph Nordman, of the firm of Nordman Bros., and wife are at their summer home, Waldes Ruhe Villa, in southern California.

H. J. Bliss, with W. E. Graves, and A. H. Boardman, with Julius A. Young, have just returned from their vacations, which they spent together at Bolinas Ridge, near Bolinas, Cal.

A. B. Elford, cashier for Morgan & Allen Co., accompanied by his wife, is enjoying a vacation at Glenwood. Mrs. Matthews, with the same firm, is in Portland, Ore., spending her vacation with relatives there.

M. F. Noack, Santa Rosa, Cal., who has been seriously ill for some time, is now nearly recovered. Mr. Noack has been able to come to this city on a business trip which kept him here for several days.

R. L. Radke, who recently lost his bungalow in Ross valley, by fire, is planning to erect a modern Summer home in its place. In the meantime, he has secured a home in the vicinity which he is now occupying.

Arthur Van Ness, junior member of the firm of H. C. Van Ness & Co., returned, last week, from the east, where he has been for the past three months on business. On his return trip Mr. Van Ness visited the trade.

Robert Baltheim, formerly city salesman for the Alphonse Judis Co., has been in Los Angeles and other southern points for the past eight months, for his health. He is expected to return to San Francisco about July 1.

Fred L. Bresbrey, with the Bassett Jewelry Co., of Providence, R. I., is now located permanently as agent for his firm at Room 408, 717 Market St. Formerly the Bassett Co. had a traveler who made the coast territory regularly, but now they will keep a regular agent here with a full line of stock.

Considerable excitement was caused the latter part of the week by the finding of a gold watch, some coins and various articles of jewelry by laborers who were cleaning out an old sewer in this city. It is thought that the articles were thrown there in the earthquake in 1906.

Detroit.

H. L. Hart, Brooklyn, was in town purchasing stock, last week.

Morris L. Rovin, who has been in business at 433 Hastings St., has removed to 47 Broadway, where he is now operating under the name of the Eagle Ring Mfg. Co.

The marriage of Miss Minnie Enggass, daughter of Mr. and Mrs. Adolph Enggass, to Max P. Heavenrich was solemnized at the Phoenix Club, Monday, June 15. The ushers included Maurice Enggass, Clarence H. Enggass, Hugo S. Fecheimer, Alvin D. Hersch and Herbert Heavenrich.

At the June meeting of the Detroit Jewelers' Board of Trade the principal topic of discussion was the convention of wholesalers held here earlier in the month. Several topics were discussed which may be brought up in the form of resolutions at the September convention in Chicago.

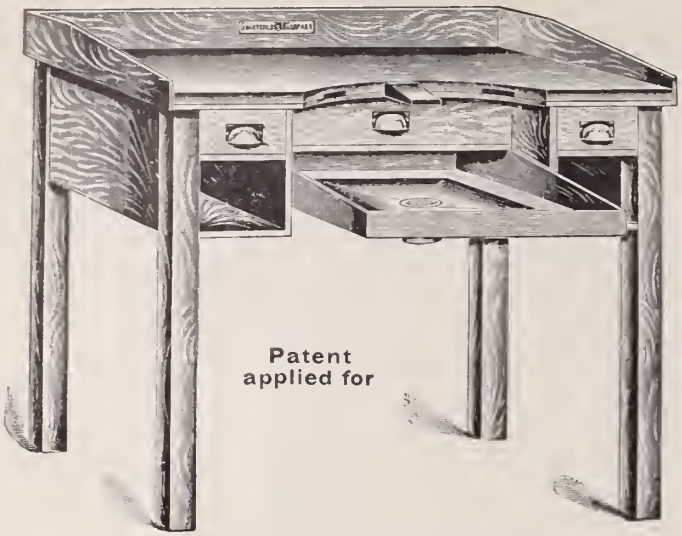
Hugh Connelly, a well known local retailer, has been very ill since Sunday evening, June 14, with a severe attack of stomach trouble. He was taken to Harper Hospital, where it was found necessary for him to undergo an operation. His condition is improving and his recovery seems assured.

Burglars broke into the store of Quinn & Marvin, at Cedar Springs, near Muskegon, on the night of June 19, and carried away the more valuable part of the stock. It was estimated that nearly $2,000 worth of watches and jewelry had been taken. The local police officers have no clue.

At the opening of Charles J. Thiry's new store at 27 Monroe Ave., Last Thursday, the establishment was beautifully decorated and a large number of Mr. Thiry's friends and former customers attended. Among the floral decorations was a large horseshoe of roses from friends in the local lodge of Elks. The new store is fitted in mahogany and is one of the most attractive in the city. Mr. Thiry has been 21 years in the jewelry business, and for the past eight years was a member of the firm of Petz & Thiry, which recently dissolved partnership.

A. L. Thoma, Piqua, O., the King of the new fraternity in the jewelry and optical trade known as the Noble Order of Ku-Kus, has appointed the following members of Nest No. 1 to assist him in instituting Sandusky Nest No. 4, at Cedar Point, on the evening of June 24, during the convention of the opticians. Prince, F. P. Barr; chief, J. B. White; scratcher, H. E. White; keeper of kash, Fred Thoma; guard, F. T. Prosser. All members of the optical trade attending the convention are invited to join the flock. Mr. Thoma announces that he has further ordained that the degree of the Flip-Flops be given the new flock on this day, and for this degree has announced the following: Grand Ku-Ku, O. C. Lightner; Ku-Ku Chief, Holmes Kimball; Ku-Ku Guard, E. E. Marshall.

Los Angeles.



Mr. and Mrs. Carl Entenmann and son left, Monday, June 15, for the east, whence they will sail for Europe, to be absent four months.

C. Hebeler, one of the officers of the South Coast Club, has offered a trophy cup which will be contested for in a yacht race to be run from San Pedro to Santa Barbara on July 4. S. Nordlinger & Sons have the order for the cup.

The Pacific Gem Co. will soon occupy commodious quarters on Broadway, Mr. Marcher, the proprietor, having recently leased the top floor of the building 622 S. Broadway. Here the concern will occupy 9,000 square feet of space. The rooms will be divided off in such a manner as to accommodate both salesmen and patrons at the same time. The shop, it is said, will be entirely remodeled and will be the finest west of New York.

A. E. Morro, 342 S. Spring St., has leased the store 400 S. Broadway, formerly occupied by Brock & Feagans for a term of years. Mr. Morro has occupied his present store since '94, but as the trend of business seems to point to Broadway he has joined the procession, and says he intends to have an establishment second to none on Broadway. With his lease of five years Mr. Morro has bought all the fixtures of the store and intends to be formally installed in the new establishment by Aug. 1.

More trophies, cups and medals for amateur athletic events and as prizes at horse shows, chicken shows, cat and dog shows, etc., are given in southern California than in any locality with similar population in the United States. The industry is becoming so keen that all of the big jewelry firms carry large stocks of all kinds of trophies continuously and occasionally give over their entire window displays to the handsome gold, silver, bronze and copper pieces. Interior displays always have a prominent place and usually are large. As the peculiar climate of southern California permits of contests and shows at all times of the year, the traffic in trophies is practically continuous. As most of the contests and exhibitions are amateur, the prizes necessarily must not consist of money or merchandise of negotiable value. Hence, the growing trade has caused dealers and silversmiths to vie with each other in producing excellent work. A large number of standing trophies and challenge cups are out for yachting, fishing and amateur athletics. Pomona College this Spring offered the latest championship cup of consequence in school athletics. The standing trophies of the Tuna Club and Light Tackle Club of Santa Catalina sometimes run up to $500 each in value, and few are less than $100. The Southern California Rod and Reel Club, a comparatively new organization, is providing for more costly trophies in addition to the class buttons given to all who catch fish of certain sizes under the rules. Imported trophies are of beautiful design and great value. The finest seen here is the $4,000 American polo trophy and other polo cups. Tennis trophies are given in large numbers here, and the next lot will be contested for in the Country Club tournament at Venice, the first week in July.

Jewelers' Practical Work Bench $14.00

LENGTH 47 INCHES; HEIGHT 38 INCHES

The Tapered Apron Drawer, which is zinc-lined, has a two-inch screen or perforated center, through which the filings drop into a *removable cup.*

Frame of bench is made of highly finished oak. The top of hardest birch, oiled and left in natural finish. Brass handles on drawers.

Wooden filing block, being removable, will fit any of the three openings shown.

Swartchild & Company Heyworth Bldg. CHICAGO

AN EXAMPLE OF A GREAT ACHIEVEMENT IN THE MANUFACTURE OF IMPORTED WATCHES IS EVIDENCED IN

"Tavannes" Movements and "Cyma" Watches

WHY?

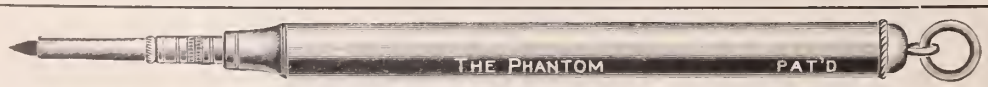
Because all features heretofore existing that have been an obstacle to the modern watchmaker have been eliminated—being brought about by the introduction of automatic machinery in the manufacture of these goods, and the concentration of our mammoth factory on a modern scale, enabling us to furnish "FINISHED MATERIAL" ready to use.

"TAVANNES" movements and "CYMA" watches give most satisfactory results when exposed to the extreme influence of TEMPERATURE, ELECTRICITY or MAGNETISM.

TAVANNES WATCH COMPANY

131 Wabash Avenue
Chicago

ADOLPHE SCHWOB, Sole Agent for the U. S.
2 and 4 MAIDEN LANE, NEW YORK



704 Market Street
San Francisco

Owing to their retirement from business

MEYEROWITZ BROS.

of Nos. 37-39 Maiden Lane, NEW YORK

hereby give notice to all persons having claims against them to present the same at their office forthwith for payment.

W. S. HICKS' SONS, Manufacturers of
GOLD PENS, PENCILS and FOUNTAIN PENS of the Finest Quality.

SILVERSMITHS BUILDING,
15-17-19 Maiden Lane,
NEW YORK.

FACTORY,
231-233-235 Greenwich Street, New York

Cincinnati.

D. Pollak has moved his repairing business from Vine St., near 7th St., to 20 Arcade.

Hugo Lindenberg, of Lindenberg & Fox, has left on a pleasure trip which will cover New York, Canada and Atlantic City.

C. S. Bennett, of the Frank Herschede Co., has returned from Louisville, Ky., where he attended the wedding of his brother, Walter J. Bennett.

John P. Mullaly, Indianapolis, Ind., stopped over here on his way to the meeting of the Grand Lodge of "Owls," held at Knoxville, Tenn., last week.

Burglars made an attempt to enter Victor Bogaert's store at Lexington, Ky., the last week. They were frightened away and only secured about $25 worth of gold rings.

Chas. Hofman, manager of the Arcade Jewelry Store, Springfield, O., was here the past week prior to leaving on a vacation of a few weeks to Oklahoma, where he will superintend gathering the crops on his farm.

Leonard J. Fox, of the Gustave Fox Co., and captain of the Gustave Fox Co. bowling team, is making special effort to interest various jewelers and factory hands in forming a bowling league for the Winter months.

Andrew J. Huellebrand, of Huellebrand Bros., Nashville, Tenn., was married, June 10, to Miss Mabel L. Beasley, of that place. The couple spent their honeymoon in this city, where they were royally entertained by their numerous friends.

A. J. Thoma, of Thoma Bros., is visiting his brother, Carl, of this firm, who is spending a vacation at a fishing camp in Eaton, O. Fred Thoma left last week for Cedar Point, O., where he will attend the State Optical Association convention.

President A. G. Schwab, of the Cincinnati Wholesale Jewelers and Manufacturers' Association, has appointed an entertainment committee, of which D. J. Gutmann, of L. Gutmann & Sons, is chairman, to make preparations for entertainment for the delegates to the coming convention in August.

The estate of Mr. Pieper, Covington, Ky., is now placing a new glass front in the store, which completes the numerous improvements made in this place. It has added 30 feet to the rear of the building, thus giving more space for the optical business, which has rapidly increased in the last year. The front part of the store, as heretofore, is used for jewelry.

Out-of-town jewelers here the past week buying stock included: H. C. Reed, Blanchester, O.; Edward Mueller, Hamilton, O.; Philip Horr, Aurora, Ind.; Mrs. A. Stamm, Williamsburg, O.; L. Schomer and Fred G Wittlinger, Middletown, O.; S. Franks, Chattanooga, Tenn.; M. Effron, Georgetown, Ky.; J. E. Zimmerman, New Holland, O.; F. A. Schweeting, Oxford, O., and John Knocke, Lexington, Ky.

A. L. Thoma, of Piqua, O., was here last week, and on June 16, at the Sinton Hotel, organized "Nest" No. 2 of the Noble Order of Ku-Kus, with 25 charter members formed from crafts affiliated with the jewelry trade. The officers elected are as follows: Robert Freisens, of Barker & Freisens, king; Anthony Thoma, of Thoma Bros., prince; Charles Reinstatter, Central Ave., chief; George Gruen, of D. Gruen, Sons & Co., keeper of kash; Arno Dorst, of the Dorst Co., scratcher, and Louis Hoehneck, guard. The meeting closed with a lunch. It is expected that a large flock will be initiated in the future, as the applications for membership are rapidly coming in. One of the principal features of the coming convention will be Ku-Ku night. Nest No. 3 will be organized June 22 at Columbus, O., and on June 24 another meeting will take place at Cedar Point, O., when "Nest" No. 4 will be established.

St. Louis.

Mr. and Mrs. C. L. Stange are at present in Chicago.

A. F. Eisenbeiss, of the Eisenstadt Mfg. Co., has just returned from a short pleasure trip.

W. K. Urbani, Vandalia, Ill., was in this city last week, with A. J. White, Staunton, Ill.

W. H. Wheeler, Palmyra, Mo., and C. W. Scanlan, Indianapolis, Ind., were visiting the trade last week.

Mark Eiseman, Birmingham, Ala., and his wife are spending their vacation in St. Louis this week.

Mike Miesch, Muskogee, Okla., was in St. Louis the past week on a visit. He was accompanied by Mrs. Miesch.

J. J. McKenna, vice-president and manager of the Bauman-Massa Jewelry Co., has gone on a two weeks' fishing trip.

Roy Rutherford, Mt. Vernon, Ill., was in this city purchasing articles for an auction which he will hold in that town next week.

Paul Nacke, of the E. Maritz Mfg. Co., has gone to Dayton, O., to visit relatives. From Dayton he will proceed to New York.

T. Zurbrugg, president of the Keystone Watch Case Co., and H. M. Carle, of the same company, called on the trade last week. In the city at the same time were L. M. Levy, of the Philadelphia Watch Case Co., and F. E. Hyatt, Chicago manager for the same concern.

Morris Bauman, formerly associated with Louis Bauman in the firm of Bauman Bros. & Co., is now with the L. Bauman Jewelry Co., and will depart in several days for a three months' trip to Seattle, Wash., and the far west. The Bauman Bros. & Co. office was on the sixth floor of the Commercial building, 6th and Olive Sts. S. Van Raalte has secured the stock of the firm.

The Eisenstadt Mfg. Co. will celebrate its 25th anniversary on Saturday, June 27, by giving a monster picnic to the firm's employes and their families at Priester's Park, 10 miles from St. Louis, between East St. Louis and Belleville. More than 150 people will leave the Eads bridge at noon, in three special cars. A band has been engaged, and there will be a ball game between the traveling salesmen and the house men. Brainerd Ryan and J. G. W. Schoenthaler, of the firm, are the committee of arrangements.

Noah Pritchard, 17 years old, was arrested last Saturday night for burglarizing the store of Oliver J. Fritsch, at 6105 Horton Pl., the Wednesday previous, and making off with more than $1,600 worth of jewelry. Detectives Quinn and Kaiser, who made the arrest, recovered $875 worth of the gems. Though Pritchard made a clean breast of the robbery to the two detectives and to the chief of detectives in the presence of others at the time of his arrest, two days later he changed his story and said he had only confessed from fear of bodily harm of two men who had promised him money to pawn the gems. He said the men would have killed him if he had not taken the blame. The police later arrested Oscar Hartmann and Harry Clayton, and all three are charged with burglary and larceny. Mr. Fritsch identified as his property the gems taken from Pritchard. In his first confession he said he had gotten into the store by smashing the glass. He would not tell where the other gems were disposed of.

Cleveland.

W. C. Ball spent Thursday and Friday in Chicago.

L. C. Morris, River Rouge, Mich., was a recent visitor in this city.

Geo. D. Davidson, Jersey City, N. J., spent Saturday in Cleveland.

E. H. Crippen, of Philadelphia Watch Case Co., was in Cleveland, Thursday.

W. H. Saxton has started out on an eastern trip for the Webb C. Ball Watch Co.

Supt. Wilson, of the New York Standard Watch Co., was in Cleveland, last week.

Mr. and Mrs. C. C. Sigler have opened their country home, "The Maples," at Courtland, O.

W. C. Cook, of the E. Howard Watch Co., spent several days in this city, recently, on his way east.

The following jewelers visited Cleveland during the past week: C. F. Hill, Akron; S. Leonheiser, Huron; H. H. Brainard, Medina; Robert Miller, Lorain; Geo. Dales, Akron; G. D. Davidson, Jersey City, N. J.; L. C. Morris, River Rouge, Mich.; F. H. DeWitt, Port Clinton; Albert Zang, Alliance; H. S. Sumner, Akron.

John Collins, who was hotel porter at the time the representative of West, White & Christy, Pittsburg, was robbed last December at Courtland Hotel, Canton, O., is now under arrest. Suspicion was directed against this man because of his sudden disappearance immediately following the robbery and he has just made a full confession as to how the robbery was accomplished and where the goods were disposed of.

Pacific Northwest

A. L. Thomas, Nye Beach, Ore., has just moved to his new building at that place. The new store is a very attractive one, finished in natural Oregon woods and supplied with plate glass mirror show cases.

Frank G. Will, Albany, Ore., has returned home after an extended trip through the east. While he was away, Mr. Will visited relatives in his old home in Missouri and transacted business in Chicago and other places.

The firm of Buhn Bros., Sedro-Woolley, Wash., has reached an agreement with the creditors and will soon reopen the store at Sedro-Woolley. The store at Bellingham, in that State, will be closed and the stock removed to Sedro.

Indianapolis.

Harry Reed, who attended the National convention at Chicago, returned home Sunday of last week.

Among Indiana jewelers in this city last week, were: F. Pennington, Knightstown, and E. T. Barnes, Spencer.

George Kamman, with T. M. Jackson, Seymour, spent a few days in this city last week, visiting friends and purchasing stock.

Charles Langbein, until recently with Don A. Hickman, has taken a position with C. W. Lauer & Co., in the State Life building.

The Marion County Board of Review has fixed the valuation of Julius C. Walk & Son at $24,780, the valuation last year being $30,000.

A pearl said to be a perfect specimen and weighing 37 grains, has been found in the Wabash river by Carl Gillis and Arthur Woodward, of Cayuga.

I. Grohs, president of the I. Grohs' Jewelry Co., State Life building, spent last week in New York on business. He returned the first of this week.

An automobile trip through Ohio and Kentucky is being made by Clarence James, a watchmaker and jeweler employed by J. P. Mullally. He will be away for some time.

A. P. Craft, of A. P. Craft & Co., is spending a couple of weeks at Three Lakes, Wis., fishing. He is with a number of friends and expects to return some time next week.

J. A. Oswald, Crawfordsville, secretary, and A. Rothermel, Connersville, second vice-president of the Indiana Retail Jewelers' Association, were in this city last week on business.

Ernest L. Niemeyer, of the Niemeyer Jewelry Co., 1621 Market St., St. Louis, Mo., was in this city, last week, attending the 32d annual Saengerfest of the North American Saenger Bund.

Contracts for political badges and buttons from both national committees, the State Republican Committee and the Marion Club, of this city, have been received by the Buschmann-Griffey Co., of this city.

The Indianapolis Merchants' Association, to which many jewelers belong, is requesting all down-town merchants to close their stores at 5 P. M., from July 6 to Sept. 4, inclusive. Several pledges have been made.

The regular monthly meeting of the Indianapolis Retail Jewelers' Association will be held in the Commercial Club rooms, July 6. There is little of a business nature to be brought up so that the meeting will be largely a social session.

Local detectives last week arrested Joseph Moore, 18 years old, who confessed to having robbed the offices of Staples & Mosias, manufacturing opticians, in the Postal Telegraph building, on the night of Dec. 27. About $7 in money and considerable stock were stolen at the time.

J. P. Mullally, president of the Indianapolis Retail Jewelers' Association, has returned from Knoxville, Tenn., where he represented the local nest at the Order of Owls' convention. There was a split in the order, Mr. Mullally being elected supreme vice-president of the new branch, to be known as the American Order of Owls.

Carl L. Rost and Miss Eva Virginia Daniels were married in Columbus, on the night of June 16. They sought to evade their friends by boarding an interurban car, but found their friends had boarded an earlier car and intercepted them at Edinburg. Mr. Rost is the son of H. L. Rost, of Columbus, and a nephew of Carl L. Rost, of Indianapolis, both jewelers.

Charles B. Dyer and Edgar T. Forsythe, accompanied by a party of 12, left here, June 17, for a tour through Europe, sailing from New York City last Saturday. They will be gone 70 days, visiting Belgium, Holland, Germany, Austria, Italy, Switzerland, France, England and Scotland, attending the Art Congress in London, Aug. 6-10. They will reach Montreal, Can., Aug. 30. Mr. Dyer is head of the Arts and Crafts School and a local retail jeweler. His business will be conducted during his absence by his father, George G. Dyer.

Omaha.

H. J. Penfold, president of the H. J. Penfold Optical Co., has returned from a trip to New York.

E. J. Tucker and wife, Pender, Nebr., were in this city last week, visiting friends and purchasing stock.

Fred Cateron, with the C. B. Norton Jewelry Co., Kansas City, Mo., has recently taken up his residence in Omaha, having removed from Lincoln, Nebr.

Miss Rossina Mandelberg, daughter of A. Mandelberg, is home from Smith's College, Northampton, Mass., where she will spend the Summer with her parents.

T. L. Combs attended the Iowa State Retail Jewelers' Convention, June 23, at Des Moines, Ia. Mr. Combs attended the Republican convention held in Chicago last week.

At the meeting of the Nebraska State Board of Examiners, held at Grand Island, reecntly, there were 14 applicants for membership, of which 10 passed the examination successfully.

J. P. Holliday, accompanied by his family, returned to Omaha, last week, where they will make their future home. Mr. Holliday has resided in Minneapolis, Minn., for a number of years, and recently became associated with the Mawhinney & Ryan Co., this city.

The following out-of-town jewelers were in this city last week, purchasing stock: D. H. Kunkel, Osceola, Nebr.; R. Beckard, Waco, Nebr.; D. Adams, Nehawka, Nebr.; J. B. Sumner, Jr., Bloomington, Nebr.; P. C. Holzinger, Pleasanton, Nebr.; W. B. Graves, Elkhorn, Nebr.; A. G. Kupka, Schuyler, Nebr.; O. G. Coglizer, Weeping Water, Nebr.; Mrs. Wilson, Atkinson, Nebr., and W. H. Lyman, Holyoke, Colo.

John H. Kuss was sentenced at Reading, Pa., last week, to pay a fine of $10 and serve two years in the Eastern Penitentiary for attempted burglary of the store of Mary Bechtel, near Bally, Berks County. Kuss was found in the store, having gained entrance by cutting out a piece of glass. When he tried to escape Manager Moyer fired a revolver at Kuss, which struck him near the cheek bone. He was driven back into the store until assistance arrived, when he was captured.

Harrisburg, Pa.

L. J. Weikert, Waynesboro, will place a clock with a 24-inch dial in front of his store. It is being made by the Fred Frick Clock Co., of that town.

Retail merchants' associations all over the State are now electing delegates to the State Retail Merchants' Association convention, to be held at New Castle, Sept. 1, 2 and 3.

The semi-annual banquet of the Millersburg Traveling Salesmen's Association was held June 20 at Montgomery's Ferry. The trip to the hotel at the ferry was made by boat.

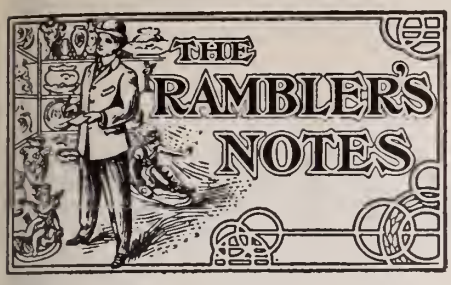
E. S. Loy, New Bloomfield, is one of the incorporators of the Hollow Concrete Building Block Co., just formed. Mr. Loy is now building a house of this material in New Bloomfield.

A company has been formed in Carlisle for the quarrying and marketing of onyx, and a West Virginia charter has been taken out. The incorporators are: T. J. Yocum, S. E. Weaver, Hugh R. Miller, J. P. Culbertson and Stanley Still, Jr., all of Carlisle.

Chief of Police Durnbaugh, Steelton, has inaugurated a campaign against the agents of cheap jewelry companies who have been operating in that town for some days. Agents of three of these companies have been in the borough distributing the cheap jewelry, which is of all imaginable kinds, to the children, who are urged to sell it for prizes in cash or otherwise. Chief Durnbaugh has determined to put a stop to this practice, as it is in direct violation of a borough ordinance requiring vendors and peddlers of all sorts to take out a license. Every child now caught selling jewelry in the borough will be made to pay 50 cents a day for the privileges.

Toledo.

G. V. Warnke, 1637 Broadway, contemplates making a number of interior alterations and improvements in his shop.



John Zurflueh, 313 Monroe St., near Summit, is entertaining his sister, who for the past 15 years has been a missionary in Japan.

J. Y. Auten, formerly connected with John Mitchell's Sons, 423 Summit St., has opened a general jewelry repairing shop in the Empire arcade building.

J. J. Freeman, of J. J. Freeman & Co., has been elected director in the Baptist Association, which includes all the churches of that denomination in northwestern Ohio.

Many Toledo opticians are arranging to attend the sixth annual convention of the Ohio Optical Association, which will be held at Cedar Point, June 23, 24 and 25. The programme includes a number of speakers, among whom are Edward E. Arrington, Nelson E. Standard, G. W. Gracy, J. C. Eberhardt.

The friends of J. George Kapp, 415 Summit St., are urging his return to the Board of Education as an appointive member, to take the place of President C. A. Seiders, resigned. Mr. Kapp only retired from the Board this Spring, on the termination of his term, after a three years' tenure of office. He declined to become a candidate for reelection at that time.

Mr. Watson, of Watson & Newell Co., was a recent visitor in Denver, Colo.

Mr. Sinclair, of S. Sternau & Co., called on the trade in Denver, Colo., last week.

J. B. Tucker, representing W. E. Graves, San Francisco, Cal., left, the first of the week, to visit the coast cities.

William Rosenburger, of the Wallach Chain Co., left San Francisco, Cal., Monday, for the north, after a successful trip.

Joseph Brennan, with Burr W. Freer, San Francisco, Cal., left, recently, for his regular trip through the northern part of the State.

Traveling representatives in San Francisco, Cal., last week, included: Jack Slemmons, J. B. Bowden & Co.; Mr. Knapp, Bigalke & Eckert Co.; J. Hagen, A. J. Hedges & Co.

Traveling representatives who visited Los Angeles, Cal., during the past week, were: E. V. Saunders; Joseph Aichers, Alvin Mfg. Co.; Mr. Ballin, Ballin Bros.; H. E. Farquharson; Mr. King, Nordman Bros.; Mr. Lyon, Lyon Gem Co.

The following traveling representatives called on the trade in Kansas City, Mo., during the past week: M. G. Cook, Alvin Mfg. Co.; George White, White & Rounsville; Charles Jacob, Frederick Speidel; Alfred Clark, Oneida Community, Ltd.

Traveling representatives calling on the Toronto, Ont., trade, last week, included: Mr. Yorke, Henry Rogers & Sons (Sheffield, England); Mr. Harmer, Potter & Buffinton; M. Schwob, Schwob Freres & Cie (Switzerland and New York); E. C. Fitch, Montreal manager Waltham Watch Co.

Among the traveling representatives recently in Lancaster, Pa., were: Louis Hodges, E. A. Potter & Co.; J. F. Ruth, South Bend Watch Co.; Mark Scheinman, D. C. Percival & Co.; F. Van Olinda, New England Watch Co.; F. A. Brennan, L. Witsenhausen; George Henle, Sussfeld, Lorsch & Co.; M. J. Lamper, Henry Zimmern & Co.

Traveling salesmen visiting Boston, Mass., during the week, included: Mr. Huger, William Huger & Co.; W. H. Thornton, Henry A. Kirby; Edward D. Hicks, William S. Hicks' Sons; Julian G. Hall, Carrington & Co.; Frederick Lapham, Carter, Howe & Co.; Arthur H. Schmitt, Harvey J. Flint Co.; H. E. Slater, Whiteside & Blank; Benjamin Griscom, Bippart, Griscom & Osborn; Mr. Clark, Cory Bros.

Traveling representatives in Omaha, Nebr., during the past week, included: R. L. Robinson, Dennison Mfg. Co.; George W. Cureton, Henry G. Lefort; John S. Cunningham, E. L. Spencer Co.; N. Lubo, Oscar Gottlieb & Co.; Charles Jacot, Friedrich Speidel; Mr. Townsend, Kreis & Hubbard; Mr. Hartshorn, Krementz & Co.; Thomas E. Rogers, Riker Bros.; F. R. Horton, Carter, Howe & Co.; H. H. Meyer, Wm. B. Kerr Co.; Joseph Levy, Gans Bros.

The following traveling representatives were in St. Louis, Mo., last week: Kossuth Marx, Kossuth Marx Jewelry Co.; Fleetwood Lanneau, R. Blackinton & Co.; W. H. Osborne, R. Wallace & Sons Mfg. Co.; Joseph Keller, Keller Mfg. Co.; F. R. Horton, Carter, Howe & Co.; S. L. Smith, Roger Williams Silver Co.; Jack Thompson, J. B. Bowden & Co.; George A. Allsopp, Jr., Allsopp Bros.; Thomas E. Rogers, Riker Bros.; W. C. Barry, Larter & Sons; C. A. Holbrook, Sloan & Co.

Traveling salesmen who called on the Cincinnati, O., trade, during the past week, included: H. Bliss, Gorham Co.; Mr. Blair, Blair Fountain Pen Co.; J. Levy, Heldman Mfg. Co.; A. Levy, Byron L. Strasburger & Co.; C. A. Holbrook, Sloan & Co.; George A. Allsopp, Jr., Allsopp Bros.; Mr. Hartshorn, Krementz & Co.; Mr. Curran, A. J. Hedges & Co.; Thomas E. Rogers, Riker Bros.; Fleetwood Lanneau, R. Blackinton & Co.; A. J. Sherrard, Enos Richardson & Co.; Mr. Bliss, Wordley, Allsopp & Bliss Co.; D. A. Davidson, Wallach & Davidson; Jack Thompson, J. B. Bowden & Co.; James R. Palmer, Henry A. Kirby; W. H. Osborne, R. Wallace & Sons Mfg. Co.; Joseph Keller, Keller Mfg. Co.; Mr. Tourtelott, Waite, Thresher Co.; Mr. Kohn, Silbermann, Kohn & Wallenstein; L. Goldsberg, J. Sollinger & Co.; Mr. Williams, Warren & Williams; R. Robinson, Shiman Bros. & Co.; D. Schwab, Ciner & Secleman; Mr. Powell, S. O. Bigney & Co.

Traveling representatives who, recently, called on the trade in Pittsburg, Pa., included the following: Howard R. Grant, Riley & French; Frank E. Harmer, Solidarity Watch Case Co.; Joseph Keller, Keller Mfg. Co.; M. F. Loomis, C. Sydney Smith & Co.; W. R. Shute, Day, Clark & Co.; Mr. Wilkinson, J. J. Sommer & Co.; Mr. Crane, Mandeville, Carrow & Crane; Mr. Curran, A. J. Hedges & Co.; J. T. Griffith, Jr., Carter, Howe & Co.; Izri W. Lederer, S. & B. Lederer Co.; Wade W. Williams, Warren & Williams; John S. Cunningham, E. L. Spencer Co.; Edwin F. Skinner, Roy Watch Case Co.; M. H. Kling, M. H. Kling & Co.; R. H. Schley, Sloan & Co.; Charles T. Dougherty, Osmers, Dougherty Co.; Richard Robinson, Shiman Bros. & Co.; Emil Herbeck, Herbeck-Demer Co.; M. Untermeyer, Chas. Keller & Co.; D. Chisholm, Bugbee & Niles Co.; Maurice Kohn, Silbermann, Kohn & Wallenstein; W. A. Burt, Cory & Reynolds Co.; Donald LeStage, H. D. Merritt Co.; A. P. Shattuck, W. & S. Blackinton Co.; F. F. Gibson, Gibson, Krugler Co.

Lancaster, Pa.

H. S. Meisky, of the H. S. Meisky Co., visited Boston, last week.

Guy K. Herr, watchmaker for Charles J. Kinzer, of Bluefield, W. Va., is in Lancaster, his old home, for two weeks.

George R. Weber, of Louis Weber & Son, has been elected vice-president of the Lyco Co., a new local manufacturing concern.

A. E. Job, York, Pa., with Wm. Spangler, last Thursday visited the Hamilton Watch Co.'s factory and the local technical school.

James Buoy, late with Charles Bischhoff, manufacturing jeweler, has gone to Oscaloosa, Ia., to take a position with a manufacturing firm.

Dr. John D. Burkholder, eye specialist, is secretary and treasurer of the New Process Steel Wire Mfg. Co., which has just erected a large plant in Lancaster.

The 1,100-pound weight controlling the striking apparatus of the clock in the tower of the Opera House at Columbia, fell Thursday, smashing flooring and doing considerable damage.

The mother of A. H. Rosenstein, president of the Lancaster Silver Plate Co., and of Edw. Rosenstein, of the same establishment, celebrated her 85th birthday, last week, by a family reunion.

John J. Bowman, of Ezra F. Bowman's Sons, a former National Guardsman, was last week elected one of the executive committee of an association of veteran National Guardsmen, which was organized here.

George W. Hull, has just presented to St. Mark's Lutheran Church, a set of beautiful silver offering plates, which were furnished by S. Kurtz Zook. G. L. Fondersmith presented a handsome altar service.

Eugene H. Keller finished, last week, 12 handsome gold medals for the graduates of the Sacred Heart Academy, of Lancaster, and another gold set for the graduates of the School for Nurses of St. Joseph's Hospital.

Among the jewelers who visited Lancaster, last week, were: Monroe Keene, Erie, Pa.; Jerome Todd, Cleveland, O.; George L. Hepp, Lititz, Pa.; J. H. Lenseing, New Holland, Pa.; Frank Best, Louisville, Ky.; N. W. Pinkerton, Manheim, Pa.; J. M. Kreider, Ephrata, Pa.

Numerous improvements are being made to the jewelry house of R. C. Green's Son, Centre St., Pottsville, Pa.

Pittsburg.

Sam F. Sipe sails early in July for Europe on his annual diamond buying trip.

George S. Dunbar, not afraid of real warm weather, has gone to Jamaica for the benefit of his health.

Henry A. Barrett and his family have gone to Chautauqua, where Mr. Barrett, who is president of the Geo. B. Barrett Co., has engaged quarters for the entire Summer.

John Collins, who robbed a salesman for West, White & Christy at Canton, last December, was arrested at Jeffersonville, Ind., while trying to sell a stolen horse and buggy. Collins sold jewelry valued at $7,722 all over the country, and melted the gold of other pieces. Collins has confessed.

Among the jewelers who visited Pittsburg last week were the following: F. H. Hayes, Washington; W. R. Hill, Suttersville; B. E. Brown, Monessen; E. Myers, Harmony; C. A. File, Mars; Harry Grieb, Butler; Frank Worrell, Cannonsburg; H. C. Morrison, Mt. Pleasant; A. C. Guth, DuBois.

Thousands of persons attended the formal opening of August Loch's new store in Federal St., North Side, June 13, the store being packed all evening. Everybody had to get in line and pass in and out of the place. Mr. Loch received a number of floral offerings from friends as a token of their esteem.

Benjamin Biggard has bought the stock of Katherine Barney, who recently filed a petition in bankruptcy, and the court has approved of the sale, the stock bringing $1,095. Of this amount Mrs. Barney claimed $300 under the exemption act and this was turned over to her. The details of the failure were published in THE CIRCULAR-WEEKLY several weeks ago. The creditors will get a very small dividend.

A. Rankin & Co., McKeesport, have asked their creditors for an extension, which has been granted. The creditors held a meeting in Pittsburg, June 16, and on request of the firm, W. O. Harrison and A. H. Gerwig, were appointed to conduct the business, and just as soon as the proceeds from the sale of stock exceeds 10 per cent. of the expenses, a dividend will be declared for the benefit of creditors. The firm's liabilities are about $1,400, and it is thought that if times get better that the concern will be able to pay the claims in full. McKeesport has been quiet because of the shutting down of some of the mills, but most of them have started up and the firm wants time.

Louis S. Racine, a watchmaker, who had a work bench in the wholesale house of S. Davis & Co., 725 Liberty Ave., but who had no connection with that house, is missing from Pittsburg, and so are a number of good watches, which had been left with him to be repaired. I. Lincoff, 519 Dickson St., Homestead, has laid an information against Racine before a justice of the peace at Homestead, charging Racine with larceny by bailee, and officers are searching for him. Racine is said to be about five feet five inches in height. He looks to be about 20 years old, but is older. Racine came here, it is thought, from Philadelphia. Mr. Lincoff says that one of the watches which he left with Racine was worth $60.

THE OPTICAL REVIEW

FOR JULY

¶ A High Class Magazine for Opticians and Optometrists.

¶ A Worthy Representative of an Important Industry.

¶ Publishes the Best Optical Literature Procurable and All the News

THE OPTICAL REVIEW is the greatest aid to the advancement and progress of the optical department, the optician and optometrist.

No jeweler with an optical department can afford to be without it.

CONTENTS FOR JULY

"Education of the Future Optometrist." By Chas. F. Prentice, M.E., New York, first president of the Optical Society of State of New York.

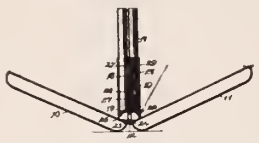
PATENT DEPARTMENT

[IN WHICH IS CONTAINED A LIST OF THE LATEST PATENTS GRANTED BY THE UNITED STATES AND GREAT BRITAIN, THE UNITED STATES PATENTS THAT HAVE EXPIRED AND THE REGISTERED TRADE-MARKS.]

UNITED STATES PATENTS.

ISSUED JUNE 16, 1908.

890,590. INTERIOR MICROMETER. Axel L. Anderson, Hartford, Conn. Filed March 23, 1908. Serial No. 422,586.



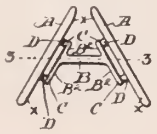
An article of the character described comprising a sleeve slotted at its lower end, a stem movable

lengthwise within the sleeve, jaws pivotally secured to the lower end of said stem and passing through said slots, and means for moving said stem longitudinally within said sleeve.

890,703. CIGARETTE-CASE. Harald C. Pedersen, New York. Filed May 20, 1907. Serial No. 374,561.

A cigarette-case comprising a pair of hinged lids forming a case, a cigarette holder secured to the hinge of the lids, and means on the holder ad-

jacent to the hinge of the lids for engaging the lids at the hinge to limit their outward movement, the limiting means acting to hold the holder central to the lids when they are swung apart.

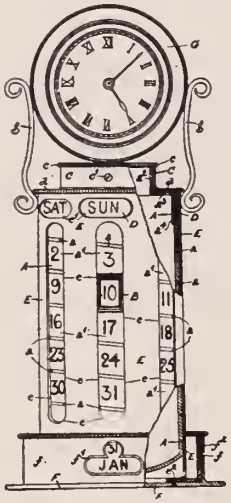


890,747. FOUNTAIN-PEN. Albert F. Zahm, Washington, D. C. Filed Oct. 4, 1905. Serial No. 281,277.

A fountain-pen, any portion of which is made of

a non-vitreous, transparent or translucent material and having a non-compressible barrel.

890,872. CUFF-BUTTON. Josef Pejchar, Cin-



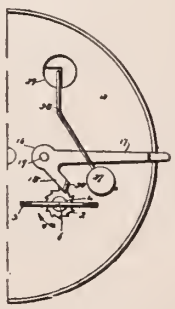
cinnati, O. Filed March 20, 1906. Serial No. 307,012.

A cuff button comprising a pair of converging outer bars, a member rigidly connecting the bars together and two pairs of projections on the button, the projections of each pair being adapted to engage the ends of the buttonhole to prevent movement of the button.

890,926. COMBINED PERPETUAL CALENDAR AND TUTOMATIC DATE-INDICATOR. Armand G. Raymond, Pretoria, Transvaal. Filed March 21, 1906. Serial No. 307,228.

In a calendar and automatic date-indicator, the combination with a revolvable cylinder having a circumferential helical groove therein, between the convolutions of which are numerals representing the dates of the month, a casing inclosing said cylinder formed with a plurality of vertical slots corresponding to the columns of numerals, an indicator engaging the helical groove in the date cylinder and sliding in one of the vertical grooves in

the casing, a ring or cylinder adapted to be rotated either independent of the date cylinder or in unison therewith, said ring or cylinder having represented on its circumference the days of the month which are adapted to be brought into coincidence with the columns of numerals on the date cylinder, a timepiece or clockwork mechanism adapted to rotate the date cylinder to cause the indicator to traverse the groove and slot in the cylinder and casing respectively to pass successively from date to date, a cylinder or drum on the circumference of which are represented the names of the months, and means actuated from the timepiece or clockwork mechanism for rotating the drum or cylinder when the indicator reaches the last date of the month.



890,977. CUFF-FASTENER. George M. Gluchowski, Baltimore, Md. Filed April 8, 1907. Serial No. 366,917.

A cuff-fastener comprising two oval sides, 1, 2, that are rigidly connected by a bar, 6, extending directly from the edge of one of said sides to the

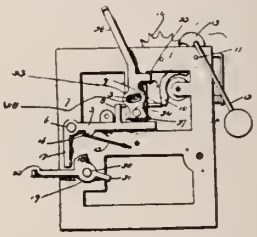
edge of the other side, and a lug, 7, projecting directly from the edge of one only of said sides—whereby the entire device can be stamped out by dies from a single piece of metal.

891,084. ALARM-CLOCK. William J. Larkin,

Waterbury, Conn., assignor to the Waterbury Clock Co., Waterbury, Conn. Filed April 20, 1908. Serial No. 428,229.

In an alarm-clock, the combination with the winding arbor of the alarm mechanism of a switch, and means rotating with the said arbor for coaction with the said switch to throw the same off when the arbor is rotated to wind the alarm-spring.

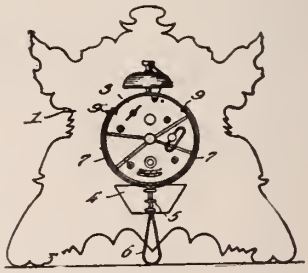
891,097. MOVEMENT-PLATE FOR WATCHES, CLOCKS AND THE LIKE. Wilson E. Porter, New Haven, Conn., assignor to the New Haven Clock Co., New Haven, Conn. Filed Nov. 11, 1907. Serial No. 401,700.



A movement-plate for watches, clocks and the like, the said plate having one or more pivot-bear-

ings made integral with the body of the plate and harder and thinner than the same.

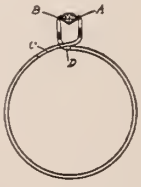
891,098. ALARM-CLOCK. Wilson E. Porter, New Haven, Conn., assignor to the New Haven Clock Co., New Haven, Conn. Filed April 27, 1908. Serial No. 429,542.



In an alarm-clock convertible for sounding an intermittent alarm or a long alarm, the combination with an alarm-wheel driven by the time-train of the clock, of a vibrating-arm carried by the verge-arbor of the alarm-train of the clock, an intermittent alarm-lever provided with a finger for engagement by the said wheel and with a detent for

engagement with the said vibrating-arm, and a converting lever adapted to coact with the intermittent alarm-lever for forcing it into a retired position in which it does not function with the alarm-wheel and vibrating arm.

891,134. CLOCK-CASE. Walter M. Barry, Rochester, N. Y., assignor to John G. Nicklaus, Rochester, N. Y. Filed Oct. 29, 1907. Serial No. 399,640.



A clock case comprising a frame, and a combined frame support and clock holder secured thereto and composed of wire bent to form a prop for supporting the frame, spring arms adapted to embrace

and support an ordinary cylindrical clock, and spring fingers which serve to press the clock against the frame.

891,161. AUTOMATIC ADJUSTABLE GEM-HOLDER. Percy H. Goodwin, San Diego, Cal. Filed May 7, 1907. Serial No. 372,422.

An adjustable gem-holder comprising a resilient ring having opposed gem-holding prongs at its

ends, said prongs being normally in close relation and requiring to be sprung apart in order to receive and have holding engagement with a gem,

said ring being provided with a longitudinal slot entering from one end thereof and the other end notched laterally and arranged in said slot.

DESIGNS.

39,361. FOB. CHARLES O. NASH, Grand Rapids, Mich., assignor to the Michigan Chair Co.,

Grand Rapids, Mich. Filed May 4, 1908. Serial No. 430,873. Term of patent 7 years.

UNITED STATES TRADE-MARKS.

[The following trade-marks have been adjudged entitled to registration under the Act of Feb. 20, 1905, and are published in compliance with Section 6 of said act. Said section provides:

"Any person who believes he would be damaged by the registration of a mark may oppose the same by filing notice of opposition, stating the grounds therefor, in the Patent Office, within 30 days after the publication of the mark sought to be registered, which said notice of opposition shall be verified by the person filing the same before one of the officers mentioned in Section 2 of this act. If no notice of opposition is filed within said time the commissioner shall issue a certificate of registration therefor, as hereinafter provided for."

Marks which are stated to have been "Used 10 years are registrable under the last proviso of Section 5 of said act, which is as follows:

"And provided further, that nothing therein shall prevent the registration of any mark used by the applicant or his predecessor, or by those from whom title to the mark is derived, in commerce with foreign nations or among the several States, or with Indian tribes, which was in actual and exclusive use as a trade-mark of the applicant or his predecessor from whom he derived title for 10 years next preceding the passage of this act."]

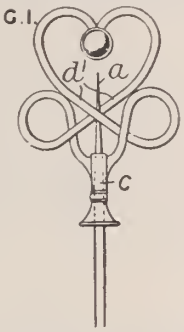
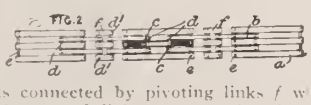
BRITISH PATENTS.



(ABRIDGMENTS OF SPECIFICATIONS, 1907, FROM *The Illustrated Official Journal.*)

ISSUE OF JUNE 3, 1908.

3,099. HAT-PINS. A. M. N. PHIPPS, Northampton. Feb. 7.



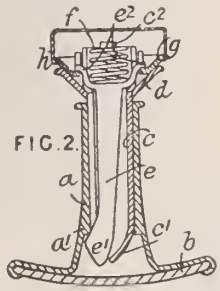
A point-protector consists of a socket C combined with an ornamental wire scroll, which grips the point *a* of the pin between two of its convolutions d^1. The socket C may be formed by bending the ends of the wire into a close helix.

FIG. 1.

3,188. BRACELETS. G. FREIVOGEL, Dietlingen, Baden. Feb. 8.

In expanding bracelets of the class having links with springs, inserted at either end and compressed by pins connecting the parts of other links, the springs *c* are in the main links *a* and bear at adjacent ends against the pins *d* of the intermediate links *b* and at remote ends against the pins *e* of the links *a*. The intermediate links *b* consist of

two parts connected by pivoting links *f* with pins d^1. Both sets of links have a plurality of parallel parts. (Reference has been directed under Section 7 of Patents, etc., Act, 1907, to Specification No. 21,654, A.D. 1905.)



3,350. COLLAR STUDS, ETC. H. OWEN & SONS, Birmingham, and A. ALLEN, Erdington, near Birmingham. Feb. 11.

A collar stud, solitaire, etc., has a base *b* with a tubular shank *a*, and a head *d* with a stem *c*, which enters the shank *a* and is retained therein by a locking bar *e*. This bar *e* has a projection c^1,

FIG. 7.

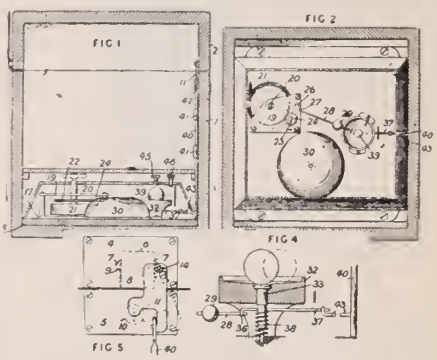


FIG. 2.

which works through a slot in the stem *c* and is kept in engagement with a shoulder *a* by the inclined part c^1 of the stem. A controlling-spring *f* is kept in position by lugs c^2 on the stem. To release, a pull is applied to an upper plain or ornamental head *h*, having a lower part *g*, which slides over the stem *c* and engages lugs e^2 on the bar *e* withdraw the projection c^1.

3,371. JEWEL BOXES; BURGLAR ALARMS. G. A. DEWEY, East Orange, N. J., U. S. A. Feb. 11.

A receptacle for jewels, etc., is provided with a device which sounds an alarm when the receptacle is disturbed. The receptacle 1 has a hinged lid 2 which is secured by a lock of the form shown in Fig. 5, comprising two plates 4, 5 secured to the lid and body, respectively; the upper plate contains a socket 6 having recesses 7, and the lower plate carries a projecting casing 8 within which are resilient locking-bolts 9. The bolts are withdrawn when the key is turned in the barrel 10 on the lower plate. The upper plate carries a pivoted hook 11, and a stud 14 extends from the hook through a slot into one of the recesses 7, so that when the bolts 9 are shot, the hook is in the position shown in full lines. In the box, the bed plate A carries a base-plate 17, on which are mounted posts bearing a cover-plate 19. Between the plates 17, 19 is journaled a shaft 20 carrying a flat coiled spring 21 and a spur-gear 22, which meshes with a smaller wheel 23, Fig. 2, on a shaft 24 which also carries an escape-wheel. A rock-shaft 26 carries a pallet 27 engaging with the escape-wheel. A rod 28 projecting from the rock-shaft carries a ball 29 adapted to strike the bell 30. A seat 32, secured to the plate A, has a dished upper surface, and extending loosely through an opening in the centre is a pin 33, Fig. 4, controlled by a coil spring. Arms project laterally from the pin, the arm 36 being bent to engage with the arm 28, and the arm 37 resting on the forked end 43 of the part 40. A ball weight 39 normally rests

on the pin, and keeps it pressed down against the spring. A detent lever 40, sliding in bearings 41 on the side of the box, has an eye 42 at its upper end engaged by the hook 11. The lower end is formed with a forked extension engaging with the rod 37. The parts being set as shown, if the box is disturbed or an attempt is made to prise the lid, the ball 39 rolls away the pin and the bell is set ringing. To move the box without bringing the alarm device into operation, the screw 35 is turned down against the ball. The alarm may be stopped by pressing down the pin 46, thus enabling the ball to roll back into position over the pin 33.

Now It's The Lord Elgin

The demand to-day is for thin watches.

The public have been waiting for a thin Elgin Watch—now it's here—the

LORD ELGIN

The Thinnest Watch Made in America with Enamel Dial

the thinnest watch made in America with enamel dial.

Like all Elgin Watches—it was not put on the market until worthy to carry with it the Elgin reputation for reliability.

Every Lord Elgin is cased at the factory and timed in the case—the most accurate thin watch in America.

Four grades—7, 15, 17, and 17 Jewels adjusted. 18K and 14K solid gold cases, also 25 year filled cases.

Furnished with metal dials, plain or engraved, gilt or silver.

Prices furnished on application by your jobber, or write the Company for only authorized price list.

THE HOROLOGICAL REVIEW

The Famous Pleissner Collection of Watches in Dresden

By M. Engelmann

(*Continued from issue of June* 10.)

A RECENT acquisition of Herr Pleissner merits here special attention. It is an enameled watch, made about 1785, which on account of its maker, as well as its technical construction, deserves particular notice. Its maker was the Swiss H. L. Jaquet Droz, at that time resident in London, whose automatic figures (androids) were until a short time ago private property in Dresden, but have lately been purchased by the Swiss people, by popular action, as a national possession.[1] A finely painted portrait of J. Droz (Fig. 23) adorns the inside of the watch. This very exactly made piece of mechanism contains the rare virgule escapement and a second train for the "jump" or independent seconds. On the escape wheel (see Fig. 23a) is placed a small steel disk with five notches. The train for the seconds engages, by means of a delicate lever, the notches in this disk, thus making it possible to stop the seconds hand from the outside and set it in motion again. We have here a very early, although not the first,[2] specimen of this device, which was much used later in similar manner. It is therefore possible that J. Droz was the inventor of the independent second, with stopping arrangement.

The golden verge repeater (Fig. 24), made about 1800 by Brégnet et fils, Paris, the perforated dial of which affords a view of the complicated interior, also deserves special notice. The ladies' watch, executed in strong relief, set with stones and having a golden dial (Fig. 25) also makes a pretty appearance. The Empire taste opened the way for curious and unique watches. Thus the collection includes a ladies' watch in the form of a mandolin (Fig. 26) and another in the form of a pear (Fig. 27).

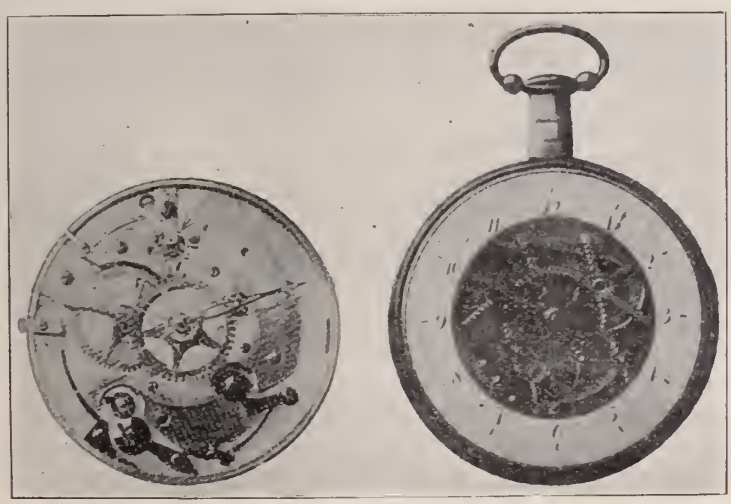

Fig. 23a.

Fig. 24.

The seventh division includes specimens of the watchmakers' art from the "Biedermeier" period. During this time the greatest effort was directed towards making the watch as thin as possible, an effort that has again made itself felt in our times. A golden lever watch made by E. K. Theurer, Chaux-de-Fonds, with a diameter of 44 millimeters, is but six millimeters thick, including the glass, while a second specimen, finished in 1830, and having traveling numerals, *i.e.*, stationary hands (Fig. 28), with the same diameter, is only 5.5 millimeters thick. This thin construction made the winding of the watch possible only by means of a thin mandril key. The long neck of the bow disappeared. The neat head again approaches in its form the earliest pattern—that of the 16th century. In the ornamentation a mixture of several earlier style periods is perceptible.

The art of the enameler is also sometimes still in evidence. This is seen in the charming, in part only solid-colored enamel decoration on the specimen of Vaucher frères (Fig. 29), Lacroix et fils, Bréguet (Fig. 30) and Freunoler, showing that even in this art-impoverished period the love of the ornamental was not entirely lost. Engine turning had been introduced. Especially was it seen to advantage in the dial plates, again made of silver or gold, mostly in matt designs, often in combination with delicately executed flowers or ornamental

DUBOIS

Safety Chatelaine Brooch and Case Combined

Which Enables a Watch to Keep Correct Time

Cannot Be Lost **Absolute Security** **Will Not Pull or Wear Off**

Patented U. S. June 9, 1908.
Patents Pending in Foreign Countries.

Watch worn as Chatelaine, showing it lifted to read the time.

MERITS—Holds the watch firmly and securely, thus preventing the movement from being jarred, as there is no swinging or bobbing up and down while the wearer is walking or running. Protects both the case and garment from wear.

UTILITY—It can be raised so as to read the time, and reversed to have either the dial or back facing front, without removing brooch pin or watch from the garment. Can be worn on the shoulder, belt, chain or fob.

ARTISTIC AND PRACTICAL—The only brooch and watch combined. Affords absolute security, as it has a safety catch. Nothing to wear out, as it works on friction bearings. Eliminates the possibility of loss of the watch owing to either bow, hook, swivel or link wearing out, breaking or coming apart, as in the old style chatelaine. Does not interfere with either winding or setting of movement.

Watch worn on belt as Chatelaine, also long neck chain can be worn attached to it.

Licensed Under Wachter Patent. Patented July 25, 1905; May 21, 1907.

DUBOIS WATCH CASE CO.

MADE FOR ALL SIZES OF LADIES' WATCHES, BOTH OPEN FACE AND HUNTING

Pat. June 9, 1908
P. P.—No. 39

Pat. June 9, 1908
P. P.—No. 38

decoration. The cylinder escapement gradually found its way to widespread adoption, but the lever escapement was already making its way to the front, especially in the above-mentioned work by Theurer and in the most delicate execution. A technically interesting specimen is a gold watch, still with verge escapement, the works of which include a small mechanism playing a minuet. A ladies' neck watch, by Patek & Philippe, Geneva, may still be mentioned. The watch itself is heart-shaped, the lid surfaces are large garnets set in gold, while the chain consists of lapis lazuli links with appliqué roses and garnet beads.

For the professional horologist, division VIII—inventions and experimental work—will doubtless possess special interest. The 14 selected specimens in this division bear witness to the extraordinary ingenuity and the masterly skill of many of the leading men in the watchmaking industry. First in order for mention should be a two-cased watch ornamented with perforated work, with bell repeating mechanism by the past master, George Graham (1673 to 1751). It contains his cylinder escapement, which, of all his inventions, must be regarded as the

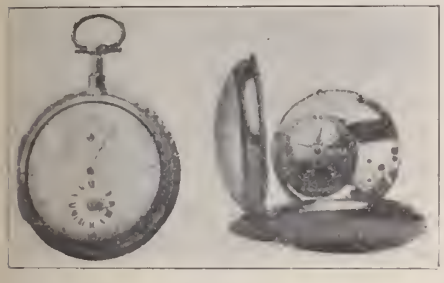

Fig. 31. Fig 31a.

most popular, and which carried his name throughout the world. The specimen is equipped with the, at that time, very rare jeweled bearings. A further remarkable specimen is a gold watch bearing the inscription, "Non plus ultra" (Fig. 31). The winding of this is effected automatically by an elastic lever weight attached to the back plate, which is set in motion as soon as the bearer steps forward in walking. This invention, revived in modern pedometers, and in this case designated "shaking" or "hammer" winding (Fig. 31a), dates from the year 1780 and was made by Jean Louis Recordon, of Neufchâtel. In London (according to Poppe) the first of these perpetual watches brought 240 to 300 thalers. In this case we have probably to do with one of the first productions of the workshops of this master, for the ornamentation of the watch is strictly in the style of Louis XVI.

The Londoner, Thomas Earnshaw, already mentioned, is represented by one of his first chronometers. The balance, consisting of bimetallic wheel sections, fitted with conical metal plugs, has a cylindrical spring. A chronometer made in 1830, and equipped with an almost precisely similar device, attracts attention, because two of the best Dresden watchmakers of their time, J. F. Schumann and Fr. Gutkaes, worked on it. The latter was the preceptor of Adolf Langes, with whose name the foundation, in 1845, of the great watchmaking industry in Glashütte was connected. Still earlier evidence of the reawakened watchmaking industry in Saxony is afforded by a silver cylinder watch made by Paul Kindermann, of Bantzen, with a date mechanism, the key winding of which may be effected either to the right or left. There are good reasons for believing that Kindermann was the teacher of the Royal Mining Councillor and Chief Inspector of the Mathematical Salon, Joh. Heinr. Seyffert (1751 to 1818). Seyffert received his scientific training at the universities of Leipzig and Wittenberg, and was the foremost horologist in Saxony at the opening of the 19th century. The Mathematical

Salon contains some of his best work. The Pleissner collection also owns a well-preserved specimen by him, with cylinder escapement, which, according to the number, 92 (1809), was the 92d of the about 100 specimens made by him, and dates from 1809. It is certainly a sign of this man's love of truth when Seyffert, by means of an engraved inscription in the interior, stated that the escapement in this watch originated with his friend, A. L. Bréguet, Paris.

A golden lever watch, made by Courvoisier & Co., Paris, about 1800, has an eight-day movement, and is one of the oldest equipped with "pin pallet" escapement. Noteworthy also is a silver lever watch, made about 1820 (Fig. 32), the balance of which, with a diameter of 40 millimeters, is much larger than the ordinary measurement. This large balance, by its size, was claimed to insure better results. The setting of the hands in this watch is effected in a peculiar manner by a knurled little wheel located on the periphery of the dial. Among the remaining watches in this division we may briefly mention a gold minute repeating watch, with bimetallic regulator compensation, by Melly & Co., Geneva; a gold repeating watch by Brégnet, Paris, with the same style of compensation, the stone cylinder, invented by Arnold, and the so-called parachute device—a peculiar protection for the delicate, easily injured ruby cylinder (Fig. 33)—and a gold chronometer by Le Roy & Son, in Paris, court watchmakers to the king. It is one of the few works of precision completed by this famous French horologist in consequence of a competition instituted by the Royal Society in 1823.

The Pleissner collection likewise includes a collection of timepieces of which heretofore no mention has been made. These are several clocks, having, it is true, the form of a watch, but exceeding the latter three or four times in size. They served the purpose in traveling carriages, possibly also on board ship, as time recorders, date indicators, and, when necessary, as alarms. The specimens shown in this collection were, in their time, certainly very expensive. It speaks for the value of these clocks at the time that among their known owners only princely personages were included. It is certain that very few clocks of this character have come down to us, and the seven specimens here shown are among the most valuable in the collection. There appears to have been, about the middle of the 18th century, a special demand for such traveling clocks, which, however, does not exclude the possibility of isolated specimens

Special Railroad Movements

To secure and hold the railroad trade there is no more attractive and permanently satisfactory line than the V. & C. Special Railroad Movements.

The watches in question have been in use for many years by a great many railroad men on all important lines in this country, and have shown a degree of accuracy and reliability which is unparalleled.

Many railroad watch inspectors have assured us that the rigid requirements of a railroad watch are met by the V. & C. to a degree which is beyond criticism, and which places the line in a class by itself.

You should have a representative showing of these railroad movements—17 to 21 jeweled, adjusted to heat, cold and position, and lever set—in order to get your share, and more than your share, of this most desirable class of business.

WATCH CASE REPAIRERS

English and Swiss Cases altered for American movements. Estimates furnished. Work guaranteed. Prices reasonable.

68 Nassau St., New York

of this form and character having been previously produced.

A clock of this character, with a dial 116 millimeters in diameter, the origin of which is hardly later than 1540 to 1550, is shown in Fig. 34 a. It is the pronounced but materially enlarged type of the breast watch of South German make, as noted in the first division. The perforated case, with the lid also in perforated work, is

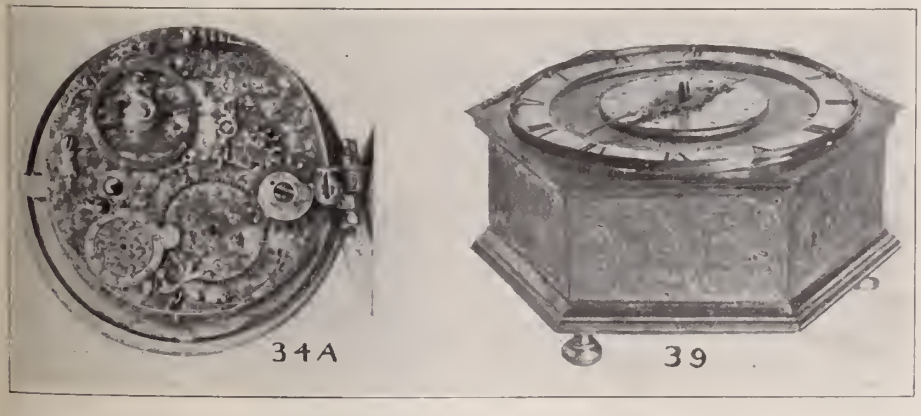

Fig. 36.

Fig. 37.

fashioned of fire-gilt bronze, and shows elaborate Renaissance ornamentation. The movement, with arrangement for striking the hour, made entirely of iron, with its hog's bristle regulation, the spring brake and the unenclosed mainspring, corresponds exactly to the watch mechanism of the period referred to (Fig. 34 a).

The remaining six traveling watches or

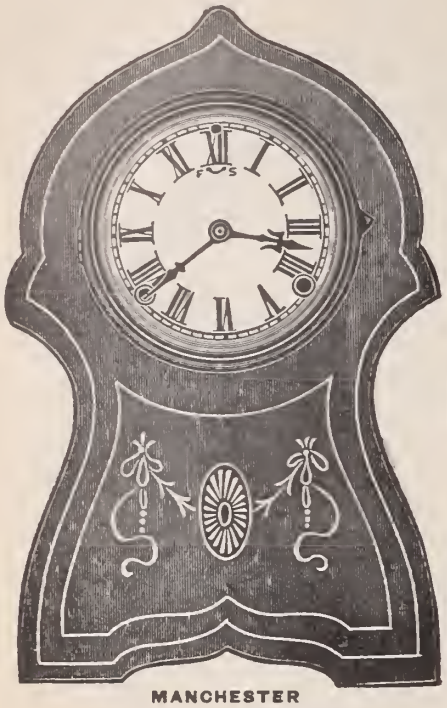
clocks date all from the 18th century; the diameter of their dial plates vary from 85 to 95 millimeters, the heaviest of them weighing 1.420 kilograms (about three pounds). The cases, with a single exception, following the characteristic style of the period of their origin, are of silver, prominently embossed in relief and well preserved. The decorations are here also pastoral and garden scenes, allegorical figures, etc., with architectural backgrounds, sometimes relieved by playing fountains. For the protection of these richly ornamented cases, outer cases of leather, tortoise shell and snake skin, also decorated, served. To facilitate better inspection, the works are placed alongside of their respective cases, and owing to the richly perforated ornamentation of the upper plate, affords an idea of the style of elaborate decorative movements of this period. A carriage clock made about 1720 by Joh. Melch. Steinmueller, of Gera, bears on the case the arms of the princes of Reuss, as well as the insignia H. LXXV. R(euss), and the tie braces of the plates of the movement in glass were adorned with gilded monograms A.G. with the superimposed princely crowns. The movement, in addition to the time record, had a four-quarter striking train, an alarm arrangement, a repeating device with bell, and showed the date. From the princely possessions of the house of Reuss also came a similar clock, made by C. F. Weber, Dresden, about 1740.

A carriage clock, equipped only with an alarm, was made by Huebner, Vienna, for King Augustus II. of Poland, son of Augustus the Strong. It bore, in the center field of the silver dial plate, the Saxon-Polish arms. The hour hand is formed of a golden monogram, A.R., with the royal crown (Fig. 35). From the possessions of the Emperor Nicholas II. of Russia came another clock, made by Francesco Heckhel, of Fridtberg, near Augsburg (Fig. 36). It has the same arrangement of the mechanical parts as the Steinmueller specimen. Two of the most beautiful of these clocks, one of which is represented in Fig. 37, were made about 1740, by the already mentioned J. F. Poncet, Dresden, probably for the Saxon court.

The collection closes with four table clocks, noteworthy South German masterpieces of the 16th century. The ornamentation peculiar to these clocks, partly engraved, partly chased decoration, bears witness to the love of ornamental art that inspired the Renaissance period. Of the makers, but one, Hans Eichsted, is known. Of these clocks we have selected for pictorial representation (Fig. 38) a Nuremberg work, made about 1550, with its movement, striking and alarm trains disposed one above the other in a crystal case, and (Fig. 39) a table clock in a hexagonal case, signed D. R. D. and made about 1600. The work has iron wheels, without fusee regulation. The artistic decoration of this specimen is in a good state of preservation and the little clock belongs with the best in the collection.

The Pleissner collection at present consists of 118 objects. Only a small portion of them could, in picture or description, be here accorded their deserts. Every one of these clocks can be considered a selected and, for its period, typical specimen.

It is much to be wished that the city of Dresden, so much visited on account of its collections, might rejoice in the permanent possession of this rich collection. The little that Dresden possesses in the way of old specimens of the technical art in small timepieces, that is accessible to the public, is scattered and inconsecutive.



(THE END.)

Old Watches in the Show Window.

EXHIBITED in the show window in the store of Hutchinson & Myers, Massillon, O., recently, was a collection of watches, some of which had been made as early as the year 1700. A French Virge watch is dated 1725. The earliest timepiece is an Oliver Quartier made in 1700. Another Swiss watch bears about the same date as the former.

An old horse timer excites a great deal of curiosity. It has an hour hand, a minute hand and a third long hand which indicates the seconds on the minute dial.

A new jewelers' work bench has just been placed upon the market by Swartchild & Co., Heyworth building, Chicago, Ill. The novel feature of this bench consists of a tapered apron drawer which is zinc lined and has a screen or perforated center through which the filings drop into a removable cup. The frame of this bench is made of highly finished oak, the top of hard birch, oiled, and in the natural finish, while the drawers have brass handles. The wooden filing block is removable and will fit in any of the three openings left for the purpose. A catalogue will be sent to any jeweler upon request.

AMERICAN-SWISS WATCH CO.
1 MAIDEN LANE
NEW YORK

A.W.C.CO

Design 1776c.

AN impression finds occasional lodgement that, owing to the extremely high character of A.W.C.CO cases, all of them are high-priced. With the high standard required in the workshop it is truly impossible to turn out slipshod work, but the factory makes a grade of lower-priced watch cases. The same taste and judgment, however, are exercised in making all our cases.

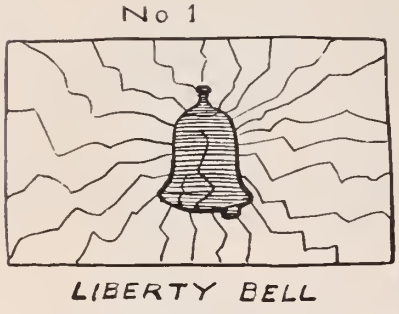
TRADE-MARKS

Manufacturers and Jobbers:

We now have in preparation a supplement to the second edition of *"Trade-Marks* of the *Jewelry and Kindred Trades,"* and in order that it may be as complete and accurate as to new marks as it is possible to make it, we request every manufacturer and jobber to send us a list of such marks as he may *now use,* or *has ever used,* together with such information (the kind and quality of goods upon which the marks are used, etc.,) as may be germane to the subject. Send cuts of marks if possible. If not, send clear, printed impressions or drawings.

The earliest attention is solicited, as it is of utmost importance to every manufacturer and jobber to have his mark recorded in this supplement.

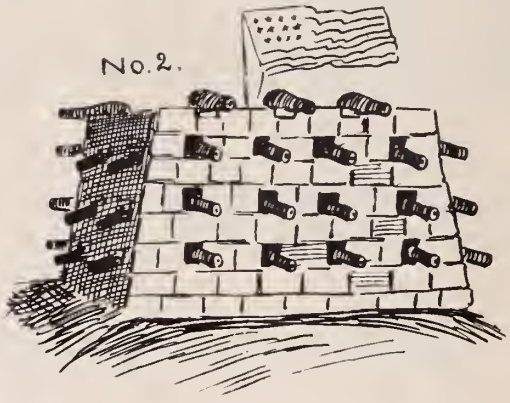
The Jewelers' Circular Publishing Co., 11 John Street, New York



STORE KEEPING DEPARTMENT

That this department shall prove mutually beneficial to our readers, it is desirable that the members of the trade generally communicate with THE JEWELERS' CIRCULAR-WEEKLY regarding any advantageous device or plan which they are utilizing in connection with their business.

Four Original Ideas for Making Independence Day Window Displays for Retail Jewelers

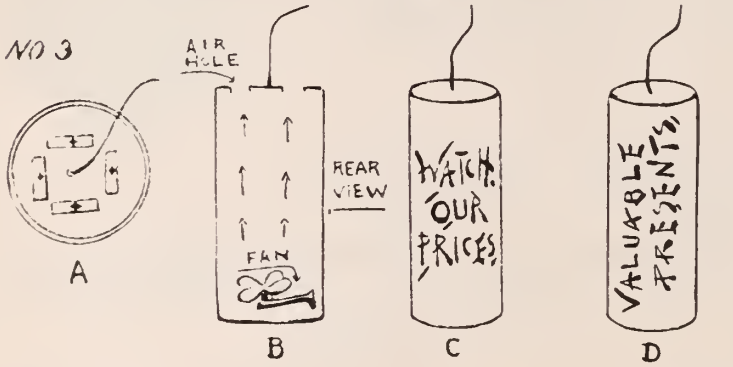


No. 1.

CUT a large sheet of stiff cardboard into a bell shape; use bronze-colored cardboard for this purpose (or paste tinfoil over any color cardboard); paint on your bell the figures 1776-1908, and outline a crack on the bell to simulate the original Liberty Bell. This should be suspended at the rear of the window by a few yards of red, white and blue baby ribbon, the colors being arranged to alternate. Your window display can be exhibited beneath this decoration. Price cards used could be cut out of miniature bells, which will look well.

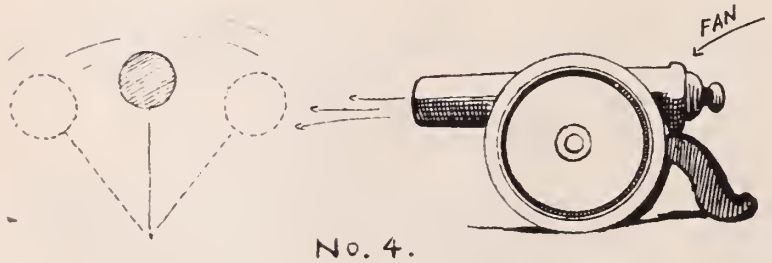
No. 2.

Erect in one corner of the window a miniature fort, composed of small boxes roughly piled into a semblance of a hillside fortification, interspersed at irregular intervals with rusty cannon (*i.e.*, beer bottles covered with brown tissue paper, pasted on smoothly). At the base a few feet of green turf could be placed and a little tuft of grass put into nooks and corners here and there.



Surmount the entire affair with a United States flag stiffened by being pasted on paper if desired to have it remain stationary, or an ordinary flag if intended to have it blowing in the breeze created by your electric fan. If the latter method is used the fan can easily be concealed in space back of the stack of boxes and placed at such an angle that it will keep the flag undulating and make the show exceptionally attractive. The opposite side of the window is used for displaying stock.

No. 3.



Take two hoops of slightly larger diameter than your fan. Tack to them a sheet or two of bright red cardboard and form a barrel; cover it at one end with a sheet of cardboard cut in pattern A, with a bit of ribbon knotted in the center. The four places marked X are slits cut in the pattern A.

Place the completed structure over your fan as shown in Fig. B, and you have Fig. C, an immense "firecracker" with the "fuse" squirming in an eccentric manner. Where the cardboard is joined, cover with strips of paper of the same shade. This firecracker can also be displayed with the inscription illustrated in Fig. D. Price tickets should be small bits of red cardboard with a bit of string tied at the end, and should be lettered in an eccentric style to resemble Chinese writing.

No. 4.

Cut a crude pattern of a cannon out of extra heavy cardboard, dark brown in color, and place this somewhat towards the rear of the window. An electric fan can be concealed behind this cannon and faced so that it blows toward the cannon's mouth. Fasten by a small but strong thread a toy balloon directly in front of the cannon's mouth. When the fan blows the effect will be as if the ball had just been discharged from the cannon. Let the fan rest alongside of the "gun carriage," the distance between the fan and the balloon being adjusted according to the strength of the current produced by the fan.

NOTE.

None of these displays will require an expenditure of over 50 cents for material. They are effective even if the moving features be eliminated.

Storekeeping Department.

Independence Day in Odon, Ind.

ODON, Ind., has a population of not more than 2,000 inhabitants, but its merchants, including its jewelers, are by no means the least enterprising in the Hoosier State. In view of the near approach of Independence Day, when storekeepers in the larger cities give expression to their ingenuity and commercial enterprise by special window displays, floats, etc., it may be interesting to show what one of Odon's jewelers did on a previous celebration of July 4. "The merchants of Odon," according to a local scribe, "got together and resolved to show the town by a real pageant that they were 'alive and kickin',' and not mere fossils of the paleozoic period."

Among the floats in the parade was one by Andrew M. Keck, whose humble effort is shown herewith. The whole display cost about $5 together with the labor of the jeweler.

The float consisted simply of a spring wagon on which was erected a platform supporting a huge pair of spectacles made of 24-karat iron by a blacksmith. The frames were painted yellow and put together by means of bolts. A banner erected on posts, bearing the word "Keck's," was stretched lengthwise through the center of the wagon. From the framework of the banner was suspended on a wire the jeweler's large watch sign. About 20 yards of red, white and blue bunting and two flags constituted the decoration.

A quaintly dressed boy with a large screwdriver, a duster and a large eyeglass was industriously engaged in fixing the watch, winding it up, listening to its ticking, and performing other antics which made him conspicuous. Mr. Keck says that he made the photograph himself, and that this is the reason why his "picture wasn't took," but, in his own words, he has "a very worthy substitute in the person of my wife, who is seen standing bare-headed in the door."

A recent fire in Sidney, O., did damage to the residence of J. B. Swain, of that place, amounting to $300.

QUAINT INDEPENDENCE DAY FLOAT USED BY A JEWELER IN ODON, IND.

Up-to-date Business Methods of a Model Jewelry Store in Norfolk, Va.

AN interior view of the handsomely furnished retail jewelry store of the Paul-Gale-Greenwood Co., Norfolk, Va., is illustrated below. The establishment, which is located at the corner of Granby St. and City Hall Ave., is eight stories high, the exterior being light brick reinforced by concrete on the inside. The building is thoroughly fireporof.

The store proper is 50 feet wide and 90 feet deep. The first floor and part of the second is used by the firm, the manufacturing and shipping department being located on the second floor. The show windows are of single pane plate glass. The one at the left of the entrance is 12 feet long, while that on the right is 14 feet long, and extends 14 feet on City Hall Ave. Directly over them is the mezzanine floor, which extends out into the store, several feet.

The diamond room is just back of the show windows at the corner of Granby St. and City Hall Ave. The cashier's booth is located in the rear of the diamond room. The watch repairing department, which is equipped with every modern repairing device, is situated back of the window at the left of the entrance. In the extreme rear of the store is the manager's office. The general offices, the reception room and the optical department are located over the manager's office, and the vault, but not on the second floor.

INTERIOR VIEW OF THE STORE OF THE PAUL-GALE-GREENWOOD CO., NORFOLK, VA.

The illumination of the establishment is noteworthy. The store is lighted by 12 electric chandeliers, which are suspended from the ceiling, and 20 electric chandeliers, which are arranged around the columns. Besides these there is a large number of incandescent lights on the mezzanine floor.

There are four rows of show cases in the store, all of mahogany with marble bases. The whole interior, in fact, is finished in mahogany. A double horseshoe show case extends down through the center of the store, while two other lines of show cases are on either side of this, and parallel to it. Each side of the store is lined with wall cases, between which are French plate glass mirrors.

The cut glass room, between the manager's office and the vault, is brilliantly lighted, the deeply cut geometrical designs in the various pieces standing out in great splendor at night. The vault, which was built at a cost of $5,000, is seven and one-

(Continued on page 92.)

The Element of Human Interest in Jewelry Advertising

Written expressly for The ewelers' Circular-Weekly by Robt. Francis Nattan

THE element of human interest is gradually becoming more conspicuous in retail jewelry advertising. There is no doubt whatever but that advertising without this element is, in the phraseology of the law, well nigh null and void. In order to make sales by means of newspaper advertising the advertisement must possess the subtle power of moving men's wills to act in accordance with the purpose of the advertiser.

The jeweler who advertises men's watches would be rash indeed to dwell simply on the ornamental qualities of a timepiece. The prospective purchaser of a watch wants a timepiece chiefly because he desires a mechanism which will indicate accurate time; hence, the advertisement which appeals to the railroad man, to the busy man who wants to catch a train or to the office man who wants to count the very minutes as they speed by, is the one which will prove effective.

Permanent utility is the great desideratum in watches, and consequently the unerring accuracy of the mechanism cannot be too strongly dwelt upon. This description of the mechanism, however, without the all-important element of human interest, makes dry reading and a too technical appeal. Show the reader how he can be on time or why he is late, how he can secure a dependable watch, and you have aroused his interest.

The wedding season, when the jeweler advertises silverware, gifts of jewelry, cut glass, china, bric-à-brac and novelties, offers many opportunities for making this kind of an appeal. Many of the articles which are purchased for this occasion are made for utilitarian purposes and not as mere ornaments, and this renders the advertiser's possibilities all the greater.

A good advertisement can actually create in the mind of the reader a desire to give, by demonstrating the elation and pleasure which will be felt by the recipient of the gift, and the consequent gratification and appreciation which will accrue to the donor.

Millions of dollars' worth of diamonds have been sold by showing not only that their purchase is a good investment, but also by appealing to human vanity. The advertisement, which tells a man that the wearing of a diamond makes him look prosperous, nine times out of 10, makes an instantaneous hit with him. This is really the main reason why so many diamonds are sold on the instalment plan to buyers who make genuine sacrifices in order to wear the coveted gem.

When an advertisement can show to a housewife that a most favorable impression will be made on the mind of visitors by an attractive array of cut glass and silverware neatly arranged on the dining-room buffet, another susceptible string in the heart of human interest will often be touched, and again we have produced a psychological effect—the impelling desire, on the part of the reader, to buy.

This human interest appeal is a most wonderful selling power. It is no mere theoretical scheme or vagary of inexperienced writers, but the result of the study and the experience of practical merchants.

Avoid the pedantic style of advertising,

GRADUATION, WEDDING AND OTHER ADVERTISEMENTS USED BY RETAIL JEWELERS.

Retail Advertising Department.

shun "high-faluting" phrases, use plain talk and good judgment, inject the human interest element into your style and success will come your way.

There is some human interest in the little advertisement of the Weaver, Jackson Co., Los Angeles, Cal. The ad. occupied a space of only three inches, single column, and was used during the presence of the fleet on the Pacific Coast.

There is a great deal more of this element in the advertisement of W. C. Graves & Bro., Memphis, Tenn., which has been reduced from seven inches, double column.

Graduation day certainly is an important event in the lives of the youngsters, and the advertiser has brought out the fact forcibly in his well written introduction, which is followed by a number of suggestions in the way of gifts for boys and girls.

The advertisement above this, that of J. Selinger, Washington, D. C., was used in a space 7¼ inches, double column, and advertises a special offer of the repair department. The offer is a generous one and no doubt brought considerable business.

"Newest Jewelry Novelties" is the catch phrase that was used in a small advertisement by Thomas J. Routledge, Elmira, N. Y., last month. The typographical arrangement is unattractive, the setting of the text in the border in this manner does not enhance the beauty of the announcement.

Simon Zausmer, Waverly, N. Y., sent in the largest advertisement in this group, some time ago, for review. The original advertisement occupied a space 11 inches high by 15 inches wide. The purpose of the ad. was to offer suggestions for gifts, and this it does very well. A range of prices is quoted under each cut. This is very desirable as it destroys any erroneous ideas which may prevail as to the prices demanded by jewelers. Many persons wrongly believe that the department stores' prices are less than those of the jeweler. The jeweler should do all in his power to destroy this impression. In his advertisement he should endeavor to show that his prices are as low, if not lower, quality considered, than his department store competitors. In the Zausmer advertisement the text is general, but suggests a large assortment of stock. The advertisement is well balanced, but a different style of type should have been used in the text in the center. An italic slope type would look fairly well, or even a smaller type than that chosen by the advertiser if the first word were initialed.

John H. Booth, Alton, Ill., appropriately advertises a special brand of silverware in a space of 5½ inches, double column.

The text used by J. S. Baird, Watertown, N. Y., in his announcement of five inches, double column, is well written but poorly displayed by the printer. "Heavily Plated Silverware" would make a more suitable catch phrase than "On the Surface." It might be followed by the words "is the kind we carry." Then the argument might go on to tell how the thinly plated closely resembles the heavily plated merely "on the surface."

A. Rosenfield, Leavenworth, Kans., also uses a commendable text, which has been unattractively displayed from a typographical standpoint. The list of gifts would look better if set vertically in two columns. A range of prices should also have been quoted.

J. H. Lepper, Mason City, Ia., used a comprehensive advertisement in a space of 15 inches, double column. Practically everything mentioned in the text is accompanied by illustrations. The suggestion in the introduction that it is always better to purchase gifts of good quality which will therefore have a permanency that will allow the gift giver to be long remembered, is a good one.

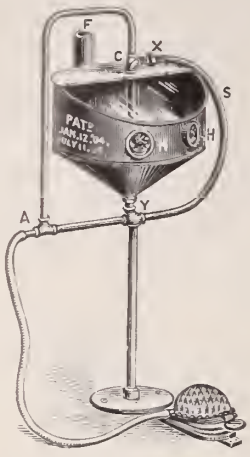
Elmer J. Faust, Allentown, Pa., advertises silverware exclusively. For the

bridesmaid and best man numerous articles are suggested. The announcement was used originally in a space of 3¼ inches, single column.

The advertisement of John C. Pierik & Co., Springfield, Ill., is reduced from nine inches, triple column. The unique and ornamental border makes a good setting for a well-written and well-balanced advertisement.

A very handsome brochure, 5¼ inches wide by 7¾ inches long, has recently been issued by August Loch, Pittsburg, Pa., commemorating the 28th year of his business career in that city. The brochure contains five very fine half-tone illustrations of different departments of the store, including a full view of the Loch building. The cover pages are of a soft white corrugated paper, with deckeled edges. On the front cover page, set in a conventionalized geometrical design against a light gray background, is simply the name "August Loch," which stands out in high relief against the gray background. The letters are not printed, but are formed by a die and have been forced out from the paper itself. The inside pages are of enameled paper. The text is interestingly written and the pamphlet in its entirety is a worthy token of the event which it aims to commemorate.

THEY Sell Because They Excel.—We are selling a great many watches—why? Because we have a large assortment of the recognized standard movements. The best grade of American-made watches in a variety of cases, solid gold, gold filled or substantial silver. Because we give a broad guarantee of the quality of all our watches. Lastly, because our prices are right. They are the lowest for which such grades of movements and cases can be sold. C. H. Leonard, Winsted, Conn.



Diamonds—Our stock of fine mounted diamond jewelry is unsurpassed by any in this vicinity. We have exceptional facilities for buying loose goods and are able to quote lower prices than fine goods can be purchased for in New York. Our diamond department is under the personal supervision of G. W. Fairchild, whose knowledge of gems, gained by his years of experience, is at the service of our customers. We invite prospective diamond purchasers to call at our shop and see the exhibition of newest designs in rings, brooches, pendants, scarf pins, etc. G. W. Fairchild & Sons, Bridgeport, Conn.

Neck Chains.—Who would go without a neck chain? I am sure no girl would if she could get her best fellow to open his heart. And then, again, we have lockets to go with them. Don't forget our large assortment, at The Star Jewelry Store, Norwich, Conn.

The Gogglette! A new goggle for the automobilist and tourist. The Gogglette affords better protection to the eyes than any other auto goggle on the market. Made in aluminum, with pneumatic rubber eye cushions. Neat and sanitary. Can be washed without injury. Comes in white and amber lenses. Price, $3.25. Clark & True, Middletown, Conn.

Does your watch drag behind in the day's march? Or does it attempt to beat the sun? In either case we will correctly diagnose the ailment and for a moderate charge effect a speedy and lasting cure. We have special facilities for doing fine watch and clock repairing and difficult or delicate work can be entrusted to us with confidence. H. E. Harris, Lowell, Mass.

You have oft been told to invest your money so as to have something for a rainy day. You can best heed this advice by buying a diamond from us, as our prices are lower than elsewhere and prices are continually advancing. It will prove a most profitable investment. Our easy payment system enables you to buy a diamond from us, no matter how small your income, and "wear it while saving." Watches and jewelry on equally liberal terms and low prices. Your patronage solicited. S. A. Andrews, Tacoma, Wash.

half feet high and seven feet two inches by eight feet wide. In its construction are used two inches of reinforced concrete. Three-ply chrome steel is applied to the interior, which has a triple time-lock.

Nothing has been overlooked in order to facilitate merchandising. There is a pneumatic cash system with a duplicate check system and the stock books at all times show a complete inventory, thus saving considerable time. A record is kept of the manufacturer's name, his stock number, the Paul-Gale-Greenwood Co.'s stock number, the cost, selling price and description and number of articles on hand.

Sales are checked off as they are made, so that the records show at any time just what is in stock besides those articles which sell quickly or slowly.

The French Hall-Mark Question in Great Britain.

(From the London *Watchmaker.*)

JUST at the present moment a rather unfortunate matter has cropped up with regard to the suggestion from the French Government to the Board of Trade that the French assay marks should be recognized in this country. Naturally, Birmingham, London and the minor manufacturing districts see in this suggestion a menace to English productions. There appears to be no legitimate reason why the French marks should be recognized as insufficient to demonstrate the quality of the precious metals sold. As a matter of fact, the French manufacturers are put to very little, if any, disability, owing to the fact that their goods must receive a special British hall-mark if they are sent to this country for sale. The Birmingham Association has moved with alacrity in the matter and has passed the following resolution:

That the General Committee of this association, representing 382 firms of jewelrs, silversmiths and watchmakers, respectfully submit to the Board of Trade that, as the maintenance of the integrity of the British hall-marks is of such vital importance to the welfare of their industries, no arrangements should be made for the recognition of foreign hall-marks without the knowledge of, or consultation with, the members of the jewelers', silversmiths' and watchmakers' trade in London, Birmingham, Sheffield and Coventry. This committee also asks the Board of Trade to receive a deputation of the members of this association before making any such agreement.

The matter is one which the Council of the National Association of Goldsmiths has dealt with, and feel just as strongly as the wholesalers' association. The jewelry section of the London Chamber of Commerce has also met and expressed an opinion very strongly against any question of special recognition of French assay marks. Our French friends must not think that the objection of British manufacturers is made in an unfriendly spirit, but for the simple reason that while they believe at the present moment jewelers of all nationalities stand on an equality in the sale of their goods in Great Britain, they are also of opinion that they should not be given the added value of the British hall-mark.

WORKSHOP NOTES AND QUERIES

[Answers are also solicited from our readers to the questions published on this page.]
No attention paid to communications unless accompanied by full name and address of the writer.

QUESTION No. 2157.—**Silver and Zinc Alloy for Handles.**—*Customers often complain because silver cane and umbrella handles tarnish and blacken the wearer's hands. Can this be prevented in any way?* S. A. Z.

ANSWER:—Silver will tarnish when exposed to the air. The discoloration is removed when handled, causing the hands to turn black. Silver can be alloyed to prevent most of the oxidization, and, according to the German method, the silver should be alloyed with chemically pure zinc in place of copper. This, it is claimed, will prevent excessive oxidization and will also give the silver a whiter and purer appearance. This silver and zinc alloy is also much employed by the French for their silver mesh bags and purses, giving the articles a fine white appearance, which it is impossible to produce from silver and copper alloys.

QUESTION No. 2158.—**To Clean Alabaster and Opera Lenses.**—*How can I clean small alabaster ornaments? Also tell me how to clean opera glass lenses.* T. C.

ANSWER:—Alabaster ornaments may be cleaned by saturating linen rags in chemically pure benzine, or in a solution of distilled water and lime, and wiping off thoroughly. Clean all the lines and crevices. This will usually remove the discoloration caused by exposure to dust and moist air. Opera glasses or lenses are easily cleaned by saturating tissue paper in a weak solution of distilled water and alkali. Then dry with a clean, soft cloth.

QUESTION No. 2159.—**Chinese White for Tracing Engraving.**—*There is a white substance used for tracing marks for engraving on metal plates. Can you tell me what it is?* C. W.

ANSWER:—This white is Chinese white; the best for this purpose is Windsor & Newton's Chinese white. This can be rubbed on the plate, the tracings may be made in this and engraved. This white is so fine that it will wipe off without destroying the polish.

QUESTION No. 2160.—**Matt on Aluminum Medallions.**—*We are producing aluminum medallions and want the relief to be a deep matt. The other portions should have a high polish. We have polished the die brightly, but we cannot produce the desired matt. You will aid us considerably by giving any available information on the subject.* R. & A.

ANSWER:—To produce the matt on the medallion, the polished part of the die must be carefully painted over with oil, and then with a thin piece of wood apply to the parts to be matted and in relief nitric acid. This will burn the relief and will produce the matt impression. The painting over of the polished part is done in order to prevent the acid from affecting it and thereby destroying the polish. After the acid has done its work the whole is well rinsed off and dried in sawdust. This operation must be repeated after the die becomes smooth from use.

QUESTION No. 2161.—**Antique Finish on New Tin Articles.**—*How could I produce an antique finish on new tin medallions?* T. P.

ANSWER:—To give an antique appearance to tin medallions or any tin article, dissolve alum in water and add a few drops of muriatic acid, or sulphuric acid. Immerse the tin articles in this for a few moments and an antique finish will appear.

QUESTION No. 2162.—**To Blacken a Brass Watch Chain.**—*How can I blacken a brass watch chain to match an oxidized locket?* T. B.

ANSWER:—To blacken a brass chain or any other brass articles, prepare a solution by dissolving some vitriol of copper in water; also dissolve some ammonium carbonate in water, then mix the two together. In this dip the brass pieces and hold same over an alcohol lamp; dip again and dry. Repeat until the desired color is obtained, then lacquer and dry.

QUESTION No. 2163.—**14-Kt. Gold Alloy.**—*Will you kindly tell me through your columns what alloys and the proportions are used in making 14-kt. gold pens? Also the method of enameling flowers, etc., with transparent enamel to produce the varied and blended colors?* E. C. S.

ANSWER:—(1) Fourteen-karat gold usually contains the following proportions: Gold, 14 parts; copper, six parts; silver, four parts. But the proportions are not always the same. The silver and copper may be changed slightly for various reasons. To produce a harder alloy more copper is used, while silver will soften it. For gold pens the alloy should be hard and springy. There should be an alloy that will resist the acids contained in the inks. It is generally understood that the gold pen manufacturers use an alloy specially suitable for their purposes, which, of course, is one of their shop secrets. (2) The transparent flowers on enamel are produced by first giving the gold a few coats of white enamel, fired in a muffler, and on this surface the flowers are painted in the same way as china, then fired in. Another way is to get from a jewelers' supply house the little gold leaf ornaments. This gold leaf is laid on the enameled surface, placed in the furnace and heated until it adheres. About the same amount of heat is used for firing paint. When cool it should be covered with colored enamel and fired again. In order to produce the white, or any of the other colors of enamel, the material is purchased in lump form, then ground fine with a mortar and pestle. When fine enough it is washed and placed in a glass jar. The pieces to be enameled are cleaned until they are free from dirt, grease or oxide. The parts to be enameled are charged, or covered with the enamel in a thin layer of the ground enamel, dried, placed on a plate of clay or iron planches and inserted in a hot muffle or assayer's furnace. When the enamel has melted, the plate is taken out. When cool the surplus enamel is filed off with a carborundum or emery file. The piece is then cleaned and again placed in the furnace until the surface melts and flows smooth. The flowers or leaves are then put on and finished as described above.

A Rich Green Color for Jewelry.

IT has long been known that the green galvanic gilding may be done by a solution containing pure gold and silver, but such color has always been of a very light shade. While this shade is well liked, it has been done quite extensively on cheap jewelry, and a darker color has become desirable for a better class of plated and solid gold articles. This color may be obtained by the following solution, which contains an important addition of arsenic to the gold and silver.

It is absolutely necessary to use white arsenic, generally known as "arsenious oxide," which should not be added to the solution directly, but should first be dissolved in caustic potash. It is prepared as follows:

Take 4½ quarts of distilled water, 23 grams of caustic potash and 14 grams of arsenic.

The arsenic should be well triturated, as otherwise it will dissolve very slowly; then the potash is dissolved in half a quart of water, to which the arsenic is added and the mixture is then heated.

In order to be able to control the color it is necessary for the galvanizer to add the arsenic solution gradually and in very small quantities, as any want of caution will turn the color to a dark hue.

The second annual convention of the Oregon Retail Jewelers' Association was held recently in Portland. Among the papers read were: "The Future," by L. A. Lewis, of Klamath Falls; "The Stamping Law," F. M. French, Albany; "Benefits of Organization," C. H. Williams, Condon; "Advertising," E. J. Jaeger, Portland; "How to Get Business," J. E. Staples, Portland, and "Store Management," L. M. Hoyt, Hillsboro. The association was organized a year ago and the present officers are: President, L. A. Making Fine Lusters.

(By Owen Gibbons, in the London *Pottery Gazette*.)

GLASS and pottery are sisters in art, and the methods of decoration used by the one can often be used by the other. Various ways of making glass iridescent have been in use in the glass works in the Stourbridge district for many years. The lusters are most frequently produced by the depositing of metallic films on the hot glass. The metals are mostly in the form of chlorides, the articles being either held for a short time and turned around in vapor chambers, or are reheated in small kilns and then subjected to the vapors of the chlorides. Mother-of-pearl luster or iridescence is also given by the common luster method used for pottery. All the above lusters are only on the surface, and are not struck into the glass or glaze, as in the case with copper or silver. Thomas Webb & Sons some years since produced a dark green glass containing copper, which was afterwards turned in the gas flame, and so became beautifully iridescent; but this is now out of fashion. Pin-heads of glass are also made in Birmingham, and lustered by the same method.

In pottery, as well as glass, the metals copper and silver, or mixtures of the two in the form of salts, can be added to the glaze or glass mixture, as the case may be, and when the glaze is fired up, or if glass is the article made, while still hot subject it either in the kiln for pottery or turn it in the gas for glass, and iridescence will be formed by thin coatings of metal in the body of the glaze or glass.

The quality of the glass or glaze has much to do with its suitability for luster decoration. Some years since I sent a piece of English glazed ware to a Florentine firm to discover if the Italian luster would take on it. Only a faint trace of red was discernible, but the Florentine potter had fortunately put on his own glaze on one part, and there the luster was perfect. Doubtless the undercoating of tin oxide, as is the Italian method of glazing, helps the reduction of the copper, for it is well known that tin oxide is a usual addition to the materials in the making of common ruby window glass to resist the reduction of the copper. The above is known as flashed ruby glass, and the process of its production is in no way like that of the Italian luster; but in stained glass we have a general method of decoration in manner like the Italian ruby luster process.

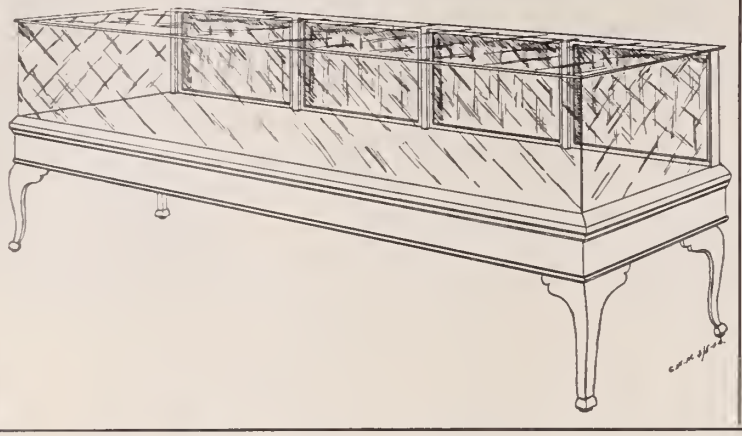
The two metals, copper and silver, have been used through long ages as the coloring matter for this class of window glass decoration. The same thick clay, or other cement, was used as a carrier, and also the proportions of clay to metal are about the same as in the recipe given by Piccolpasso. The difference in the firing is, however, great, the glass in this case being packed between layers of lime, which prevent the oxidizing of the pigments.

In my early observation of lustered glass I noticed that a class of Continental vases were lined and decorated in ruby color on a clear ground, and yet that there was no casing, as the surface was quite even, showing that no ruby casing had been removed from the clear part of the glass. Also there was always a slight luster to the color. Eventually I found that this glass was made in Bohemia, and then I entered into correspondence with a gentleman living where this class of goods is made, and he furnished me with a complete description of the method of production, with drawings of the kilns. I here give my translation of his description:

"Ruby stain, called red etching, by means of copper oxide. All sorts of glass are not suitable for this purpose. The best sort is that made with potash, which gives a beautiful and equal tone. Take one part of the finest ground black copper oxide and five parts yellow pipe-clay (ochre), add some water or turpentine to it, and grind it as fine as painters' colors. With a brush paint with this mixture as one would with other colors on the glass. Fire I.—After the color is well dried the glass articles are placed in an ordinary clay muffler and burnt in the ordinary way to a red heat. Through this the glass obtains copper stain in the form of a yellow-gray color. The paint is brushed off the glass after the burning, and the last remains of the ochre paint are removed by a solution of soda. Fire II.—The yellow-green tint of the decoration must now be reduced to red in the following way: The glass must be placed in a thin wrought-iron muffler; on the floor of the muffler is placed a tray with edges two centimeters high; this is filled with small pieces of stone-coal; the muffler is then hermetically closed and fired up to a low red heat. After this fire the glass has a dirty black-brown color which neither water nor acids will remove. Fire III.—To give the glass the beautiful ruby color, and to destroy the dirty color given by the gas, it is only necessary to fire it again in the clay muffler to red heat."

The suggestion of the first burning in and then removing the clay paste is a good one, as by this method the actual surface of the ware is brought into contact with the reducing gas.

The peculiar beauty of the Italian luster is due to the extremely thin metallic sheen and the variety of the iridescence. This, I think, will never be obtained in a progressively equal current of gas. In the Italian method of firing there was much greater variety in heat and reduction. The Italian luster was in great part used as an embellishment to their underglaze painting, and so clever were they that their luster firing did not affect the copper-greens in the underglaze painting. In England we seem never to attempt this combination of underglaze and luster work, although I may say that one of the great difficulties is to obtain harmony as the Italians did.



In my own experiments I have found that iridescence can be varied by lining with India ink or lampblack oil color such parts as veins on flowers and butterflies' wings, etc.; then the luster color painted over this work in the usual clay paste form. Shaded ruby can be done as follows: Shade the work, using finely-ground copper oxide (red is best); then blow a mixture of water and china clay all over the painting with an air brush. Fire as usual for luster. The protecting coat of china clay will do as well applied over the top of the painting as mixed with the pigment.

The Kaiser as Potter.

THE Paris *Figaro* recently published a descriptive article concerning the German Emperor's private pottery at Cadinen, which employs some 2,000 hands. According to our contemporary, the Kaiser is the soul of the undertaking. Though ready to receive advice on technical points, he keeps every detail of the work under his personal supervision. He engages the staff, cashier, clerks, foremen and all; the most insignificant workman cannot be put on or discharged without his consent.

The writer goes on to praise the care of this model employer for his workpeople. There are pensions for the aged, the widows, the orphans; none are forgotten. In the Summer outdoor sports are encouraged, in bad weather indoor recreations are enjoyed in specially erected rooms—lecture hall, library, books, papers and reviews. The royal master attends to every want. In all Germany there is no master who is so popular among his workpeople.

When residing at Cadinen he visits the works at 6 o'clock every morning, saying in a loud voice as he enters, "Good morning, workers." And they reply, all together, "Good morning, your Royal Highness." Then the Kaiser generally lets one of the cleverest craftsmen instruct him in the minute details of porcelain production, and invites one of the managers to dinner.

The Proposed Amendment to the National Stamping Law as to "Solid Gold."

Address of Geo. H. Edwards before the Joint Convention of the State Associations of Retail Jewelers and Opticians of Missouri and Kansas.

IT seems to me that such gatherings as this portend great good to the jewelry trade. The meeting of competitors and the better acquaintance thus secured cannot but lead to the improvement of conditions. You find, when you get at the real inside of the other fellow, that he is not a bad sort, and after all is very much like yourself and entirely different from the picture you had made of him from the things that had been told you by some customer who was trying to work you for a cut price.

The fact that you take up at these meetings such questions as these is encouraging, and your discussion of them will have great weight in shaping the policies and practices of both manufacturer and jobber. The manufacturer, jobber and retailer are all equally interested in these questions, but look sometimes from different standpoints, and in determining any question you will come nearer the right solution if you view it from all sides. Then, by all means, let us thresh these matters out thoroughly; let retailer, jobber and manufacturer get together and determine what is right and co-operate with each other to accomplish that right.

You will find, I am convinced, that the great majority of the jobbers and manufacturers desire the same things that you want, namely, only that which is honorable and honest and best for the entire trade. Why not? Your and their interests are identical. You cannot long continue relations with each other unless same are mutually profitable. Let us get rid of the idea which some of us seem to have, that the manufacturers are serving wholly selfish interests in advocating or opposing any stated policy. Let's listen to their statements of ideas and give them due consideration, confident that they are candidly and honestly made. Let's present to them our ideas of the question involved, and if they are wrong convince them, if we are wrong let's be broad enough to acknowledge it.

While this may not be the proper time and place, I cannot refrain from suggesting that the interests of the entire trade would be served by the appointment of a conference or arbitration committee by your National Association and by the National Association of Wholesale Jewelers, now forming, and representatives of the manufacturing jewelers, to take up together any matters of mutual interest or any differences there may be between the retail, wholesale and manufacturing branches of the trade, to the end that we may get to a better understanding of conditions and that evils that exist may be speedily remedied. Don't let us get the idea that the men who differ from us are necessarily insincere. Do not take what is told you by the representative of one manufacturer or jobber about a competitor as gospel truth until you do a little investigating. Possibly circumstances unknown to the man telling you the story might make things look different. But this is a digression.

The jewelry trade is prone to promise too much. This habit is of long standing and consequently hard to break. Eugene Ware, of Kansas, in talking of his travels abroad, tells of the explorations of the city of Nippur on the Grand Canal, between the rivers Tigris and Euphrates, revealing the fact that some 40 centuries ago there flourished in that city a certain real estate dealer, Belnadin by name, who purchased an emerald of the local jeweler which the jeweler guaranteed to stay securely in the setting for 20 years. Mr. Ware goes on to say that the real estate dealer was very prosperous and continued in business some 75 years, but fails to state how long the jeweler lasted. We seem to have had this habit for 40 centuries, and it has grown on us until we find certain manufacturers making watch cases which they term "stiffened gold filled" which have electroplated caps and inside lids, and so much gold on the outside that they can be sold at wholesale at $2.75 or $3. The manufacturers guaranteeing such goods to wear 20 years must certainly make a mental reservation that the case shall be carried only a part of the time on Sundays and not at all the balance of the week. Or, when a dealer sells a gold plated chain for $1.50 to a customer in good health and guarantees it to wear a lifetime, he is taking a chance not justified by the mortuary tables of any well regulated life insurance company.

Or, at times when you listen to the description of a watch movement made by some enthusiastic salesman, you feel confident that he is offering his customer a fine timepiece until a little investigation reveals that he is simply trying to make a Vanguard description fit an Ingersoll dollar watch.

We are accustomed to speak in hyperbole in describing merchandise for sale. Gradually, it seems to me, our standards have been lowered in response to the demand for something at a low price. The time was when 14 karat jewelry was not uncommon among the better classes; to-day we find 6 karat and 8 karat goods passing muster as "solid gold," and oftentimes even then the pin stems in the brooches are brass and the sleeve buttons are lined or filled with solder. We need a standard of quality, and the standard is partially provided or at least recognized, by the stamping law passed by Congress, June 13, 1906, which became effective June 13, 1907.

This law prohibits transportation by mail or in interstate commerce of any article of merchandise manufactured after date when act takes effect, and made in whole or in part of gold or silver or any alloy of either of said metals, stamped or labeled of a higher quality than the actual fineness of the gold or silver used.

It provides that the word "Sterling" or "Sterling Silver" stamped on silverware shall mean that article is 925/1,000 parts pure silver, and the word "Coin" or "Coin Silver" shall indicate that articles contain 900/1,000 parts pure silver.

Thus the United States Government has recognized and established by law a definite standard of qanlity for silver goods—and later in the act prohibits the use of either of these terms on silver plated articles either alone or when accompanied by words indicating that article is plated. But the act does not prohibit the use of words indicating the fineness of gold used in filled or plated articles, provided the words "filled" or "plated" accompany it. In short, it is lawful to stamp an article "14 karat gold filled," but unlawful to stamp any article "Sterling silver plated."

There is probably no question that the present law has had a salutary effect in the trade. We all remember the days when one dealer would have his 18 karat rings made of 14 karat gold, and his neighbor, who was a deacon in the chuch and whose conscience was therefore more tender, would order his 18 karat rings made of 16 karat gold. These old abuses are, I believe, overcome.

But there are still abuses which can be corrected—and it was doubtless a recognition of some of these abuses which led the Executive Committee of the National Retail Jewelers' Association to recommend an amendment to the stamping law, providing that the term "Solid Gold" or "Gold" should not be used on goods less than 10 karat fine. The amendment is as follows:

> "To amend the national stamping law and provide for a minimum of fineness to be stamped 'Gold' or 'Solid Gold.'
>
> "Sec. 1. Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled: That it shall be unlawful for any person, firm or corporation to stamp or otherwise imprint the word or words 'Gold' or 'Solid Gold' upon any article which is other than the same material throughout, except the solder, platinum or precious stones necessary in constructing the same and the free metal of which shall assay less than 39/96 fine gold.
>
> 'Sec. 2. Be it further enacted that it shall be unlawful for any person, firm or corporation to use the words 'Gold' or 'Solid Gold' upon any card, tag, box or parcel which shall bear, contain, or be in any way attached to any article the specifications or fineness of which shall not be in compliance with the foregoing section.
>
> "Sec. 3. Be it further enacted that it shall be unlawful for any person, firm or corporation to offer for sale, or to have in his possession with intent to sell, any article which shall be of itself in violation of, or shall be carded, tagged, boxed or otherwise displayed or transmitted to another in any manner in violation of Sections 1 or 2 of this amendement.
>
> "Sec. 4. Sections 1 and 2 of this amendment shall be in full force after 30 days from its passage.
>
> "Sec. 5. Section 3 of this amendment shall be in force and effect from and after Dec. 31, 1909.
>
> "Sec. 6. Any and all penalties applying to or being a part of the national stamping law shall be made a part of and fully apply to this amendment."

Nothing in the bill now in force establishes a standard of "solid gold" or "solid silver." Nor is the use of either term prohibited unless the term "solid silver" might be construed as a colorable imitation of the term "sterling silver" or "coin silver." In this case its use would be prohibited unless the article was of the defined standard of sterling or coin silver. Custom has practically done away with the use of the term "solid silver," at least so far as the branding of goods is concerned. Not so with the term "solid gold," however, which has been worked overtime and has been applied to such low grade trash that it is practically meaningless so far as conveying an idea of excellence is concerned.

What is solid gold? Who has the recipe for it? As a matter of fact each manufacturer determines for himself what shall be termed "solid gold," so far as his line goes, the consequence being that we have almost as many different kinds of "solid gold" as there are manufacturers, the whole thing depending upon the conscience of the maker and the demands of competition, so that the dealer of high ideals who is striving to give his customer only goods of merit, who shows his goods over the counter and does business at home where a dissatisfied customer can reach him, finds himself in unfair competition with the mail order house that sells from pictures and gets its money in advance, and the fake concern whose only motto is to "Get the money." The consumer is the chief sufferer, as oftentimes he gets worthless trash thinking he is buying gold goods. But what is the remedy? Will a law by Congress arbitrarily establishing 10 karat or 12 karat as the standard of solid gold, accomplish the result, or would it be better to prohibit the use of the term "solid gold" without a further mark indicating the grade of the gold? The latter plan would be more efficient and also fairer to all concerned.

Would not the same process of reasoning that proves that an article made of 10 parts gold and 14 parts brass is solid gold, prove that an article 10 parts brass and 14 parts gold was "solid brass?" Don't you believe that fully 90 per cent. of your customers who buy "solid gold" goods of you, think that these goods are at least half and half or better? If goods stamped "solid gold" will sell better than goods stamped "10 karat gold," is it not because the buyer thinks he is getting something better than 10 karat gold, and if by law 10 karat was made the standard of solid gold, would not the supposed advantage of that mark over "10 karat" thereby be destroyed?

Again, there can be no objection to a manufacturer making 8 karat gold goods, provided the goods are branded 8 karat, and thereby the possibility of their being sold as something better is eliminated. While I am no lawyer, I have grave doubts of the validity of a law that would prohibit a manufacturer branding his wares "8 karat solid gold" if that was exactly what the goods are. While personally I am satisfied to handle no goods of a lower grade than 10 karat, there are manufacturers who have developed their business on 8 karat lines, and it would seem unfair to me to interfere with their product, provided they are selling it as and are willing to brand it just what it is—8 karat gold.

I do not sympathize with the contention that the jeweler gets his trade principally because the public believes in his knowledge of the goods handled, and if the brand was protected by law the legitimate jeweler would lose this advantage to the department store and the mail order house. This advantage the man educated as a specialist will always have, whether goods are branded or not, and the unfair advantage taken by houses placing 6 karat and 8 karat goods in competition with your 10 karat goods under the expansive term "solid gold," will, in my judgment, more than overbalance any trade the jeweler may lose on this score. Furthermore, providing that no goods of lower quality than 10 karat should be stamped solid gold, would not prevent dishonest dealers from selling 10 karat goods and representing them to be 14 karat.

I do not believe that the provisions of the pure food laws, providing that labels on packages should show constituent parts of contents, have seriously interfered with the profits of any legitimate grocer or druggist, although they may have cut off considerable revenue derived from the sale of merchandise under false impressions as to what the goods were. Nor do I see any reason why a similar law in the jewelry trade would interfere with any legitimate business.

I cannot believe that any legitimate business will

be hurt by a requirement by law that provides that a dealer shall let his customer know exactly what the goods he is selling him are, and certainly such a provision will tend to eliminate misrepresentation and fraud.

The amendment, it seems to me, should also cover the term "solid silver," that the abuse of this term may not develop, as has that of the term "solid gold."

I shall not undertake to go into the legal phases of the proposed amendment further than this—the original bill does not prohibit the manufacture of any goods, but does provide that goods branded contrary to the provisions of the act shall not be carried by mail or in interstate commerce. The reason for wording the bill that way is that the courts hold that the national Government has no jurisdiction over such matters except as they relate to interstate commerce or come under the postal regulations, each State having the right to make its own regulations within its own boundaries. The amendment should therefore be made to conform in this respect to the original bill, and so far as possible legislation in conformity with national law should be passed by the legislatures of the several States.

The original bill covers only goods manufactured after date when act becomes effective, and the act did not become effective until one year after it was approved. Thus manufacturers were given time to adjust their business to the new conditions and some such provision should be made in the amendment, which, if constitutional and adopted as drawn, would practically confiscate many thousands of dollars' worth of goods.

True, the amendment provides that the penalty for selling or having on hand for sale merchandise stamped contrary to its provisions shall not apply until after Dec. 31, 1909, but a little thought will, I believe, convince any one that a dealer having on hand any considerable stock of such goods would experience great difficulty in disposing of them before the date mentioned, especially in the wholesale trade, because retailers would object to buying goods so branded as soon as the law was passed. While it might make it a little more difficult of enforcement, I think it would be fair that the act apply only to goods manufactured after its passage.

The intention of this amendment is, in my opinion, good, and with certain modifications as suggested, its passage would be a long step forward, and would tend to protect the honest dealer as well as the consumer.

If this is true it should have, and I believe will have, the support of such organizations as yours, and in fact of everyone connected with the trade who desires no more than a square deal all around.

Address of C. E. Range, President of the Missouri Association of Opticians.

Friends and Members of the Missouri Association of Opticians—As president of the association it affords me great pleasure to note the interest that is manifested at this meeting. You and I, and in fact all of us, have been formally welcomed, and the prospect for an interesting meeting is beyond question. In fact we are in the midst of it now, wondering "just what is going to happen next." But along with the addresses, discussions and pleasures which have been arranged for us we must not overlook the fact that there are matters of vital importance to the optician to be transacted during this convention, and to that end we are met here this afternoon in executive session.

For the fourth time the Missouri Association of Opticians has selected Kansas City as the ideal place for its annual meeting, and as we realize that this is the eighth convention and revert back to the many successful gatherings which these members have enjoyed, we should feel thankful to those "pioneer" opticians who are responsible for the origin of this splendid society.

While we are not the largest in numbers, we can but feel that the "quality of the meat is the substance thereof," and with the friendly spirit and united forces we now possess, much good can be accomplished.

During the past year our membership has increased very materially, and I am pleased with the efforts of the membership committee as well as others who have worked for the enlargement of this association. It should be the duty of every optician in the State of Missouri to identify himself with this society. He owes it not only to himself, but to the community wherein he resides. Nothing but good can come from such a step and the exchange of ideas and the higher development of the profession is the result. Optics is a science open to research for a thousand years. If you think you have mastered it all, the Missouri association cannot benefit you, as we are associated together for the purpose of: Higher education in optics, the elevation of the profession and the protection of its members.

If you believe you have reached a step higher than these three principles involved, and think you are losing time by becoming one of its members, this association "takes off its hat to you," and passes on to the brother up in the country town who reads by the same kind of light, out of the same kind of books you do, and perchance may fit the same patient with compounds that you fitted with cross cylinders and get the same results.

It stands us in hand at this time to work unceasingly for an increased membership. With the coming legislative year staring us in the face, it should be apparent to all that the influence and prestige of this organization can be greatly increased by doubling the membership. Along with this same line of thought it appeals to me that a practical and advantageous solution of the question of the next year's place of meeting would be to select Jefferson City, and meet there at a time when our committee on legislation deems best. If a creditable number could be depended upon, there is no doubt in my mind that such a procedure would impress not only the law-makers but the people in general with the idea that our optical profession is in earnest and at the same time demonstrate to them that the public should be benefited by the passage of an optometry law which eliminates quackery in the fitting of spectacles.

In considering this optical law for the State of Missouri it may be well to say that the members of our legislative committee have proven themselves well qualified to handle this important measure, yet they cannot but feel the need of the aid and assitance of every member of this association. Likewise, the officers for the forthcoming year will have no little work in making preparations for this event, as every detail for the optometry law must be made before there is a decisive move. The members will offer their greatest assistance by exerting their influence with their representative and senator, explaining to them the object of the bill and its advantage to the public.

I wish to compliment our secretary, who has worked untiringly and diligently in his effort to look after the business of the office which he has so creditably filled. No one who has not had a secretaryship will understand the importance of this post, with the large volume of correspondence which is essential to a State organization. The dues of the members have been liberally collected and the treasury is in a "healthy condition," as the treasurer's report will show.

In closing, I wish to thank all of the standing committees, the officers and members who have assisted me with the work throughout the year, which has been a pleasure, I assure you.

The Missouri Association of Opticians stands among the progressive organizations of the day, and its future acts will no doubt be chronicled as pages of history; while I have not accomplished much for the association, I feel greatly honored by the gift of this office for the past year, and I will look forward to the future of the society with friendly pride and feel gratified that I am one of you.

Echoes from the Joint Convention of Jewelers and Opticians of Missouri and Kansas.

The Western Clock Mfg. Co., of La Salle, Ill., was represented by W. J. Stanton and L. W. Arnold.

* * *

E. O. Baumgarten, the representative of M. F. Barger & Co., was kept busy during the week talking "Just watches, that's all."

* * *

H. B. McKinley, representative of the Elgin National Watch Co., was distributing souvenirs among the jewelers during the convention.

* * *

Carl T. Weibezahn, the trade-mark of S. O. Bigney & Co., was one of the most popular boys on "the job," and had a good showing.

* * *

M. G. Cook, representing the Alvin Mfg. Co., and A. R. Talbot, with Joseph Fabys & Co., had one of the largest and most popular exhibits at the convention.

* * *

The wholesale jewelry firm of T. R. J. Ayres & Sons, Keokuk, Ia., were represented here during the convention by Joseph J. Ayres, E. J. Marcotte and R. C. Huxley.

* * *

George Turner, special representative, and D. F. Richardson, manager of the retail department of the Burley & Tyrrell Co., were kept busy showing their line during the convention.

* * *

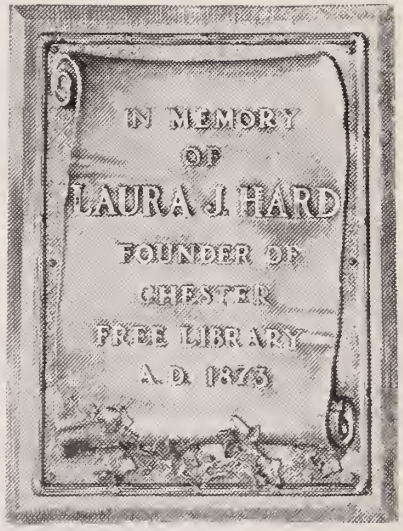
H. C. Carpenter, sales manager, assisted by C. T. Higginbotham, consulting superintendent, and C. J. Foley, ably represented the South Bend Watch Co., during the convention.

* * *

The following telegram was received from Thomas Gowenlock, of Clay Center, Kans., and not only shows the conditions of the country but also gives a glimpse of Gowenlock: "Am neither fish nor bird. Can neither swim nor fly. Will take the varnished cars and be with you Thursday if possible."

* * *

W. G. Riggs, who has so ably filled the position of secretary for the Kansas City Jewelry and Optical Jobbers' Association, and as joint secretary in getting the conventions together here and making the meeting such a success, was presented with two chairs, between courses at Electric Park, as tokens of appreciation from his coworkers. Mr. Riggs was so surprised that he was entirely unable to reply.



* * *

R. S. Davis, the traveler from Atchison, was also nearly knocked off his pins by being presented with a bouquet from the ladies of the convention. Of course it was not the receipt of a bouquet from ladies which affected him, as he is accustomed to that, no doubt, but the manner of presentation was a little out of the ordinary, for the boys sent the park policeman around after him, and he really thought he was under arrest for a while. R. D. Worrell made the presentation speech, and by the time he had completed, Davis had again gained control of himself, and also his gift of expressing his feelings.

A Fine Bronze Memorial Tablet.

A MEMORIAL tablet has just been placed in the Chester (Pa.) Free Library to the memory of Laura J. Hard, the founder.

The tablet is made of solid chased bronze, showing an opened scroll, on which appears an appropriate inscription. This scroll appears in heavy *bas relief*, and projects from a matted, hammered background. At the base is a spray of climbing ivy, symbolic of the affection of the people of Chester for Miss Hard.

BRONZE TABLET TO LAURA J. HARD.

The bronze is mounted on a background of solid oak, and reflects credit on the designers and makers, Maxwell & Berlet, Philadelphia, Pa.

TIME-SAVING equipment and methods that help us get every fractional value out of the filings, waste, sweep and scrap consignments treated by us. We do the work expeditiously and as a rule remit for more than the consignor expects his shipment to yield. Write us.

Workshop Notes

FOR

Jewelers and Watchmakers

Revised and Enlarged 100 Pages New Matter

Containing 300 Pages (size 7½x10½ inches)
Bound in Cloth, Stiff Covers

A collection of the latest practical receipts on the manufacture and repairing of watches and clocks, and on the various processes entering into the manufacture and repairing of jewelry, as coloring, polishing, enameling, annealing, oxydizing, etc., in short, a thorough compendium of the numerous mechanical departments of the jewelers' and watchmakers' shop.

This book is the most useful, comprehensive and perfect publication for the workman at the bench, and should be in the hands of every jeweler and watchmaker in the country. It is the only book of its kind published.

Price, by mail postpaid, $2.50

That "Piano Advertising Plan" from Iowa

Pulls prosperity out of a lean year of panic. It never had an equal among advertising and premium propositions for building up trade in the teeth of a gale of adversity. It doubles sales for merchants and puts on subscriptions for the newspaper publishers. And it's brand new to-day.

The smallest merchant can work it just as successfully as the largest. The puzzle of it is that it does not cost the merchant one dollar, but actually makes him big money.

Nobody ever fails at this money-making enterprise who uses my plan and my pianos, which are of uniformly excellent quality. I superintend the manufacture of them myself, so I know.

And let me tell you it would be suicidal for any merchant to give away a cheaply made, inferior piano to any customer if he wants to reap a permanent benefit from the enterprise.

Here is a plan by which the merchant and publisher alike can tum hard times into hard cash, increase their business amazingly—literally make two dollars grow where there was one before—and pocket no possible loss for their thrift.

Live Ones—Write me *Needy Ones—Wake Up* *I'll Show You How it's Done*

SALESMEN—Boys with Grit and "Go"—

IT'S YOUR CHANCE. I want a few Reliable Salesmen to Canvass the Retail Trade. Samples in coat pocket. Don't worry trying to revive dead lines. Get one with breath in it now. It's a boom year for you if you connect right. Get wise to the "Iowa Idea."

Mention this Paper

ALVIN DEPOSIT WARE

Vase No G3259—Actual Size
Poppy Pattern
Made in four sizes

3257	3258	3259	3260
6	8	10	12 inches
$4.00	$5.50	$7.50	$10.00 each

Subject to usual catalogue discount

The Alvin Manufacturing Co. were the pioneers in making Deposit Ware. Others have gone into the business—and gone out again!

Some who still manufacture deposit ware have so cheapened the product by using so little silver that they cannot engrave it properly.

We have always refused to cheapen our product by reducing the quality to meet this competition, maintaining our standard of high grade quality throughout and our reputation as the acknowledged leaders in deposit ware manufacture.

S. O. BIGNEY & CO.

MIRROR FINISH

is the name which has been given to S. O. Bigney & Co.'s

HIGH GRADE GOLD-FILLED CHAINS

on account of the beautiful finish. After the links are soldered the gold is somewhat porous. In order to get a perfect finish, the only method known to the art is the method of burnishing. This we apply to our chains. It closes the pores, hardens the surface, gives the mirror finish, and will add one-third to the wearing life of the chain. This method makes for durability and excels all other processes of hardening finish.

Every retailer should have a good stock of our high-grade, gold-filled, mirror-finish Chains, Fobs and Bracelets.

We Make Bracelets of Every Description

Oval and Square, Side Swing and Hinge, beautifully finished and embossed. Pleasing to the eye, and rapid sellers.

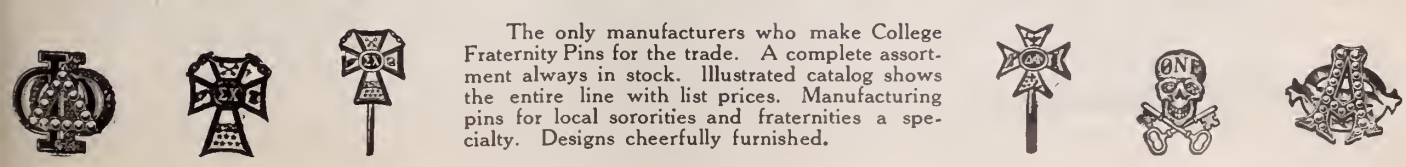
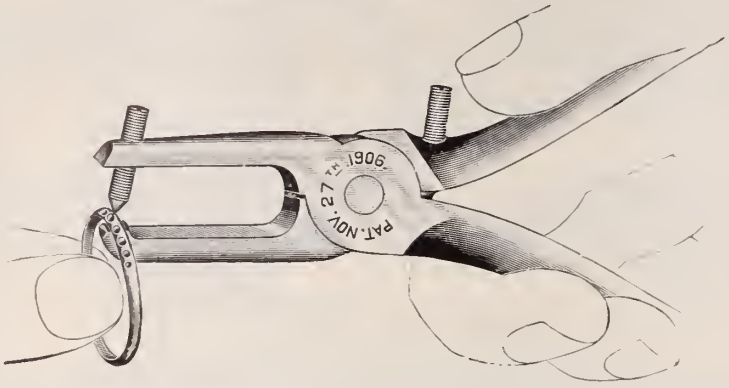
When you DO have a call for a fine Emblem Ring it is well to know that Wendell & Co. make the only line of high grade 14K. Rings on the market, that they carry a complete stock and gladly send a selection on memo. Their catalog shows illustrations of the entire line with list prices. They also make special Emblem Rings to order.



WENDELL AND COMPANY

The Special Manufacturers for the Retail Jewelry Trade

103-105 WILLIAM STREET, NEW YORK 57 WASHINGTON STREET, CHICAGO

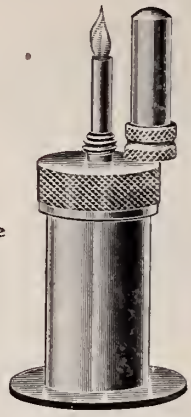


The only manufacturers who make College Fraternity Pins for the trade. A complete assortment always in stock. Illustrated catalog shows the entire line with list prices. Manufacturing pins for local sororities and fraternities a specialty. Designs cheerfully furnished.

Pearl Setting Plier, No. 327

This tool should prove a useful addition to any jeweler's outfit. It is intended for setting half pearls or other stones of similar shape, which are imhedded in gold or other mctal. It is used for cutting a burr and forcing it against the stone, either in brooches or rings, therehy holding the stone securely without liability of the tools slipping or breaking the stone, as is often the case with the use of other tools. The lower jaws are half round, to conform to the inner shape of rings. The work can be done more pertectly and under hetter control than with gravers or other tools used heretofore.

Made of best Swedish steel, nicely nickel-plated.



Price, each, $1.25

Randall Jewel Lamp

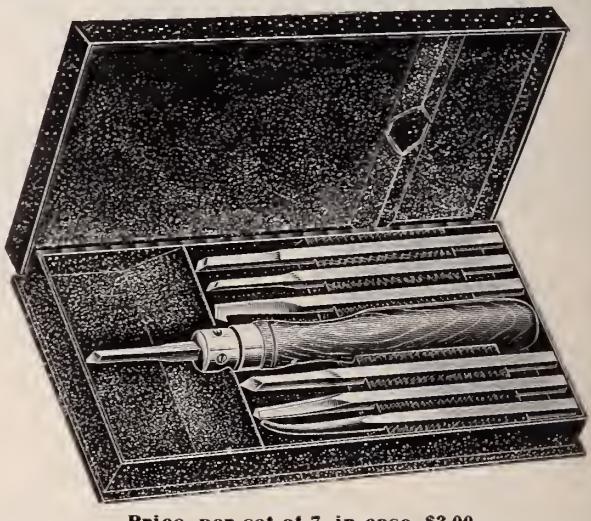
Cut is full size

—

Price, each, 50c.

Especially designed for work where very small flame is essential and very desirable when cementing roller and pallet jewels, for drawing temper of pivots and annealing small parts of watches. Made of brass full nickel plated. Has ruhber washers inside of cap and under the hood to avoid leaking and evaporating.

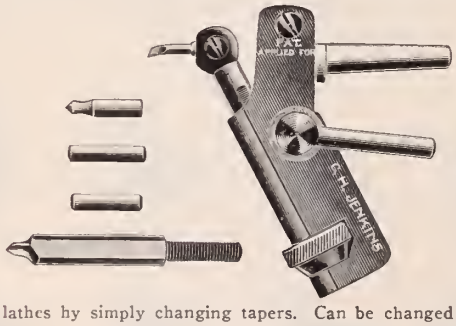
Phesay's Two-In-One Soldering Tweezer



Price, each, 75c.

By using Phesay's Two-in-One Soldering Tweezer the joint catch or Back is handled only once.

SAVES TROUBLE.—Phesay's Two-in-One Soldering Tweezers will solder plumb and true. Will not let article slide when solder flows. Will hold pieces of jewelry with rounded stones or flat surfaces with equal firmness.



Guaranteed "E.F.B." Turning Gravers No. 33

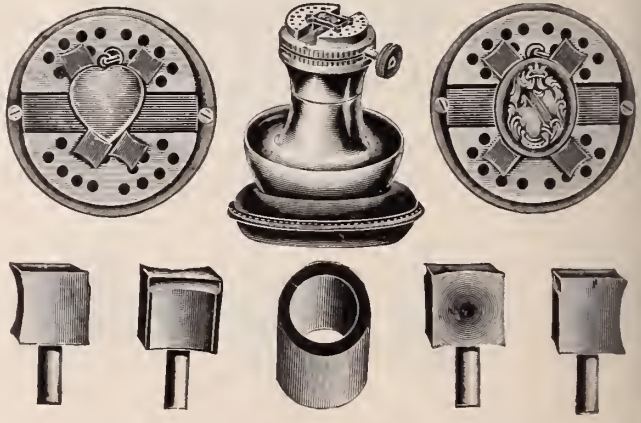
Price, per set of 7, in case, $3.00

The finest set of gravers on the market. Handle is of the finest cocoholo, fitted with nickel plated socket in which the gravers can be moved in or out as desired. The two set screws hold the graver rigid and prevent rocking or chattering. They will be appreciated by all users of fine tools.

Improved Turning and Jeweling Attachment No. 33

New Features

Adjustment for alignment, fine feed, with direct connected screw. Positive hinder operated hy slight movement of the thumb or finger. Cutters may he changed quickly. No small projecting parts to become lost or broken. Special cutters can be made from wire.



And Other Good Points

One tool may be used on different makes of lathes hy simply changing tapers. Can be changed quickly.

All Standard Tapers in Stock

Each attachment is furnished with two cutters, one burnisher and two blanks. In ordering, please give name and size of lathe. **Price, each, $4.50**

"Ideal" Pins for Engraving Blocks

Per set of 4 with 4 pure rubber tubes, 50c.

The faces are milled to various shapes to take regular and irregularly formed articles. The few illustrations show their possibilities. Four pure ruhber rings are furnished to slip over the pins when very delicate and highly polished articles are to be clamped. Made for all Standard Engraving Blocks. Please state name of Block when ordering.

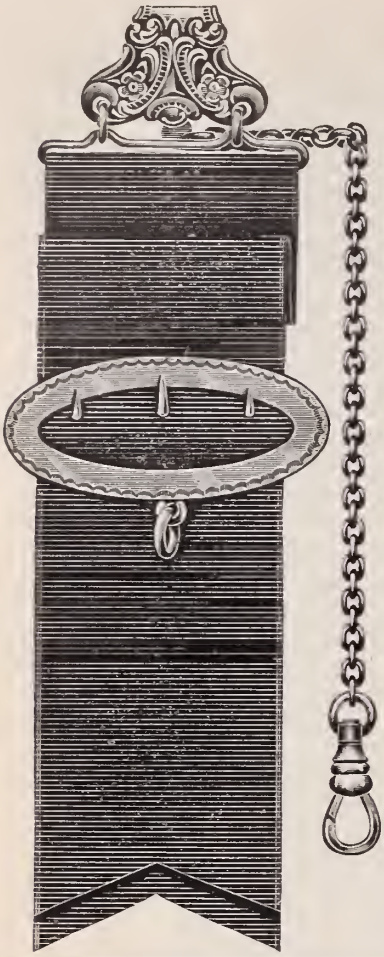
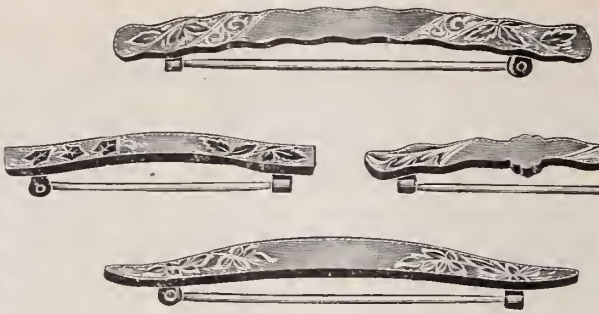
EXHIBITION BULLETIN

16th Year WEDNESDAY, JULY 1, 1908 Vol. VI. No. 6

In the making of Bracelets, we believe that our position can be most emphatically outlined when we assert that our Bracelets are specifically designed to fulfill the demands of the critical wearer. They successfully meet those exactions, becase they are produced with a precise knowledge of the requirements. Then, too, the materials employed by our craftsmen are put through processes not thought of by the unskilled, so that the finished Bracelet—especially in our new productions—will be found smart, exclusive and unique. In viewing our EXHIBITION, which takes place at our offices, from August 24th to 29th, inclusive, you will find a large variety of our newer productions in Bracelets; especially in the lower priced.



We are already receiving Diamonds, Pearls and other precious stones purchased by our Mr. Mayer, who is now abroad. These are to be used for our new Fall productions.



Write to us for specimen stones.

ENGELSMAN'S PATENTED COMBINATION "GEM" DISPLAY RINGS and ADJUSTABLE STONE HOLDERS

MEET A LONG-FELT WANT

THEY ARE MONEY-MAKERS AND MONEY-SAVERS

UNMOUNTED STONES of any size and shape can be displayed advantageously, as is herein illustrated. Your investment in stock can thereby be *decreased,* as you need not mount them up in expensive settings. Your sales will also *increase* by being able to exhibit unmounted stones. The prices are *low* enough to induce you to buy them and *save* you from incurring frequent losses caused by the awkward handling of the tweezer when your customer desires to examine unmounted stones. Try them. For sale by all jobbers.

Due to greatly improved automatic machinery and reduced cost of production, we are now quoting these as follows:

Sets of 18 (full set), in box,			$6.00
" " 12		" "	4.00
" " 9		" "	3.00

Mr. RETAILER:

There is but ONE line of Raised Gold Decorated Watch Cases in this country.

You may see COPIES, IMITATIONS and HONEST ATTEMPTS,

BUT

the Raised Gold ARTISTS in America to-day are employed on the products of the SOLIDARITY WATCH CASE CO.

This is a bold statement, but you won't hear it questioned.

Our 1908 line far surpasses anything we have ever shown, and at no advance in cost to you. Your jobber will send selection upon request.

Alcohol Gas Stove Chafing Dishes

Hot Meals Without Hot Kitchens

Sufficiently powerful to prepare as complete a dinner on the dining table as on the kitchen gas range. An invaluable adjunct to the sick room, a home convenience at all times.

The possibilities of chafing-dish cookery have been doubled by the Manning-Bowman Alcohol Gas Stove. It has three times the heating power of the regular chafing-dish lamp, yet regulates to a simmering flame at a touch.

This Alcohol Gas Stove is designed for use with any cooking utensil.

11 JOHN STREET NEW YORK

The "Krementz-Bodkin Back"

STUD and VEST BUTTON

Pat. Feb. 16, 1904

Krementz & Co. believe the trade will agree that they understand the jewelry business sufficiently to know that the **"Krementz-Bodkin Back" Stud** and **Vest Button** is the simplest and best mechanical Stud or Vest Button made.

The **"Krementz-Bodkin Back" Stud** and **Vest Button** is not one piece, but **is one-piece construction,** which makes it very simple and the strongest and most durable, because:

1—It is **Solderless**
2—It has **no** spring or hollow wire to bend or break
3—It is made of **solid, hard spring metal throughout**
4—It is made by **Krementz & Co.** which insures perfect **quality, construction** and **workmanship**

THE STORY OF THE HEAD

Krementz & Co. Invite Comparison

Krementz & Co. stand back of their assertion. All **"Krementz-Bodkin Back"** Studs and Vest Buttons are sold also under the unique **Krementz Collar Button Guarantee.**

THE STORY OF THE BODKIN BACK

GUARANTEE

If for any cause whatever, a **"Krementz-Bodkin Back" Stud** or **Vest Button** should be damaged either in the hands of the dealer or wearer, a new one will be given in exchange, without charge. **"Krementz-Bodkin Back" Studs** and **Vest Buttons** are made in large variety of patterns in 14-kt. gold and platinum, set with pearls and diamonds.

Sash Buckle Pins

AMONG THE NEW Summer Goods now coming from this factory is an impressive line of Sash Buckle Pins.

The demand is assured because Fashion decrees that they shall be an essential of feminine attire.

Style and quality are assured because the Buckle in all its forms has always been a notable specialty here.

THE DESIGNS are the very latest. Applied trim and Hand Engraving furnish many attractive decorations. Plain examples for those who choose simplicity. In some, well selected stones are used to advantage.

Altogether the line is seasonable, safe, moderately priced and profitable. What more need be said?

Important Notice

¶ The jewelry trade is hereby notified that the following manufacturing jewelers have been granted licenses under my pending patents to manufacture and sell the "Fashion" Collar Pins:

KREMENTZ & CO.
CARTER, HOWE & CO.
BIPPART, GRISCOM & OSBORN
A. J. HEDGES & CO.
ECKFELDT & ACKLEY
J. T. MAURAN MFG. CO.
WOLCOTT MFG. CO.
ARCH CROWN MFG. CO.
SCHRADER-WITTSTEIN CO.
THEO. W. FOSTER & BRO. CO.
THOS. F. BROGAN CO., New York
JOHN R. KEIM, New York

The trade is informed that I shall protect our rights under my pending patents to the full extent of the law, and having confidence in the fairness of the trade in general, I believe that I may expect its co-operation by refusal to purchase should other manufacturers than those above mentioned offer "Fashion" Collar Pins in imitation of mine.

Thanking the trade in advance for its consideration, I beg to remain, very respectfully,

CHARLES T. WITTSTEIN

Roller Chain

OUR SPECIALTY

Do not forget that we will continue to show the best line of these goods on the market, in Fobs, Bracelets and Neck Chains. These wear longer, give better satisfaction than any metal fob made, and our designs are up-to-date. Also our line of chains of all kinds finds a ready market among the best trade, both in 1-10 and a medium wearing grade.

We also make a nice line of Brooches, Hatpins, Scarfpins, Barrettes, etc., that should demand your attention.

Ask your jobber, and if unable to obtain them from him, advise us who he is, and we will make arrangements for you to get them.

The Morosini Cups for 1908.

THE 1908 sterling silver cups presented by Miss G. P. Morosini for champion trotters and champion pacers have just been completed and have been on exhibition in New York by Tiffany & Co., the makers.

The prize for champion trotters, illustrated on this page, is a tall and graceful vase-shaped cup of classic design. The body is decorated with chased concave flutes and a band of laurel leaves around the top. Two intersecting horseshoes pass through the stem of the foot, just below

THE MOROSINI CUP FOR TROTTERS.

where it joins the body, and help to support the cup.

The trophy has two handles, is 13½ inches high, and contains about 48 ounces of sterling silver. The inscription, in raised letters, reads as follows:

> The Morosini Cup—Champion Trotters.
> Matinee Season—1908—Won by

The prize for champion pacers, shown on the front cover, is also of classic design and represents a shallow bowl, supported by a high slender foot. The decoration consists of plain concave flutes on the stem of the foot and also on the two handles. The latter are finished in the form of a knob, made by crossing two upright horseshoes at right angles.

The cup contains nearly 58 ounces of sterling silver and is 11¾ inches high. The following inscription encircles the top of the cup.

> The Morosini Cup—Champion Trotters.
> Matinee Season—1908—Won by

Parisian Novelties in Ladies' Umbrella Handles.

THE news from Paris, in regard to the latest styles for ladies' fine umbrellas, is by no means without interest to our readers. The truly modern umbrella, such as the chic Parisienne carries on her regular morning promenade in the Bois de Boulogne, is long-handled and when opened provides an adequate protective covering In articles of dress that serve a utilitarian purpose, the Parisian woman demands all the useful properties. The fancy umbrellas, covered with silk in many-colored floral designs, such as are carried in other countries, are unknown in Paris. The covering material is almost invariably plain black, a strong silk, with selvaged edge. As far as possible, the useful side is kept in view. This does not prevent the umbrella, when closed and handled like a walking stick, from making a pleasing and graceful impression and following the fashion, which finds expression in the handle.

Fashion at present favors the Empire style, and the fashionable umbrella stick, with its ornate handle, follows the style of that period. The stick is not only long, but it is a straight rod, of moderate thickness, which emphasizes its naked length. Neither a crook nor a convenient bend is provided as a handle; at most, a gradual enlargement towards the end of the stick.

It is only on these stick handles that the tricks of fashion find play and are carried out in the most diversified styles. The most beautiful emanate from the goldsmiths' shops. Semi-precious stones and quartz, which are very popular, are elaborately mounted in the precious metals and artistically inlaid work is being employed with success on umbrella handles. An umbrella handle that comes in a pretty box, with corresponding rib-points to match the handle, is a favorite present.

With tortoiseshell or horn handles, with gold inlaid work, the rib-points may also be of tortoiseshell or horn; with inlaid work in cloisonné or Toledo they are in gold, and the same with most umbrella handles of semi-precious stones. Cut rock crystal, with its subdued play of color, in a setting of ornate Empire garlands, makes a very fine appearance. Bluish aquamarine, green jade (nephrite), yellowish topaz, violet amethyst and various others serve for umbrella ornamentation. Japanese work in cloisonné, also in carved ivory, stained brown or rose colored, are likewise prized, as well as the Spanish work of gold, inlaid in steel, known commercially as Toledo.

The ferrule must correspond with the handle and must be of the same elongated form as the entire umbrella. Care must be taken that no ornament, either in the form of a band or knot, shall mar the tall, unbroken line of the modish umbrella. There can be no doubt that this innovation in elegant umbrella handles, with the production of which the goldsmith has so much to do, will not be confined to Paris, and that in this country their artistic ornamentation will also tend towards a richer character.

The Production of Zircon in 1907.

IN the course of his report on the production of monazite and zircon in 1907, just issued by the United States Geological Survey, Douglas B. Sterrett says of zircon:

"Contrary to expectation, the production of zircon was very small during 1907, amounting to only 204 pounds, valued at $46. This came from the mines in Henderson County, N. C., as in previous years. There seems to have been no commercial separation of zircon from monazite concentrates made during 1907. The investigations by the United States Geological Survey concentrating plant, under the direction of Dr. Joseph Hyde Pratt, at Chapel Hill, N. C., in 1907, were given up through the lack of funds. One of the objects of this work was to devise a cheap and satisfactory method of separating all the minerals of value occurring in the concentrates from the monazite region. As has been pointed out elsewhere, certain of these concentrates contain considerable zircon.

"A new deposit of zircon has lately been reported by Frank Rush, forest supervisor for the Wichita National Forest, about seven miles northwest of Cash, Okla. Specimens sent to the survey by Mr. Rush consisted of portions of pegmatite rock through which zircon crystals up to three-fourths-inch cube were thickly scattered. The crystals consisted of the simple pyramid faces with the prism almost entirely lacking. Most of the crystals were of deep red-brown color, though some were yellowish, and nearly colorless. Whether the mineral occurs in sufficient quantity to be of commercial value is not known, though the hand specimens examined were quite rich."

The jewelry stock and fixtures of L. A. Soper, Harvard, Nebr., have been sold under bankruptcy proceedings. Mr. Weaver purchased the stock and C. E. Gaddis the fixtures.

AUTOMATIC IN ACTION

One of the strongest points of the Larter Shirt Stud is that it is automatic in action. The back does not have to be pushed or pulled into place, so that the stud will not slip out of the shirt.

The strong spring in the Larter Shirt Stud carries it to the proper place, and thus avoids the annoyance of working out of either a button-hole or eyelet-hole shirt.

The above illustration is a copy of the cover of a little booklet just published showing 125 different patterns of the Larter Shirt Stud in 10K. gold and 14K. gold filled. If you have not received one of these booklets send us a postal, and we will mail you one at once.

The Ancient Egyptian Scarab—Its History and Symbolic Significance.

By Clement W. Coumbe.

Author's Note.—Well within the branches of journalistic endeavor comes the giving of attention to producing descriptive matter, and more or less exhaustive information on the different forms of decoration that are becoming or likely to become popular. The Egyptian scarab is appearing as an ornamental part in jewelry design of late. Many jewelers scarcely know what an Egyptian scarab is. Very few can give their enquiring customers a fairly full definition when asked as to its symbolic intent, much less other materials surrounding the historic "sacred beetle." Yet that information will assist sales by popularizing the knowledge of the industrious hug. To assist the manufacturer in placing his wares, to aid the retailer in pushing his stock, the following condensed story of the scarab should serve a useful purpose, whether the material is used in the production of advertising matter or in orally explaining to the intending purchasers the interest that attaches to the subject.—C. W. C.

FIG. 1. THE TRUE SCARAB BEETLE.

AFTER having fallen into desuetude for many years, the ancient Egyptian *scarab* of 2,500 years ago is again coming into popular favor, according to reports from Europe and this country. Dug out from its long sleep, the jeweler is resuscitating "his bugship," and the historic and symbolic significance surrounding the insect when expounded to the uninitiated public is likely to prolong the period of scarab activity as a decorative feature.

Scarabs are not the only bettles that have been used as adornments of the human

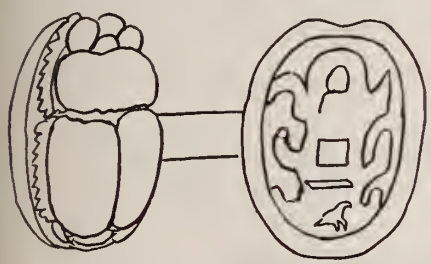

FIG. 2. MIDDLE KINGDOM SCARABS.

person. The writer remembers in his youth how the beautiful blue and purple metallic sheen of the Ceylon beetles' "case wings" figured as favorites, gold mounted. in scarf pins, brooches, etc. Again, more recently the iridescent South American bug of smaller size but similar color scheme, chained *alive*, with golden fetters attached to one leg, crawled languidly over my lady's bosom, to the disgust of some, amusement of others, and surprise of all but the wearers.

But in utilizing the Egyptian scarab as a decorative feature we are feeling back into history and symbolism of a most interesting period of the world's civilization. Of immense interest from the artisan's standpoint is the fact that the Egypt of those periods was the birthplace of most of our inherited art forms—the source from whence the ancient Greeks derived most of those *motifs* which they developed from their cruder originality into that perfection of symmetrical form never since surpassed. Under the tutelage of Isis and Osiris the Egyptian cult brought forth much for art lovers.

What Is a Scarab?

The *Scarabæus sacer*, of Linnæus, or the *Ateuchus sacer Ægyptiorum*, of Cuvier, known in history and mythology as the "sacred beetle" of Egypt, abounds throughout the east. It is found all over South Europe, East Indies, Cape of Good Hope, Western Asia and North Africa. The Latin word *scarabæus* (from which we derive our word *scarab*) comes from the Greek *skarabaios*, which signified this same insect.

Pliny's Natural History says: "The scarabœus also, that forms pellets and rolls them along. It is on account of this kind of scarabœus that the people of a great part of Egypt worship those insects as divinities, an usage for which Apion gives a curious reason, asserting, as he does, by way of justifying the rites of his nation, that the insect in its operations portrays the revolution of the sun. One ancient writer, Horapollo, declares the scarab denoted "the *only begotten*, or *generation*, or a *father*, or the *world*, or a *man*. The 'only begotten' because the scarabœus is a creature self-produced, being unconceived by a female."

Plutarch wrote: "The Egyptian warriors had a beetle carved upon their signets because there is no such thing as a female beetle ('for they are all males') for the propagation of it is unique and after this manner:—when the male is desirous of procreating, he takes the dung of an Ox and shapes it into a spherical form, like the world; he then rolls it from him by the hinder parts from East to West, looking himself towards the East, that he may impart to it the figure of the world ('for that is borne from East to West while the course of the stars is from West to East'), then, having dug a hole, the scarabœus deposits this ball in the earth for the space of 28 days ('for in so many days the moon passes through the 12 signs of the zodiac.'). By thus remaining under the moon, the race of scarabœi is indued with life; and upon the nine and 20th day after, having opened the ball, it casts it into the water, for it is aware, that upon that day the conjunction of the moon and sun takes place, as well as the generation of the world. From the ball thus opened in the water the animals, that is the scarabœi, issue forth. The scarabœus also symbolises generation for the reason before mentioned; and a father, because the scarabœus is engendered by a father only; and the world, because in its generation it is fashioned in the form of the world; and a man, because there is not any female race among them."

From the above authoritative description it cannot fail to dawn on American readers (especially those hailing from the southern States) that in Mr. Scarab we have no other than our own familiar, and grotesque, Mr. Tumble-bug, that we have watched so often rolling his excreta burden along our sandy soils on hot Summer days. A glimpse at his portrait, as depicted in Fig. 1, will strengthen our conviction, for the likeness

FIG. 3A.

FIG. 3. CARTOUCHE OF PTOLEMY.

is too familiar to deceive. The whole evidence is so conclusive that we can drop the question of identity and turn to his symbolic side.

Scarabs in History.

Among the many relics of ancient Egypt that were found in most prolific numbers was the facsimile of the scarab, or "sacred" beetle. The beetle form figured on the obverse side, and hieroglyphic inscriptions were on the reverse side. A sample of the common form is shown in Fig. 2. They

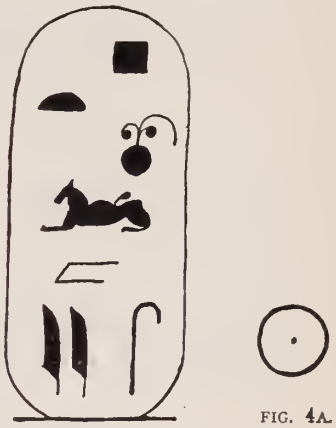

FIG. 4A.

FIG. 4. CARTOUCHE OF CLEOPATRA.

were found made of clay, they were cut out of hard stone. They are discovered in steatite (a soapstone), green basalt, diorite, granite, hematite, lapis lazuli, jasper, serpentine, verde antique, smalt, root of plasma or prase (a species of chalcedony having green streaks of hornblend), cornelian, amethyst, sardonyx, agate and onyx.

They were found in myriads in the tombs and in the ruins of temples. Each had its peculiar hieroglyphic inscription. For many years the Egyptologists threw them aside as unworthy of attention; they could not read

any sense or meaning in their thousands of mysterious incisions. They became a plague to the collectors even in their unending multitude, and were discarded as the meaningless toys of a foolish people.

But with the discovery of the full intent of the Egyptian hieroglyphic language a change came in the collector's attitude. The incisions in those apparently insignificant bug effigies, that had got into the museums and collectors' hands in almost unwelcome quantities, became the most valuable keys to unlock the history of the land of the Nile. Their style and their inscriptions denoted different periods in the dynastic reigns, and in a short space of time the experts could place the date of origin of each scarab, and, better still, each scarab told its bit of history of that date. And thus our hundreds of thousands of scarabs furnish us with whole volumes of Egyptian history as valuable as that read in the hieroglyphs on the tombs and monuments of the Nile valley.

These multitudes of scarabs contained, besides hieroglyphic reading, decorative designs such as scroll, spiral, twist and key patterns, but all had their symbolic significance. The period when they were produced most prolifically was during the reign of Tehutimes (Thothmes III. of the XVIII. Dynasty), about 1600 to 1566 B. C. Very many originated in the XIX. and XX. Dynasties. A peculiar feature still puzzling to Egyptologists is the fact that although each Pharaoh had his peculiar style of scarab, several Pharaohs had *reissues* made from those of predecessors. And so, though nearly all the many scarabs can be ascribed to certain dates by their style, another source of bewilderment occurs in these anomalous "reissues." And although all scarabs may look more or less alike to the outsider, the expert can place them practically all in their periods.

The earliest scarabs date back to the III. Dynasty (Neb-ka), about 3900 B. C. Scarabs almost ceased to exist about 500 B. C. Under the Heretic kings of the XVIII. Dynasty scarabs went out of use, but once again came into favor in the reign of Hor-em-heb and Sethi I., when rings again became fashionable in Egypt. Their symbolic sacred acceptance lasted over a span of 3,000 years.

Symbolic Significance of the Scarab.

Perhaps the most interesting fact (from a theological standpoint) that the scarab presents to 20th century readers is that it is the oldest expression of the ancient conception of the soul's immortality to reach us so far. This date of the ancient Egyptian dogma of a future eternal life for the pious and moral dead reaches far further back than Moses' time. For the scarab was a symbol of the resurrection, or new birth, and the eternal future life of the "triumphant" or "justified" dead. (The dead, whether king or commoner, had to pass the ordeal of a trial at the hands of the priests as to whether the past life of the deceased "justified" *immortality* by mummification.) The scarab symbol in its day very closely resembled in intent our Christian symbol of the cross. It stood for resurrection of the soul as well as immortality.

The scarab was especially sacred to Amen-Ra—the mystery of the sun-god. It symbolized creative and fertilizing power. It was the first life appearing in the Nile's mud when the sun commenced to dry the shores after the waters receded.)

Ptah, the Creative Power, and Khepera (or Khepra), the Creator, another deity of high degree, had the scarab as emblem. As Ptah it usually had the head and legs of a man. "Kheper" means "to be," "to exist," "to become," "to create," "to emanate" in the hieroglyphic language; this was represented by a scarab.

Right here, perhaps, a few words as to the sun deities of Egypt becomes necessary to avoid confusion. The sun, rising in the morning as Horus (Fig. 3a) reaches its zenith at noon as Ra (Fig. 4a) and sets in the evening, in the dark regions, as Tum, absent at night as Osiris, then rises victorious over darkness in triumph again as Horus.

Thus we read: "In the Great Temple at Thebes a scarab has been found with two heads, one of a ram, the symbol of Amen (or Ammon), the hidden, or mysterious, highest deity of the priesthood, especially of Thebes; the other of the hawk (the symbol of Horus, Fig. 3a), holding in its claws a symbol of the universe." This is supposed to symbolize the rising sun and coming of the Spring sun of the vernal equinox in the zodiacal sign of the ram.

The number of the toes (30) of the scarab beetle symbolized the days of the month, we are informed. The movement of the ball it manipulates, we must remember, symbolizes, among other things, the action of Ra, the Egyptian sun-god, at midday.

(To be continued.)

Exports of Jewelry, Clocks, Watches, Silverware and Kindred Lines from the Port of New York.

Washington, D. C., June 24.—The following were the exports of jewelry, silverware, optical goods, clocks, watches and kindred lines from the port of New York for the week just ended:

Bremen: 5 cases plated ware, $400; 3 cases watches, $4,898.
Buenos Aires: 2 cases watches, $1,300; 33 cases plated ware, $3,659; 114 cases clocks, $3,536; 2 cases watches, $1,300; 1 case jewelry, $150.
Calcutta: 3 cases watches, $416; 25 cases clocks, $465; 64 cases clocks, $885; 103 cases clocks, $1,130.
Callao: 1 case plated ware, $311.
Cape Town: 72 cases clocks, $1,184.
Chaux de Fond: 2 cases watches, $100.
Colombo: 13 cases clocks, $353.
Colon: 1 case plated ware, $112; 9 cases clocks, $484.
Corinto: 1 case jewelry, $100.
Hamburg: 6 cases optical goods, $620.
Havana: 1 case optical goods, $223; 2 cases jewelry, $272.
Havre: 3 cases jewelry, $318.
Hong Kong: 161 cases clocks, $2,620.
Liverpool: 1 case silverware, $210; 4 cases watches, $2,000; 2 cases jewelry, $258; 1 case plated ware, $100; 1 case jewelry, $100; 93 cases clocks, $2,220.
London: 38 cases watches, $5,007; 1 case silverware, $1,500; 2 cases thermometers, $190; 9 cases optical goods, $3,262; 61 cases clocks, $528; 1 case jewelry, $500; 81 cases clocks, $2,987; 24 cases clocks, $257; 3 cases scopes and views, $100.
Melbourne: 5 cases plated ware, $956; 3 cases plated ware, $190; 48 cases clocks, $1,055.
Montevideo: 3 cases plated ware, $565; 16 cases clocks, $439.
St. Michaels: 13 cases clocks, $137.
Shanghai: 74 cases clocks, $1,910.
Southampton: 1 case optical goods, $228; 11 cases watches, $1,512.
Sydney: 2 cases plated ware, $115.
Trinidad: 1 case plated ware, $1,116.
Valparaiso: 1 case watches, $235.
Vera Cruz: 35 cases watches, $598.
Vienna: 19 cases clocks, $735.
Yokohama: 25 cases clocks, $457.

Canadian Gold and Silver Marking Bill Discussed Before Committee of Canadian Senate.

Toronto, Ont., June 24.—The amended Gold and Silver Marking bill came before a committee of the Canadian Senate at Ottawa on Tuesday. In its present shape the bill proposes that no jewelry shall be brought into Canada or made in Canada and called gold below nine karats, and that no article shall be imported or sold as silver or sterling silver unless 925 thousandths parts are pure silver.

Hon. J. K. Kerr, of Toronto, strongly opposed the bill as the most drastic piece of protective legislation ever introduced into the Canadian Parliament. He said he was not surprised at the statement that the Canadian manufacturers were united in favor of the act, as it proposed to protect them absolutely from cheap jewelry, while it would not prevent them from making a low-grade article. The law would work to the advantage of the manufacturers and to the detriment of the small dealer and people who would like to buy low-priced jewelry. It was a monstrous piece of legislation in restraint of trade, it was claimed.

Hon. R. W. Scott, of Ottawa, favored the bill as a protection to the public from being imposed on by fraudulent marks which dishonest manufacturers placed upon articles called "gold." It was generally agreed that an article was not gold when it was below nine karats fineness. The bill did not propose to prevent articles of less than nine karats being imported, but declared that they might not bear marks to mislead the public. The bill was demanded by the trade, which was suffering from large importations of cheap and improperly marked jewelry.

Hon. J. K. Kerr replied that the Criminal Code made effective provision in cases of the false marking of goods, and that the proposed law was not necessary.

Hon. William Gibson, of Beamsville, Ont., protested against amendments made this session to the bill, which, he contended, were solely in the interests of the manufacturers of Toronto as against other interests. He asserted that the Toronto manufacturers in procuring these amendments had not kept faith with those of other places who had favored the bill in its original form.

Hon. D. Ferguson, Charlottetown, P. E. I., supported the measure as a protection to customers against manufacturers and importers dealing in shoddy jewelry. The bill stood over for further consideration.

Doane & Rosenthal, Goldfield, Nev., have assigned for the benefit of their creditors.

The Montana Supply & Jewelry Co., Butte City, Mont., has purchased the stock of the Northwestern Supply & Jewelry Co., 63 E. Park St., that city. The building has been thoroughly remodeled by the new concern, of which A. Pincus is president and Isadore Goodman secretary and manager.

Samuel K. Reich, Alleged "Short Change" Swindler, Examined at Brooklyn, and Held for the Grand Jury.

Samuel K. Reich, who it is alleged obtained $1,370 worth of diamond jewelry from the Robert Simpson Co.'s pawnshop at Myrtle Ave., Brooklyn, by a short change trick, and who was arrested in Buffalo and later taken to Syracuse, where there was not evidence enough to hold him on another charge of the same character, was arraigned before Magistrate Dooley in the Adams St. Court, Brooklyn, Thursday morning. The complaint against the prisoner is to the effect that on Feb. 25 he visited the Simpson pawnshop on Myrtle Ave. and obtained diamond jewelry, and then, after paying the amount charged for the goods, succeeded in extracting the big bills in the roll and departed, leaving only $19 in bills and one silver dollar as payment to the pawnbrokers for their property.

The prisoner was brought into court Thursday by the court officer and arraigned before the magistrate. He was represented by Attorney Abraham Brekstone, 302 Broadway, New York. Mr. Mackentire, an employe of the Simpson concern, was the first witness called, and he told the story of the theft of the jewelry. He explained that the man called at Simpson's pawnshop on the afternoon of Feb. 25 and asked to see diamond jewelry. He asked for earrings and for diamond rings, said the witness, and was waited upon by Mr. Tweedy.

According to the witness, the man, after examining the goods placed before him for inspection, left the store and returned in a short time and paid over to Mr. Tweedy $1,369 in two $500 bills, three $100 bills, one $50 bill and 19 $1 bills. Mr. Tweedy counted the money and found a shortage of one dollar, and then called the attention of the purchaser to this fact and the money was handed back to be recounted by the customer, who, according to witness, admitted the $1 shortage and took from his pocket a silver dollar, handed back a roll of bills together with a silver dollar, and after having obtained a receipted bill, took the jewelry and the bill and made his departure. The witness went on to say that immediately upon the departure of the customer Mr. Tweedy counted the money and at once saw the fraud and hurried to the street, but was unable to apprehend the man. The witness stated that there were $19 in the roll of bills handed back to the clerk.

The witness was next questioned relative to when he had seen the alleged swindler after the time that he had been in the store and stated that he had not seen him after that time until he was arraigned in the Adams St. Court on June 17.

The attorney representing the prisoner opened his cross-examination by asking the witness if he was absolutely sure of the date on which the man is alleged to have visited the store, and was informed that the man came to the pawnshop on Feb. 25 between 2 and 3 o'clock P. M., at which time two other employes of the concern besides Mr. Tweedy and the witness were in the store. The witness said that he stood where he could watch the transaction between Mr. Tweedy and the customer, and that he took notice of his appearance and could positively identify him as the man who visited the shop on the date mentioned. He said that he had given a description of the man to Mr. Ryan, another man connected with the store.

The attorney for the defendant then asked the witness if he would be surprised if he were told that the alleged swindler was in St. Louis at the time that the theft was supposed to have been committed, and also told him to take plenty of time and take a good look at him, that there might be no possibility of mistaken identity. The witness said that he would be very much surprised to hear that the man was in St. Louis at the time mentioned. He was then questioned relative to the transaction, and said that Mr. Tweedy counted out the money, and that it was not more than 30 seconds from the time when the goods were delivered to the swindler before the alleged discrepancy in the amount was noticed. He stated that he saw Mr. Tweedy counting the money and that the six large bills had been extracted from the roll. The witness was then excused.

Mr. Tweedy was then called as a witness, and when asked by the magistrate to tell the circumstances of the alleged swindle he said that the prisoner came to the store on Feb. 25 and stated that he was going to be married and wished to purchase some suitable diamond jewelry. The man left the store and returned in about 10 or 15 minutes and paid over $1,369 and a receipt was made out for the goods. When the money was counted a shortage of one dollar was discovered and the customer's attention called to this fact, whereupon the roll of bills was returned to him and recounted and then a roll handed back, together with the silver dollar. The goods were then turned over to the customer, who took his departure. The testimony of Mr. Tweedy corroborated that of the first witness.

On cross-examination Mr. Tweedy stated that he went to Syracuse, where the prisoner was held for examination on another charge, and that he saw the man and identified him as the one to whom he had sold the goods. He said that the suit the prisoner had on when he saw him in Syracuse was not the one he wore when in the Simpson store, and that the man afterward changed the suit he was then wearing for another one, which was the same as that worn at the time he visited the Simpson store.

In his testimony relative to the actual transaction Mr. Tweedy said that the man added a silver dollar to the roll and handed the money to him, and he looked into the roll and saw that the big bills were gone. He found that six bills had been extracted and then hurried out of the store, but the man was not in sight. The witness positively identified the prisoner as the man with whom he had the transaction.

Mr. Adams, another employe of the concern, was next called as a witness and said he recognized the defendant as the one who visited the store on the date in question. He was positive as to the identity of the man. On cross-examination he was questioned relative to the ability of the customer to speak fluent English and stated that the prisoner conversed with a foreign accent. He said that he was out at lunch when the man first came to the store, and when he came back he saw Mr. Tweedy talking with him. Asked how he was so positive relative to the identification, he said that the man's face impressed itself on his memory, particularly his peculiar nose and mouth and sunken cheeks. He was then excused.

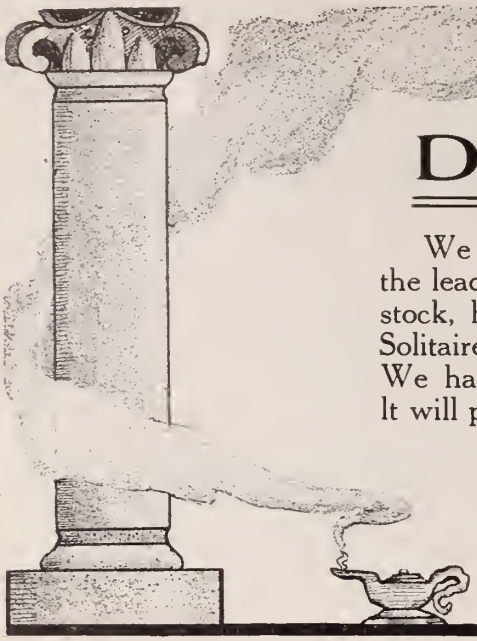
Mr. Tweedy was then recalled, and when questioned relative to the appearance of the man's hands said he did not recall any unusual defect or marks on his hands, and that the man spoke with a slight accent which was not very noticeable. He was then excused.

Attorney Brekstone then moved to dismiss the case on the ground that the evidence was not sufficiently strong to hold the prisoner. The attorney said that witnesses had testified that the money was counted out before their eyes, and that they had receipted for it and the man had taken his goods and departed. He said that there was not a scintilla of evidence to prove that this man was the one who was guilty of the alleged crime. He said that there was no evidence which fixed the charge, and asked the court that the prisoner be dismissed.

The motion was denied and the prisoner was returned to the Raymond St. Jail to be held to await the action of the Grand Jury.

Jeweler Sued for Reward Which He Offered for Missing Diamonds.

WATERTOWN, N. Y., June 24.—As the result of an advertisement some months ago in which Jeweler Silas L. George inserted in local papers offering $100 reward for the return of two diamonds, valued at $400, which mysteriously disappeared from his store, A. P. Sheldon, a druggist, has brought suit against Mr. George to recover the amount.



George missed the diamonds on Dec. 28. He had not seen them since Nov. 23. Elvin C. Katz, who is now in the reformatory for stealing the diamonds, sold the two stones to Mr. Sheldon for $218 on Dec. 19 and later Mr. George secured the stones. Mr. Sheldon now claims the reward, inasmuch as it was by information from him that Katz was apprehended and George secured his diamonds.

Katz was sent to the reformatory for another crime

Death of Benjamin Seccombe.

AMSTERDAM, N. Y., June 24.—Benjamin Seccombe, until about a year ago a jeweler in East Main St., died last evening at St. Mary's Hospital. He suffered from a complication of diseases, which compelled Mr. Seccombe to retire from active business about one year ago. He sold out to Clinton Little. Mr. Seccombe had been in ill-health about two years.

Mr. Seccombe was born in Cobleskill and first engaged in the jewelry business in Volatie, conducting a store there for about 20 years. He opened a store here in 1895. Deceased is survived by a widow and two children.

DIAMOND RINGS

We import diamonds and other precious stones direct from the leading markets of the world and always carry a complete stock, hence we are able to show, at all times, a fine line of Solitaire Diamond Rings, also Cluster, Princess and Fancy Rings. We have rings to please every taste at prices that are right. It will pay you to know our line. Send for illustrated catalog.

THE NEWS FROM LONDON

Business Still Quiet in London, Despite the Franco-British Exhibition—Birmingham and Sheffield Trade Also Dull—Arguments on the "Daylight Saving" Bill—Engraver's Present to the French President—De Beers Dividend Declared.

London, June 21.—Trade still remains extremely quiet. Throughout the provinces, despite the spells of fine weather we have had, reports are all very disquieting. In London the Franco-British Exhibition has indeed drawn a great number of people, and in the West End and the western suburbs of London considerable difficulty is experienced by visitors in procuring a hotel or any form of lodging accommodation. Of course, this must react in some way upon the trade, but as yet no one seems to have felt the advantage. Among those who were introduced to the King and President of France in the Court of Honor at the opening of the exhibition were the following members of the trade: Herbert C. Lambert, of Lambert & Co., the well-known West End silversmiths; Alex. Ridpath, diamond merchant; Jas. Haswell, of R. Haswell & Sons, material dealers, and W. Augustus Steward, editor of the *Watchmaker, Jeweler, Silversmith and Optician*. These gentlemen represented the jewelry, silversmithing and horological section of the exhibition, and in the near future, so far as these departments are concerned, I hope to write at length.

* * *

The trade in Birmingham falls in much the same lines as in London, while Sheffield still feels the pinch of bad trade not only in the want of work in the silversmithing and electroplate departments, but also cutlery. The Scottish National Exhibition in Edinburgh does not seem to be doing much good for the local people; indeed, up to the time of writing, despite these exhibitions—the Franco-British and the Hungarian in London and the Scottish Exhibition in the North—there is a great want of freely moving money, and manufacturers, factors and retailers all complain that money is particularly and exceptionally tight.

* * *

TAMPERING WITH TIME.

The House of Commons Select Committee is still in session and listening to those who are in favor of the so-called Daylight Saving Bill, and those also who are against it. I have previously mentioned the fact that Sir W. H. M. Christie, the Astronomer Royal, is strongly against interfering in any way with what he terms the fundamental principle of time recording. This he declared emphatically "regulates not merely our own life, but our relations with the rest of the world, and would have far-reaching consequences, which do not appear to have been sufficiently considered by those who have accepted the scheme as the only way of securing what they desire in the abstract." The Astronomer Royal states thus far a scientific view against the bill, as did also another astronomer who used strong language in his protest against it. But the British Astronomer Royal, besides being a scientist, is also a man of the world and something of a sentimentalist, and he recognizes the fact that the hard-working country laborer, like his forefathers, gets up not by the clock, but by the sun, and by asserting 4 o'clock is 5 o'clock the working man will not be deceived; neither, as one sarcastic person suggested, will "the cows which have to be milked."

But there is another important argument against the bill, and the possibility is that the objections of the General Post Office will be the means of giving it its quietus, for the secretary to the Post Office, in giving his evidence, while admitting that there might not be any serious dislocation occasioned to the Home Mail Service by the change in the clock, affirmed that the Continental service would be knocked out of gear unless foreign countries also altered their clocks to make them correspond with British time. The result of the later arrivals would lead to serious dislocation of the service, and would in most cases mean material curtailment of the business day for dealing with Continental correspondence.

* * *

When the French President was in London he received a somewhat remarkable gift from a London Engraver, A. G. Sharp, who had engraved upon an ordinary hen's egg a view of the Court of Honor, which constitutes the magnificent entrance to the

ENGRAVED EGG PRESENTED TO FRENCH PRESIDENT.

grounds of the exhibition, and on the other side one of the exhibition posters representing a figure of Peace holding a dove. Expert engravers will know the difficulties which attend engraving on pearl goods, and thus thoroughly appreciate the care needed not to break the flimsy eggshell.

* * *

The De Beers Consolidated Diamond Mines, Ltd., have declared the usual semi-annual dividend of 20 per cent. on the preferred stock, thus terminating recent fears in the market that the dividend be passed owing to the depression and crisis in the diamond industry.

St. George.

At the meeting of the stockholders of the J. J. Sweeney Jewelry Co., Houston, Tex., held recently, the following officers were elected: W. T. Carter, J. S. Rice, John H. Kirby, C. G. Pillot, W. G. Sears, H. B. Rice and J. J. Sweeney. Following this the directors elected J. J. Sweeney as president and treasurer. C. G. Pillot vice-president, and George J. Mellinger secretary and manager.

A. W. Susen, Who Disappeared from El Paso, Tex., a Year Ago, Reported to Have Died in Louisiana.

El Paso, Tex., June 24.—According to an announcement made in this city, the mystery as to the whereabouts of A. W. Susen, a former jeweler who disappeared about a year ago, had been cleared up by the news that Mr. Susen recently died at Napoleonville, La., and was buried there June 14. In Napoleonville, it is said, Susen went under the name of A. W. Stegner, and was employed as a jeweler by F. C. Revoire.

The news of the death came through the local lodge of Elks in this manner. The death of the man known as Stegner was very sudden and an inquest was held by the Coroner. Among the effects of the deceased was a diamond ring, an Elk pin and a valuable watch. Inquiry through the Elks resulted in the identification of Stegner as Susen.

When Susen disappeared a year ago it was believed that he had met with foul play. He left El Paso for New York some time in May, going to the metropolis by way of Chicago. When no word was heard from him, inquiry was made in New York among those firms to whom he was expected to go to purchase stock, and it was found that he had not appeared in that city. He was traced as far as Chicago, where the trail was lost, and it was believed that he was murdered in that city, as he was supposed to have some valuable diamonds, or the proceeds therefrom, in his possession.

A newspaper clipping some months later indicated that Susen had gone to Germany, and according to the information received from Louisiana he must have returned from Germany about four months ago.

After Susen's disappearance a bankruptcy petition was filed against him, and Mayor Sweeney was appointed administrator of his affairs.

Death of Frank Wettstein.

Cedar Rapids, Ia., June 24.—Frank Wettstein, well known to the jewelry trade of the west and the son of George Wettstein, manufacturing jeweler of this city, died at his home, 41 N. 16th St., Saturday last, and the remains have been sent to Lisbon for interment. Death came after a long illness.

The deceased, who was but 29 years old, has been suffering from a fatal malady for 10 years. Some time ago he was sent to the southwest, where it was hoped the climate would benefit him, and he returned in comparatively good health. He became worse, however, after his return here, and it was evident that there was no cure for him.

Young Mr. Wettstein had been connected with his father's house for many years and had many friends among the retail jewelers whom he visited while traveling for the business, particularly in Colorado, Kansas, Nebraska and Iowa. He is survived by a widow as well as his parents, two brothers and a sister.

F. E. Pirtle & Co., who have been operating stores in Anthony and Council Grove, Kans., have just opened a new store in Cherokee, Okla. Mr. Hanson, who has been at the Council Grove store, will be in charge.

Modern Cameos

The first samples of the MODERN CUT CAMEOS were brought over by us about two years ago.

Confident of the ultimate success of the stone we never tired in our efforts to acquaint the trade with its merits. Its immense popularity now attests to our correct foresight.

The same effort has been exerted on the other side in improving the quality as well as securing an adequate supply. We have succeeded also in this respect, and our Cameos are unexcelled in the matter of superior engraving, and precision of size and finish—and at right prices.

ONYX CAMEOS in MODERN and CLASSIC DESIGNS on hand in all sizes and colors for immediate delivery.

Representative of Birmingham Jewelers Comes to Pittsburg to Claim Articles Stolen by Salesman.

PITTSBURG, Pa., June 27.—E. R. Carder, representing Abraham Bros., jewelers, Birmingham, England, arrived in Pittsburg yesterday afternoon to take charge of the case against Albert J. Walker and Ralph Waldeman, being held on charges of smuggling into this country diamonds and jewelry valued at $5,000 belonging to the firm who employed Walker. This morning, in company of counsel, Mr. Carder visited M. M. Garland, Collector of the port of Pittsburg, and identified the jewelry, which, Walker admitted to the police, he had brought to this country to dispose of. Walker had intended returning to Kingston, Jamaica, where goods valued at $10,000 are being held in bond, and bring them here and sell them, and then lose himself to the world.

Mr. Carder identified the goods, except six pieces, from which the tags had been removed. The tags on the other pieces corresponded with the entries made on his books. Formal claim will be laid with the United States Court here for possession of the goods, and it is doubtful if additional charges will be made here.

Under ordinary circumstances the government could start forfeiture proceedings for the diamonds, and should it be decided to sell the goods for the duty, these proceedings probably will be instituted next week. A formal claim on them will, it is believed, stop any action of this kind. Abraham Bros. want to secure control of them.

"There is no precedent in a case of this kind, so far as I have been able to learn," said Collector Garland to THE CIRCULAR-WEEKLY correspondent, "and it must be shown that the firm claiming them did not intend to send them to this country for disposal. Mr. Carder showed me a contract which his firm made with Walker, who was their salesman, but I do not know what countries Walker was to cover for the firm. So far as Uncle Sam is concerned, the two men under arrest are the only ones to be dealt with. It is up to Abraham Bros. to show that the goods belong to them, and I presume that will not be difficult to do. But in any event, the men will be punished for smuggling.

Mr. Carder is undecided as to what he will do about prosecuting the men, but Superintendent of Police McQuaide is of the opinion that prosecutions will not be entered here against them, beyond the charges already made. Carder spent most of the day in company of his attorney. He says that the jewels were not smuggled in with the authority of the firm, and therefore they should not be called upon to pay duty for the goods. In the meantime the men are still being held here in the county jail, and their case cannot be brought before the United States Grand Jury until next October, as the jury will not meet before that time. The two men evidently will do what they can to have the goods turned over to Abraham Bros., so it is believed here. Carder does not desire to remain in Pittsburg longer than necessary, and the government collector will not hand the jewelry over until the case is properly disposed of in court.

If it is decided to make information against the men, and it is done in Jamaica, the men would have to be extradited, and if they waive the right of extradition, could be proceeded against here by the federal authorities.

PITTSBURG, Pa., June 29.—United States Attorney John W. Dunkle has begun proceedings for the forfeiture of the diamonds brought into this country by Walker and Waldeman. The court granted an order that the defendants show cause why the goods should not be taken for duty and made the rule returnable to-morrow.

Porter, Who Stole Pittsburg Jewelry Firm's Trunk, at Canton, O., Located in Indiana Jail and Admits the Charge.

PITTSBURG, Pa., June 25.—William Graver, of Nashville, Tenn., alias "John Collins," "George Taylor" and a number of other names, who robbed a jewelry trunk at Canton, O., December 6, 1907, and carried off the contents, valued at $7,722, belonging to West, White & Christy, of Pittsburg, is serving a 10-year sentence in the Indiana State Reformatory at Jeffersonville, Ind., where he was arrested May 27 for stealing a horse and buggy belonging to a citizen of Ft. Wayne, Ind. The identification of Graver was brought about by the Chicago branch of the Pinkerton Detective Agency, operating in behalf of the Jewelers' Protective Union, of which West, White & Christy are members, and when Graver serves his sentence prosecutions will be made against him on the Ohio charge.

The trunk stolen had been left in the trunk room of the Cortland Hotel at Canton, O., and Graver hauled it away, ostensibly to take it to the railroad station. Instead he hauled it to a dark street, broke it open and dumped the contents into a bag and started for Cleveland. Graver had planned to make away with the contents of several other trunks, but they were late arriving at the hotel.

Graver since the robbery had traveled over a large portion of the United States, Mexico and Canada. When he was arrested at Jeffersonville railroad tickets valued at $12,000 were found on his person, he having been engaged in a number of railroad station robberies, and through this means had managed to travel a great deal without cost to himself. Graver melted most of the solid gold jewelry and disposed of it, receiving over $3,000 for the loot. He unmounted most of the diamond rings and sold the stones. The jewelry was disposed of at various places throughout the country he traveled.

Graver must stand trial at Canton for the Ohio robbery, but it is likely that it will be a number of years before he is out of prison, as he confessed to the jewelry theft. It is also likely that he will be prosecuted on other charges. A reward of $500 had been offered for Graver's arrest, and much satisfaction was expressed here that he had been arrested. It is not thought that much of the stolen property will be recovered. West, White & Christy will not lose anything by Graver's transaction, as the Jewelers' Protective Union have settled with the Pittsburg firm for its loss.

Eugene L. Young, Latrobe, Pa., Again Goes Into Voluntary Bankruptcy.

PITTSBURG, Pa., June 27.—Eugene Leaf Young, Latrobe, who once before was declared a bankrupt, Wednesday filed a petition in voluntary bankruptcy in the United States District Court in Pittsburg. He gives his liabilities as $7,060.14, and assets $1,953.85. The schedules which he files set forth that he was declared a bankrupt June 20, 1901, and that his estate paid .097 on the dollar. James S. Keenan, of Greensburg, Pa., was appointed referee in the latest bankruptcy proceedings, and to-day was set as the time when Young should appear before the referee and make a statement of his affairs.

Young owes the following creditors whose amounts exceed $25 or over: Alvin Mfg. Co., $379; Heeren Bros. & Co., $41; Laubheim Bros., $119; W. A. Pickard, $83; Cohannet Silver Co., $71; Heintz Bros., $401; Lock Art Glass Co., $39; L. Witsenhausen, $198; Cross & Beguelin, $87; National Jewelry Co., $97; Dennison Mfg. Co., $52; Quaker City Glass Co., $143; New Haven Clock Co., $103; Siegle Rotschlid, $43; Woodward & Tiernan, $25; A. H. Gerwig, $132; D. V. Brown, $29. In addition to these amounts, Young also gave the following notes, most of which were for balances owing on merchandise purchased: Laubheim Bros., $458; Cross & Beguelin, $400; Barlow Mfg. Co., $51; Heeren Bros. & Co., $400; Marsh, Brown & Mather Co., $1,294; M. A. Mead & Co., $600.

Young says that his stock is worth $1,400. He also claims $300 exemption under the bankruptcy laws. It is not thought that the estate will pay the creditors much.

The Career of Charles R. Bickford.

ELYRIA, O., June 24.—The recent death of Charles R. Bickford was the cause of sincere regret by the citizens of this town, as he was one of Elyria's best-known citizens, and for many years one of its leading merchants and jewelers until his retirement, about a year ago. He passed away after an illness of several months of Bright's disease.

Mr. Bickford, who was 57 years old, was a native of Virginia and lived in Richmond, his birthplace, through his childhood. Later his parents came to Massachusetts and there he received his education. He came to Elyria in 1874 and obtained employment in the Walcott jewelry store, where he laid the foundation of that knowledge of the jewelry business, which was in great part the cause of his success in later years. After a few years he succeeded to the business and carried it on successfully until his retirement a year ago, hoping to spend the rest of his life in quiet and comfort.

Mr. Bickford was married in 1875 to Miss May Sibley, and she, with a daughter and son, C. L. Bickford, survive him. The latter is connected with the local national bank.

The Star Watch Case Co., Ludington, Mich., contemplates building an addition about 300 feet long to its present plant. The working force will be considerably increased when the new addition to the plant is completed.

Thieves Unsuccessful in an Attempt to Secure Valuable Diamond Jewelry from New York Manufacturers by New and Clever Trick.

What appears to be a very clever attempt to swindle a manufacturing jeweler was made last week in New York, and that the perpetrators did not get about $13,000 worth of diamonds and jewelry was due to the caution of a jeweler who was made the innocent tool of the swindlers. The guilty men have not been arrested, although an attempt has been made to locate them, as it is believed that they may try to operate their scheme upon others. The trade is warned to be on the lookout for them.

Early last week two men called upon Herman Mestel, a jeweler at 56 Essex St., New York, and one of them presented a card bearing the name of a Jersey City doctor, saying that they had been referred there by Mr. Mestel's brother, a Jersey City jeweler. One of the men, who said he was a doctor, told the jeweler that he knew his brother well and that he came over to buy a valuable brooch and ring for his (the "doctor's) mother. As the jeweler did not have these goods in stock, at the suggestion of his customers he took them to a manufacturer, S. Kaplan & Co., 45 John St., the "doctor" saying that if the jeweler would get the articles which were wanted on memorandum, he would call, with his mother, at the Essex St. store in the evening and make the purchase.

When the men arrived at the office of S. Kaplan & Co., the "doctor" looked at some brooches and picked out three worth, respectively, $325, $365 and $260, and two unset diamonds which were worth $130 and $128, which were given to Mr. Mestel on memorandum.

While he was doing this his companion went up to a desk at which Miss Kaplan was working and asked if he might write a telegram. When permission was given him, he asked Miss Kaplan to get him a drink of water, and while she was away took six or seven sheets from the pad usually used for sending out statements. Miss Kaplan discovered this, and telling the man he could not use that paper, she gave him some plain white paper, laying the sheets which he had pulled off the pad on another part of the desk. As she did this the "doctor" also requested a drink of water from her. His companion proceeded to write the telegram on the plain paper.

After the parties had gone away, and Mr. Mestel had been given the jewelry on memorandum, Miss Kaplan discovered that the "doctor's" companion had taken several of the statement sheets which she had originally caused him to put back, and also some envelopes, but she did not consider the matter of serious import until later.

Hardly had Mr. Mestel returned to the Essex St. store with the diamonds than a boy brought to him a note written on the printed statements of S. Kaplan & Co., and enclosed in one of their envelopes, which read:

"Dear Sir—As I have made a mistake in the prices on the brooches, kindly give bearer the goods, so that I can correct same, and I will return goods immediately."

This was followed by a statement of goods which had been given to him, and was signed, "Yours very truly, S. Kaplan & Co."

Mr. Mestel was suspicious, owing to the fact that he had just come from the store of Kaplan & Co. He questioned the boy, who said that he worked for S. Kaplan & Co., and was ordered to bring back the goods to correct the mistake. But even then Mr. Mestel decided that he would not risk sending them back and telephoned to the firm, but they did not understand about the note and suggested that he call the following day.

That same evening Mr. Mestel received a telephone message again telling him to return the goods to Kaplan & Co. When the "doctor" and his companion failed to keep the appointment at the store, the jeweler became more suspicious, and the following day he called on Kaplan & Co. and asked for an explanation, and the fraud was discovered.

Needless to say that nothing has been heard of the doctor or his associate, and Kaplan & Co. and Mr. Mestel are congratulating themselves that the tricks of the swindler resulted in no loss to either.

Mr. Mestel inquired of his brother in Jersey City and learned that he knew nothing about the two men except that they had called at his store and asked for articles which he did not have in stock, and he had directed them to Herman Mestel in New York.

When seen at his store, Friday, Herman Mestel, the young man who by his carefulness avoided the loss of the diamond jewelry, described the two men who had come to him. He said that the older man was about 5 feet 10 inches in height, with black hair and eyes and a heavy mustache, and that he wears eyeglasses. He was dressed in a light suit and Panama hat. This man gave the jeweler a card, bearing the name of a Jersey City doctor, which he had probably picked up somewhere and used for the occasion. The smaller man was about 5 feet 4 inches high and had light hair and eyes. He gave no name. He was also dressed in a light-colored suit and wore a straw hat.

When the matter was reported to the police they complimented Mr. Mestel on his carefulness in not giving up the jewelry.

C. E. Tillson, secretary and treasurer of the North Dakota Retail Jewelers' Association, was elected delegate to the convention of the American National Retail Jewelers' Association, at the second annual meeting of the former association held in Jamestown, June 16 and 17. The officers of the North Dakota association elected are: W. H. Reighart, president; C. E. Tillson, secretary and treasurer; A. G. Tellner, vice-president. The Executive Committee includes Messrs. Reigart, Tellner and Tillson.

Bankruptcy Schedules of Jones & Dreyer Filed at Chicago.

Chicago, June 25.—In the matter of the bankruptcy of Jones & Dreyer the schedules were filed here, June 23, and show the following list of creditors: Abel Bros. & Co., $82; Arnstein Bros. & Co., $1,400; Bassett Jewelry Co., $647; J. Bernstein, $2,666; Dreyer, Lochau & Ohm Co., $102; Electric City Box Co., $527; F. & F. Felger, $467; Chas. P. Goldsmith & Co., $106; Hamilton & Hamilton, $227; Chas. E. Hancock Co., $358; Hirsch & Oppenheimer, $348; E. Karelson & Co., $75; Kleinschmidt, Howland & Co., $5,421; S. Lazarus & Co., $2,561; Albert Lorsch & Co., $4,284; Ludeke & Heiser, $7,756; L. Mannheimer & Bro., $1,260; Rud. Noel & Co., $3,550; H. Z. & H. Oppenheimer, $4,144; Shiman & Eisenstein, $150; Silberman, Kahn & Wallenstein, $500; W. S. Sparrow, $25,564; Stern Bros. Co., $14,377; Stein & Ellbogen Co., $4,099; Jacob Strauss & Sons, $3,031; Chas. F. Wood & Co., $6,636; Warren & Williams, $107; J. Wodiska, $2,842. Aside from the above claims it is noted that $10,000 was secured on mounted and unmounted diamonds valued at $16,235; also one note to the National Bank of the Republic, Chicago, for $7,148, secured by 106 unmounted diamonds and several notes given the same bank in March and April this year for a sum aggregating $23,500, these secured by bills receivable of Jones & Dreyer aggregating about $20,000.

A summary of the assets and liabilities as scheduled is as follows:

Liabilities—Wages due employes, $1,727.50; secured claims, $40,648; unsecured claims, $95,432.17; total, $137,807.67.

Assets—Cash on hand, $745.60; bill and notes, $23,557.32; stock of merchandise, $30,000; machinery and tools, $1,500; other property, $7,811.48; debts due on open account, $57,911.46; deposits in bank, $3,148.82; total, $124,674.68.

Burglars Steal $700 in Gold and Precious Stones from Jewelers of Los Angeles, Cal.

Los Angeles, Cal., June 25.—Burglars entered the building at 414½ S. Broadway, Sunday night, by prying open the doors, and proceeded to the office of the Los Angeles Ring Mfg. Co., of which A. T. Werner is manager. They opened the safe doors by using the combination, and rifled it of its contents, which consisted of merchandise valued at $700, mainly gold and precious stones. The office of M. Streicher, a sample shoe man, which adjoins that of the Los Angeles Ring Mfg. Co., was also entered and the same opened by means of the combination. Here the thieves secured $800 in cash.

H. F. Wallace, a wholesale jeweler, occupies the front offices on the same floor of this building in which the robbery occurred, but Mr. Wallace's establishment was left undisturbed. He accounts for this, however, by the fact that his place is equipped with the burglar alarm. Both losses are covered by burglary insurance.

The store of W. T. Johns, Hampton, S. C., has been destroyed by fire.

Iowa Jewelers Gather At Des Moines.

Third Annual Convention of Iowa Retail Jewelers' Association a Great Success - Important Resolutions Adopted and Officers Elected.

DES MOINES, Ia., June 25.—The jewelers of this State have again shown themselves among the most progressive in the Union, as far as organization is concerned, and the convention, which was the third annual meeting of the Iowa State Jewelers' Association, has just closed, after one of the most important and interesting sessions that has ever been held in the trade. More than 300 jewelers from all parts of the State participated in the proceedings and the reports of the officers and addresses of the speakers, as well as the entertainment afforded the jewelers and their wives, were thoroughly enjoyable and instructive, and amply repaid them for their trip here.

The meeting was held in the Savery Hotel, where a large number of exhibits were also made by the leading manufacturers in all lines that come into the jewelry trade. The meeting began June 23, with a reception and registration of the members, the receipt of new applications, etc., and this kept the executive committee and officers busy until the session was called to order by Mack A. Hurlbut, of Fort Dodge, who is also president of the American Retail Jewelers' Association.

Mr. Hurlbut's address was, as usual, of vital interest to its hearers. Among the many points which he dwelt upon was a question of fraudulent advertising, how it hurt the trade and how this could in part be merited by laws making fraudulent advertising a punishable offense. He also took up the question of opposed law regulating the stamping of watch cases and of the inspection of watches by railroads advocating both measures.

On the subject of Amendment to Stamping Law he said:

Our present gold stamping law seems slightly insufficient as it does not state specifically what is meant by solid gold, or rather gold, solid gold being a misnomer, we as jewelers should discourage its use. It developed during the last holidays, and brought before the National Executive Committee at their meeting in January, that the market was supplied with a lot of low karat stuff actually assaying about three or five karats sold by the department stores and others in competition with their goods. Advertised as solid gold, and guaranteed by Uncle Samuel himself as the Simon Pure Quill, the jewelers who never speak to anything less than 10 karat on the street were up against it. The committee then decided that a minimum should be established and an amendment drawn and presented for consideration before Congress. After much discussion it was deemed advisable to make this minimum 10 karats fine. This was done owing to the fact that 10 karat, owing to the present great difference in price over 14 karat, is almost essential in some communities. Such an amendment was drawn and forwarded, but owing to the rush of Congress getting busy doing nothing and getting their fences up for the new campaign, it did not receive recognition and was left waiting at the church. But it will keep, and in the meantime we can get an expression of opinion from the whole trade on the matter.

This, like everything else attempted, met with a whirlwind of commendation and advice. The cheap goods man got out his hammer, the 14 karat man said that we were way below par, and some even asked who this committee was. To my mind the most equitable basis for settlement, owing to different trade conditions, is 10 karat, and as we certainly have a limit. I would suggest that Iowa stand for us in the term gold instead of solid gold, and making the minimum 10 karat.

On the subject of fraudulent advertising he said, in part:

Retail jewelers should pay particular attention to legislation affecting fraudulent advertising. Printed advertisements should be as binding as printed contracts. The furniture dealers recently took the matter up and we should join hands with other retailers to bring about the desired results. The idea is to make all misrepresentation in advertising, either as to quality or value, whether directly or by innuendo, a case of fraud and punishable under the statutes. Such a law would cause great harm to the get-rich-quick artist, and would be of great benefit to the retailer and to the public.

On Watch Inspection he said:

Should we jewelers interest ourselves in legislation concerning watch inspection on railroads? At the National Convention a resolution along this line was introduced and immediately taken up in the press by interests who would benefit thereby and an entirely wrong construction put on the actions of the National Convention. We very much

MACK A. HURLBUT, PRESIDENT.

deplored the channels into which the agitation drifted, or were forced by those who were most interested in seeing it carried. It is my opinion that legislation, if any, would necessarily be Federal rather than State, as it applies to interstate commerce, and the lines made under one system frequently cover several States. If there is injustice done under the present system, which no one denied could be greatly improved, is it not the railroad man rather than the jeweler who suffers, and if so, are not the railroad men perfectly capable of handling it through the very organizations which we all know they possess. Why, if the poor downtrodden railroad man is so vexed and harassed and unjustly used, does he not take a stand against it, rather than rising in the full might of his organized power, to get out and lobby and oppose such legislation whenever proposed?

One-half of the jewelers are inspectors, the other half are not. The half that are inspectors, are not asking it, the rest have no complaint, for if so much evil does exist and the railroad men so badly abused by the inspectors, the man who is not inspector will surely get his share of railroad trade, for if they are being robbed by the inspector, they will have no more to do with him than is necessary, and whenever they need anything outside the time service itself, they are not going to a man who puts it over them, no, they will patronize the man who is not inspector, so he would in the end get the cream of the railroad business, which to my mind is not the watches one sells but the other goods he uses. If possible I would like to see a watch inspection act under interstate commerce commission department, wherein a certain minimum of goods and service would be fixed and required on all roads, and in this I would favor a standard of grade not quite so expensive but still accurate. This standard having been adopted allows the inspectorships to be handled largely as they are at present and give every maker of a good watch who could show grade and rate on his movements an equal chance at his share of the business. Have this grade and rate fixed for the entire country, so a railroad watch could be as sure to pass muster in California as in Maine.

Mr. Hurlbut's address was followed by reports of Secretary N. Nielson and reports of the other committees, which, in turn, was followed by the appointment of a committee of resolutions. The morning session closed with a discussion on "Benefits Received from and Caused by Association Influences in the Past Year and the Future Probabilities in Association Work."

After an adjournment for lunch the members met again at 2 P. M. and listened to interesting discourses by John Hands on the subject of "From Where Are We to Get Our Watchmakers in the Future?" J. H. Purdy, on "Catalogues"; A. L. Sackett, on "Benefits That Will Accrue to Manufacturers by Organization in the Retail Trade"; J. H. Lepper, on the subject of "Boost the Price of Protected Goods," a phrase, by the way, of which he is the author; A. Hoch, on "To What Extent and in What Manner Should the Jeweler Back His Goods That He Sells."

The afternoon session closed with a general discussion of many subjects and the afternoon was also spent by the wives of members in an automobile ride about the city.

Wednesday's session began in the morning with a discourse upon the "Bulletin, Its Past, Present and Future," by S. Callison. This was followed by a report of the Committee on Resolutions and among the important resolutions adopted was one which declared against the time guarantee in watch cases, but deferred judgment on the remainder of the proposed bill to regulate the stamping of watch cases; one endorsing the Missouri and Kansas resolutions on the amendment to the Stamping Law to do away with the words "solid gold" and require the actual karat to be stamped; a resolution of congratulation to the newly organized association of jobbers, assuring them of the support and co-operation of this State association, and another asking the National Jobbers' Association if it were not possible to devise some method whereby more strict supervision might be had in the distribution of jobbers' catalogues. The association declared in favor of their official organ and for a national organizer.

The officers elected by the association were practically the old board. Mr. Hurlbut tried to excuse himself from serving again, pleading excess of duties and the fact that his wife objected to so much of his time being spent in this work. Secretary Neilson and Ex-Secretary J. H. Lepper, who were urged to run for president, refused to run against Mr. Hurlbut if he could possibly serve, and a committee waited upon Mr. Hurlbut's wife and got her to consent and urge her husband to accept the position. Mr. Hurlbut was re-elected then amid great enthusiasm. The

other officers re-elected were: N. Neilson, Harlan, as secretary; S. Callison, Dexter, as editor of the Bulletin. Emile Renaud, of Keokuk, was elected vice-president, and the executive committeemen elected were: Dan Jones, Independence, and John Hands, Iowa City.

There was a debate of much spirit over the selection of the city at which the next State convention should be held. Sioux City and Iowa City both had their adherents, while Des Moines was again proposed. The result of the vote showed 63 for Des Moines against 30 for Sioux City and 15 for Iowa City, showing that the jewelers believe that the capital is the most advantageous place for their meeting.

A flashlight was taken of the members in convention here in the convention hall.

Among the interesting papers of the afternoon session Wednesda, was one on "How to Detect and Correct Escapement Errors," by C. T. Higginbotham, of the South Bend Watch Co., whose discourse was listened to with greatest attention. A paper on "Things a Retail Jeweler Should Know," by J. W. Pilkington, and one on "The Kind of Advertising That Pays," by E. A. Lewis.

The early part of the evening was devoted to a banquet which was held in the dining room of the Hotel Savery, and which was given by the jewelry interests of the city and the traveling men, to the visiting jewelers. As usual this proved a most enjoyable affair, as did the feast of fun and reason which followed it.

During the afternoon session there was also a trolley ride about the city, in which the wives and daughters of the visiting jewelers participated. It ended at the Capitol, after which the ladies returned to the hotel.

Des Moines, Ia., June 26.—Following the meeting of the jewelers, the Iowa State Association of Opticians held its 11th annual convention at the Savery yesterday and to-day, and manufacturers and wholesalers occupied adjoining rooms for the exhibits. President Thompson presided and the proceedings were opened with a prayer and a brief address of welcome by the Mayor, to which Mack A. Hurlbut responded. The formal reading of the minutes of the last meeting were read, the report of the officers and committees and the appointment of special committees took up the morning session, while the afternoon was devoted to addresses by S. W. Lane on "Chalk Talk," and J. O. Oaks, Dubuque, on "Asthenopia."

To-day's session began with an address by Dr. Lane on "National Organization by House of Delegates with States Affiliation," after which will come the business session, with a report on legislation by Karl D. Fisk. The afternoon session will be devoted to unfinished business, election of officers and appointment of committees, while the proceedings will close to-night with a formal banquet at the Savery.

Hobson & Gove will soon celebrate the completion of their sixth year in business at Washington, Ia. They are having new fixtures installed, and a number of improvements made in their sales room.

Thief Who Tried to Get Ring from Atlanta Jeweler With Forged Check Captured After Exciting Chase.

Atlanta, Ga., June 24.—Monday evening, about 6 o'clock, after an exciting chase that began at the Fourth National Bank and ended several blocks away, on the roof of the freight depot of the Central railroad, a heavy-built, well-appearing young man who signs his name as E. G. Huge, was captured by a crowd of 15, who joined in the chase, and is now occupying a cell in the Fulton County Tower, charged with attempting to steal a diamond ring from Schaul & May, Peachtree and Decatur Sts. For the purpose of getting the ring he is charged with having forged the name of Dr. L. L. Amster, proprietor of the Piedmont Sanitarium, both to a $50 check and to a letter of introduction.

About 5 P. M. Huge entered the jewelry establishment of Schaul & May. To D. A. Tobias he explained that he wished to buy a diamond and handed him a letter of introduction vouching for his reliability and signed "L. L. Amster," saying that his (Amster's) check would be presented by the bearer. The man, Huge, who was well dressed and looked honest, decided on a $48 ring, which was wrapped up for him, and he was given the $2 change.

To make sure everything was all right, Mr. Tobias said: "Mr. Huge, Dr. Amster's office is just across the street in the Fourth National Bank building; I'll go by with you and see him." They walked out side by side until they reached the steps of the bank building, when Tobias missed Huge, and saw him a few yards ahead, walking very rapidly. Mr. Tobias yelled for someone to stop him, and at that the man broke into a run, and went by leaps down a stairway that leads from the main street to the railroad tracks. He ran under the Forsyth St. bridge, and as ne neared Madison Ave. he took the ring and threw it back to his pursuers, evidently hoping to stop the chase or to cause delay, but Tobias yelled to a boy to pick it up while he continued in pursuit.

Huge ran through a negro house and knocked a woman down, ran through an old barn to some freight cars, which he climbed, and from these he jumped to the top of the building upon which he was captured.

When arrested, the young man gave his name as E. C. Huge, and said that he is from Atlantic City, N. J. He says he is 18 years old, but looks to be about 29; is well dressed and appears to be well educated.

Huge stated that his plan was prearranged. He and his partner had arranged that he should run as soon as he purchased the ring. He stated that the check for $50 and the note, which were used, were written by his partner, who is named Anderson. Huge stated that he came to Atlanta Saturday, June 21, in the hope of procuring work, and failing in this, he decided to get the ring and sell it for enough to live upon for a while.

E. G. HUGE, ARRESTED AT ATLANTA, GA.

The police believe they have captured a man with a reputation, and are endeavoring to ascertain if he is wanted for thievery at other places. Huge was bound over to the State courts to-day on the charge of "forgery, larceny after trust, and cheating and swindling." His bond was placed at $500, and in default of this he was placed in the county jail. No trace of his alleged partner can be had.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended June 27, 1908.

The U. S. Assay Office reports:

Gold bars exchanged for gold coin	$270,489.72

ESTABLISHED 1880 3 MAIDEN LANE, NEW YORK

Annual Field Day of Philadelphia Jewelers' Club Followed by Entertainment and Smoker—New Yorkers Win Baseball Game.

PHILADELPHIA, Pa., June 25.—Supposed rivalry between New Yorkers and Philadelphians is to be accepted as the reason why members of the Jewelers' Club of this city, representing New York and the Quaker City, held their annual field day and athletic entertainment Tuesday, June 23. Therefore all prominent jewelers of New York, Newark, Jersey City, Baltimore, Washington, and especially Philadelphia and nearby points, to the number of about 500 became the guests for a day of the Philadelphia Jewelers' Club, witnessed two nines recruited from the New York and local contingent compete for honors on a baseball field and afterward were treated to a breezy series of boxing bouts, dancing, music and other vaudeville performances at a local sporting club.

As has been the custom of the club for about 12 years past, the 23d of June was set aside for the event. Until last year the Philadelphians had been triumphant in the baseball game, but this year, playing like a well-oiled machine, the New York "Colts" defeated the Philadelphia "Veterans" in the annual ball game by the decisive score of 28 to 4.

The game was called at the end of the fourth inning, as the Phillies were tired out from running after the long drives of the "Colts," who pounded out 25 hits to the "Phillies'" five. The excellent work of the "Colts" was shown in that they only made one error in the game. The features were the pitching of Spies, two long home runs by Lapham, and two three-base hits, one by Higham and one by Kirtland.

The New York rooters, 100 strong, aided their team by a noisy demonstration, which increased as the team forged further ahead. There is no doubt that the Philadelphians reluctantly admitted to having made a sorry showing, while the New Yorkers were gleeful to a degree. The nines lined up as follows:

Philadelphia—R. P. Coates, c.; W. H. Taylor, p.; L. P. White, 1b.; J. E. Cadwallader, 2b.; David Provan, ss.; Zophia Laird, 3b.; W. S. Moore, lf.; T. B. Dornan, cf.; M. P. Hoffman, rf.

New York—Spies, p.; Higham, 1b.; Power, ss.; Lapham, lf.; Washburne, rf.; Kirtland, c.; Bush, 2b.; Davies, 3b.; Landis, cf.

Umpire, Frank Weiner.

When the game was called and after the cosy corner under the bleachers had performed its function the players and the rooters went on down for the most part to the Jewelers' Club rooms at 1228 Chestnut St., and afterward, about 9 o'clock in the evening, to the show at the National Sporting Club, 11th and Christian Sts., to which the club had invited all its guests. Here was given one of the brightest and most interesting of stag affairs. Between boxing bouts were feats of acrobats, sleight-of-hand and legerdemain artists, monologues and vocalists.

The attendance at the smoker was even larger than at the baseball game, and to make the night complete the club guests were welcomed after midnight at the club rooms, where the festivities of the day were prolonged to the wee sma' hours of the morning. At the club quarters, as well as at the smoker, Col. J. Warner Hutchins acted as master of ceremonies, and on behalf of the club essayed the rôle of host and announcer.

The entire day's entertainment, both in the way of the baseball game and in that of the entertainment of the evening, is declared by the members who enjoyed the hospitality of the Jewelers' Club to have been one of the most agreeable ever before given by the club. The rather one-sided game was full of amusement to spectators, especially as it was played with vim and hearty enthusiasm. The attendance of the New York contingent was larger than for any other event of the club with the exception of the annual banquet and the annual shad dinner.

Death of Charles H. Judson.

ROCHESTER, N. Y., June 29.—Charles H. Judson, Deputy Excise Commissioner for Monroe county, and well known among the local jewelers, died last Saturday night at his Summer cottage at Charlotte as the result of a stroke of apoplexy.

Mr. Judson was 46 years old and had passed the greater part of his life in Rochester, where he was active in political and business life. He was born in Brighton in 1862, and moved, with his parents, to this city in 1870. After graduating from the Free Academy with high honors he entered the jewelry business with Smith & Edmonds. Later he worked for John Dittmeier in the same line of business. He stayed with Mr. Dittmeier for seven years and then became partner in the firm of Judson & Robie. Upon Mr. Robie's death he assumed full control of the business on E. Main St., and conducted the same for several years. Deceased retired from the jewelry business about six years ago an account of his activity in politics.

Rufus S. Cobb, Albertville, Ala., has removed to Jacksonville, Ala.

Retail Jewelers of Cleveland, O., Form a Strong Local Organization.

CLEVELAND, O., June 27.—On Monday evening, June 22, in the Assembly Room of the Hollenden Hotel, 20 Cleveland retail jewelers gathered together to organize a local association. The call for the meeting was sent out by President Stebbins and Secretary Lightner, of the State Association, and these two gentlemen were present in person to help effect preliminary organization. Both of them gave very instructive talks on the value of organization and the results accomplished by it elsewhere, and it was agreed on the spot and a motion passed unanimously favoring the organization of the Cleveland retail jewelers into a strong association.

The following temporary officers were chosen: E. J. Dister, president; H. M. Shaffer, secretary, and formal resolutions supporting the measures of the National and State organizations were adopted.

The meeting adjourned to meet again on Friday, before which time each one was to use every effort to obtain new members.

Permanent organization was effected at the meeting held last night at the Hollenden, with C. C. Lewis, of the Lewis Jewelry Co., as president, and Jos. A. Welf, of J. Welf & Sons Co., secretary.

The following jewelers were present and constitute the charter membership of the organization: C. C. Lewis, F. B. Guyon, D. Eaffy, F. K. Leland, R. P. Dorman, Henry Welf, Grover J. Welf, H. H. McCreary, C. H. Kinnaman, W. B. Grigsby, Jos. A. Welf, J. H. Welf, C. J. Welf, E. L. Wilsdorf, E. J. Dister, J. S. Holkenburg, Hugo Hill, of Wm. Griffiths Jewelry Co., Mr. Longtin, of Knittle & Longtin.

The president appointed a committee to locate permanent meeting headquarters and the gathering adjourned subject to his call.

The earnest co-operation of every legitimate retailer in Cleveland is desired by this organization, which has for its object simply the betterment of conditions in the jewelry trade, so far as they affect the retail dealer.

Contracts Awarded to Supply Silverware Etc., to Government Departments.

WASHINGTON, D. C., June 24.—The award of the contract for furnishing the silverware, called for in bids opened at the office of the Third Lighthouse District, Tompkinsville, N. Y., on May 12, for the use of eight new tenders, has been made to the International Silverware Co., New York, at the company's bids of $3,444.64. The other bidders were Reed & Barton, $3,785.68, and the Gorham Co., $4,140.52.

WASHINGTON, D. C., June 25.—Robert Ledding, of this city, has been awarded the contract by the Navy Department for the engraving of all medals, pins and bars that may be required by the Bureau of Navigation during the coming fiscal year at $251.30.

E. H. Prey, Canby, Minn., who purchased the stock and business of Peter Nelson at Watertown, S. Dak., has taken possession and is putting in new show cases and fixtures.

AMERICA'S NEWEST GEM

AMATRICE

THE MOST REMARKABLE, BEAUTIFUL AND INDIVIDUAL MATRIX PRECIOUS STONE EVER OFFERED TO JEWELRY WEARERS

Entirely superior to any other matrix gem in permanent jewelry merit.

COLOR Wonderful shades of green combined with infinite forms of matrix effects in shades ranging from subdued pink through tans and light browns down to very dark brown. Peculiarly adapted to gold jewelry.

HARDNESS AND POLISH Matrix and color polish equally and brilliantly, and there is no roughness nor any porosity in the polished matrix. Amatrice is materially harder than turquoise.

INDIVIDUALITY The unequaled variety of matrix effects makes each stone an individual gem. Exact duplicates do not exist, but beautiful matching effects for sets are obtainable.

SALABILITY At retail the most salable of matrix gems, because the range of color combinations and innumerable matrix effects appeal strongly to the individual buyer.

RETAILERS SHOULD REQUIRE MANUFACTURERS TO SUPPLY DIFFERENT TYPES IN EACH LOT BOUGHT.

Amatrice Positively Does Not Fade Nor Change Color.

MOST SUCCESSFUL SALES BY RETAILERS HAVE ESTABLISHED THE POPULARITY OF AMATRICE.

BUY THROUGH THE REGULAR TRADE.

ONLY ONE AMATRICE MINE IN THE WORLD OWNED SOLELY BY

OCCIDENTAL GEM CORPORATION

Programme of the Forthcoming Convention of the American National Retail Jewelers' Association.

HASTINGS, Minn.—I. M. Radabaugh, secretary of the American National Retail Jewelers' Association, has just made public an outline of the programme of the annual convention which will be held in Cincinnati, O., Aug. 4 to Aug. 7, inclusive. In arranging this programme, it has been the aim of those in charge to give ample time for the discussion of the various topics, as they believe that only by so doing can the best results be obtained. Every man on the programme is one who thoroughly understands the topic assigned to him, and it is with pride that it is submitted to the members. The entertainment will be perfect in every way, and though it is impossible at this writing for us to give an exact outline of it, assurances come from those having it in charge that it will be second to none ever provided. Cincinnati has many places of extreme beauty and historical interest to visit, and it is safe to say that the people of Cincinnati will not lose the opportunity of showing the city to their guests on this occasion.

Special entertainment will be provided for the ladies during regular sessions of the convention, the details of which will be published later. The programme is as follows:

Monday Evening, Aug. 3.

8 P. M.—President's reception at headquarters.

Tuesday, Aug. 4—Morning Session.

9 A. M.—Registration, distribution of badges, etc., in charge of the executive committee.

10 A. M.—Call to order. Address of welcome by the Mayor of Cincinnati, L. Markbreit. Response by Vice-President J. P. Archibald.

10:30 A. M.—Organization of the convention, appointing of special committees, etc.

11 A. M.—Reports of secretary and treasurer.

11:30 A. M.—Report of committee on credentials.

12 M.—Adjourn for lunch.

Afternoon Session.

1:30 P. M.—President's address, Mack A. Hurlbut, Fort Dodge, Ia.

2:30 P. M.—"Scientific Salesmanship," J. Rowland Stebbins, Ohio, President Ohio Retail Jewelers' Association.

3 P. M.—Open discussion of above topic.

3:15 P. M.—Recess, to visit the exhibits.

3:45 P. M.—Reconvene. "Advertising a Retail Jewelry Store," E. Olin Finney, Chicago.

4:15 P. M.—Discussion of above topic.

4:45 P. M.—Question Box. Free for all. (This is the time to get rid of that disgruntled feeling.)

Evening Session.

8 P. M.—"Ailments of the Escapement and How to Treat Them," Charles T. Higgenbothem, South Bend Watch Co.

(This lecture will be illustrated by a working model of the lever escapement, four and one-half feet in diameter, being the largest metal model ever made.)

Wednesday, Aug. 5—Morning Session.

9 A. M.—Report of the executive committee.

9:15 A. M.—"The Fixed Selling Price," Jos. Mazer, Oklahoma, President Oklahoma Retail Jewelers' Association.

9:45 A. M.—Open discussion of the above subject.

10 A. M.—"Legislation That Affects the Retail Jeweler," Hon. E. B. Vreeland, New York.

11 A. M.—Question Box.

12 M.—Adjourn for lunch.

The afternoon will be given up to entertainment, in charge of the Cincinnati Retail Jewelers' Association.

Thursday, Aug. 6—Morning Session.

9 A. M.—A consideration of place for next convention.

9:15 A. M.—"Are Our Lines Drifting Into Other Channels?" J. H. Lepper, ex-secretary of the Iowa Association.

9:45 A. M.—Open discussion of the above important topic.

10 A. M.—"Retail Organization and Its Benefits to the Manufacturer," A. L. Sackett, vice-president and manager Buck Silver Co., New York.

11 A. M.—"Is an Official Organ Necessary?"

11:30 A. M.—Discussion of above question.

12 M.—Adjourn for lunch.

The afternoon will be given up to entertainment, when those present will be the guests of the Cincinnati Retail Jewelers' Association.

Friday, Aug. 7—Morning Session.

9 A. M.—Report of committee on president's address and revision of constitution.

10 A. M.—"The Solid Gold Amendment to the National Stamping Law," R. D. Worrell, Mo.

10:30 A. M.—Open discussion of same. "Get posted."

11 A. M.—Election of officers.

11:30 A. M.—Selection of place for next convention.

12 M.—Adjourn for lunch. "Eat light and think hard.

Afternoon Session.

1:30 P. M.—Report of committee on resolutions. This is where we get busy. This committee will receive resolutions up to 10:30 P. M. Thursday and then proceed to formulate the report. Unfinished business. Installation of new officers. Adjournment.

The evening will be left open for entertainment and will be in charge of the Cincinnati Jobbers' Association.

Jewelers of Fox River Valley Organize Branch of Wisconsin Retail Jewelers' Association.

APPLETON, Wis., June 26.—Jewelers in the Fox River valley have just organized a branch of the Wisconsin Retail Jewelers' Association, which includes leading jewelers in cities from Fond du Lac to Green Bay, Wis. At the meeting held at Appleton, June 24, the organization was perfected and the following officers were elected: President, J. R. Chapman, Oshkosh; first vice-president, John Hess, Fond du Lac; second vice-president, Walter Grunert, Green Bay; secretary, A. W. Anderson, Neenah, and treasurer, H. A. Kamps, Appleton.

There has long been felt among the jewelers of eastern Wisconsin a need for just such an organization, and indications are that the new branch will prove to be a powerful factor in the State association. The new branch is planning to send an especially large delegation to Milwaukee at the coming annual convention, July 7 and 8.

Alfred G. Farnham, Lawrence, Mass., Goes into Voluntary Bankruptcy.

BOSTON, Mass., June 24.—Alfred G. Farnham, who conducted a retail jewelry store at 569 Essex St., Lawrence, Mass., has filed a voluntary petition in bankruptcy in the United States Court in this city. The schedules which accompany the petition show liabilities amounting to $4,745, of which a claim to the amount of $1,700 is secured. The assets enumerated are estimated at $1,515.

Mr. Farnham has been struggling financially for some time. He is a young man and has been in business since November, 1905. A chattel mortgage for $1,700 was filed in July, 1906, and another one for $2,000 in February, 1907. He is a practical jeweler and an industrious worker, but has not been able to make much headway. He has not been rated well financially for some time.

W. R. Lasham, who has been in business at Grand Forks, N. Dak., for the past 26 years, will retire as soon as his present stock is sold.

Death of Eugene Swigart.

CINCINNATI, O., June 24.—The members of the jewelry trade in Cincinnati feel they have lost one of their most beloved associates in the death of Eugene Swigart, president of the E. & J. Swigart Co., which occurred Saturday, June 20. For three weeks before his demise Mr. Swigart had been suffering from a complication of stomach and nervous troubles, and was apparently on the road to recovery when he suddenly became worse and succumbed half an hour later.

Mr. Swigart was born in Toledo, O., 51 years ago, where he received his early education. In the early 70's he connected himself with James Moore, a wholesale jeweler in that place. Later he formed a partnership with Bernard Boehme, doing a general wholesale jewelry business under the firm name of Boehme & Swigart. In 1884, at the urgent request of Oskamp, Nolting & Co., they came to Cincinnati and took over the tool and material business of this company, which the concern discontinued to devote all their interests to the jewelry business. Boehme & Swigart then made a specialty of tool and materials, and built up a very successful business.

In 1887 Mr. Swigart bought out Mr. Boehme's interest and formed a partnership with his brother John, who was engaged in the same kind of business in Toledo, O., changing the firm name to E. & J. Swigart. In 1907 they deemed it advisable to incorporate, forming a company and taking in some of the employes who had grown up with the business. The name then became the E. & J. Swigart Co., with Eugene Swigart as president. The company and management will continue as heretofore.

Deceased is survived by a widow and one son, four years old, also two brothers, John, of Toledo, O., and Charles, traveling salesman for the Cincinnati house.

Mr. Swigart was a 32d degree Mason, a member of the Business Men's Club, and one of the Avondale Golf Club. He was a home-loving man, of gentle disposition, always kind and courteous, and won the highest respect from his associates in the community for his many fine qualities. Resolutions of regret at his death were passed by the Cincinnati Wholesale Jewelers' and Manufacturers' Association and by the Cincinnati Retail Jewelers' Association, the latter reading as follows:

Whereas, In His infinite wisdom it has pleased our Heavenly Father to call from the scenes of his activities our most honored friend, Mr. E. Swigart; therefore, be it

Resolved, That we, the members of the Cincinnati Retail Jewelers' Association, in session assembled, do record our deep sense of the loss our association has sustained, and, be it further

Resolved, That we extend our heartfelt sympathy and sorrow to the hereaved family, and that a copy of these resolutions be sent to the bereaved family and also to be published in the trade journals.

JOHN BERTLING, President.
EDW. F. KAELIN, Secretary.

The will of the late Mr. Swigart was filed for probate to-day. The estate is given at $215,000, all of which goes to the widow except $15,000, which is divided among remaining heirs.

Gold spectacles and other optical stock valued in all at $1,500 was recently stolen from the Gray Optical Co., Cedar Rapids, Ia. Thus far no clue has been obtained to the thieves.

STRICTLY A COMMERCIAL BANK **ACCOUNTS SOLICITED**

Jewelry Stolen at Houston, Tex., Offered to Memphis, Tenn., Jeweler by Negro, Who Is Later Arrested.

MEMPHIS, Tenn., June 24.—Through the publicity given to a robbery in a recent issue of THE CIRCULAR-WEEKLY and the astuteness and caution of S. Friedlander, a wholesale jeweler at 91 N. Main St., who had read the account carefully, the police of Memphis have made an arrest which is considered most important as it has resulted in the recovery of a quantity of the stolen property and may result in the detection of a clever thief.

As told in THE CIRCULAR-WEEKLY of June 17, Taylor Bros., 605 Main St., Houston, Tex., were robbed of 24 rings worth about $4,000 by a sneak thief, and a complete list of the stolen property, together with the statement that the rings bore the letters "T. B." and numbers from 400 to 629, was also published. When this journal arrived in Memphis the story with the other news was read carefully by Mr. Friedlander, who received his copy on the morning of June 19, and after reading the account he went for his lunch. On his return to the store he found a colored man standing at the diamond counter, and upon asking the man his business, the latter said that he wanted to sell a diamond ring. Mr. Friedlander examined the ring carefully and discovered the initials "T. B." and the number 578 upon it.

Immediately remembering about reading of the robbery, Mr. Friedlander verified the letters and number from the account and asked the darkey to wait for a few minutes, went to the office on the pretense of making an examination of the stone; arrived in the office he telephoned to the police headquarters, but the police were so long in sending a detective that the colored man became suspicious and left five minutes before the detectives arrived.

Mr. Friedlander gave the police the information which he had about the robbery with the description of the colored man who offered the stolen ring, and the officers immediately went in search of him. After looking five days, they finally succeeded in running him down, and in his possession have found 16 diamond rings which answer the description of the property stolen from Taylor Bros.

The Houston police have been communicated with and the negro is held to await the action of the police of that city.

HOUSTON, Tex., June 25.—The police of this city have received word from Memphis to the effect that George Washington, a negro, was in custody in that city on a charge of being implicated in the recent theft of a tray of diamond rings from the jewelry store of Taylor Bros., 605 Main St., this city. According to the dispatches, the negro had a number of the rings on his person and has signified his willingness to return to this city without extradition papers.

Washington, who is known in this city, was suspected of the crime at the time but disappeared when the police went to look for him, and was later heard from in New Orleans. He is said to have served a term for a jewelry robbery at Beaumont.

The negro's arrest at Memphis was caused by a jeweler who had read the account of Taylor Bros.' robbery in THE CIRCULAR-WEEKLY and recognized the rings when offered by Washington when he came to his store. Local officers have left for Memphis to bring him on here.

Imports of Clocks, Watches, Jewelry and Gems Into Canada.

TORONTO, Can., June 25.—The monthly report of the Department of Trade and Commerce of Canada for March, just issued, gives the value of imports entered for home consumption in the jewelry and kindred trades as follows:

	Month of March,		12 Months Ending March,

Jewelry Exposition to Be Held in Paris.

THE Galliera Museum, in Paris, which has been closed, is being prepared for its opening this month with an exhibition of precious ornaments worn by women.

M. Eugène Delard, conservateur, and M. Gaston Derys, attaché of the conservation, are planning, with as much taste as zeal, the placing of the show cases, which are being disposed in the grand hall of tapestries and side galleries.

It promises to prove a great success for the creations of Lalique and some other masters of the jewelers' art. But the interest attached to such an exposition lies above all in the attention it receives from the artisans who work at home for the big jewelers, and who have no other opportunity of showing and identifying themselves publicly with that which they conceive and create.

Among the objects received by the jury may be noted combs in carved horn by M. Barthélemy, chased jewelry by M. E. Lelièvre, enamels by Tourette, engraved stones by M. Gambard, translucent enamels by M. Du Suan de la Croix, articles of silver and wrought iron by M. Nices and various works from MM. Lienard, Maurice Dufresne, Andre Royer, Paul Bonnaud, Vernier, Jorel, Brussot, Gardey, M. Lefebvre-Brattan and others.

Disappearance of Meyer Newman, Jewelry Salesman, Still a Mystery—Black Hand Letters Demanding Ransom Continue to be Received.

No information has as yet been received relative to the whereabouts of Meyer Newman, the jewelry salesman who disappeared from his home at 1555 Fulton Ave., the Bronx, New York, two weeks ago, as noted in the last issue, and the police are placing little confidence in the stories that the missing jewelry salesman has been captured by the Black Hand and is being held awaiting the ransom of $10,000. Letters demanding the payment of this ransom continue to be received, and it is the opinion of detectives who are working on the case and who have studied the letters received by Newman's family that they were never written by Italians. So far as can

MEYER NEWMAN, MISSING SALESMAN.

be learned Newman did no business among Italians of any class.

Mrs. Meyer Newman, wife of the jewelry salesman, has caused to be inserted in the newspapers a notice reading as follows:

"If Meyer Newman is alive let him write his wife in his own handwriting. ANNA NEWMAN,
1555 Fulton Ave., Bronx.

Mrs. Newman is greatly worried because of the disappearance of her husband and members of the family are solicitous relative to her being able to bear up under the strain.

Another letter received by Stern Bros. & Co., which is written on pad paper and in ink, reads as follows:

To Whom it May Concern:

Meyer Newman is now out on the high seas bound for Cuba, if you do not stop hounding us by the police we will put him off at an island and sell him for a slave to some farmer.

BLACK HAND.

The first three letters demanding that the $10,000 be placed in a tin can at the Bronx Park entrance were mailed in the Bronx, the other letter was mailed at a sub-station at Third Ave and 51st St., South Brooklyn. Another letter signed by the "Black Hand," was received last Friday addressed to Mrs. Newman. This letter stated that the salesman was alive and well in Charleston, S. C., on his way to Cuba. It read as follows:

Meyer Newman is alive and well in Charleston, S. C., and on his way to Cuba. As you have put the police to hounding us we will land him there and then make terms for the ransom of $10,000, when that is paid we will arrange to have him set free.

Abraham Newman, brother of the missing man, who came here from his home in Scranton to help find the salesman, is working in conjunction with the police, but so far no clue to the missing man has been obtained.

An Interesting Decision as to Insurance Company's Liability on Stock Stolen from a Truck.

A recent decision was rendered by Judge Wauhope Lynn in the First District Court, New York, which is of considerable interest to jewelry concerns who send out their salesmen with bulky packages of valuable samples on which insurance is carried. Judge Lynn directed a verdict against an insurance company which denied liability on technical grounds.

Cohn & Rosenberger, 536 Broadway, held a policy of insurance with the Federal Insurance Co., which insured their traveling salesman's goods against risks and perils of transportation while in places other than that of the assured, and while in the custody of the assured or their traveling salesman. The insurance policy contained a clause exempting the company from liability of loss caused by theft.

On Sept. 17, 1907, the jewelry concern sent 12 sample cases on a truck hired by the day to Macy's department store, in New York, where the salesman met the truck. While one of the cases was being taken into the salesroom the driver disappeared with the others, 10 of which were afterward recovered and the guilty parties punished. In February the jewelry concern wrote to the insurance company and put in a claim for $440, the amount of loss claimed on the one case which was not recovered. The insurance company, according to Prince & Nathan, attorneys for the jewelry concern, denied liability on the sole ground that the goods when stolen were not in the custody of the assured or of a traveling salesman, but made no reference to the exemption clause as to theft. Prince & Nathan therefore contended that the insurance company waived its right under the theft clause when the suit was tried. Judge Lynn sustained the contention of the plaintiffs and directed the jury to bring in a verdict for the plaintiff for the full amount, holding that the goods being on a truck that was hired by the plaintiff, and over which they had exclusive control, that the custody clause was not broken.

Market Price for Silver Bars.

The following are the quotations of silver bars in London and New York, as reported by Zimmermann & Forshay:

	London.	*New York. .999 Basis.*
June 23	25 3-8d.	$.57⅛
" 24	25 3-16d.	.56⅞
" 25	25 1-4d.	.56¾
" 26	25d.	.56¼
" 27	24 3-4d.	.55¾
" 29	24 7-8d.	.56

M. E. Johnson is a new jeweler at Dumont, Ia.

M. H. Tappin has opened a store at Earlington, Ky.

E. J. McGrath recently started in business in Pearl City, Ill.

The Sancton, Herrick Jewelry Co. was recently organized at Old Town, Me., to deal in jewelry, watches, etc., with $10,000 capital, of which $3,100 is paid in. The officers are: President, H. H. Herrick; vice-president, James H. Sancton.

Trade Gossip.

Sam Martin, jewelry auctioneer, recently conducted successful sales for T. L. Combs & Co., Omaha, Nebr., and L. Lechenger, Houston, Tex., and is now engaged in disposing of the stock of the Rushmer Jewelry Co., Pueblo, Colo.

Something entirely new in alarm clocks has just been put upon the market. It consists of an eight-day long alarm clock which rings automatically each morning and continues ringing for 50 minutes unless shut off before that time. The alarm switch can be locked so the clock will not ring on Sunday or any other day, when so desired. Another novel feature of these clocks is the cases in which they are sold, which combine an alarm with a regular mantel clock. They are furnished in time-alarm, also strike and alarm, striking the hour on cathedral gongs and the half-hours on a cup bell. Description and price list of these clocks will be furnished by the makers, the Seth Thomas Clock Co., 51 Maiden Lane, New York.

Irving L. Knapp, Hartley, Ia., was recently married to Miss Caroline Jones.

GORHAM SILVER

THE IDEAL PRIZE.

¶ The originality and artistic fitness displayed in the Cups, Vases and special pieces designed by Gorham artists combine to render these the ideal trophies for Summer Sports.

¶ Members of Athletic Committees and all those concerned in such matters fully recognize that dignity and interest are added to any contest, the prize for which is a piece of Gorham Silver.

¶ It is for this reason that the alert and progressive Jeweler will see to it that at this season he is not unprovided with appropriate Gorham Goods.

A New Game Worked by Clever Crooks.

WHAT appeared to be a new and clever method of stealing, tried by a couple of swindlers, last week, in their efforts to get about $1,300 worth of diamonds and jewelry from two New York firms is discussed in detail in another column of this issue, and calls attention to the fact that jewelers, whether wholesalers or retailers, cannot be too careful about keeping their cards and stationery out of the hands of people whom they do not know. In this instance the swindlers after getting a jeweler to obtain for them on memorandum several articles from another firm, stole some of the stationery of the latter, on which they sent a note to the jeweler who held the goods, asking him to return the articles by bearer (their accomplice) to the manufacturer from whom they came.

Fortunately the man who received the note was suspicious and did not follow the instructions, although it appeared in every way genuine. Had he done so, he or the manufacturer would have been out the jewels.

The cleverness with which the swindlers operated in every movement in this instance shows them to be alert crooks of more than ordinary intelligence with considerable knowledge of the way business is done in the jewelry trade, and that their scheme was not successful was due to more than ordinary caution on the part of the man who received the note. In nine cases out of 10 it probably would have succeeded. Members of the trade are therefore advised to read the article carefully and profit by the lesson which it teaches.

The Cost of Doing Business.

MANY inquiries continue to come to THE CIRCULAR-WEEKLY on the question of the cost of doing business in the jewelry trade, and from many of the letters which we receive it is apparent that a number of retail merchants have no clear or definite idea as to what is the proper percentage or amount which they should add to the original cost before figuring the profit which they should make upon an article. Nor have they any idea as to how the amount of rent, cost of lighting, clerk hire and advertising should be apportioned to their stock in figuring out the selling expenses.

As we have said before, this appears to be a vital question of interest to every business man, and a thorough discussion of the subject will surely prove not only instructive and profitable to a large number in the jewelry business, but will probably also bring out points to those merchants who think they have solved the problem that may result in giving the latter hints and short cuts in figuring, which they could get in no other way.

We suggest this subject as one for general discussion by local, State and national societies. In addition we are willing to open our columns for the use of any of our subscribers who wish to give information, ask questions, bring out points or make suggestions that will in any way relate to the cost of selling goods.

To insure publication all changes of copy for standing advertisements must be received not later than Friday noon preceding date of issue.

Another Example of the Value of Publicity.

AGAIN THE CIRCULAR-WEEKLY has been instrumental in helping to locate stolen property by giving proper and thorough publicity to the robbery, with a description of the articles stolen, and, although it is too early to know definitely, it looks as if an item published in the issue of THE CIRCULAR-WEEKLY of June 17 will not only result in a Texas jewelry firm recovering a large amount of the goods which had been carried off by a sneak thief, but in addition may be the means of running down and bringing to justice the man or men who were implicated in the crime.

Early this month a Houston jewelry firm discovered that it had been robbed of about $4,000 worth of rings, and on learning the facts THE CIRCULAR-WEEKLY telegraphed for particulars, and published in the issue of June 14 a complete list of the stolen rings, with the statement that the initials of the firm and certain numbers were to be found on the articles. A Memphis, Tenn., subscriber to THE CIRCULAR-WEEKLY read the account of the robbery carefully with the other news of the paper on June 19, and a short time afterwards was approached by a negro who wished to sell a diamond ring. On examining this he noticed the initials and numbers of the property stolen in Texas, and immediately recognizing it he attempted to get the police. Although his customer got suspicious and skipped before the officers arrived, nevertheless the information which he was able to give about the man resulted in running him down and in locating 16 of the 24 stolen rings. It is believed now that through this arrest the original thief or thieves will be traced and probably the remainder of the property recovered.

E. J. Born & Co., Ashland, Wis., have moved their stock from the Bristol block to the Braun block, corner of Fourth Ave., W., and 2d St.

The police of Augusta, Ga., have captured the burglar who two weeks ago effected an entrance into the jewelry store conducted by the estate of J. H. Prontaut, 644 Broad St., that city, and got away with 45 gold and jeweled rings and a watch worth about $50. In Henry Prontaut's estimate the loot was worth about $400. The men got into the store through a hole in the wall, and though the light was burning at the time they must have leisurely picked out the articles which they carried away, as the silverware and other large pieces of stock had been put aside by the thieves. A negro named George Prather has been arrested for the crime.

Importers and Cutters of Diamonds and Precious Stones

43 Rue de Meslay, PARIS Telephone, 480 John 31 Maiden Lane, NEW YORK

Trade-Mark

OUR guiding principle has always been to incorporate as much artistic skill and good material in the construction of our jewelry as possible. This is contrary to the skimming, economic operations so extensively practiced in the manufacture of inexpensive gold jewelry. In observing this standard we naturally sacrifice the petty profits resulting from the less exacting methods of others; nevertheless our jewelry is consistently low priced and of a quality away beyond the ordinary.

¶ *Ask to see it and look for our trade-mark—the imprint of originality and all that's good.*

Newark.

TRADE CONDITIONS.

Optimism, tempered with a realization that business conditions are still far from perfect, is perhaps the most accurate way to describe the state of mind of the Newark manufacturing jewelers. All are hopeful for the Fall trade and several say that June proved a surprisingly good month under the circumstances. The most commonly met comparison is that conditions for 1908 will, taken as a whole, approximate closely those of 1906. Returned salesmen report that sales in May were light, as compared with what was both hoped and expected. On the other hand, they point out that a number of jobbers and retailers who showed extreme caution in May began to buy in June, so that on the whole the business averaged up to a proper percentage. Salesmen who made the long western circuit say that trade on the Pacific slope, which was indescribably bad at the opening of the year, has shown marked improvement the past month.

The Hoboken Optical Co. has opened a store at 220 Washington St., Hoboken.

The International Jewelry Mfg. Co. has been incorporated at Orange with $50,000 capital. The incorporators are C. J. Murray, S. N. Carter and E. W. Oliver.

John C. Lapp, of Schultz & Lapp, is serving temporarily as traveling salesman for the house. A new regular salesman is to be added to the concern's force in a short time.

The Crane building on Oliver St., which shelters a large number of concerns, will close down the week of July 4. The time will be devoted to inspection, repairs and improvements to the building, shafting, power plant and separate factory plants. Owing to this coming enforced idleness most of the tenants are hurrying business so as to be prepared for it.

The change in the business style of Schultz & Co. to Layman & Straus Co. went into effect to-day. Sydney C. Straus will continue to travel for the concern as in the past, and Percy M. Layman will represent the new firm in New York, Washington, Baltimore, Philadelphia and adjacent territory. The factory will remain at 91 Oliver St., and for the present no change will be made in the line.

Henry W. Egner, Jr., was last week appointed receiver for the Wakefield & Seiler Co., manufacturing jewelers at 109 Oliver St. Vice-Chancellor Stevens took this action on return of a rule to show cause to the contrary secured by Frederick H. Tegen, Jr., counsel for George B. Adams, a creditor. The order fixed the bond for the receiver at $5,000. The liabilities amount to about $8,000, with the factory equipment as the main asset.

Plans are in the hands of the contractors for estimating for a large four-story brick factory building which Herpers Bros., manufacturing jewelers, are to build on the northeast corner of Crawford and Washington streets. The building, which will be of mill construction, will have a frontage of 93 feet on Crawford St. and 49 feet on Washington St. The structure will be faced with North River brick. It is the intention of the owners to rent the various floors for light manufacturing purposes. The building will be equipped with steam heat, electric light lighting and power from the owners' present plant. E. A. Wurth is the architect for the structure, the estimated cost of which is $20,000.

New York Notes

The Woodside Sterling Co. has moved from 11 John St. to 170 Broadway.

"Moe" Eliassof, of Eliassof Bros., Albany, N. Y., was a visitor in town last week.

John Marsh, of C. A. Marsh & Co., Attleboro, Mass., spent several days last week in town.

A. E. Cuff, diamond buyer for Ryrie Bros., Ltd., Toronto, Can., was in town last week.

S. Goodman, retail jeweler in New Haven, Conn., was seen in the Maiden Lane district last week.

Fred. Peters, of the firm of H. S. Meiskey Co., Lancaster, Pa., was a caller in town Monday.

John Coburn, representing Bugbee & Niles Co., sails to-morrow on the *Celtic* for a vacation.

J. Ripstein, a new buyer for the Dominion Jewelry Co., Winnipeg, Can., called on local dealers last week.

M. Loeb, of the Dueber-Hampden Watch Works, made his regular monthly visit to this city last week.

George D. Davidson, a retail jeweler of Jersey City, is on a western watch inspection trip this week.

David Kaplan has opened a jewelry store and optical department at 16 S. Main St., Port Chester, N. Y.

Dr. E. E. Hale, head of the Estate of O. M. Draper, called on friends in town during the past week.

Gus. Schwarzschild, of Schwarzschild Bros., Richmond, Va., has been spending a short vacation in this city.

George Broadhurst, of the Dominion Jewelry Mfg. Co., Montreal, Can., was in town last week, selecting new goods.

Louis S. Hodges, of the E. A. Potter Co., Providence, R. I., called on friends in the Maiden Lane district last week.

L. P. Kadison, of Fera & Kadison, accompanied by his wife and son, will sail for Europe to-morrow on the *Amerika*.

Walter B. Ballou, head of the R. Blackinton Co., North Attleboro, spent a part of last week in the Maiden Lane district.

Edward N. Schenkein, of H. Schenkein & Sons, 2 Maiden Lane, sailed Tuesday of last week for Europe on the *Kaiser Wilhelm II.*

James Lincoln, the New York representative for the Wolcott Mfg. Co., is sick at his home in Providence, R. I., with typhoid fever.

Louis Blackinton, of the W. & S. Blackinton Co., North Attleboro, Mass., was a visitor in the Maiden Lane district early this week.

Frederick E. Burden, who is manager of the W. C. Greene Co., of Providence, has opened a New York office in the Silversmiths' building.

W. J. Hoppe has closed his store at 471 E. 138th St., and has gone to Atoona, Germany, for a three months' visit after an absence of 20 years.

Mr. Beckley, formerly buyer for Gimbel Bros., Philadelphia, Pa., is now the buyer for Stern Bros., 23d St. department store. He succeeded James Clausman.

An auction sale of the bankrupt stock of Lindo Bros., 1157 Broadway, near 27th St., has been continued during the past week. W. H. Brokaw being the auctioneer.

C. N. Gray, of the Jewelers Board of Trade, is enjoying a three weeks' vacation. He will take a sea voyage to New Orleans, La., accompanied by his wife and daughter.

The Jewelers Board of Trade report that the composition of 15 per cent. in the matter of W. P. McFarland, Orange, Tex., has been confirmed and that the money will be paid out as soon as some matters are adjusted.

The building at 21 John St., which is an old landmark, will be remodeled by making the attic loft into a full story. The improvements are for Dieges & Clust, jewelers, the lessees.

"The Etiquette of Gems" is the title of the second article from the pen of George Kunz, diamond expert for Tiffany & Co., which appeared in the last issue of the *Saturday Evening Post.*

On the afternoon Grand Jury of New York County last month were Wm. I. Rosenfeld, Byron L. Strasburger, of Byron L. Strasburger & Co., and Louis Strasburger, of Louis Strasburger's Son & Co.

The Jewelers' Security Alliance, 9 Maiden Lane, is receiving letters in praise of the recent special bulletin which it sent out warning the trade against crooks who are working in different parts of the country.

M. H. Harris, optician, entertained his physicians, experts and department managers Wednesday evening after a meeting at 54 E. 23d St. About 33 persons were present at the dinner given at a nearby restaurant.

The C. E. Fenniman Co., New Rochelle, N. Y., has been incorporated to deal in jewelry and kindred lines with a capital of $25,000. The directors are Clarence E. Fenniman, William H. Robson and Albert Van Winkle.

Mr. and Mrs. George Heywood are spending their honeymoon up the Hudson. Mr. Heywood is the New York representative for the Horton, Angell Co., Attleboro, Mass. The marriage took place last Wednesday, his bride being Miss Maud Lamond, of Attleboro.

Fred. Goldsmith, of the Ingomar Goldsmith & Co., 182 Broadway, will sail for Europe to-day on the *Rotterdam,* accompanied by his family. Mr. Goldsmith will visit the diamond companies in Amsterdam and Antwerp, and will remain abroad about three months.

Max Meyerowitz, formerly with Meyerowitz Bros., will in the future represent R. A. Breidenbach in the south, and will leave, this week, on a trip. Max Moser, of the same firm, is expected to start for a trip in the west in a few days.

Nat. Harrison, of Harrison Bros., 14 Maiden Lane, returned Thursday of last week on the *Oceanic* from a trip to the British Islands and France, where he spent an enjoyable vacation. He was given a welcome by the employes of the firm.

The different committees in charge of the annual outing of the Jewelers' 24 Karat Club, of New York City, are hard at work arranging for the coming event which will be held, Aug. 1, at the Port-au-Peck Hotel, Long Branch, N. J. The outing committee are considering the feasibility of substituting a barbecue in place of the clambake at outings of the club to be held after this year. The athletic committee have in mind a number of new events which will add to the enjoyment of the day, and from present indications the club will hold the largest outing in its history.

Sanford & Bennett, fountain pen manufacturers of this city, have incorporated their business with a capital stock of $25,000. The incorporators are William W. Sanford, Frederick D. Bennett and E. D. York. The company will continue to make its popular fountain pens as usual, the incorporation of the company serving to put the business upon a basis more satisfactory to the owners of the firm.

R. Blackinton & Co. have moved from 3 Maiden Lane to a new suite of offices in the Silversmiths' building, 15 Maiden Lane, where they have three large office rooms, which are used as a show room, private office and receiving room. The show room is 35 by 15 feet and has been fitted up with show cases and wall cases of mahogany with sliding glass fronts extending the entire length of the room, beneath which are six rows of drawers of variable length. The salesroom is also fitted with two large glass top tables, making one of the most complete suites of offices in the Maiden Lane district.

William H. Rand, a pioneer commercial traveler in the jewelry business, and who had many friends in Brooklyn and through the country, died at the home of his son, Charles C. Rand, 135 Lefferts Ave., Richmond Hill, last Thursday afternoon. The end came very suddenly, Mr. Rand having been ill but two days. Death was caused by the diseases incident to old age. Mr. Rand was born in New Hampshire, and lived the greater part of his life in Brooklyn. He had been retired for the last five years, and during that time had resided at the home of his son in Richmond Hill. Mr. Rand was 87 years old.

Eugene Cohn and Julius Levy, attorneys for Maurice Brower, 12 John St., who filed the latter's schedules in bankruptcy, say that while the schedules represented Mr. Brower's liabilities at about $400,000, that this amount is the aggregate of the schedules of indebtedness and includes secured paper, indebtedness of every kind, including Mr. Brower's liabilities as an indorser. None of these items, the attorneys say, is expected to share in the $80,000 assets. The unsecured debts and the debts not on indorsement amount to no more than $200,000, and it is these debts and these debts only which will participate in the fund realized from the assets.

Lawyer Franklin Taylor has obtained from Justice Kelly, of the Supreme Court, a writ of prohibition, to prevent Judge Dike's proceeding to punish for contempt certain pawnbrokers, for attempting to prevent the County Court from getting possession of stolen jewelry, pawned by ex-Policeman Charles H. Haussler after Sadie Papps, the manicure girl, had stolen it from her Flatbush customers. The writ is returnable to-morrow before Justice Kelly. It was claimed on behalf of the pawnbrokers that a recent law provided for another method for the recovery of alleged stolen property, and that Judge Dike lacked the power to compel the pawnbrokers to give it up. The pawnbrokers were ad-

New York Notes.

(*Continued from page 69.*)

judged in contempt, and thereupon the writ of prohibition was procured.

The Jewelers Board of Trade have received a letter from L. Lachenger, Houston, Tex., who asked for an extension some time ago, stating that on June 18 he met all notes due on that date and that he has also anticipated all notes due Aug. 18.

Doane & Rosenthal, Goldfield and Manhattan, Nev., Reported in Bankruptcy.

GOLDFIELD, Nev., June 29.—Doane & Rosenthal, composed of W. S. Doane and Ben Rosenthal, who operate jewelry and drug stores here and in Manhattan, Nev., have gone into bankruptcy. The failure caused surprise as they are both highly reputed merchants and were believed to have a surplus over liabilities of about $30,000.

Mr. Rosenthal was previously in business at Hamilton and Mr. Doane was formerly at Reno before going into business here. They have been in Goldfield about four years. Up until the financial flurry of last year the firm did well, but since that time their business has suffered owing to the labor conditions of the district. Recently they have been pressed for ready cash to meet their obligations, and the bankruptcy petition was due to the fact that some creditors have been pressing for a settlement.

Utica.

Word was received from St. Johnsville, Wednesday, to the effect that the store of H. F. Hecox, Van Dusen Block, had been broken into by a thief and a watch and several small articles of jewelry had been stolen.

The receivers of H. G. Woolworth & Co., proprietor of novelty stores in Syracuse, Albany and other cities, were recently directed by Judge Ray, of the United States Court, this week, to sell the stock to S. Kresge, Detroit, for $15,553.

Word was recently received in this city by stockholders in the Amsterdam Diamond Co., which sold diamonds in the manner that watch clubs operated some years ago, was not paying the regular dividend upon matured contracts, but the dividend was being withheld for a short time owing to the financial stringency.

In the Baltimore column last week, mentioning Jacob Engel, of J. Engel & Co., and J. J. Bartholomee, it was said that the former was a member of the executive committee of the Baltimore Jewelers' Association. This was an error as Mr. Engel is a wholesale jeweler and the statement referred to Mr. Bartholomee.

The deaf mute son of G. Kern, a former jeweler and pawnbroker, of Knoxville, Tenn., was struck and knocked down by a trolley car in that city recently, and was removed to the General Hospital, where it was found that though the boy was badly bruised no bones were broken. It is expected that he will soon recover.

Boston.

W. F. Macomber and R. J. Taylor will go on their southwestern trips for E. A. Cowan about the middle of July.

Earl E. St. Hoor, representative of Sischo & Beard, St. Paul, Minn., was among the visitors in the city during the past week.

Buyers in town during the week included C. A. Senter, Brockton, Mass.; E. G. Wright, Putnam, Conn.; A. B. Chapin, Worcester, Mass.

Irving L. Braynard, engraver to the trade, now on the sixth floor of the Jewelers Building, will occupy quarters with Joseph Cowan, in the same building, after Aug. 1.

George B. Owen, Jr., of the Wm. L. Gilbert Clock Co., was at the Boston salesrooms of the concern last Saturday, stopping over on his return from a business and recreation trip east.

The Eastern Minerals Co., Boston, has been incorporated to deal in precious stones, with a capital of $75,000; James H. Green, William I. Mabie and Frank W. Johnson are the incorporators.

The Cowan brothers, E. A., Henry and Joseph, with Albert Schaub, Detroit, Mich., William Matschke, New York, and other friends, made up an automobile party that went to Nantasket Beach last Thursday to enjoy an outing and shore dinner.

Harry Howe, New York, who tried to sell Policeman William J. Chapman a piece of glass, which he said was a $600 diamond, for $4.50, recently paid the duty on his cleverness later before Judge Murray in the police court. He was fined $10 for selling jewelry in the street and $10 more for attempting to secure money under false pretences.

Harrisburg, Pa.

Members of the Red Lion Merchants' Association last week decided to close their stores every evening, except Saturday, at 8 o'clock. An outing at some park is also being planned.

E. L. Rinkenbach took his family to their Summer cottage at Mt. Gretna this week. The family of G. A. Hutman are already occupying their pretty cottage at the same popular resort.

On July 17 the Governor will be asked to grant a charter to the big Easton store firm of William Laubach & Sons. The incorporators will be William Laubach, Geo. A. Laubach, Wm. H. Laubach, Chas. M. Laubach, Frederick H. Laubach, and Henry B. Laubach.

J. C. Winebrenner, a former York pawnbroker, has been arrested at Dover, Del., and brought back to York upon information charging him with the larceny of a number of watches and diamond rings. The information was made before Alderman Aughenbaugh.

These officers of the Shippensburg Board of Trade have been elected: President, Charles Rummel; first vice-president, F. R. Bassart; second vice-president, Howard A. Ryder; treasurer, W. A. Lutz; recording secretary, Frank S. Gates; corresponding secretary, J. Beattie Barbour; executive committee, John E. Boher, G. B. Cole, J. W. Eldon, F. B. Fleming, Geo. W. Himes, F. E. Hollar, John Hosfeld, E. R. McPherson, W. A. Nickles, J. S. Omwake, J. C. Rummel and C. B. Segner.

Connecticut.

The Sessions Clock Co., Forestville, closed its factory, June 27, and will reopen July 13.

M. W. Hill, New Milford, returned last week from a business and pleasure trip to New York.

Two patents were recently granted to W. E. Porter, New Haven, on a movement plate for clocks, watches, etc.

The old clock which has ticked off the hours for many years in the cupola on the La Forge building, Greenwich, is being repaired.

John A. Burke, for several years foreman at the Waterbury Clock Co.'s factory, Waterbury, died at his home in Watertown, June 21. The deceased is survived by his widow.

The receiver for Parker, Kolb & Co., Bridgeport, reports that a recent inventory of the stock of the concern shows it to be worth $10,064.

George J. Mears, Jr., with the Bausch & Lomb Optical Co., Rochester, N. Y., and Miss Eleanor F. Lackburn, Danbury, were united in marriage at the home of the bride, Wednesday afternoon.

Joseph Carnevale, New Haven, reported to the police, last week, that burglars had entered his retail jewelry store Wednesday morning, and stolen several rings, scarf pins and other jewelry.

Burglars recently stole several hundred dollars worth of miscellaneous jewelry from the store of Mr. Hill, New Haven. The thieves gained access to the stock by cutting a large piece of glass out of the show window.

A special Summer meeting of the Governer's Staff Association of the State of Connecticut, of which George H. Ford, New Haven, is a member of the Executive Committee, was held at the Hartford Yacht Club, at Fenwick Point, Saturday.

Mrs. Harry MacLaughlin died recently in the Meriden Hospital after an illness of several months. The deceased was well known in Hartford, where she completed her education. She was, for several years before her marriage, in the employ of the International Silver Co., of Meriden.

A sample case was stolen from Edward Earles, a jewelry drummer, of Leominster, Mass., one day last week, while Earles was passing through Hartford on a train. The thief rode away in a cab, after leaving the train and temporarily left the case with the driver, who, becoming suspicious, turned it over to the police.

Scovill Hitchcock, Southington, died Saturday afternoon, June 20, at St. Francis Hospital, Hartford, of elephantiasis, aged 59 years. The deceased was born in Cheshire and was engaged in the jewelry business in Southington about 20 years ago. About a year ago he opened a store in Southington, but ill health compelled him to discontinue business.

L. Lovrud, Minneapolis, Minn., has taken charge of the jewelry department at W. D. Gile's store, Crary, N. Dak.

Pittsburg.

George S. Dunbar, of the Geo. B. Barrett Co., who was in Jamaica on business, has returned to Pittsburg.

Nothing has been heard from Louis S. Racine, a watchmaker who is wanted at Pittsburg and who left here suddenly more than two weeks ago.

The son of Mr. Goddard, of Goddard, Hill & Co., last week took an examination for admission to Yale. He is only 17 years old. He intends to take a scientific course.

Among the out-of-town jewelers who last week visited Pittsburg were Carl Leighner, Butler; Frank Worrell, Cannonsburg; Harry Furtwangler, Greensburg, and E. H. Kennerdell, Tarentum.

W. M. Winstead, with E. P. Roberts & Sons, and Miss Anna Louise Ruoff were married last week, a number of local jewelers attending the wedding. The couple have gone to housekeeping in Bellevue.

Elmer Vey, a son of Benjamin Vey, 840 E. Ohio St., North Side, who fell from a Butler trolley car several weeks ago, sustaining a fractured skull, and who remained unconscious for several days, is now at the home of his father and is rapidly recovering from his injuries. His life was despaired of for several days after the accident.

The employes of the W. J. Johnston Co. have challenged the employes of the E. P. Roberts & Sons Co. to play a match game of baseball Saturday afternoon, July 11, on the grounds of the Western University of Pennsylvania. The latter accepted the challenge and the opposing teams are practicing every evening, in anticipation of the event.

The Executive Committee of the Pennsylvania Retail Jewelers' Association held a meeting Tuesday night of last week to make further arrangements for the annual convention, which takes places in Philadelphia, Aug. 13. The committee is in correspondence with a committee from the American Association of Opticians, completing arrangements for the event. A large number of jewelers from western Pennsylvania will attend the convention.

Robert Gestrich, whose place of business is at 4726 Liberty Ave., in the Bloomfield district of Pittsburg, has been elected Exalted Ruler of Pittsburg Lodge No. 11, Benevolent and Protective Order of Elks, one of the largest Elk lodges in the United States. The honor was conferred upon him after a rather exciting contest. The lodge is the most prominent one in all Western Pennsylvania, as well as the wealthiest. Mr. Gestrich has been congratulated on all sides for his great victory.

Samuel Weinhaus, of S. & B. C. Weinhaus, receiver for Abraham Lippard, whose financial troubles were told in the last issue of the CIRCULAR-WEEKLY, Saturday, sold Lippard's two stores in Wylie Ave. The stock in one brought $5,280 and was bought by Lewis Gordon. The stock of the second store was sold to J. Lavine for $965. Lippard's liabilities are about $18,500. He has a home in the East End which will be disposed of later. It is valued at $5,600 and is mortgaged for $4,000. Mr. Weinhaus says that he believes the creditors will realize about 35 cents on the dollar. Mr. Weinhaus says that there is considerable expense to be met. A large number of persons were attracted to the sale and the bidding was spirited.

Philadelphia.

Marcus Goldman, watchmaker, has resigned his position with William G. Earle, 11 N. 9th St.

Andrew Smith, with L. P. White, spent a few days last week on a fishing trip to Angelsea, N. J.

Isadore B. Bravemen, individually and trading as Keystone Jewelry Store, Reading, was recently discharged as a voluntary bankrupt.

William Hines, foreman of the watch department of William Gibbons, 40th and Market Sts., has gone to Mt. Pocono for the Summer.

Robert T. Chapman, Atlantic City, returned last week from a short stay in the Adirondack Mountains made for rest and recreation solely.

Charles Dean, diamond broker, is about to remove from his quarters at 717 Sansom St. to a handsome new store on 8th St., just above Sansom St.

J. E. Caldwell & Co. displayed in their show windows last week prizes made and designed by the firm for the Malta Boat Club regatta and the Sea Isle City Carnival.

Horace McFarland, Dowingtown, Pa., returned last week from an extended automobile trip to Gettysburg, the eastern shore of Maryland and Baltimore and Washington.

George Katz, Sr., 1934 Germantown Ave., was one of the committee which welcomed home from a European tour last week the Rev. Dr. Russell Conwell, a distinguished Baptist clergyman.

William Gibbons, 40th and Market Sts., opened, last week, his home at Mt. Cresco, where he will remain throughout the Summer with his family, making brief excursions into the city to attend to business.

C. P. Meyers, 929 Passayunk Ave., left, Wednesday, by way of Baltimore, for a two months' tour of Europe on pleasure solely. Mr. Meyers' family have opened their Summer home at West Palmyra, N. J.

Col. J. Warner Hutchins, president of the Jewelers' Club, went to Cape May at the week's end to attend the Commodores' Day of the Cape May Yacht Club, as the guest of J. Clifford Wilson, commodore of the club.

The Bailey, Banks & Biddle Co. displayed in its show windows last week a handsome trophy designed for the championship trotting team. It is a handsome silver vase about three feet in height and designed to appeal especially to lovers of horses.

Among the visitors to this city's trade last week were the following: John MacPherson, Mauch Chunk, Pa.; Capt. George Bowen, Bridgeton, N. J.; H. MacFarland, Dowingtown; L. S. Caldwell, Wildwood; T. C. Kremer, Phoenixville, Pa.; E. K. Bean, Lansdale; David Krause, North Wales, Pa.

Samuel Pascal & Co., instalment jewelry and furniture dealers, Passayunk Ave., were adjudged involuntary bankrupts in the United States District Court last week, and Louis B. Bloch was appointed receiver. The firm is made up of Samuel Pascal and Isaac Wilderman. The stock of jewelry is valued at about only $1,000.

John Kirschnek, Media, made a trip to this city last week to purchase goods in his automobile, and incidentally treated himself to an auto ride through the pretty suburbs of the city. Mr. Kirschnek, who is an enthusiastic autoist, declares that out-of-town jewelers are appreciating the advantages of an auto for business and traveling.

For robbing the pawnshops of Michale Schwartz, Germantown Ave. and Oakdale St.; L. Rosenfelt, Germantown Ave. and York St., and R. Rosenthal, Germantown Ave. and Silver St., on the night of Dec. 31, 1907, Harry Ayres and Harry Gibbons, two youths, were arrested, last week, after having been fugitives for months, and were held by Magistrate Wrigley for court.

Harry J. Smith, lapidist, 717 Sansom St., gave up, last week, the management of the Philadelphia Jewelers' Baseball Club, the nines of which are recruited from the wholesale trade largely, and has been succeeded by William C. Robertson, manufacturing jeweler, 725 Sansom St. Mr. Robertson has planned to play "Griffin," a "phenomenal" one-armed pitcher, in a game between the jewelers and the Penn Field Club at Hunting Park on Saturday. The game played by the club last Saturday was lost by a score of five to three to the Haddon Heights Club.

Max E. Newman, watchmaker, with A. C. Smith, general watch inspector and superintendent of time service for the railroads of Mexico, with offices Prolongacion del 5 De Mayo 67, apartment 92, Mexico, D. F., was in this city last week, renewing old acquaintances in the trade while spending a long vacation in the north. Mr. Newman was formerly with J. E. Caldwell & Co., this city, and has many friends in the trade here. He says that Mexico furnishes a good field for watchmakers and other skilled artisans from the States, and that the country is rich in possibilities. He declares that the American watchmaker is sought after by Mexicans, and work is entrusted to him which would not be given to native watchmakers and jewelers.

William Kiefer, 1524 Cumberland St., is convalescing from serious and painful burns received Sunday of last week while on a trip in his automobile. The auto in some manner broke down on Old York road and Mr. Kiefer, who was driving his car, got out and under the machine to make repairs. The gauntlets he wore were soaked in gasoline while he was adjusting the machinery, and in some manner unknown they caught fire and blazed up. Mr. Kiefer, though suffering intensely from pain as his hands burned, managed to preserve his presence of mind, and, tearing off his coat, extinguished the flames on the gloves, but not until his hands were badly burned. Then Mr. Kiefer drove his own auto to the Jewish Hospital, where his burns were dressed. He was compelled to remain at the hospital several days. With him at the time of his accident were his wife and daughter.

The Altoona (Pa.) Merchants' Association has inaugurated an active campaign for the betterment of trade conditions in that city, and is compiling a rating system containing about 6,000 names.

North Attleboro.

Thomas G. Frothingham and family are at Oak Bluffs.

Artner Chace is home from a western trip for Mandalien & Hawkins.

John MacMillan made a trip through New York State the past week for J. J. Sommer & Co.

Edmour Precourt has resigned as foreman of the press department at R. Blackinton & Co.

Woodbury Melcher, of Scofield, Melcher & Scofield has opened his Summer home at Lakeport, N. H.

A good-sized extension is being made to the office and packing room of the estate of O. M. Draper.

The factories of the Paye & Baker Mfg. Co., Fred S. Gilbert and Furbush, Swift & Fisher are closed this week.

Theron I. Smith and family enjoyed, the past week, an automobile trip through the Berkshire Hills, New York State, Vermont and New Hampshire.

Curtis Reed, salesman for the H. F. Barrows Co., has gone on a pleasure trip to England, France and Germany. He was accompanied by his wife.

H. C. Van Ness, New York representative for Codding & Heilborn Co., is at the factory. He will be entertained over Patriots' Day at Mr. Codding's camp at Lake Archer, Wrentham.

George W. Cheever, of Cheever, Tweedy Co., has been elected vice-president of the Attleboro Savings Bank. He succeeds the late Charles E. Bliss. Walter B. Ballou, of R. Blackinton & Co., and Edward A. Sweeney, of W. H. Wilmarth & Co., of Attleboro, were chosen trustees.

A second dividend of 25 per cent. will be declared to the depositors of the defunct Jewelers' National Bank, July 1. It will be distributed the latter part of July. The first distribution was for 60 per cent. It is believed that a third dividend of 10 per cent. will follow several months afterwards.

Alton H. Riley, treasurer of G. C. Hudson & Co., has filed the following report: Merchandise, $11,877; machinery, $16,845; cash and debts receivable, $52,814; manufactures and merchandise, $13,526; good will, $15,000; total, $110,062; capital stock, $100,000; accounts payable, $3,045; surplus, $7,017; total, $110,062.

A certificate of incorporation was issued on Monday to the Bishop Co., North Attleboro. The capital stock is $20,000. Two hundred shares of $100 each have been issued. The directors are: Norman J. MacGaffin, president; Warren N. Ackers, of Winthrop, treasurer, and Margaret F. Keenan. The purpose of the concern as set forth in its charter is to buy, sell, manufacture and deal in jewelry, gold and silverware, optical goods and novelties of all kinds.

The Boss & Baldwin Co. has been organized under the laws of the State of Rhode Island. The capitalization figure has been set at $10,000. A. W. Dennis, of Providence; Walter Boss and William Baldwin. The new firm has taken over the business of the Attleboro Falls Mfg. Co. Mr. Boss, who will be the traveling representative, until recently was with the traveling force of the Standard Button Co., Attleboro. Mr. Baldwin, who has occupied responsible positions with the T. I. Smith Co. and the Standard Button Co., will have charge of the factory end.

Attleboro.

The D. F. Briggs Co. will close from Aug. 1 to Aug. 10.

A. V. Cobb will pass the hot Summer weeks at Buttonwoods.

William L. King has been elected noble grand of Attleboro lodge of Odd Fellows.

R. John Marsh, of C. A. Marsh & Co., has opened his Summer home at Oak Bluffs.

Edwin Bullock, one of the early partners in W. H. Wilmarth & Co., is soon to leave for California on a prospecting expedition in search of gold.

Maj. Everett S. Horton, Alfred R. Crosby and Steven Briggs are members of a committee appointed by the town to investigate a sewerage system.

Col. Sidney O. Bigney has received a silk hat from Thomas W. Lawson, the noted Boston financier, who wagered that Roosevelt would be the nominee of the Republicans.

A persistent rumor has been in circulation that Clarence L. Watson was soon to erect a new factory. It is stated authoritatively that there is no truth to the report.

The C. H. Eden Co., the James E. Blake Co., McRae & Keeler and the Bay State Optical Co. are the members of a second jewelers' league that was formed last week.

Clarence L. Watson is to build a row of handsome tenement houses near the factory of the Watson & Newell Co. Mr. Watson has accomplished a good deal in building up that portion of the town.

Edgar A. Remmington, Ernest D. Gilmore, Charles A. Narsh and A. V. Cobb are members of the financial committee of the Y. M. C. A. E. M. Bliss, of Bliss Bros. Co., is the new president of the association.

Charles E. Moore, of Moore Bros., was married last Wednesday morning to Miss Bertha Moritz, of Boston. The wedding took place at the Shawmut Church of Boston. Mr. and Mrs. Moore intend living in Attleboro.

Thomas E. McCaffery has given a handsome pennant as a trophy for the victor in the Jewelers' Baseball League. On Saturday the D. F. Briggs Co. beat the Horton-Angell team, 14 to 8. R. F. Simmons Co. won from Bates & Bacon.

George E. Heywood, New York representative of the Horton-Angell Co., was united in marriage Wednesday evening to Miss Clara Maud Lammond, of Attleboro. Mr. and Mrs. Heywood will live during the Summer at Grand View on the Hudson.

The first meeting of the creditors of the D. A. White Co. took place last week at the session of the Bankruptcy Court in Taunton before Referee Clifford Sherman. A number of claims were presented and the meeting adjourned until the latter part of July. Attorney Ralph C. Estes has been appointed trustee and required to give bonds to the amount of $7,500.

Frank L. Zweck is making improvements in his store on Central Ave., Marshfield, Wis. When finished it will be one of the best in that part of the State.

Providence.

The L. Lindroth Co., which was incorporated by the Secretary of State, with a capital of $16,000, will conduct business in North Attleboro, the incorporators being all men in the jewelry business of North Attleboro.

James H. O'Neill, president of the Jewelry Workers' Union, was selected Friday night as the first delegate to the Independence Party's National Convention, which will be held in Chicago in the week beginning July 27.

Articles of association were issued at the office of the Secretary of State to A. W. Dennis, W. R. Boss and William Baldwin, for the purpose of manufacturing jewelers' findings, under the style of Boss & Baldwin Co. Capital, $10,000, shares of $100 each.

Harris Fellman, an optician and jeweler at 132 Main St., Woonsocket, observed the 23d anniversary of his business in Woonsocket and the first anniversary in his present store, last week, with a special sale, and received a number of newspaper notices upon the occasion.

Mr. and Mrs. A. N. Sweet, celebrated their golden wedding recently in St. Paul's Church, Potters Ave., with a reception to about 250 friends. Mr. Sweet was an old manufacturing jeweler and a former member of the firm of Sweet, Fletcher & Co. He was married in Pawtucket in 1858.

Alderman G. W. Parks, of the G. W. Parks Co., has won his fight for publicity in the matter of city work. The Board of Aldermen, recently, unanimously adopted his semi-annual newspaper publication bill. Alderman Parks has been the recipient of many congratulations upon his victory.

The following firms have signified their desire to close from June 27 to July 6 in Providence: F. H. Adams, N. Barstow Co., B. A. Ballou Co., Inc.; the Bassett Jewelry Co., William Bens Co., Chapin & Hollister Co., Capron Co., Cory & Reynolds, C. H. Cooke Co., Geo. W. Dover Co., L. Davidsburg & Co., Dunn & Rodenberg, Esser & Co., Fowler Bros., Fletcher-Burrows Co., Fessenden & Co., Inc.; Theodore W. Foster & Bro. Co., Ford & Carpenter, Hutchison & Huestis, George H. Holmes Co., Jewelers' Supply Co., the Jeanette Jewelry Co., the Kinney Co., S. & B. Lederer Co., P. & A. Linton Co., John T. Mauran Mfg. Co., Martin-Copeland Co., Peacock, Stone & Markham, Potter & Buffinton Co., E. A. Potter Co., T. Quayle Co., Streeter & Co., A. H. Schreiber & Co., C. Sydney Smith Co., J. Solinger & Co., George N. Steere & Co., E. L. Spencer Co., Waite, Thresher Co., Wolcott Mfg. Co. and D. Wilcox & Co. The following have signified their desire to close from June 27 to July 6 in Attleboro: Electric Chain Co., Furbish, Swift & Fisher, F. S. Gilbert and R. B. MacDonald Co.

A. L. Bostwick, Tripoli, Ia., has sold his store to H. J. Frye, Waverly.

The G. W. Jewelry Co., Peoria, Ill., has secured commodious quarters at 111 S. Adams St., at that place. The concern, after moving into its new store, will be known as the Goldstein Jewelry Co. The old firm conducted business at 311 Main St. for 11 years.

ENTERPRISING and successful jewelers everywhere are pushing the sale of some individual line of watches which they believe to be superior to all others, and upon which they can also make a satisfactory and justifiable profit.

This explains the growing demand for ILLINOIS WATCHES, in 0, 12, 16 and 18 sizes, by increasing numbers of leading jewelers throughout the United States.

If you are not familiar with the superior quality of — and advantages gained by handling—Illinois Watches, it will mean reputation and dollars for you to investigate.

Every one fully guaranteed.
Price List sent on application.

Vol. LVI. CHICAGO, WEDNESDAY, JULY 1, 1908. No. 22.

Chicago Notes.

J. L. Teeters, Lincoln, Nebr., stopped over here on his way home from eastern points last week.

A. F. Laity, buyer for Schutz & Ketcham, Madison, S. Dak., was a recent visitor in Chicago.

Frank E. Behrendt, western representative of the Homan Mfg. Co., made a short trip to St. Louis last week.

M. E. Johnson, who was formerly in business in other lines at Ft. Dodge, Ia., has opened up a store at Dumont, Ia.

H. M. Goldstein, Peoria, Ill., who was a recent Chicago visitor, announces that he will move into new quarters July 1.

F. W. H. Schmidt now makes week's end trips to his farm near Hartford, Mich., returning to the city Monday mornings.

S. E. Dickson, western representative of the Adelphi Silver Co., has located at La Grange, Ill., a nearby suburb of Chicago.

The New England Watch Co.'s Chicago office has sent the stock back to the factory, owing to the discontinuance of this office July 1.

R. E. MacPherson, western representative of the Standard Button Co., Attleboro, Mass., was recently married. He will reside at Evanston.

Homer A. Curtiss, president of the Meriden Cutlery Co., Meriden, Conn., visited Dr. J. R. Payne, local manager of the company, two days last week.

S. F. McLaughlin, credit man for Sproehnle & Co., is taking a two weeks' vacation on his yacht, and putting in at St. Joseph and other Michigan points.

A. Harper, Chicago manager of the American Silver Co., is visiting at the factory of that company at Bristol, Conn. Mr. Harper's parents reside at Bristol as well.

The capital of the Newman Clock Co. in Illinois is $40,000 and not $100,000 as reported last week, the latter amount being the capital of the concern in New York.

Fred Nelson, of the Chicago office of Watson & Newell Co., will attend the convention at Minneapolis, July 6, 7 and 8. E. Lutz, of the same force, is now in off the road.

Arthur R. McDougall, now located at 27 Monroe St., will soon move his optical store to 40 E. Madison St., in the Heyworth building, which is now occupied by Lange, the florist.

Benj. Allen & Co., who now occupy the entire fifth floor of the Silversmiths' building, are fitting up some 1,500 square feet of space on the east end of the fourth floor, to be occupied by their optical, tool and material goods departments.

Adrian J. Morais, New Orleans, La., was a recent visitor in Chicago. Mr. Morais has been connected for 21 years with the wholesale house of Leonard Krower, New Orleans, but has now started up a wholesale business of his own.

L. Sachs, of C. G. Breitenbach & Co., will attend the convention of the Wisconsin Retail Jewelers' Association at Milwaukee early in July. Mr. Sachs was formerly a director of the association, resigning when he removed to Chicago.

Geo. H. Spies, of Spies Bros., was married, Saturday evening, June 27, at the Hotel Metropole, to Miss Carolyn Hunt. It was distinctly a society function and some 200 guests witnessed the ceremony. Many beautiful and costly presents were received.

In the matter of Joseph Brown & Co., the composition settlement heretofore erroneously reported confirmed has now been confirmed on the basis of 25 per cent., 12½ per cent. cash and 12½ per cent. in six months. The business has been turned over to Mr. Brown, who is now in possession as heretofore.

The following jewelers were in Chicago during the past week: F. E. Williams, Janesville, Wis.; J. W. Neasham, Ottumwa, Ia.; S. A. Asquith, Waterloo, Ia.; S. D. Culbertson, Piper City, Ill.; C. T. Allen, Plymouth, Ind.; F. W. Hinrich, Kalamazoo, Mich.; A. F. Laity, Madison, S. D.; Henry J. Harm, Albert Lea, Minn.; Adrian J. Morais, New Orleans, La.

Friends of August Johnson, of August Johnson & Co., the fountain pen manufacturer, whose wife has been seriously ill, will be pleased to learn that she has undergone a successful operation and is now on the road to recovery. Mr. Johnson has taken his wife to a retreat in the Dells of Wisconsin to recuperate and build up her health, and spent 10 days with her at this retreat.

In the matter of Jones & Dreyer, in bankruptcy, the sale of accounts receivable was postponed, June 23, for 15 days. An appraisement of the stock of merchandise has been made and the collateral held by the National Bank of the Republic as security on a note for $7,148 has been turned over to the receiver, the American Trust & Savings Bank, the bank, of course, still retaining its lien on the collateral for payment of the note. There is probably an equity here of some $1,500 and there is also a substantial equity in the collateral held by other parties on similar paper. Collections of the accounts receivable have been very satisfactory, although the expense in making collections has been considerable. If the court grants an order to sell the merchandise at the same time as the sale of the accounts receivable a notice to this effect will be given creditors.

The following are among the creditors included in the schedules of the dry goods, jewelry and novelty house known as Maison Nouvelle, which recently went into bankruptcy: Deitsch Bros., $132; Bernard Rice's Sons, $308; Codding & Heilborn Co., $98; C. T. Cuny & Co., $53; M. A. Eiseman & Bro., $65; Schrader-Wittstein Co., $78; N. Barstow Co., $127; N. Reichert & Co., $274; Brown & Mills, $1,050; Geo. H. Holmes Co., $85; Max Rosenberg, $157; E. A. Bliss Co., $467; Morris, Mann & Reilly, $300; Providence Mfg. Co., $128; A. & E. Leather Goods Co., $1,250; Geo. H. Cahoone Co., $1,050, and Cohn & Rosenberger, $263. The entire liabilities are put at $39,635 and the assets at $65,262.

St. Louis.

Victor Roth, New Braunfels, Tex., is here attending the Jaegerman Watchmaking School.

Capt. and Mrs. F. C. Klein, and their son, of Ft. Smith, Ark., are spending a few days here on their return home from a vacation on the Michigan lakes. Captain Klein is of the firm of Klein & Fink, Ft. Smith.

M. J. Bieber, manager of the material department of the Bauman-Massa Jewelry Co., and A. B. Bauer, of the same firm, are on their vacation in Burlington, Ia. F. J. McKenna, vice-president of the Bauman-Massa Jewelry Co., is also away.

Among the out-of-town jewelers in this city last week were: C. H. Gieseke, Trenton, Ill.; Fred Simon, Collinsville, Ill.; L. A. Holdener, Belleville, Ill.; Ben Polskee, Memphis, Tenn.; Jerome Lowe, of J. Lowe & Co., Monroe, La.; A. L. Compton, Mound City, Ill., and Charles W. Scanlan, Indianapolis, Ind.

The store of F. G. Meyer, Dayton, O., was considerably damaged by fire, recently.

We Can Furnish You A High-Grade Catalog That Will Keep Your Trade At Home and Increase Your Business Up To 100%

STORE OF J. V. MERCHANT JEWELRY CO., IOLA, KANS.

READ OUR CUSTOMERS' LETTERS

IOLA, Kans., Feb. 3, 1908.
THE ARNSTINE BROS. CO.,
Cleveland, Ohio.

Gentlemen:—Replying to yours of the 25th, will say we do not see how we could successfully conduct a Jewelry Store without the use of your Catalogs and other advertising matter. The use of your Catalogs the past four years has made us the largest Jewelry concern in Allen County, Kansas. We expect to double our order for Catalogs the coming fall. Yours very truly,
J. V. MERCHANT JEWELRY CO.

This firm used The Arnstine Bros. Company Catalogs in 1904, 1905, 1906 and 1907.

GALVESTON, Tex., Jan. 24, 1908
(Extracts from Letter.)
THE ARNSTINE BROS. CO.,
Cleveland, Ohio.

Gentlemen:—In answer to your letter, regarding the benefits and results obtained from the use of the Catalog, will say they brought the results we expected during the Holiday Season just closed, although the financial depression caused a lack of interest for Jewelry.

I hope to be one of the Catalog promoters for this year's business. Respectfully,
N. SALZMANN.

This firm used The Arnstine Bros. Company Catalog in 1907.

IN WRITING US PLEASE MENTION THIS ISSUE "JEWELERS' CIRCULAR-WEEKLY"

Cincinnati.

Eli Gutmann, of L. Gutmann & Sons, is recuperating at French Lick Springs, Ind.

G. W. Meyers, Chattanooga, Tenn., stopped here on his way east to buy stock, last week.

"Gus" Spiegel, of A. A. Spiegel & Co., and wife are enjoying a 10 days' outing at Atlantic City.

Fred Krueger, with Gebhardt Bros., was in Chicago the past week attending the wedding of a friend.

S. Lindenberg, of Lindenberg, Strauss & Co., and wife are home from a very enjoyable pleasure tour in the east.

M. H. Tappin bought stock here the past week for the new jewelry store which he has just opened at Earlington, Ky.

Gustave Fox, of the Gustave Fox Co., and Milford G. Fox, of this house, have left for northern Michigan on a fishing trip.

T. J. Dorrah & Son, Springfield, Tenn., stated to Cincinnati friends, last week, their intention of locating in Oklahoma in the near future.

I. N. Fox, of Fox Bros. & Co., has resumed his duties on the road after an illness lasting since last Spring, and reports business much improved.

Henry Mehmert, at Olney, Ill., was here last week buying material for the new store which he is erecting at that place. It will be completed about Aug. 1.

The Oskamp-Nolting Co., during the coming convention in August, has arranged to present to all visiting jewelers to this house a copy of *Evans' Essays*.

Godfrey M. Braham and Michael H. Plaut were admitted June 25 as partners in the firm of A. & J. Plaut. The firm name will remain the same as heretofore.

E. Richter, of Richter & Phillips, has returned from Chicago, where he was called by the illness and death of his brother. The remains were brought here for burial last week.

Charles Swigart, of the E. & J. Swigart Co., was married June 24 to Miss Grace Lindeman, of Walnut Hills. Owing to the death of Mr. Swigart's brother Eugene, the wedding was a quiet affair at the home of the bride.

Prentice Tiller, arrested some weeks ago on a charge of robbing Michie Bros.' jewelry store in 1891 of about $2,000 worth of jewelry, was tried last week and found guilty of the charge. Sentence has not yet been pronounced.

Miss Mary Gallagher, formerly bookkeeper for Joseph Mehmert, but now in the jewelry business in Pueblo, Colo., reports her store to have been robbed last week of about $800 worth of jewelry. The loss is covered by insurance.

Out-of-town jewelers here last week buying stock included: C. H. Schamber, Meridian, Miss.; Charles Haynes, Chillicothe, O.; R. S. Weaver, Miamisburg, O.; Frank Fullilove, Owenton, Ky.; John Knocke, Lexington, Ky.; F. A. Schweeting and wife, Oxford, O.

William Pflueger, of Joseph Noterman & Co., was out last week at White Water Park at the annual picnic to the German Methodist Sunday-school, of Covington, Ky., of which he is superintendent. Mr. Pflueger has the reputation of being a royal entertainer, which always assures him a large following at these picnics.

George H. Oppie, manager of the sales department of the Wadsworth Watch Case Co., and Miss Virgie L. Hughes, of Point Pleasant, W. Va., were married, June 25, at St. John's Episcopal Church, in Dayton, Ky., after which they departed on their honeymoon in the east. Friends in the trade extended their heartiest congratulations.

The Clemens-Oskamp Co. has improved the opportunity to enliven business a bit by making a large display of ebony elephants—the emblem of the Republican party—just imported from India. The display is very attractive, as it takes the form of a parade. The little elephants take the lead and the larger ones bring up the rear. They range in size all the way from an inch to a foot in height.

One of the finest and handsomest pieces of art jewelry turned out in this section was recently produced by Bingamin & Co. It is in the form of a Masonic charm and made up of diamonds and rubies. The piece is one and one-half inches square and made in three sections, each side being covered with Masonic emblems. The total value is $5,000. The stones unset are valued at $3,000. The jewel is the usual Greek cross presenting a solid front of diamonds, the gold being entirely concealed. On the front is an eagle, which is fastened to the charm by hinges, making it movable. The bird's eyes are represented by two brilliant rubies, while between the wings rests a 2¼ carat diamond. There are in the piece 73 beautifully matched blue-white diamonds, weighing a little over 12 carats.

D. J. Gutmann, of L. Gutmann & Sons, who is noted as a traveler who has visited many countries, recently returned from China and Japan and has given an interview in which he tells how very much impressed he was by these nations; more so, perhaps, than any other he has seen. In this he refers to the great opportunities for business with these nations to which the Americans are blind. Mr. Gutmann says if the American Congressmen would only go abroad and see for themselves how American interests are suffering in the Orient, he thought they would begin a great work of reform. He spoke of the ship subsidy law, the inadequate provisions for America's consuls and ambassadors, as well as the lack of American shipping in the Orient. Mr. Gutmann upon reaching home received a card entitling him to admittance to the semi-annual garden party given by the Emperor of Japan. The card was forwarded to Cincinnati as Mr. Gutmann had just left Japan.

Omaha.

Roy Scott, formerly with Albert Edholm, but now of Lexington, Nebr., was in this city last week.

C. B. Brown, accompanied by his wife, will leave July 4 on a business and pleasure trip to New York and other eastern points, where they will spend six weeks.

Mrs. George W. Ryan, mother of Geo. W. Ryan, of the Mawhinney & Ryan Co., died Monday, June 22, and was buried in this city. Deceased had been a resident of Nebraska for 23 years.

S. H. Clay, Long Pine, Nebr.; A. W. Crabill, Plattsmouth, Nebr.; Max Egge, Grand Island, Nebr.; E. E. Ernstine, Nebraska City, and E. J. Mayle, Rawlins, Wyo., were in this city during the past week, replenishing their stocks.

The following jewelers of this city will close their stores daily, at 5 P. M., except Saturdays, during the months of July and August: Mawhinney & Ryan Co., C. B. Brown Co., Albert Edholm, Joseph Frenzer, Fred Brodegaard & Co., T. L. Combs & Co., A. Mandelberg, S. W. Lindsay, H. Copley and Gustafson & Hendrickson.

The C. B. Brown Co. has had on display in one of its show windows the original silver medal presented by President Grant to Chief Red Cloud, of the Sioux Indians, in 1871, as a symbol of the making of peace with the Sioux tribe. The medal is two and one-half inches in diameter. On one side is an embossed bust of General Grant and on the other side a Bible, world and agricultural implements. This is said to be the only medal of this design in existence.

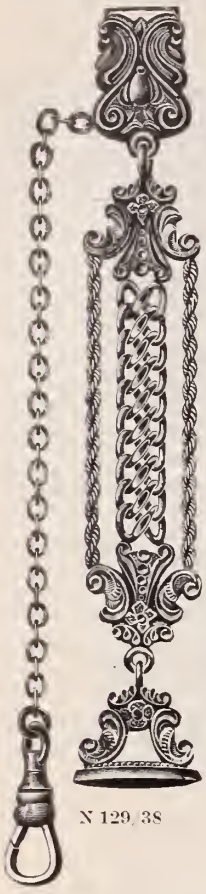
Los Angeles.

L. E. Vaughn, Oxnard, is in this city purchasing goods and also placing orders for show and wall cases.

W. H. Brooks, of the Morgan & Allen Co., San Francisco, accompanied by his wife, is visiting the city on a business and pleasure trip.

The first and second prizes offered for the trans-Pacific yacht race are now on exhibition in the establishments of Montgomery Bros. and Nordlinger & Sons, who supplied them. This race will be run July 4, from San Pedro to Hawaii Islands.

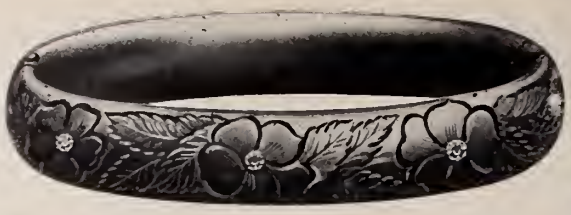
Miss Ada May Richardson has been engaged as saleswoman for the Spring St. store of the Southwest Turquoise Co. Miss Richardson is thoroughly familiar with the jewelry business, having for a number of years successfully conducted an establishment of her own in San Pedro, Cal.



The Southwest Turquoise Co. has increased its workshop force materially during the past week. There has been added a number of young men ranging from 18 to 23 years, who are anxious to learn the trade. This company has also secured the services of a first-class representative who will now cover the entire territory east of the Missouri river.

A local gem concern is preparing to place a new gem on the market, having secured exclusive control of the entire output of the mine from which this gem is taken. This gem is related to the turquoise family, but has not as yet been christened. This function, however, will take place at the next meeting of the directors of the company.

Miss Ethel Payne, a valued employe of E. Gerson, was one of the principals of a pretty romance which culminated in a wedding June 14, when she and Fred T. Simpson, a popular young banker associated with the Farmers & Merchants' Bank of this city, were married in Santa Ana, Cal. Mr. and Mrs. Simpson are now at home to their friends at 1057 W. 46th St.



Edwin W. Hicks, Albion, Ind., recently sold out to Floyd Cole, of York.

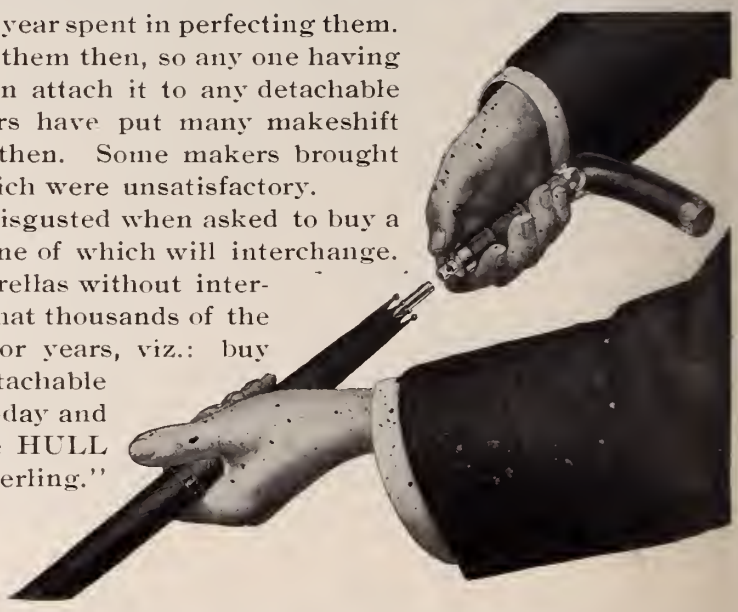
If your jobber cannot supply you with the "IF FOR ANY REASON" line, write to us and we will put you in touch with a live jobber.



N 132/48

Hull Detachable and Interchangeable Handle Umbrellas

were first put on the market in 1900, after a year spent in perfecting them. They are made to-day exactly as we made them then, so any one having a handle bought of us eight years ago can attach it to any detachable umbrella we make to-day. Our imitators have put many makeshift detachable handles on the market since then. Some makers brought out four kinds in as many years, all of which were unsatisfactory.

We believe a merchant must become disgusted when asked to buy a different detachable feature each year, none of which will interchange. The day is past for a jeweler to buy umbrellas without interchangeable handles. Then, why not do what thousands of the most successful merchants have done for years, viz.: buy umbrellas with a reputation and with a detachable feature which is "the same yesterday, to-day and forever"? Buy umbrellas with the name HULL on the button. "It means as much as Sterling."

Our line of Handles for the coming Holiday Season is now ready for your inspection.

HULL BROTHERS UMBRELLA CO. Trade Mark

Hull Brothers Umbrella Company

344-346 Summit Street, Toledo, Ohio

San Francisco.

The race for the Shreve trophy was won by the yacht *Neva*, owned by H. S. Brindle.

Chas. Niner, Pleasonton, and Morris Friedberger, Stockton, visited the trade in San Francisco last week.

Joseph S. Johnson, Concord, Cal., was here, during the past week. He is touring the State in his motor cycle, during his vacation.

C. J. Klein, who has a concession for a jewelry store in the new Casino, at Santa Cruz, has just opened his place for the Summer trade.

Mr. Huggins, president of the wholesale firm of A. I. Hall & Sons, spent the week's end at his Summer home at Inverness, where his family are living during the Summer.

The Morgan & Allen Co., which leased the entire fifth floor of the new Jewelers' building, now in course of construction, expects to move to the new quarters some time in August.

Col. A. Andrews, proprietor of the Diamond Palace, on Van Ness Ave., recently suffered the loss of his sister, Mrs. Sarah E. Baker. Mrs. Baker was the mother of Samuel Baker, who is also connected with the store.

Judge Ogden, of the Alameda County Court, has reduced the bail of Lyman J. Matlock, who is held for the theft of jewelry from his employer in Las Vegas, N. Mex. The extradition proceedings are still pending.

Among the out-of-town jewelers in San Francisco, during the past week, were: L. A. Schaufele, Monterey; J. F. Brooks, Colusa; L. C. Coburg, Healdsburg; A. E. Morro, Los Angeles, and Mr. Cohen, of Cohen Bros., Mazula, Mont.

Leo Van Vliet, of the Baldwin Jewelry Co., returned about a week ago, from Los Angeles, where he and family have been enjoying their vacation. While in the south Mr. Van Vliet spent considerable time fishing at the Catalina Islands and other places.

Hammersmith & Co. have appealed the suit brought against them by May Gender to recover the value of diamonds placed with them for safe keeping and which were destroyed in the fire of 1906. The case was decided against the jewelers in the justice court.

George Farwell and Lena Winchell, who were arrested here last week, on suspicion of being the "fences" connected with the disposal of stolen jewels for several years, and with a recent robbery at Memphis, Tenn., have been discharged. The eastern officers have arrested Samuel Bernstein, for whom Farwell was mistaken. The woman, who is known to be a friend of Bernstein, was discharged for lack of evidence.

M. A. Goldman, Los Angeles, was here, last week, on business connected with the opening of his new store in Los Angeles. He has purchased the Angelus Jewelry Store, of J. Macowsky, in the southern city, and will take possession next month. Mr. Macowsky will open a store in the new Phelan building, in San Francisco, as soon as the space which he has rented is completed, which will probably be the latter part of August. The store is situated on Market St., near 4th St. A large store on the ground floor of the building has been leased.

The San Francisco police, at the request of the Pinkerton detectives, are holding a man and a woman, supposed to be jewelry thieves. The man is believed to be wanted in Boston for the theft of over $50,000 worth of jewels and diamonds, stolen from the home of a Boston importer. The couple were followed here from the east by detectives and arrested last week at the cottage where they were staying, on Natoma St. Every effort is being made to keep the affair quiet until the necessary confirmation of the belief of the officers is forthcoming. The name of the jeweler who was robbed is withheld.

Milwaukee.

P. Jagla, Kiel, Wis., was a recent visitor in this city.

A. J. Stoessel recently purchased a new Stoddard-Dayton touring car.

Alonzo Fuchs, of Fuchs & Hentschel, was married recently in this city.

Richard Seidel, Milwaukee, is the owner of a new Mitchell roadster automobile.

Earl E. St. Hoor, manager of the material department of Sischo & Beard, St. Paul, visited Milwaukee last week.

I. Greenberg, formerly of Milwaukee, and who has been located at Denver, Colo., for some time, is in this city for a few days.

O. E. Lange, Racine, Wis., and Mr. Schneider, of Schneider & Son, Burlington, Wis., were visitors, last week, to the trade in this city.

Louis Sachs, 418 National Ave., recently had a narrow escape from a disastrous fire. Firecrackers set off by small boys in front of the jewelry shop, started a blaze in the awning and only prompt action saved the building. The awning was destroyed and the building was somewhat damaged. The loss was fully covered by insurance.

The street clock of Archie Tegtmeyer, at National Ave. and Grove St., was erected last week. The tall timepiece in front of the Bloedel establishment is again in place after extensive repairs. The clock of Richard Seidel, at Grand Ave. and 2d St., is now in the repair shop and will be erected this week. The following, who had their clocks torn down recently, will replace them as soon as possible: C. Preusser Jewelry Co., A. J. Stoessel, W. & E. Schmidt, David Goldman and Herman Miller, Joseph Wellstein, Charles Veicht and Alsted-Kasten Co., who took down their clocks before the raid, are also planning on erecting them again.

Milwaukee jewelers are making extensive plans for the third annual convention of the Wisconsin Retail Jewelers' Association, which will be held in this city, July 7 and 8, with headquarters at the Hotel Blatz. The entertainment features are in the hands of the Milwaukee Jewelers' Club. A handsome programme and souvenir are under preparation at the present time and these will be mailed to the jewelers of the State this week. An instructive programme of timely addresses has been prepared and the social feature has been well taken care of. One of the most important events that will occur during the convention will be the formal organization of the Badger State Optical Society, an organization through which efforts are to be made for the passage of a suitable optical law for Wisconsin.

Cleveland.

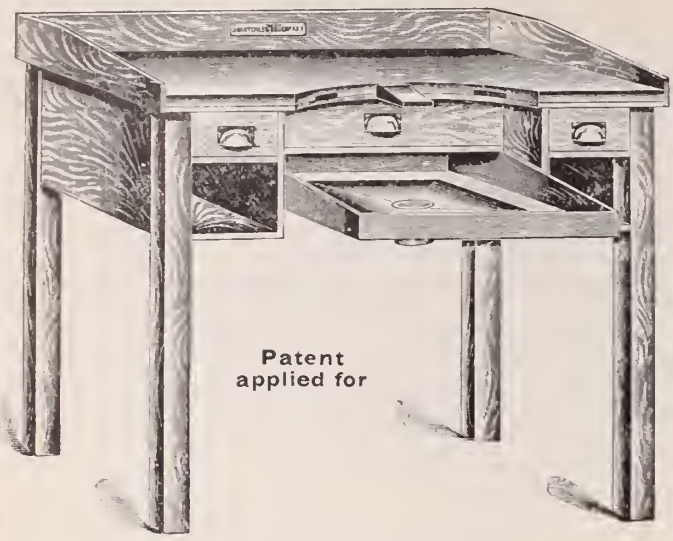
Webb C. Ball was in New York several days last week.

A. G. Lee, of the E. Howard Watch Co., spent several days here last week.

L. M. Levy, of the Philadelphia Watch Case Co., was in this city Wednesday.

A number of local opticians attended the sixth annual convention of the Ohio Optical Association held at Cedar Point, near Sandusky, O., on Tuesday, Wednesday and Thursday of last week.

The very interesting exhibit of watches which passed through the San Francisco earthquake and fire, which the Waltham Watch Co. displayed at the Jamestown Exposition, is being shown in the windows of the Webb C. Ball Watch Co. this week.



The police have not made any progress toward locating the jewelry valued at $1,000 recently stolen from G. L. Harding's establishment. It is believed that the watches, rings and diamonds were disposed of in an eastern city, but from insufficient evidence it has been necessary to discharge the men arrested in connection with this case.

A bolt of lightning that struck the wires controlling an electric burglar alarm at the jewelry store of Knittle & Longtin, 1929 W. 25th St., last week, resulted in sergeant and patrolmen surrounding the store with drawn revolvers. They rushed the doors of the store but found only a cat purring contentedly on a desk. Then an electrician happened along and explained.

The mammoth National Educational Association Convention being held in Cleveland this week is expected to leave a large sum of money in the city and jewelers are making preparations to secure their share of it. Nearly every window is stocked full of souvenirs of every description and one or two companies have displays in the exhibit space. The Webb C. Ball Watch Co. loaned several Standard clocks to the committee in charge of the convention to be used at the headquarters offices.

The Jos. Welf & Sons Co. has a very interesting window display that is attracting much attention. It consists of a complete tower clock in operation, with ribbons leading from the various parts to placards pasted against the window pane, which set forth the purpose of the different important pieces. The clock movement is mounted on the extreme left side of the window and the full sized dial on the extreme right side, with a long connecting rod carrying the motion from movement to the hands.

Wm. Johnson, a negro, was shot while attempting to escape last week after trying to break into the jewelry store of H. T. McKinley, 405 Main St., Little Rock, Ark. Wm. Clark, Johnson's confederate, who was standing guard with a revolver, was also taken into custody.

HERPERS BROS., Newark, N. J.

Do Not Be Misled, Brother Jeweler,

By Auctioneers Copying My Style of Advertising

I have for fifteen years advertised as America's Leading Jewelry Auctioneer

I have conducted the largest and most difficult sales ever made in America, and my results were not only 100 cents on the dollar, but a profit of 20 to 25 per cent. over cost on the entire sale of the old goods in the store and on new goods on memo. 25 to 75 per cent., yet I sell only solid gold and silver and fine goods. I employ to assist me four of the best-trained auctioneers in America—salesmen and gentlemen. I do not associate with any other kind. I guarantee results equal to those of any pair of auctioneers in the world. I guarantee 100 cents on the dollar or over for myself or men, and my guarantee is good.

Look me up in the rating of Bradstreet's and see. Why fool with men without experience? Remember I stand back of my men, and if you need memo. goods to sweeten up your stock I can furnish you any amount desired and at prices that will pay you handsome profits.

DAN I. MURRAY, No. 3 Maiden Lane, New York

151 Wabash Ave., Chicago; 512 Race St., Cincinnati, O.; 1172 Sutter St., San Francisco, Cal.; 183 Eddy St., Providence, R. I.

America's Leading Jewelry Auctioneer, with Four First-Class Auctioneers to Assist Me

Indianapolis.

I. Grohs, of the I. Grohs Jewelry Co., has returned from New York.

A. R. Gray, of Gray, Gribben & Gray, spent last week visiting relatives and friends in Hendricks County.

A vacation trip to Chicago and vicinity is being made by Horace Plummer, a watchmaker and jeweler in the employ of J. H. Reed.

A business trip to Texas will be made to-day by Leo Markowitz, of the I. Grohs Jewelry Co. He will be away about six weeks.

Asher Gray, of Gray, Gribben & Gray, is spending this week visiting relatives near Columbus, and will return home some time next week.

Following an absence of several weeks due to a severe illness and a visit to Chicago, Harry Reed is again working for his father, J. H. Reed.

Carl L. Rost is building a residence at 2058 Central Ave. to cost about $5,000, and which will probably be ready for occupancy some time in August.

Andrew Streng, for some time located at 203 Indiana Ave., is opening a new store at 5 W. Market St., and may decide to continue both places.

H. A. Winn, located in the Pembroke Arcade, made an automobile trip with his family, last week, to Bloomingdale Glens, returning home this week.

After a two weeks' automobile trip through Ohio and Kentucky, Clarence James, employed by J. P. Mullally, will return home to-day, July 1.

J. W. Culbertson has taken a position with George S. Kern at his N. Meridian St. store. He was at one time employed by the Waltham Watch Co.

Out-of-town jewelers in this city, last week, included: T. H. Anderson, Bedford; N. W. Myer, Crawfordsville; J. F. Kiser, Muncie; Dan Beauchamp, Kempton, and A. B. Johnson, Sheridan.

Mr. and Mrs. Chris. Bernloehr left to-day, July 1, for a three months' trip to Europe. They sailed from New York on the *Rotterdam*. They will go to Amsterdam, where Mr. Bernloehr will look after some business matters and will then spend several weeks touring the continent. Mr. Bernloehr is a member of the firm of Chris. Bernloehr & Bro., of this city.

Krauss & Secttor, 45 N. Illinois St., have just completed alterations and improvements including the installing of one of the best equipped optical departments in the State. The location of their office has been changed, the old office being attractively fitted up as a reception room. A dark room has been built and equipped with modern appliances. The company expects to install machinery with which it can do its own grinding, in the near future.

Practically all of the pawnbrokers in the city were asked to appear before the Marion County Board of Review, last week, in order to give information as to the value of their business and stocks. The board fixes valuations upon which a basis for fixing taxes is gained. While many of the pawnbrokers are not incorporated, the board felt that they should give more detailed information as to their valuations than are contained in the tax duplicates given to the county assessor. As a result, the valuations of several pawnbrokers were raised, while others were allowed to remain about as they were.

Kansas City

F. J. and E. P. Nevin, of Nevin Bros., have been taking turns visiting McAllister Springs for pleasure and recreation.

E. H. McClintock, Thomas, Okla., has been enrolled as a student at the Kansas City Horological and Optical School.

All the traveling representatives of the C. B. Norton Jewelry Co. will be in the field on their midsummer trips after to-day, July 1.

The Franklin Jewelry Co. has removed from 1425 Grand Ave. to 524 Main St. The building formerly occupied by it has been condemned and is being torn down.

J. M. Scott, with the Woodstock-Hoefer Watch & Jewelry Co., is enjoying a well-earned vacation at Sulphur Springs, Ark., and Otto Knaul, with the same company, is taking his vacation from his duties as traveling representative in this city.

The following jewelers were in this city during the past week: Ora Stutzman, Garden City, Mo.; J. H. Leighty, Spring Hill Kans.; A. Manifold, Beloit, Kans.; R. R. Smithers, Cameron, Mo.; R. S. Settle, Kearney, Mo.; F. W. Jordan, Minneapolis, Kans.; H. G. Sloan, Le Roy, Kans.; F. W. Grover, Porum, Okla.; C. C. Fleck, Salina, Kans.

E. H. Morgan, vice-president of the C. B. Norton Jewelry Co., has returned from a vacation outing at Minacqua, Wis. A. H. Clark, manager of the material department of the same company, will spend his vacation in the east, and will visit Boston, Mass., and Toronto, Can. W. C. Schumann, with the C. B. Norton Jewelry Co., has returned from a vacation spent in Chicago and near-by resorts.

Rochester.

Another attempt was made by burglars to enter the store of Terry & Block on Main St. W., recently. A rear window was broken, but the door connecting with the store proper could not be opened. The burglars were frightened away by persons living near the store. Last March, the store was entered in a similar manner and jewelry valued at about $175 was taken.

Max Levinson, pawnbroker and jeweler, who refused to give up a stolen watch to the police, was fined $50 in Police Court, last week. The watch, which belongs to a local police officer, was left at a local jewelry store for repairs. A crook obtained it by paying the repair charges, and pawned it at Levinson's. When it was located at the pawnbroker's, he refused to give it up unless he was refunded the $8 which he had advanced on it. Levinson was arrested and demanded a jury trial. It took the jury about five minutes to find him guilty on a charge of petit larceny.

Anthony Natchueske recently broke into a store at Bernice, Pa., and was captured near Satterfield after a two days' chase through the woods. Gold watches and a quantity of jewelry were found upon him. He pleaded guilty and was brought to La Porte, Pa.

Minneapolis and St. Paul.

"Lucios" is about to open a store at 426 Nicollet Ave., Minneapolis.

R. R. Golding, London, Ont., accompanied by his wife, was in Minneapolis, last week, visiting his nephew, B. F. Simpson.

A. Lindahlof, 880 Payne Ave., St. Paul, has just moved into new quarters in his own building, recently completed, at 910 Payne Ave.

H. N. Meyers, 1136 Tenth Ave., N., Minneapolis, was taken into custody, a short time ago, at the Union Depot, accused of selling bogus jewelry.

Elmer Anderson, with S. H. Clausin & Co., Minneapolis, has gone to Michigan on his vacation. W. R. Cooper, of this firm, has returned from a vacation spent in the east.

B. F. Simpson and F. G. Simpson, Minneapolis, have returned from extended business trips through the western territory, where they report excellent agricultural conditions.

C. G. Lindquist's store, at 1917 Washington Ave., N., Minneapolis, was entered recently by burglars. Several watches, fountain pens and jewelry were taken. The loss was about $150. A reward of $100 is offered by the Jewelers Security Alliance for the arrest and conviction of the thieves.

J. A. Light, Doland, S. Dak., has arranged to become a partner with B. F. Simpson & Co., wholesalers, and the latter is taking stock preparatory to the new arrangement. The firm style will remain the same as formerly. Mr. Light's force in his retail business at Doland has been added to the force under the new arrangement. New safes have been installed.

Arrangements have been made for the erection of a five-story and basement building at the corner of First Ave., N., and 4th St., in the heart of the jobbing district of Minneapolis. Several of the wholesale houses have under consideration a tentative arrangement for occupying space in the building. The building is of fireproof construction throughout, reinforced concrete being used.

S. H. Clausin & Co., Minneapolis, will move, July 31, from the Sykes block to the second floor of the Warner building, at 13, 15 and 17 S. 6th St., where they will have greatly enlarged space. There will be passenger and freight elevator service, and larger vault room, in a new fireproof building. The concern will be open for business in the new quarters Aug. 1.

Among the jewelers in the Twin Cities during the past week were: Gust. Chellin, Dassel, Minn.; Mr. Webber, of the Webber Jewelry & Music Co., St. Cloud, Minn.; I. D. Allen, Cooperstown, N. Dak.; W. W. McGuire, Northfield, Minn.; H. K. Lee, Fosston, Minn.; Chas. Swedberg, Hopkins, Minn.; C. F. Winter, River Falls, Wis.; Villeaux Bros., Wahpeton, N. Dak.; Wm. Stibal, Foley, Minn.; I. Reiner, Hutchinson, Minn.; J. J. Donohue, Faribault, Minn.; F. Z. Sherwood, Faribault, Minn.; L. H. Bruns, Anoka, Minn.

Thomas Aldwell, who claims to reside at El Paso, Tex., was taken into custody in Kansas City, Mo., last week, for selling bogus jewelry.

Detroit.

W. J. Bottomley, Round City, is recuperating at Battle Creek.

W. E. Green, Mt. Clemens, visited the trade here on Friday.

Harry Minkley, salesman for Traub Bros. & Co., is spending his vacation on a fishing trip.

F. Creswell and wife, Holly, stopped over in Detroit, last week, on the way to Niagara Falls.

Edward C. Koelzer recently returned from a trip through the southeastern portion of the State.

W. W. Bridges, Marine City, visited the local trade last week. He left here to make a short visit to Rochester, Mich.

Albert Schaub has just returned from a trip to New York, having gone there with friends who participated in the national skat tournament.

James H. Garlick swore out a warrant, last week, for Walter Mueller, whom he accuses of passing a fraudulent check for $90 in payment for jewelry.

Herman Meyer, watchmaker for Traub Bros. & Co., was married, Thursday, to Miss Lillian Bross, at Dexter, Mich. The couple went to Niagara Falls on their wedding trip.

Edward B. Roehm left, Monday, to attend the convention of the P. S. I. Gamma Delta Fraternity in New York, Tuesday and Wednesday. He is the official jeweler of the fraternity.

Wm. F. Schultz has purchased the interest of Emil O. Buehler in the firm of Wm. F. Schultz & Co., and is now the sole owner of the business.

Traub Bros. & Co. have secured a 10 years' renewal of their lease on the property at the corner of Woodward and Grand River Aves., where they have been located for 14 years.

Emil and Walter Kantlehner have purchased the interests of their father, F. Kantlehner, in the firm of Fred Kantlehner, Chelsea, Mich., and the business will hereafter be conducted under the name of Kantlehner Bros.

A committee of the Detroit Jewelers Board of Trade has been investigating the operation of the new auctioneers' license ordinance which was recently passed through the efforts of that body. It has been found that the auctioneers against whose methods complaint was made have gone out of business.

Burr, Patterson & Co. have added new office room to their quarters at 75 Fort St., W., and now occupy the first floor front of the building, in addition to their former office and factory space. F. H. Burr, of this firm, left last week on a trip to the Pacific Coast, and is not expected to return to Detroit until next January.

The illness of Hugh Connelly has turned out to be more serious than was at first expected. Since his removal to Harper Hospital three operations have been necessary, and while his condition is as satisfactory as might be expected, it will probably be some time before he returns to business. Paul C. Sinz is temporarily in charge of the store.

Detroit wholesale jewelers are co-operating with other wholesale merchants of the city in a campaign against proposed increases in the excess baggage tariff of the railroads. An appeal has been made to the State Railroad Commission for an order to change the present rates on excess baggage, which are considered to be too high in comparison with those in effect in other States. The Railroad Commission has announced that it will give a hearing on the subject, July 8, in this city.

The store of Solomon P. Flayer, 83 Grand River Ave., was robbed about 1 A. M. Friday morning by burglars, who effected an entrance by cutting out a portion of the plate glass in the front door. The goods taken included four dozen signet rings, 20 ladies' watches and 12 chains, the total being valued at $260. Mrs. John Sullivan, who lives above the store, heard a noise and called from the window to a man standing on the sidewalk, asking what he was doing. Not receiving a satisfactory answer, she telephoned to the police, and the approach of the patrol wagon scared the burglars away, their escape being effected in the darkness. The police later arrested four young men, who gave their names as Edward Deering, Duncan Eichen, Joseph Carpenter and James Kaigy, on suspicion.

Creditors of John Hellerich, bankrupt, met, Thursday, and elected Edward F. Wunsch, an attorney representing the eastern creditors, as trustee of the property. The sale of this stock will take place at the store, 39 Michigan Ave., July 7. The entire stock will be sold in bulk. An order was secured for the bankrupt to submit schedules on Tuesday. The inventory recently completed by Messrs. Toepel & Liesemer disclosed a smaller stock than had been expected, the amount being only $9,500, while the debts scheduled aggregate more than $17,000. In addition to the property found at the store and recovered from the bankrupt, some additional goods were secured from the police court, where they had been held as exhibits in a criminal case in which Mr. Hellerich was complainant. The bankrupt was not present at the creditors' meeting.

Canada Notes.

L. H. Doll, Calgary, Alba., is asking for an extension of time.

M. S. Clappison, Hamilton, Ont., is selling off his stock at auction.

A judgment for $397 has been recorded against T. L. Coughlin, St. John, N. B.

William, Harry and Gerald Birks, of Henry Birks & Sons, Ltd., Montreal, were in Toronto, Ont., last week.

A destructive fire occurred at Burk's Falls, Ont., on Saturday, June 20, among the sufferers being S. T. Vanstone, jeweler, whose loss was $3,000, partially covered by insurance.

Out-of-town jewelers calling on the Toronto, Ont., trade last week included: Joseph U. Pequegnat, Guelph; E. D. Wilcox, Uxbridge; Miss O. C. Diesfield, Port Perry; R. V. Bassett, Whitby; T. Binkley, Hamilton; and W. G. Young, London, all Ontario.

On Monday, June 22, a large portion of the city of Three Rivers, Que., including the entire business section, was destroyed by fire. The following jewelers were among those burned out: Napoleon Lamy, loss $10,000; A. Bergeron, loss $15,000; and A. J. Contois, loss $11,000.

John Lang was recently arrested at Schreiber, Ont., charged with breaking into and robbing J. H. Tucker's store, Carleton Place, Ont., on the night of June 8. A number of watches and other stock were found in his possession.

Lancaster, Pa.

G. William Reisner spent last week in Philadelphia.

Edward Sweet, of the Sussfeld-Lorsch Co., made a special trip to this city last week.

Samuel Warhaftrech, watchmaker for Marcus Edelstein, went to New York last week to be married.

William J. Kettler, Washington, D. C., visited the Non-Retailing Co. and Hamilton Watch Co. last week.

A. F. Hostetter has been elected a trustee of the Henry G. Long Asylum, to succeed John B. Warfel, deceased.

E. R. Kant and Charles A. Foose spent last week, with their families, at York Furnace on the Susquehanna river.

Wm. Kinna, of the Elgin National Watch Co., was the guest last week of A. W. Moyer, manager of the Non-Retailing Co.

Among the jewelers visiting here recently were Robert Maincar, Baltimore; Stephen Blair, Richmond, Va.; E. P. Zane, Christiana, Pa.; Frank Paulsen, Boston; Nat. C. Benkert, Wilmington.

Elmer Pierce, watchmaker for C. A. Shinneman, Chambersburg, Pa., spent a few days in Lancaster last week among old friends. He stopped over en route to Asbury Park, where he is spending his vacation.

M. T. Gardner, who came here several months ago from Paterson, N. J., as watchmaker for W. W. Appel, and who started in business for himself a month ago, closed up last week and left, Friday, for Chicago.

Ernest Schwarz, of Schwarz & Getz, who is a clever modeler and designer, has just filed papers for patenting a miniature baseball team, the figures being of metal, painted to represent different teams, and set on the diamond.

James E. Ziegler, formerly of Lancaster, now in the jewelry business with his brother, John, at Stockton, Cal., is making a hit as a vocalist, as well as being successful as a jeweler. A recent edition of a Stockton newspaper has many nice things to say about his singing in a local show.

J. Ursinus Fritchey, one of the leading contractors of eastern Pennsylvania, but for years a prominent Lancaster jeweler, and at one time traveling representative of the Pairpoint Mfg. Co., American Silver Plate Co. and Simpson, Hall, Miller & Co., Saturday, June 27, celebrated his 57th birthday at his handsome home near Lancaster. His friends surprised him with a gift—a large-sized sterling silver loving cup.

Curtin Brocius, Summerville, has left the Ezra F. Bowman Technical School to take a position as engraver and watchmaker in McKane's jewelry store at Charleroi, Pa. Harry Charles, of Mountville, Pa., a student at the school, has returned to his studies after undergoing an operation at the General Hospital. L. B. Spielman, of Hagerstown, Md., has entered the school for a special course in watchmaking.

LEARN JEWELERS ENGRAVING

"The Engraving School that Graduates Experts."
A fascinating, high-salaried and easily learned trade, taught thoroughly and practically by correspondence. Your instructor is the foremost authority and master workman in the world. We will teach the beginner better engraving by correspondence than he can gain in years of rigid apprenticeship. We will improve the skill of any engraver one hundred per cent. and make him master of the trade. The demand for competent engravers far exceeds the supply.
Send for handsome, illustrated prospectus.

TRADE-MARKS

Manufacturers and Jobbers:

We now have in preparation a supplement to the second edition of ***"Trade-Marks of the Jewelry and Kindred Trades,"*** and in order that it may be as complete and accurate as to new marks as it is possible to make it, we request every manufacturer and jobber to send us a list of such marks as he may ***now use,*** or ***has ever used,*** together with such information (the kind and quality of goods upon which the marks are used, etc.,) as may be germane to the subject. Send cuts of marks if possible. If not, send clear, printed impressions or drawings.

The earliest attention is solicited, as it is of utmost importance to every manufacturer and jobber to have his mark recorded in this supplement.

THE JEWELERS' CIRCULAR PUBLISHING CO.
11 John Street, NEW YORK

This supplement when complete will be mailed to all holders of the second edition of this work without charge.

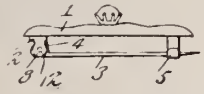
[IN WHICH IS CONTAINED A LIST OF THE LATEST PATENTS GRANTED BY THE UNITED STATES AND GREAT BRITAIN, THE UNITED STATES PATENTS THAT HAVE EXPIRED AND THE REGISTERED TRADE-MARKS.]

UNITED STATES PATENTS.

ISSUED JUNE 23, 1908.

891,229. COLLAR-BUTTON. Bernhard Brand, Braila, Roumania. Filed Oct. 13, 1905. Serial No. 282,625.



In a collar-button the combination with a base plate having a central projecting portion, of a coiled spring secured to the said central portion of

the base plate so as to project at right angles from the base plate, a knob secured to the free end of the said coiled spring, two flaps hingedly connected to one another and to the said knob, a hole provided in the said knob and intended to receive a fastening hook secured to the cravat.

891,686. PIN-JOINT. Frederick W. Goerdes, Newark, N. J. Filed Feb. 28, 1907. Serial No. 359,781.

As a new article of manufacture, a pin-joint comprising a base having integral diverging ears adapted to be bent to a parallel position and provided with transverse openings, and a pivot pin permanently bound at one end in the opening

of one ear and adapted to be secured at its free end within the opening of the other ear when the joint is closed, whereby the article with the pin attached may be polished by the operation of "tumbling" without injury to or displacement of the pin.

DESIGNS.

39,366. BADGE. Charles J. Dieges, New York.

Filed May 7, 1908. Serial No. 431,541. Term of patent 7 years.

39,367. EMBLEM OR BADGE. Caleb Brinton,

Portland, Ore. Filed Feb 8. 1906. Serial No. 300,191. Term of patent 7 years.

39,368. RING. Ira C. Hartzell, Tabernilla,

Panama. Filed May 8, 1908. Serial No. 431,733. Term of patent 7 years.

39,369. HANDLE OF SPOONS, FORKS OR SIMILAR ARTICLES. Frederick Habensack, Sag Harbor, N. Y., assignor to the Fahys Watch Case Co., New York. Filed

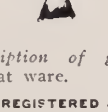
April 10, 1908. Serial No. 426,399. Term of patent 7 years.

39,370. HANDLE FOR SPOONS, FORKS OR SIMILAR ARTICLES. Gustave Strohhaker, Wallingford, Conn., assignor to the

International Silver Co., Meriden, Conn. Filed May 11, 1908. Serial No. 432,309. Term of patent 7 years.

UNITED STATES TRADE-MARKS.

[The following trade-marks have been adjudged entitled to registration under the Act of Feb. 20, 1905, and are published in compliance with Section 6 of said act. Said section provides:



"Any person who believes he would be damaged by the registration of a mark may oppose the same by filing notice of opposition, stating the grounds therefor, in the Patent Office, within 30 days after the publication of the mark sought to be registered, which said notice of opposition shall be verified by the person filing the same before one of the officers mentioned in Section 2 of this act. If no notice of opposition is filed within said time the commissioner shall issue a certificate of registration therefor, as hereinafter provided for."

Marks which are stated to have been "Used 10 years are registrable under the last proviso of Section 5 of said act, which is as follows:

"And provided further, that nothing therein shall prevent the registration of any mark used by the applicant or his predecessor, or by those from whom title to the mark is derived, in commerce with foreign nations or among the several States, or with Indian tribes, which was in actual and exclusive use as a trade-mark of the applicant or his predecessor from whom he derived title for 10 years next preceding the passage of this act."]

PUBLISHED JUNE 23, 1908

Ser. No. **33,426.** (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) The Williams Bros. Mfg. Co., Glastonbury, Conn. Filed March 16, 1908.

Particular description of goods.—Silver-plated and nickel-silver flat ware.

TRADE MARKS REGISTERED JUNE 23, 1908

69,553. WATCHES, WATCH CASES AND WATCH MOVEMENTS. Langendorf Watch Co., Langendorf, Switzerland.

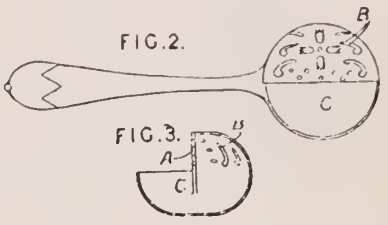
Filed Nov. 23, 1907. Serial No. 31,323. Published April 21, 1908.

69,612. FOUNTAIN-PENS AND PENCILS. L. E. Waterman Co., New York.

Filed Oct. 15, 1907. Serial No. 30,613. Published April 21, 1908.

69,650. CERTAIN JEWELRY. Schanbacher & Brod, Newark, N.J.

Filed Feb. 26, 1908. Serial No. 33,013. Published April 21, 1908.

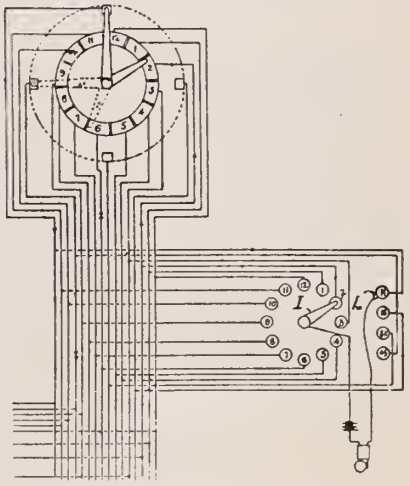


BRITISH PATENTS.

(Abridgments of Specifications, 1907, from *The Illustrated Official Journal.*)

ISSUE OF JUNE 10, 1908.

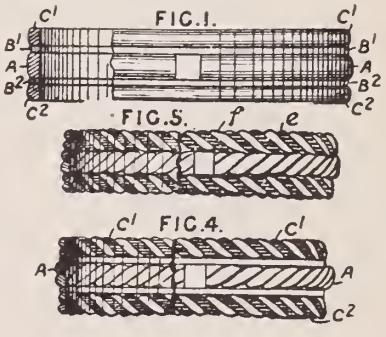
3,952. SPOONS. W. S. Codner, Dedham, Essex. Feb. 18.



A spoon for sprinkling sugar, etc., has an im-

perforate bowl C partly covered with a perforated hood B having a part A which is turned down into the bowl.

4,085. TIME-ALARMS. G. F. Coleman, Wolverhampton. Feb. 19.



The central clock which controls electric alarms in a number of rooms has a series of contacts corresponding with the hours, over which the hour-hand moves, and also four other contacts corresponding to the quarter-hours over which the minute-hand moves. The electric circuit through any

alarm is not completed unless both hands touch their contacts simultaneously. Main wires lead from these contacts, and wires from a special switch in each alarm circuit are connected to these main wires. The switches in the various rooms have circles of contacts corresponding to the hours, anyone of which may be touched by the contact-arm I. Four plug sockets marked H, 15, 30, 45, correspond to the quarter-hours. By moving the arm I to make contact with the desired hour-contact, and inserting the plug L in its proper socket, the hands of the central clock are caused to complete the circuit of the alarm bell in the room at the desired time.

4,198. JEWELRY. W. F. Jennens, Birmingham. Feb. 20.

Anti-rheumatic rings, bracelets, armlets, ankle

rings, etc., containing both galvanic and magnetic elements are built up of one or more ring-shaped

DUBOIS

Safety Chatelaine Brooch and Case Combined

Which Enables a Watch to Keep Correct Time

Cannot Be Lost **Absolute Security** **Will Not Pull or Wear Off**

Patented U. S. June 9, 1908.
Patents Pending in Foreign Countries.

Watch worn as Chatelaine, showing it lifted to read the time.

MERITS—Holds the watch firmly and securely, thus preventing the movement from being jarred, as there is no swinging or bobbing up and down while the wearer is walking or running. Protects both the case and garment from wear.

UTILITY—It can be raised so as to read the time, and reversed to have either the dial or back facing front, without removing brooch pin or watch from the garment. Can be worn on the shoulder, belt, chain or fob.

ARTISTIC AND PRACTICAL—The only brooch and watch combined. Affords absolute security, as it has a safety catch. Nothing to wear out, as it works on friction bearings. Eliminates the possibility of loss of the watch owing to either bow, hook, swivel or link wearing out, breaking or coming apart, as in the old style chatelaine. Does not interfere with either winding or setting of movement.

Watch worn on belt as Chatelaine, also long neck chain can be worn attached to it.

Licensed Under Wachter Patent. Patented July 25, 1905; May 21, 1907.

magnets A, Fig. 1, to the flat sides of which one or more zinc annuli B^1, B^2, are soldered, and to each of these in turn is soldered a copper ring C^1, C^2, the combination being stated to have an anti-rheumatic effect. In a modification, the copper and steel rings may be made by coiling two wires of the same material together and bending into a ring, as seen at C^1, A, C^2, Fig. 4; or the copper-zinc combination may be made by twisting together copper and zinc wires *e*, *f*, Fig. 5. In a further modification, two or more magnets and three or more copper zinc rings are used.

3,939. TIMING PIGEONS. H. Haneuse, Brussels. Feb. 16.

Relates to the type of apparatus in which the time of the insertion of the pigeon ring into one of several rec ptacles is recorded by pricking rotating paper dials which indicate hours, minutes and seconds.

454,827. WATCH-BOW FASTENER. Fritz Mink, Philadelphia, Pa., assignor to the Keystone Watch Case Co., same place.

A New Gem Material Recently Found in Utah.

A NEW gem material which is now being offered to the trade for the first time in cut form is called Amatrice by the company by which it is mined and sold, inasmuch as it is distinctly an American matrix. The gem material, which was found within the past year in the Stansbury Range in the western edge of the Rocky Mountains in Tooele County, Utah, was at first supposed to be a variety of Utahlite and by some considered variscite, though the company which has produced it, however, claims that it is neither, but a combination of variscite and wardite in conjunction with crypto-crystalline quartz, chalcedony, sodium oxide, magnesium oxide and small quantities of iron and potassium, but contains no copper.

The essential color of this gem material is green, resembling somewhat the turquoise matrix, but the green runs from pale blue shades through apple green and dark sea green down to the deep emerald hues, while the matrix runs through various colors from the subdued pink tints, reddish browns, drabs, medium browns to very dark brown. The effects in these stones are very striking, and are of infinite variety, no two stones presenting the same arrangement of the shades of color.

One of the characteristics of the gem is its homogeneous hardness, with a lack of the porous characteristics of most matrix stones, and this permits an even finish to be given to the surfaces, whose uniform luster makes the division of the material look more like divisions of color. Unlike Utahlite and variscite, this material has a hardness which runs from 6 to 7.

It is claimed that this material has been found nowhere outside of one place in the Stansbury Mountains, Utah.

Jacksonville, Fla.

Hess & Slager, 5 East Bay St., will give a beautiful gold watch to the one who delivers to them Oct. 1 the greatest number of "Florida Widow" cigar bands.

The Retail Jewelers' Association of Florida was to have held an annual meeting at the Board of Trade auditorium June 18, but owing to the fact that only two or three were present at the hour for calling the meeting to order, it was postponed.

RECENT PUBLICATIONS

ANTIQUE PLATED WARE, A HISTORY OF OLD SHEFFIELD PLATE: By Francis Pairpoint. Second edition. 62 pp. Published by Pairpoint Bros., London. Price, cloth, 2s.; paper, 1s.

THIS interesting little work on the subject that is growing more and more interesting to jewelers every year is an excellent history of old Sheffield plate and contains full particulars as to close plating, together with a large number of interesting old illustrations with upward of 50 old makers' marks and signs. It will prove most useful to collectors and dealers, and has been aptly described as an excellent guide at a nominal cost.

As the author points out at the beginning of the work, "the plated ware known today as antique Sheffield plate is an example of how a process of manufacture may be invented, and starting from small beginnings rise to a great height of success, and then, superseded by another process, sink and disappear, and disappear so completely in a short space of time (in this instance not much more than 200 years) so that little if any record remains, except the articles themselves and sundry traditions more or less authentic, relating to the early manufacturers and their workmen. It must be understood that Sheffield plate is only the name of a process, and it does not follow, as one might suppose, that Sheffield-plated articles were only made in Sheffield. It gets its name from being invented and brought to perfection in that town."

Such works as that of Mr. Pairpoint, however, will at least keep the next generation from knowing less than this in regard to the Sheffield-plate industry, as even a cursory examination will prove both interesting and instructive to the jeweler and give him many points upon this old style of plated ware which never before had been brought to his notice. The illustrations alone will throw a flood of light on certain phases of the industry, as the author has been able to collect pictures of many of the articles, not only knives, forks, spoons and hollow ware, but a number of odd pieces such as wine labels, shields, caddy spoons, etc., as well as reproductions of old advertisements by dealers and a large number of the marks used.

The concluding chapters of the book contain a list of marks and signs used by various makers between 1785 and 1840, and a list of marks and signs found on close plated articles attributed to Sheffield and Birmingham from 1790 to 1840.

John W. Ware, a prominent Dunkirk, N. Y., jeweler, was a victim of an unfortunate mistake recently. When he stepped from a Lake Shore train on his arrival in Buffalo, he was made a prisoner by the police, locked in the cell and held to await examination on the charge of being a suspicious person. At last Mr. Ware convinced the police of his identity, proving that he was a reputable business man, and was finally released. It is said that the mistake was made by railroad detectives, who mistook the jeweler for the man they wanted and telegraphed to Buffalo to have him held.

Now It's The Lord Elgin

The demand to-day is for thin watches.

The public have been waiting for a thin Elgin Watch—now it's here—the

LORD ELGIN

The Thinnest Watch Made in America with Enamel Dial

the thinnest watch made in America with enamel dial.

Like all Elgin Watches—it was not put on the market until worthy to carry with it the Elgin reputation for reliability.

Every Lord Elgin is cased at the factory and timed in the case—the most accurate thin watch in America.

Four grades—7, 15, 17, and 17 Jewels adjusted. 18K and 14K solid gold cases, also 25 year filled cases.

Furnished with metal dials, plain or engraved, gilt or silver.

Prices furnished on application by your jobber, or write the Company for only authorized price list.

THE HOROLOGICAL REVIEW

A CATECHISM OF THE LEVER ESCAPEMENT

Being an Informative and Instructive Series of Questions and Answers for Watchmakers and Apprentices.

(Written expressly for THE JEWELERS' CIRCULAR-WEEKLY by T. J. WILKINSON.)

(*Continued from issue of June 17.*)

QUESTION:—Briefly point out wherein an examination of a double roller type of escapement differs from an escapement with a single roller table.

ANSWER:—In double roller escapements

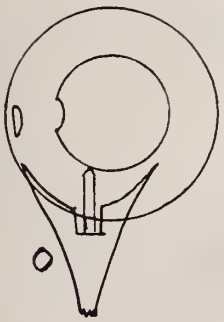

FIG. 78.

we find that when the guard finger enters the crescent the roller jewel will be found within the horn. In a single roller escapement, when the guard pin enters the crescent, the roller jewel is passing the corner of the lever notch. In double roller escapements, as long as the guard finger remains

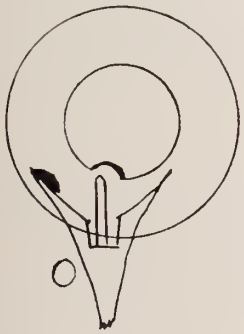

FIG. 79.

outside the crescent, tripping is prevented by the act of the guard finger coming in contact with the edge of the safety roller. As soon, however, as the guard finger enters the crescent, the prevention of tripping is effected by the roller jewel coming in contact either with the face of the lever horn or corner of the lever notch.

QUESTION:—Explain the tests applicable to a double roller escapement?

TEST I.

ANSWER:—When the guard finger is outside the crescent, to test for tripping, bring the guard finger in contact with the edge of the safety roller, Fig. 78, and observe that the tooth must remain on the pallet's locking face.

QUESTION:—Immediately the guard finger enters the crescent, upon what in double roller escapements does the prevention of tripping depend?

TEST II.

ANSWER:—Upon the roller jewel and lever horn. The test for tripping is made by bringing the face of the lever horn in contact with the roller jewel, Fig. 79; then, as before, see that the tooth remains locked on the pallet jewel.

QUESTION:—In a double roller escapement, when the roller jewel is passing the corner of the notch, Fig. 80, how is tripping prevented?

ANSWER:—When the roller jewel is passing the corner of the notch, tripping would be prevented by the act of the corner of the notch coming in contact with the face of the roller jewel. This statement applies with equal force to double and single roller escapements.

QUESTION:—When, in a double roller escapement, we bring the roller jewel and face of lever horn in contact, would we expect to find rough contact of the parts named?

TEST III.

ANSWER:—No; when we bring the tip of the lever horn in contact with the face of the roller jewel, and then proceed to rotate the balance, we should find that the roller jewel slides over the face of the lever horn and passes the corner of the notch without sticking thereon.

The following letter from Mr. Hunter, superintendent of the Elgin National Watch Co., and published in a former contribution, contains advice exactly along the lines of our teaching. It refers especially to single roller escapements. The advice is valuable in conjunction with tests C and D: "Turn the balance slowly until a tooth of the escape wheel drops; then hold the balance in that position and try the shake between the fork slot and the jewel pin. Do this on both sides in order to see if the shake is equal. If the shake on the jewel pin is unequal and of the same amount and in the same direction as that of the guard pin, the 'let off' is out. This may be corrected by resetting the pallet stone or by bending the fork. So far as the practical operation is concerned, it is really of no consequence if the shake on the guard pin is slightly unequal, so long as the jewel pin does not catch in passing into the fork slot when the guard pin is against the roller (on the side having the most shake), and the escapement does not unlock." The teachings, to follow

FIG. 80.

our escapement clinics, will be along these lines, when a slight bend to the guard pin or the lever saves much tedious work and benefits the escapement, this procedure will be advised exactly as in our former series of escapement articles.

To successfully bend a lever requires pliers with tapering concavo-convex jaws. They should also possess a set screw capable of controlling the extent to which the jaws shall approach each other; otherwise break-

FIG 81.

age of the lever is liable to take place. The amount of bending given a lever should always be so slight as to be scarcely perceptible. Whenever a lever requires a decided bend to correct its action, the pallet jewels will be found to require alteration; hence an alteration of the pallet jewels is demanded, and to correct an error, the

SETH THOMAS CLOCK COMPANY

ESTABLISHED 1813

Automatic 8-Day Long-Alarm Clocks

PATENT APPLIED FOR

The modern up-to-date Alarm Idea the public has been demanding for years.

It requires winding but once a week. Movement is so constructed **that clock does not need any attention each night like all other long-ringing alarms. AUTOMATICALLY IT ALARMS EACH MORNING, ringing until owner arises and stops it by pushing switch.** No further attention is required throughout the week. Alarm switch can be locked should you not want clock to ring Sunday or any special day.

Cases

These three patterns represent a new departure in shapes and quality of cases for alarm clocks, being ornamental as well as useful for alarm purposes.

Movement

A superior 8-day pendulum movement, fitted with an ingenious 24-hour alarm dial so that clock can be set for A. M. or P. M., as desired.

ADVANCE

Black adamantine finish, green marbleized top and base mouldings, the best imitation of marble ever produced. Guaranteed not to crack, chip or peel. Gold plated trimmings.

Height, 11 in.; Dial, 4½ in.

Time-Alarm, list $6.50
Strike and Alarm, list 8.50

VIGIL

Metal case of artistic design and workmanship.
Height, 12½ in.; Dial, 4½ in.

Fine Bronze Finish.

Time-Alarm, list $8.50
Strike and Alarm, list 10.50

Rich Gold Finish.

Burnished and lacquered.

Time-Alarm, list $10.50
Strike and Alarm, list 12.50

Dealers should place their orders early for this complete assortment as these Clocks will have a large sale and pay a good profit Electrotypes will be mailed free to any Jeweler desiring them.

PROGRESS

Quartered Oak and Mahogany.
Highly finished and polished.
Height, 12½ in.; Dial, 4½ in.

Time-Alarm, list $6.50
Strike and Alarm, list 8.50

These clocks represent a combination of the modern AUTOMATIC 8-day long-alarm idea with fine mantel cases, the assortment of patterns and finishes is such that a selection can be made which would be suitable for almost any room. ¶ Please note that these cases can be had with two kinds of movements, *i. e.*, Time-Alarm, also Strike and Alarm, striking the hours on a Cathedral gong and the half hours on a Cup Bell.

The Alarm in Time-Alarm Clock will ring 50 minutes, and in Strike and Alarm Clocks for 25 minutes unless shut off.

Send to your jobber, or to us for special circulars for distribution to the public. If your jobber cannot serve you, please order direct.

51 MAIDEN LANE NEW YORK **SETH THOMAS CLOCK COMPANY** 70 WABASH AVE. CHICAGO

Makers of Superior timepieces of all kinds, sizes and prices, from a Ladies' 0 size Watch to 40-foot dial Tower Clock, largest in the World.

lever must be given a decided bend. This matter we shall again consider in our clinics.

QUESTION:—State Rule VII. and explain why it is necessary to lay emphasis on this rule.

RULE VII.

ANSWER:—As a preliminary to all escapement examinations, examine the fit of the roller jewel in the notch of the lever, because a roller jewel too small for the lever notch will invalidate the deductions to be made from our tests.

QUESTION:—What rules should be observed when making an escapement examination?

ANSWER:—These rules we have already given in a former paper, but the better to emphasize them we shall briefly repeat them.

QUESTION:—What point does Rule I cover?

ANSWER:—That an inspection of the conditions of pallet and tooth lock must first be made; should the lockings be found too deep or too light always make the required correction before attempting to make further tests.

QUESTION:—To what does Rule II apply?

ANSWER:—It applies to the adjusting of the banking pins so that drop or first lock only is present.

QUESTION:—What is the nature of Rule III?

ANSWER:—This rule states that the guard pin must be so adjusted that there shall be no possible chance for contact between it and the edge of the roller table.

QUESTION:—What is defined by Rule IV?

ANSWER:—This rule defines the term lock when used in these tests to imply always and only the drop or first lock, excepting where otherwise explicitly stated.

QUESTION:—State Rule V.

ANSWER:—Should any trouble exist about the inference to be drawn from any or all of the following tests, viz., A, B, C, D, further doubt can be avoided by bending the guard pin an extra amount away from the edge of the roller table, then retest.

QUESTION:—What is the important feature of Rule VI?

ANSWER:—That upon completion of testing and of altering escapements the bankings be opened to allow for the draw or second lock; this is a matter of importance.

QUESTION:—What does Rule VII provide for?

ANSWER:—An examination of the fit of the roller jewel in the notch of the lever, as already explained in this paper.

QUESTION:—Explain, under title Test A, case a, the routine examination of the fork and safety action—single roller escapement.

TEST A, CASE A.

ANSWER:—An examination of the escapement before us requires us, first, to observe Rule I. In this instance we will assume that the lockings of the teeth on the pallet jewels are quite correct. This point determined, next observe Rule II. In accordance with this rule we close the bankings in to position of drop or first lock. This done, we replace the balance. We are now in a position to examine the freedom which should exist between the guard pin and the edge of the roller table. In order to make the observation more accurately we guide the roller jewel beyond the tip of the lever horn; then, with some instrument, we lift the lever off its banking and at the same time keep watch of the forward motion of the guard pin until it comes in contact with the edge of the roller table, or we may indirectly gauge this freedom by observing the extent to which we are able to lift the lever off its banking. By either method we thus judge of the freedom which exists between the guard pin and the edge of the roller table under Test A conditions and Rule II. The results of this test, we shall assume, indicate that on each side of the roller table the guard pin has an equal amount of freedom. Following our teachings we shall use tests B, C and D before we conclude that the action of the escapement is correct. In a former contribution all tests were explained at some length, hence we shall give but a brief description in this explanation of routine escapement testing. Proceeding with Test B we place under the lever bar a wedge of cork or pith. Slowly we rotate the balance, bringing the roller jewel into the notch of the lever and continuing the rotation until the roller jewel pushes its way out of the lever notch. The result of the foregoing, provided the escapement action is sound, will be observed as follows: First, the lever will not be at rest against its bank; second, the tooth of the escape wheel will remain in contact with the face of the pallet jewel in the manner shown in Fig. 81. The two foregoing results under Test B conditions are present, we assume, in the escapement before us. As they represent a sound escapement we shall pass on to Test C. In order to use Test C we remove the wedge from under the lever bar and place it under the balance. The balance being wedged, proceed to guide the roller jewel into the lever notch and slowly cause unlocking of tooth and pallet. At the exact moment of this unlocking cease rotating the balance. If the escapement is a sound one we will find the following: First, owing to Rule II being in force and the lever acting freely, we find the lever is at rest against its bank; second, if we take a broach and lift the lever off its bank we find it can be moved some. The extent of this motion represents the freedom which exists or should exist between the corner of the lever notch and the face of the roller jewel, as depicted in Fig. 82. Supposing that we have made a test of the same action on the opposite corner of the notch and having found that the same extent of freedom exists between the corner of the notch and the roller jewel, we are in a position to state that this escapement is sound and accurate. But to avoid all doubt we shall employ Test D. This test is closely allied to Test C. In Test C we are controlled by the drop of the tooth on the pallet, while in Test D we view the effect from the standpoint of the unlocking action. Briefly followed out, this test is used as follows: The balance being wedged as in Test C, slowly and carefully rotate the roller jewel into the notch. At the precise moment that the roller jewel comes in contact with the side of the lever notch, cease rotating the balance; then, as in Test C, observe the extent to which the lever can be lifted off its bank; make a similar test on the opposite side. As before, we again find equal freedom between the corners of the lever notch and the face of the roller jewel. Therefore, as tests A, B, C and D each and together indicate a sound escapement action viz., of the guard pin with the edge of the roller table, and of the action of the roller jewel in the lever notch, also of the roller jewel with the corners of the lever notch, we are now prepared to say that this escapement is sound and correct in all of the actions examined by the tests A, B, C and D and controlled by rules I and II.

QUESTION:—Briefly restate the purpose of each test and rule in the foregoing instance.

ANSWER:—An observation of the lockings of the pallet and teeth lockings came under Rule I; second, under Rule II the bankings were closed into position of drop lock; third, Test A indicated that there was a correct amount of freedom between the guard pin and edge of roller table; fourth, Test B showed that the depthing of the roller jewel in the notch of the lever was correct and in accordance with the pallet and tooth action; fifth, Test C indicated that there was a correct amount of freedom be-

FIG. 82.

tween the corner of the notch and the face of the roller jewel, which decision we confirmed by Test D.

QUESTION:—When all tests work out in harmony with the requirements, as specified in a former paper, what shall we say as to action of each part of the escapement as related to each test?

ANSWER:—We may safely pronounce all parts examined as being practically perfect.

QUESTION:—When we commenced testing we, according to Rule II, closed the banking; having concluded our testing, what rule must always be observed?

ANSWER:—We should always observe Rule VI, which instructs us that after all alterations and examinations are completed, the bankings must be opened out to allow for the draw or second lock to take effect.

QUESTION:—Explain by what method we can determine if the guard pin "is set too close" to the roller table.

TEST A, CASE B.

ANSWER:—An examination of this escapement requires, as in every escapement examination, that Rule I be observed. Our examination under this rule shows that the lockings of the teeth on the pallet jewels are quite correct. We next pass on to Rule II, in observance of which we close the banking pins into position of drop or first lock. Having done so, replace the balance. We can now observe the action of the guard pin in its relation to the roller table. In this instance we find that the watch refuses to run. The fault may be due to one of two causes, and if the escapement is exceptionally imperfect it could be due to both of these causes; first, the guard pin

Profit

Is what you are in business for—"Ball Watches" assure you several varieties.

1—A fair cash return.

2—Satisfied customers—most desirable "profit."

3—No preliminary repairing of movement—No fitting to case—No long regulation. Thus, saving your time is "profit."

4—No "price cutting" competitors.

might be too much forward, or, second, the roller jewel may have too much contact with the lever notch. By this we mean that the acting length of the lever is too great, i. e., long (provided the roller jewel is not inclined forward). In either event the roller jewel would be unable to pass out of the lever notch. An examination of the guard pin shows it to be inclined forward to such an extent as to bind on each corner of the crescent. Hence, the escapement was unable to act. On straightening up the guard pin we find that the watch starts running, and also find that there now exists a correct amount of freedom between the guard pin and edge of roller table. The watch appears to have its escapement in good condition, but to feel satisfied we employ Test B, and following the instructions for that test we wedge the lever. This done, replace the balance and slowly rotate the roller jewel into the notch and out on the opposite side. The effect on this escapement is, first, that we find that the lever is not at rest against its banking, and, second, we find the tooth of the escape wheel remains on the pallet jewel, as indicated by Fig. 81. An examination of the opposite side gives similar results, viz., that the lever does not come to rest against its bank, nor does the escape wheel tooth leave the pallet jewel's impulse face, these being the correct positions, as explained in former papers. Hence, Test B shows, so far as it goes, that the escapement is apparently sound. We next employ Test C, first removing the wedge from under the lever, as in this test the lever must be free to act. The wedge is now placed under the balance; we next guide the roller jewel into the slot and allow a tooth to drop onto the pallet. As this takes place, cease rotating the balance, then lift the lever and note the extent it can be lifted away from its bank. The extent to which we are able to move the lever represents the space existing between the corner of the notch and the roller jewel, as shown in Fig. 82. A similar test should be made on the opposite corner of the notch, where a like freedom should be found to exist. Follow this up with Test D, as already explained in this series, and seeing that we have altered the guard pin, we test for tripping errors. If no other errors are discovered besides that revealed by Test A, which we corrected, we may safely pronounce this escapement correct and conclude by observing Rule VI, viz., opening the bankings.

(To be continued.)

"Well, sir, I had to send my watch downtown to have it cleaned out again," said an east side barber, the other day. "I have to send my watch to the repair shop about once a month, and there is absolutely nothing the matter with it, except that it is full of hairs. I do not understand how the hairs can get into the works and behind the hands and mix up in the mainspring and every place as they do in my timepiece. I watched myself one month, as closely as I could, and I swear I never opened the back of it. Yet, at the end of the month I unscrewed the back lid and it was full of little fine hairs. I always keep it in my pocket when I am cutting hair, but I don't see how any hairs get into the watch. Yet they must, because they are always there."

Proposal to Change the Time in Great Britain Being Seriously Considered.

THE Committee of the British House of Commons to which the "Daylight Saving Bill" was referred for consideration, has been examining witnesses for and against the putting "backward and forward" the hands of the clock so as to make a longer day. Mr. Willett, who suggested the alterations, was proceeding to give a number of poetic reasons for his idea when the chairman of the committee cut him short by saying that everyone was convinced that early rising was a good thing and that all they had to consider was the possibility of making such alteration, if any, which would benefit the great mass of the population without interfering to any great extent with the conduct of business life and travel. Mr. Willett admitted that "a man who does business with America will suffer a disadvantage, but those who have business relationships with the east will have an advantage."

The manager of the Great Eastern Railway Co. who spoke as the representative of the directors, stated that while they were in sympathy with the object of the bill, they were not of opinion that the proposal to alter the time by four stages was at all practicable. If clocks were put forward in four successive weeks alarming confusion would be caused in the railway service. It meant that every official would have to alter his watch for four successive weeks, and in the event of an accidental omission to do so serious consequences might result. The suggested alterations would upset very seriously the service between Great Britain and the Continent. He was of opinion that the difficulty could be met by putting all clocks forward an hour once and for all.

A representative of the London and South Western Railway was of the same opinion and gave some figures showing the possible gain in cash to the railway companies. He thought the gain of an hour's daylight each day would increase the takings of his company £1,000 per week, while they would save £3,000 a year on their lighting bill. He estimated that British railways would benefit to the extent of £90,000 per annum by saving in lighting of railway stations, carriages, etc. The general manager of the Midland Railway gave his unqualified approval of the bill.

Thos. D. Wright, the director of the horological department of the Northampton Institute in Clerkenwell, and one of the greatest living British authorities on horology, has been credited with originating the opposition to the scheme, but this does not represent the position which he takes. Quite in sympathy with the proposal and fully cognizant of the advantages of early rising, he is simply antagonistic to the suggested methods, mainly because, as he well says, Mr. Willett's proposals ignore the convenience of every civilized nation that has adapted its civil time to that of Greenwich. Nearly all nations have done this, and the minute and seconds hands of all clocks agree with British. In adjacent countries the hour hands also agree, but in more distant ones where mid-European time generally prevails there is a difference of exactly one hour, while in others the difference is by an exact number of hours, and his objection is based upon the great confusion and inconvenience which the change by a series of fractions of an hour would cause at home and abroad. He favors the advance of a complete hour.

The Astronomer Royal is antagonistic to the proposals, basing his arguments upon the same objections as Mr. Wright and also the sentimental reason that the working classes will not benefit by the alterations but rather on the contrary. On the other hand the Irish Astronomer, Sir Robert Ball, and Sir William Ramsey, support the principle of the bill as do also the Vice-Chancellor of Oxford University and the Provost of Trinity College, Dublin.

The controversy on this question has brought up again that of numbering the clock from one to 24 instead of dividing it, so to speak, into the divisions representing day and night.

One curious objection to the proposals contained in the bill is that there would be a difficulty in fixing the date of a birth which occurred upon any of the four Sundays consisting of 23 hours and 10 minutes. This is a somewhat far-fetched objection, but certainly to suggest the alteration of the clock eight times a year is one which demands very careful consideration.

Effects of Air Pressure on Watches.

DURING the last meeting of the Watchmakers' Association, "Urania," at Glashütte, Germany, Professor Bruns, director of the observatory of the Royal University, in Liepsic, delivered an address of great interest to the watchmakers' craft, on the results of the Leipsic watch tests. After the learned speaker had analyzed the various testing methods and laid special stress on the testing of accurate watches "in carrying," for "practical use," he discussed the results obtained by the comprehensive experiments conducted, at his suggestion, by Dr. Krause, Leipsic, in regard to the effect of air pressure on the rate of a watch. The influence of changes in air pressure on the performance of pendulum clocks was already well known, but with regard to watches and marine chronometers no accurate investigation had been instituted by scientists.

According to the calculations recently made, the effect of varying air pressures on the speed of the balance oscillations amounts to about 0,012 second difference in rate per day for each millimeter of barometrical variation, or, for each oscillation to only 0,000,000,03 second. To still further reduce the minute variation in rate ought to be an interesting task for manufacturers and regulators. The officers of the Urania thanked Professor Bruns sincerely for his valuable address, while the audience, as a mark of their respectful gratitude, rose in their seats.

The store of Johnson Bros., Albia, Ia., was recently broken into by thieves who escaped with a large amount of miscellaneous jewelry. The loot includes watches, silverware and diamonds. Thus far no clue has been obtained.

How to Secure a Patent in the United States

Useful Information Compiled Expressly for The Jewelers' Circular-Weekly

THE patent system of the United States is considered to be the most comprehensive of any of the countries of the world, and American inventors enjoy the distinction of being the most prolific producers of original ideas to be found anywhere. It also is a well known fact that has been proved time and time again that no other class of investments offers like chances for profits as are offered by American and foreign patents secured upon inventions of demonstrated merit. It will be the object of this article to show in a brief and concise manner the necessary steps to be taken in procuring a patent in the United States.

The American law provides that "any person who has invented or discovered any new and useful art, machine, manufacture or composition thereof, not known or used by any other in this country, and not patented or described in any printed publication in this or any foreign country before his invention or discovery thereof, and not in public use or sale for more than two years prior to his application, unless the same is proved to have been abandoned, may upon payment of the fees required by law, and other due proceedings had, obtain a patent therefor." All patents are issued in the name of the United States of America, under the seal of the patent office, and are signed by the secretary of the interior and countersigned by the commissioner of patents. They are recorded, together with the specifications, in the patent office, in books kept for that purpose.

The fees and charges in taking out a patent are as follows: On filing each original application for a patent, $15; on issuing each original patent, $20. In design cases: For 3 years and 6 months, $10; for 7 years, $15; for 14 years, $30. On filing each caveat, $10. On every application for the re-issue of a patent, $30. On filing each declaimer, $10. On the granting of every extension of a patent, $50. On an appeal for the first time from the primary examiner to the examiners-in-chief, $10. On every appeal from the examiners-in-chief to the commissioner, $20. Copies of drawings usually cost $5 a sheet.

The bare cost of obtaining a patent is $35 for the government fee, and $5 for a drawing, but in cases of a complicated nature the total cost will be more. However, the government fees are the same in all cases. It should be borne in mind that the rules of practice of the patent office advise that the assistance of competent counsel will, in most cases, be of advantage to an applicant for a patent.

The application papers comprise the petition, specification, oath, together with drawing, which must be filed in the patent office with the first government fee of $15. As soon as the application is filed the applicant is protected against the grant, without his knowledge, of a patent of the same thing to another person. The petition, specification, and oath must be written in the English language. From the standpoint of the patent office it is desirable that all parts of the complete application be deposited in the office at the same time, and that all papers embraced in the application be attached together.

Applicants for patents should not forget that the actual value of a patent is measured by the character of its claims. On this point a well-known patent attorney says: "While formerly the impression prevailed to a great extent that the essential thing to insure protection was a patent of some kind, the manufacturing public has been educated to understand that the vital and all important part of the invention is its claims. If the claims are narrow and restricted, the patent is comparatively worthless; on the other hand, if the invention is well covered by broad and comprehensive claims, it will be found that the patent is readily endorsed by manufacturers."

Before any inventor can receive a patent for his invention, he must make application therefor, in writing, to the commissioner of patents, and must file in the patent office a written description of the same, and the manner and process of making, constructing and using it, in such full, clear, concise and exact terms as to enable any person skilled in the art or science to which it appertains, or with which it is most nearly connected, to make, construct and use the same. In the case of a machine, the inventor must explain the principle thereof, and the best mode in which he has contemplated applying the principle so as to distinguish it from other inventions. The inventor must particularly point out and distinctly claim the part, improvement or combination which he claims as his invention or discovery. The specification and claim must be signed by the inventor and attested by two witnesses.

Inventors will do well to remember that a well prepared specification and well accentuated drawings greatly expedite the allowance of an application by the Patent Office, as the examiner is thus relieved of annoyance and unnecessary work in the examination of the case. A case which is poorly and incorrectly prepared entails upon the examiner much study and extra labor in determining just what the application is seeking to claim. Loosely drawn specifications and inferior drawings naturally have a tendency to prejudice the examiner in his action.

An inventor has a right to call his invention what he pleases, provided he does not assume an already existing and popular name; to the prejudice of those who have preoccupied the name. As a general rule, a single patent cannot embrace two devices which are wholly independent of each other, or embody distinct improvements upon unconnected machines. But, where two or more devices relate to one subject or are connected in nature and operation, the courts have held that they may be secured by a single patent. A patentee cannot claim in a patent the same thing claimed by him in a prior patent, nor cover what he omitted to claim in a prior patent in which the invention was described, unless he reserved the right to claim it in a separate patent, and seasonably applied therefor.

An inventor who makes any new invention and desires further time to mature the same may, on payment of the Government fee of $10 and $5 for drawings, file in the Patent Office a caveat setting forth the design thereof, and of its distinguishing characteristics, and praying protection of his right until he shall have matured his invention. The caveat will be filed in the confidential archives of the Patent Office and preserved in secrecy. It will be operative for the term of one year from the date of filing.

If application is made within the year by any other person for a patent with which such caveat would in any manner interfere, the Commissioner of Patents will deposit the description, specification and drawings of such application in like manner in the secret archives and give notice thereof to the person by whom the caveat was filed.

Storekeeping Department.

If such person desires to avail himself of his caveat he must file his description, specifications and drawings within three months from the time of notification. A caveat answers a double purpose: First, to give notice of the inventor's claim, and, second, to prevent a patent from issuing to another for the same thing.

Patentees and their assigns and legal representatives, and all persons making or vending any patented article for or under them, must give sufficient notice to the public that the same is patented, by fixing thereon the word "patented," together with the day and year the patent was granted. When this cannot be done, owing to the character of the article, it will be sufficient to affix a label to the packages containing the articles a like notice. Severe penalties are provided for falsely marking or labeling articles as "patented."

A joint patent may be granted for a joint invention. When an invention is the result of the combined mental operations of two persons acting together, as neither can claim to be the sole inventor, the invention is joint, and they are jointly entitled to a patent on the article. The duration of a patent is 17 years. It is quite impossible to state with any degree of certainty the time required to secure the allowance of a patent. As all the various divisions of the Patent Office are considerably in arrears in their work, it takes from two to four months to procure a patent. Of course, when there is interference or other obstacles to overcome the time required to do this is still longer.

Every patent or any interest therein is assignable in law. There are three classes of persons in whom the patentees can vest an interest of some kind in the patent. The first is the assignee, who may have transferred to him in writing the whole interest in the original patent, or an undivided part of such whole interest in every portion of the United States. The next is the grantee, to whom is transferred the exclusive right under the patent to make and use, and to grant to others to make and use, the thing patented within and throughout some specified part of the United States. The third class embraces the licensee, to whom may be transferred a less or different interest than either the interest in the whole patent, or an undivided part of such whole interest, or an exclusive sectional interest.

In conclusion, attention is invited to a decision rendered in 1892 by Justice Brown in the Supreme Court of the United States, in which the following statement appears: "The specification and claims of a patent, particularly if the invention be at all complicated, constitute one of the most difficult legal instruments to draw with accuracy, and in view of the fact that valuable inventions are often placed in the hands of inexperienced persons, to prepare such specifications and claims, it is no matter of surprise that the latter fail to describe with requisite certainty the exact invention of the patentee, and err either in claiming that which the patentee had not in fact invented, or omitting some element which was a valuable or essential part of the actual invention."

Points For the Business Man.

From the "Making of a Merchant," by H. N. Higinbotham.

"NEATNESS is a prime essential in storekeeping."

"The ability to play the game of barter and sale is no mysterious talent."

"The world is full of shrewd buyers, and every town has its proportion of them."

"The first essential of successful buying is the sound knowledge of goods and of values."

"When a merchant gains a reputation in his community for never misrepresenting his goods he is on the high road to success."

"From the delivery boy up to the proprietor, quality of service should be considered the very essence of good merchandising."

"He is a wise merchant who makes up his mind at the outset that it is far more profitable to hunt customers than to hunt 'snaps.'"

"The most successful merchants, the world over, are those who meet competition

THE ATTRACTIVE STORE FRONT OF CARSON & SMITH, HAGERSTOWN, MD.

"Generally every man has some friend who can be trusted to tell him the truth, even about himself."

"The practice of cutting prices is quite as much a matter of personal disposition as it is of necessity."

"Stopping the little leaks of waste is one of the most essential elements in the success of a merchant."

"There is but one criterion by which all men in modern mercantile life are judged, and its name is—Results."

"Then the young merchant will do well always to bear in mind that courtesy is the biggest part of his capital."

"There is scarcely a community in which the really able merchant is not cursed with ignorant and reckless competition."

by giving their customers better, instead of cheaper, goods."

"Just ordinary courtesy and attentiveness demand very little time, and they are far more valuable than flattery or argument in the sale of goods."

"The great cohesive power of a mercantile establishment is the spirit of confidence between employer and employe. It is indeed necessary for success."

"The matter of advertising is not an unimportant detail. Like his stock, the subject matter of his advertisement should be kept fresh by constant change."

"Perhaps the most important thing which any merchant sells is that for which he does not make a direct or open charge. The name of his commodity is *service*."

WORKSHOP NOTES AND QUERIES

[Answers are also solicited from our readers to the questions published on this page.]
No attention paid to communications unless accompanied by full name and address of the writer.

QUESTION No. 2164.—**Casting German Silver Ornaments.**—*I have trouble in getting German silver castings without blow holes, and wish you would inform me how to overcome this difficulty. I use German silver scrap and want to cast small ornaments.* C. G.

ANSWER:—German silver castings should be made in sand, such as is used for brass castings. The German silver should contain some spelter, just enough to produce castings without blow or pin holes. If the scrap is 18 per cent. nickel, add from three to four per cent. spelter, which will in most instances make good sound castings. The spelter will burn out readily, and part of it must be replaced at every remelting period.

QUESTION No. 2165.—**Hardening Pin Tongues.**—*How can pin tongues be hardened after soldering?* H. P.

ANSWER:—To restore the hardness in pin tongues that have become soft from the soldering flame, clean away the borax flux by boiling out in a pickle of oil of vitriol and water. The hardening may be done in several ways. One is to hammer with a smooth-faced hammer on an anvil, turning around so that the wire will retain its shape. Another way is to take two pliers, one in each hand, holding the soft portion with them. Then turn around a few twists and file smooth with a fine file. Still another method is to rub a steel burnisher up and down, using soap and water as a lubricant to prevent the steel from biting into the pin. The latter method is perhaps the best and quickest. It keeps the pin in good shape, gives a smooth and hard surface, and can be done after a little experience so that no polishing on the buff will be necessary. The steel burnisher must be kept rubbed up well, so that a smooth finish will be obtained.

QUESTION No. 2166.—**Blue Black on Silver.**—*We have some silver-plated name plates and silver napkin rings on the surface of which we want to produce a blue-black finish. Kindly inform us how we can do this.* B. & B.

ANSWER:—The blue-black finish, or oxidize, is produced on silver or silver-plated articles by dissolving sulphide of ammonia in water, in a porcelain vessel. Immerse the article and slowly heat it. When the desired tint is obtained, transfer to lukewarm soap-water and brush with a soft brush. If not dark enough, immerse again; if too dark, scratch-brush part of the black away and try again. All oxidized finishes should be well lacquered at once. The oxidizing liquid may be kept in a glass jar or a porcelain crock. It can be used many times.

QUESTION No. 2167.—**Soldering Paste.**—*Please publish a formula for making a soldering paste, suitable for cheap and quick repairs.* S. P.

ANSWER:—Soldering paste can be made by grinding together tin, 16 parts; lead, 11 parts. Make into a paste with glycerine and a little lactic acid.

Bright Dip Silvering.

DIP silvering is extensively used on a large variety of small metal goods, for the reason that it is cheaply done and the finished article has a white color, says *The Brass World*. Although silver is a costly metal, dip silvering is, in the majority of instances, cheaper than nickeling; and were it not for the fact that silver tarnishes rapidly, it would be even more extensively employed. For small brass goods it would then replace tinning, as it is rapidly produced.

The method followed for dip silvering upon small brass or brass plated goods is to make a solution of potassium cyanide in water and add a small quantity of either the nitrate or chloride of silver. By immersing the articles in this solution, heated nearly to boiling, the silver is deposited upon the brass in the form of a white, firmly adherent coating. Although this method is simple, yet, to obtain a bright, white silver coating requires that the silvering solution shall be made in the right manner.

If brass is immersed in an ordinary silver plating solution (such as that employed in plating spoons), heated nearly to boiling, the silver immediately deposits upon the surface. It is, however, not bright, and also has a yellow shade. This is caused by the fact that the solution not only contains too much silver, but also considerable free cyanide.

According to recent experiments that have been carried out, it has been found that the best results in dip silvering are obtained when the solution contains very little silver and practically no free cyanide. When this is done, the silver coating is not only bright, but equally as white as pure silver. If the solution contains no free cyanide at all, it seems to work even brighter than when a small quantity is present.

It has also been found that it makes no difference whether the nitrate or chloride of silver is used for making the dip-silvering solution, and for this reason the nitrate is to be preferred, as it is readily made or purchased and dissolves with ease.

To make a dip-silvering solution, the best method of procedure is to dissolve the nitrate of silver in water and then add a solution of cyanide to it, until the precipitate that is formed just barely dissolves. In this manner a solution is obtained that contains practically no free cyanide. Proceed as follows:

Water	1 gallon
Silver nitrate	¼ oz.

Dissolve the nitrate of silver in the water (cold). It dissolves easily, so there is no need for heating it.

Now add a solution of potassium cyanide, made by dissolving one pound of this substance in one gallon of water, to the nitrate of silver solution. Add little by little and stir after each addition. At first a precipitate of cyanide of silver is produced, but as more cyanide is added it redissolves. Care should be taken toward the end point not to add any more cyanide than is required for dissolving the cyanide of silver that is formed or too much free cyanide will be present. The solution is now ready for dip silvering.

To use this dip-silvering bath, it must be heated or it will work very slowly. The hotter it is the more rapid will be its action, but, as it is difficult to maintain a large solution quite hot, a temperature of from 130° to 150° F. will be found suitable.

The brass or brass plated articles, previously cleaned from grease, are immersed in the hot solution, either on wires, in baskets, or in any other suitable manner. The coating of silver immediately forms, and as soon as this is accomplished, which usually takes a second or so, the articles are immediately taken out of the solution, rinsed and dried. If left in too long, the silver coating becomes dull.

In order to obtain a bright silver coating, the surface of the brass must be bright, and polished surfaces give a silvered surface almost equally good. If the brass has a dead surface, however, the silver will be dead. This fact must be realized before satisfactory work can be done. The majority of dip-silvering is done upon brass work that has been dipped, and when this is done it is essential that the sulphuric acid used in making the dip shall be free from arsenic. Unless this is the case, the silver will come yellow.

It may be of interest to the reader to know what the reason is for using so small a quantity of silver in the solution, and what the effect of free cyanide is.

If a solution is made containing three or four ounces of silver to the gallon, and no free cyanide, it will be found that the silver coating is white, but dead. It lacks luster. If free cyanide is added to this bath, the silver coating will not only be dead, but will have a yellow shade.

If some free cyanide is added to the solution containing one-fourth ounce of nitrate of silver to the gallon, the silver coating will not be as bright as when no free cyanide is used. The reason for this is undoubtedly the fact that the free cyanide attacks the brass and causes the surface to become slightly rough. The best results are obtained when there is just enough silver in the solution to deposit a white coating.

A permanent organization of merchants of the North Side, Hazleton, Pa., has been effected by the election of H. W. Fritz, president; Joseph Lindsay, secretary, and A. Oswald, treasurer.

Libbey

"THE WORLD'S BEST"

CUT GLASS

BUSINESS ESTABLISHED IN 1818

Before it has been told, the buyer knows that Libbey Cut Glass is "the world's best" cut glass—that it always has been—that it always will be.

Is it worth anything to you to have the exclusive sale of a cut glass which is beyond the reach of rivalry?

Be sure the name "LIBBEY" is graven in the glass

IVORY AS AN ARTISTIC STAPLE.

By the Commentator.

WHAT degree of importance is to be attached to products in carved ivory? That is a question which the head of an art department has to consider. The answer is not as easy as one might think. Ivory occupies a somewhat peculiar and exceptional position as a trade commodity. It could hardly be claimed that the demand for art goods of this class, is large enough to rank them as "popular"; and yet the call for them, such as it is, is comparatively steady. While there is no actual *vogue*, there is yet a place for them in the appropriate department. Indeed, one might go farther and say that no art department is thoroughly equipped that does not have at least some shavings in carved ivory.

Certain considerations which we shall point out, would justify one in regarding ivory as a staple line. It may seem an unusual application of the term "staple," to use it in this connection. The word is commonly applied to articles of utility, especially to absolute necessities for which there is a steady demand. Now the mere fact that the call for ivory goods, though limited, is comparatively steady, gives color to the claim that it is an artistic staple.

Added force is given to this contention by the fact that there are no violent changes of style to throw ivory workings "out of fashion." The products of last season are as good as ever to-day, and this season's shavings will not be back numbers next year. This brings us to another point. Ivory does not deteriorate. Atmospheric and other conditions do not affect it; it is impervious to the corruption of "moth and rust." It does not become shelf-worn or shop-worn. Ivory products are guaranteed by the makers.

Finally it should be noted that prices in this line are steadily maintained, irrespective of conditions in other departments of trade. Even during the recent business stringency there was no lowering of prices for ivory; and the sales during the past year have been well up to the average.

The reasons for this price maintenance and the careful relations subsisting between supply and demand, are interesting. The fact of the matter is that ivory, like the diamond, is under the control of a syndicate. The controlling head is no less a personage than the King of Belgium, which goes to show that even royalty is becoming infected with the modern spirit of "commercialism." If monarchies are "effete," apparently the monarchs themselves are not. The Emperor William is another up-to-date monarch who occasionally takes a little commerce "on the side"; but that is another story. Several years ago in these columns the writer made a passing allusion to certain "humanitarian" projects which the King of Belgium was fathering in Africa. The word *humanitarian* is quoted advisedly; because while the august monarch had one eye on sociological conditions in the dark continent, he had the other eye and both hands on the ivory trade. Thus civilization and commerce go hand in hand, only it is the native that gets the civilization and the white man that gets the commerce. Well, the result was as expected, and the ivory business fell into the hands of the Belgian syndicate. This accounts for the maintenance of price. Prices are determined by the relations between supply and demand. As supply is under control it can be limited in times of stringency, so as to keep the ratio about the same and prevent any substantial fluctuations in prices quoted.

There are many uses of ivory which are important and yet which do not fall within the province of this page. For example, the largest importations of ivory into the United States are for the purposes of toilet goods. However handsome and expensive these may be, they are not strictly objects of art; they are utilities of a high order, but still utilities primarily and essentially. The two phases of ivory working which interest us here, are the curios and the art-carvings. Is this a real distinction? The writer claims that it is. The curio may be as ugly as sin, generally is. The true art-object must be beautiful. Probably ivory-carvings have claimed rather more attention as curios than as things of beauty.

For the whimsical and grotesque in ivory we are mainly indebted to China and Japan. These nations sometimes seem to revel in ugliness; the more atrocious the conception, the higher the price. An acquaintance in San Francisco bought a Chinese carving of such unearthly appearance that it reminded one of the famous Bandersnatch in "Alice in Wonderland." His wife had nervous chills every time she looked at it, and quietly got rid of it while her husband was in Europe. There's no accounting for tastes. The same collector will buy the curio and the art-carving, and the ogre and Marguerite will sit side by side on the same shelf. The most beautiful of traditional and classical carvings have been inspired by Germany and Switzerland.

It is doubtful if even the most enthusiastic collector buys a great deal of ivory, and yet he is pretty sure to buy some. No cabinet is quite complete that does not afford ivory a place. This brings us back to what we said at the beginning. The demand though limited is tolerably sure and steady within those limitations, which justifies its claims as an artistic staple.

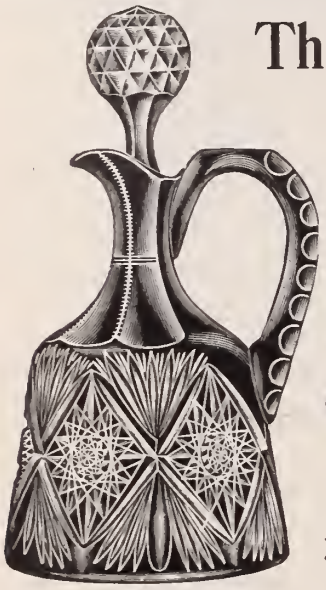
The Bohemian Exposition.

THE American Consul, Joseph L. Brittain, furnishes the following report concerning the Bohemian exposition, now being held in the city of Prague:

This exposition, to be open from May until November this year, will be something quite outside of the usual exposition representing the industries of a small territory. The Bohemians are an exceedingly industrious people and desire that their country should maintain the important commercial position it has acquired during the past 50 years. However, it is a country much neglected by American exporters. The opinion appears to prevail that the Bohemian financial and commercial institutions are not established on a substantial basis. This impression is a very erroneous one, and should not for a moment be entertained. Instead of American exporters contenting themselves with placing the sale of their wares in the hands of some foreign importing house, they should come to Prague and investigate for themselves.

Prague is not only one of the most beautiful cities in Europe, it is also one of the most important, from a commercial standpoint. The Bohemians have gathered into Prague and its vicinity a large percentage of the varied industries of the entire country.

The exposition will be of unusual interest, showing what is possible in a small territory peopled by industrious and enterprising inhabitants. There will be 2,300 exhibitors. The Chamber of Commerce, aside from administration buildings, has erected 21 large exposition halls, and 100 smaller halls have been built by separate exhibitors. The machine industry will count 100 exhibitors, one display consisting of two complete trains of day coaches, sleepers and restaurant cars, constructed here after the best models.



The various industries of the same description are to be grouped together either in one building or in one part of the grounds. Thus there will be one hall de-

voted to interior furnishings, separate compartments representing every description of room from a ballroom to a kitchen. The glass, glove, stonework, metal, chemical, iron and textile industries will each be separated, and there will be a fine exhibit of peasant art work, hand made laces and embroidery. A great effort has been made to systematize every department of the exposition.

Lava Used in Jewelry.

THIS natural production is the spontaneous union of various stony substances which volcanoes eject during their eruptions, and which, in a state of pasty fusion, flow like torrents down the sides of mountains and sometimes to great distances. It occurs massive, with vesicular or porous marks, has a splintery and conchoidal fracture; a luster dull or glistening; is opaque and of gray, brown, red, yellow, black, green and white colors, of all their shades. It often contains crystals of feldspar, lenate, hornblende, garnet, etc.

The blue lava of Vesuvius has the appearance of the blue, transparent, artificial enamel, and is in much request for jewelry and ornaments. Even cameos are made from it, and also intaglios, etc. Where it most abounds, as in Naples, they use it to make vases, candlesticks, boxes and other similar articles.

Lava is cut with iron, emery and sand, and is polished with pumice, olive oil and tripoli. The graving tool is used in working on the cameo, as well as on the shell.

Lava is found in all volcanic countries, and particularly at Aetna, Vesuvius, Hecla, in Mexico, the Lapari Islands, etc. It is often used as the base for mosaic works.

Some fine specimens of polished slabs are at the rooms of the Boston Society of Natural History. E. F.

Permanent Mercantile Exposition Planned at Warsaw, Russia.

A BUSINESS firm of Warsaw, Russia, writes to the Bureau of Manufactures that the Merchants' Association of that city "are contemplating to shortly establish, in a building specially provided for that purpose, a permanent exposition of articles and goods of all sorts manufactured beyond the limits of Russia, for the purpose of getting better acquainted with the foreign trade. The leading exporters and manufacturers of England, Austria-Hungary, Switzerland, Belgium and France, as well as government institutions, like chambers of commerce of Austria and France, have already expressed their desire to promote the foregoing plan." The letter states further that one of the members of the firm writing is an American citizen, who desired to acquaint the business concerns of the United States with this opportunity.

There was recently placed on the market by Robert H. Ingersoll & Bro., a new line of cheap watches, resembling somewhat the thin American model in size and shape, which can be retailed at $2. They come in polished nickel or gun metal finished cases.

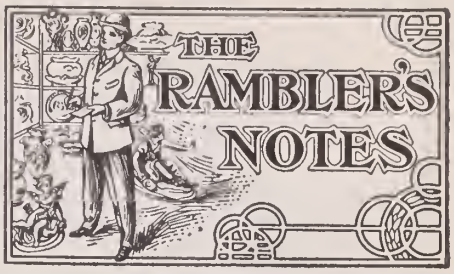
European View of the Growth of Glass Manufacturing in United States.

CONSUL JOSEPH I. BRITTAIN, of Prague, submits the following report regarding the European view of the progress American glass ware manufacturers have made in the past few years:

A recent number of the Austrian *Export Industrieblatt* issues a note of warning to the continental glass ware manufacturers. The paper advises the European trade to study carefully American methods for manufacturing glass ware, especially pressed glass ware. It states that the American glass industry has made wonderful progress since 1850, when there were but 5,700 clerks and mechanics employed in the American glass industry, and only $2,000,000 annually was paid in wages.

It further states that the number of glass works increased 12 per cent. between 1900 and 1905, while the number of workmen increased 21 per cent., invested capital 46 per cent. and production 41 per cent. The article says that in 1905 there were in the United States 399 glass works with an invested capital of $89,000,000, an annual output of $80,000,000 worth, giving employment to 64,000 workmen, and with a yearly payroll of $37,000,000.

The opinion is expressed that the American glass works will in a few years supply the entire home demand, and sharply compete in the markets of the world against continental manufacturers. Especial mention is made concerning our advancement in the manufacture of plate glass, which was formerly imported largely from Belgium. It is stated that 22 glass furnaces have been obliged to close, which formerly made heavy shipments to the United States.



The article speaks of the enormous increase in the manufacture of bottles in the United States, which is given at 12 per cent. in 1907 over the product in 1906. This increase is attributed to our perfected bottle-making machinery.

Particular attention is called to the fine quality of pressed glass made in the United States, which, the article states, owing to its peculiar brilliancy and rough edges, closely resembles cut glass. It is claimed that the manufacturers at Cologne and Ehrenfeld, Germany, are bending their energies to equal the American pressed glass and thus prevent its obtaining a foothold in Germany and other European countries where American pressed glass is finding favor.

The writer of the article appears to be satisfied with the exports of cut glass, hotel and restaurant ware, and the finer grades of Bohemian, German and French glass ware to the United States. He also mentions the exports of colored lamp shades, and certain styles of lamp glasses, as well as fancy colored glass for illuminating purposes, also crystals for watches. The latter article is made almost entirely in Germany, especially in Alsace-Lorraine.

Watch glass crystals are made by hand, and in consequence of the lower prices paid for labor in Germany the American manufacturers cannot compete.

The Buechner Jewelry Co., Cheyenne, Wyo., is installing a large street clock outside of its establishment. The clock will be 12 feet high and will surmount a steel post.

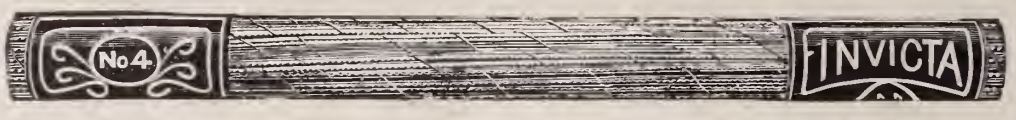
ART METAL NOVELTIES.

AT the salesrooms of the Bradley & Hubbard Mfg. Co., 21 Barclay St. and 26 Park Pl., New York, there is now on exhibition a collection of distinctly attractive art metal novelties which should appeal strongly to the jewelry trade. Among these articles are a number of smokers' sets in copper, finished in antique brass. Each set includes a cigar jar, art tray, match holder, etc. Attractive cigar jars are also displayed in wood and metal, while others are made of metal and glass. Book slides in brass and bronze are shown in a number of patterns. The line of electroliers comprises a wide selection of fancy styles. Electroliers with leaded glass shades are among the most attractive, and when lighted the effect produced by the light shining through the shade is most pleasing. Desk sets in brass with raised work are also shown.

*

CUT GLASS IN VARIOUS STAGES OF PRODUCTION

LING & STEWART, 68 West Broadway, New York, have on exhibition at their salesrooms an interesting and instructive exhibit in the form of a cut glass salad dish, showing the different stages which the dish passes through before it is turned out a finished product. The first dish shows the plain glass with one-half marked in the pattern the design is to be cut. The second dish shows the dish in the rough state after cutting, and the third dish shows the finished product. The same firm is exhibiting a line of attractive cut glass, which includes bon-bon dishes, salad dishes, etc.



*

NEW OFFERINGS IN RICH GLASS.

AMONG the many attractive offerings in cut glass to be seen at the salesrooms of C. Dorflinger & Sons, 36 Murray St., New York, is a cut glass hock set. The set includes 12 hock glasses and two holders. Six of the glasses are in ruby tint, while the other six are green. There is one holder of each color. Other dainty offerings include bon-bon dishes, servers, fruit baskets, etc. THE RAMBLER.

The E. H. H. Smith Silver Co., Bridgeport, Conn., has recently been granted a valuable patent for plating spoons and forks by which process the concern is able in one operation to place 65 per cent. of the whole amount of silver upon the backs of articles in the places that receive the most wear. The concern is now making a special effort to introduce its "Sterling Effects in Plate" patterns, made under this process with double the amount of silver over the entire back of the article.

That "Piano Advertising Plan" from Iowa

Pulls prosperity out of a lean year of panic. It never had an equal among advertising and premium propositions for building up trade in the teeth of a gale of adversity. It doubles sales for merchants and puts on subscriptions for the newspaper publishers. And it's brand new to-day.

The smallest merchant can work it just as successfully as the largest. The puzzle of it is that it does not cost the merchant one dollar, but actually makes him big money.

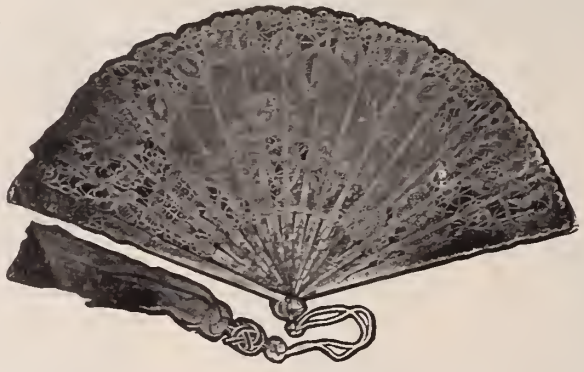
Nobody ever fails at this money-making enterprise who uses my plan and my pianos, which are of uniformly excellent quality. I superintend the manufacture of them myself, so I know.

And let me tell you it would be suicidal for any merchant to give away a cheaply made, inferior piano to any customer if he wants to reap a permanent benefit from the enterprise.

Here is a plan by which the merchant and publisher alike can turn hard times into hard cash, increase their business amazingly — literally make two dollars grow where there was one before—and pocket no possible loss for their thrift.

Live Ones—Write me *Needy Ones—Wake Up* *I'll Show You How it's Done*

SALESMEN—Boys with Grit and "Go"—



IT'S YOUR CHANCE. I want a few Reliable Salesmen to Canvass the Retail Trade. Samples in coat pocket. Don't worry trying to revive dead lines. Get one with breath in it now. It's a boom year for you if you connect right. Get wise to the "Iowa Idea."

The Alvin Manufacturing Co. were the pioneers in making Deposit Ware. Others have gone into the business—and gone out again!

Some who still manufacture deposit ware have cheapened the product by using so little silver that they cannot engrave it properly.

We have always refused to cheapen our product by reducing the quality to meet this competition, maintaining our standard of high grade quality throughout and our reputation as the acknowledged leaders in deposit ware manufacture.

Prices quoted are subject to usual catalog discount. Compare with others.

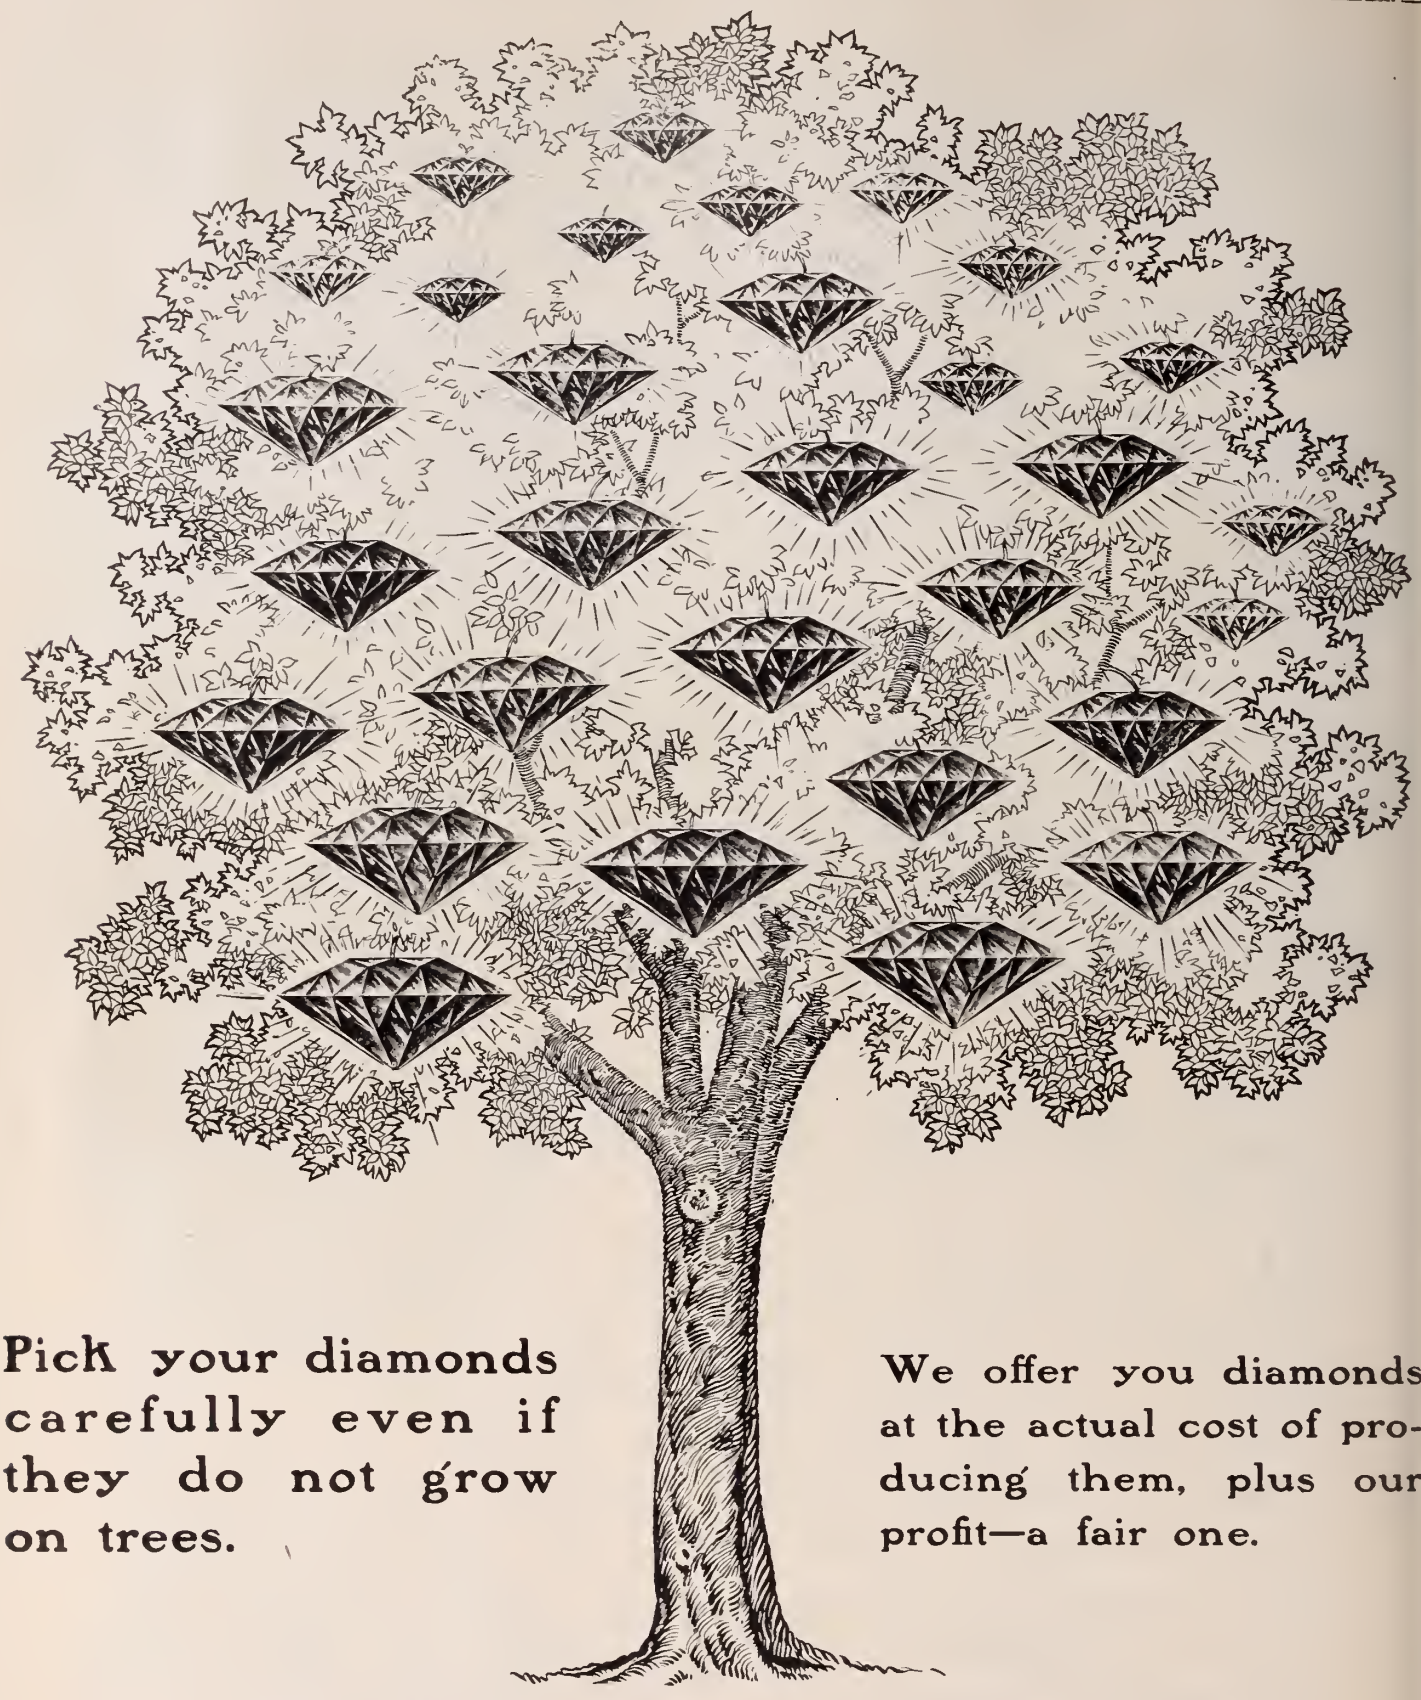
Silversmiths

NEW YORK



MONTAUK LIGHT, MONTAUK POINT, LONG ISLAND.

What a lighthouse is to the mariner **FAHYS MONTAUK CASE** is to the jeweler—a beacon of safety.

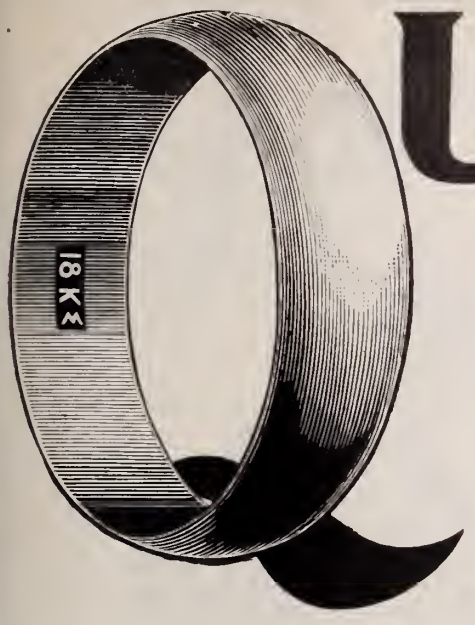
The lighthouse warns the mariner to avoid dangerous places. There are no "dangerous places" in **FAHYS MONTAUK CASE,** it is the best-made and best-known 20-year case on the market, and the liberal amount—and scientific distribution—of gold used in its manufacture eliminates "shallow places," and insures its wearing qualities for more than its guarantee of twenty years.

JOSEPH FAHYS & CO.

NEW YORK BOSTON CHICAGO SAN FRANCISCO

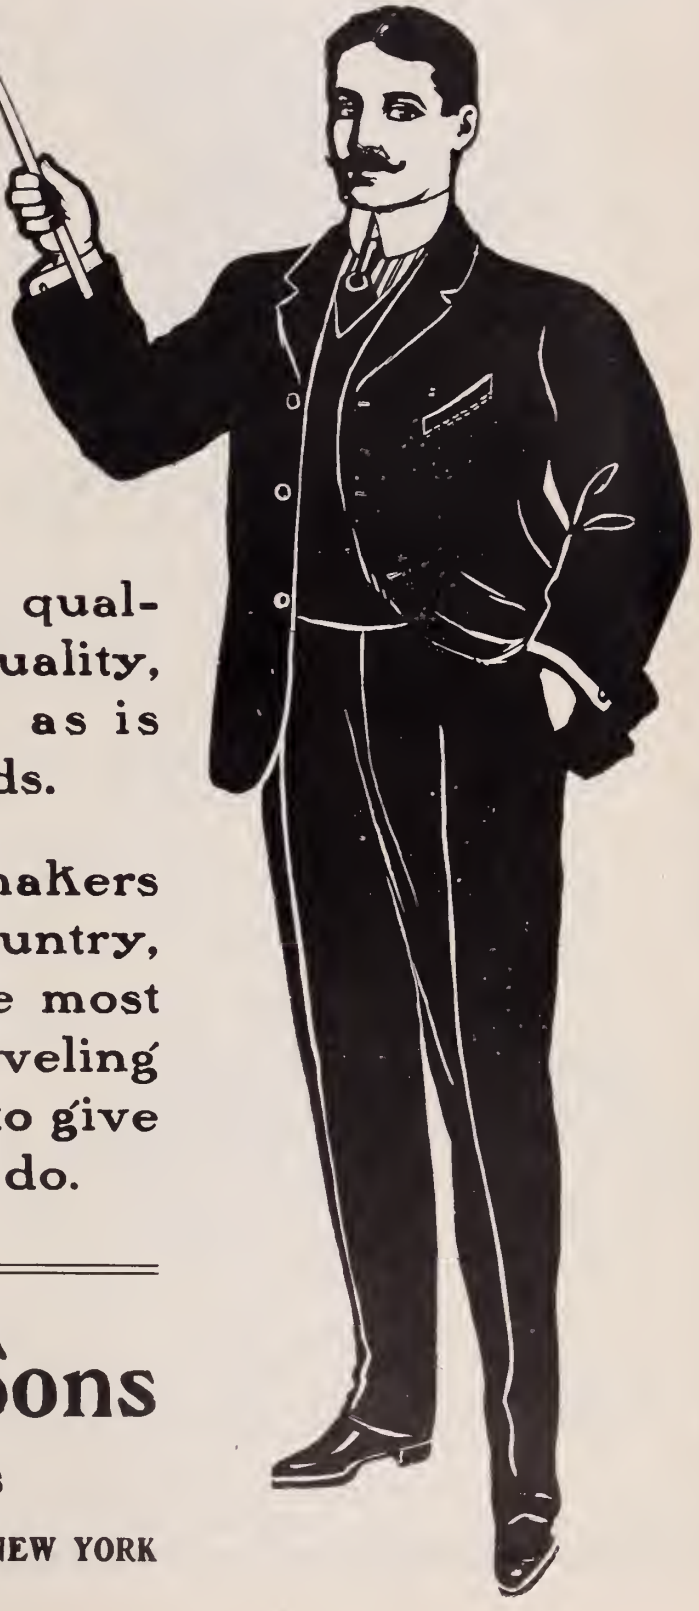
Pick your diamonds carefully even if they do not grow on trees.

We offer you diamonds at the actual cost of producing them, plus our profit—a fair one.



YOU CANNOT BUY DIAMONDS AT LOWER PRICES THAN THIS, BUT YOU CAN PAY MUCH MORE

J. R. WOOD & SONS



DIAMOND CUTTERS

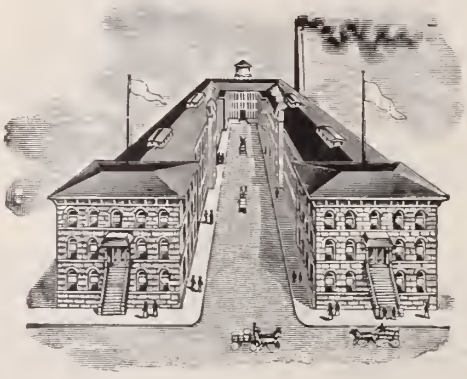
Importers of Emeralds, Rubies and Sapphires.

2 Maiden Lane, Corner of 170 Broadway, New York

QUALITY!

Quality in wedding rings should be considered even before price.

By buying of us you get quality, the very highest quality, and a price as small as is charged for inferior goods.



Being by far the largest makers of plain rings in this country, and selling them in the most economical way (no traveling salesmen), we can afford to give better value than others do.

J. R. Wood & Sons

Wedding Ring Makers

2 Maiden Lane, Corner of 170 Broadway, NEW YORK

S. O. BIGNEY & CO.

MIRROR FINISH

is the name which has been given to S. O. Bigney & Co.'s

HIGH GRADE GOLD-FILLED CHAINS

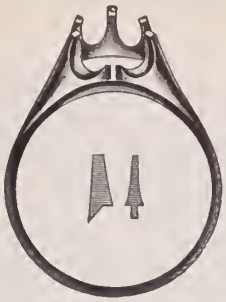
on account of the beautiful finish. After the links are soldered the gold is somewhat porous. In order to get a perfect finish, the only method known to the art is the method of burnishing. This we apply to our chains. It closes the pores, hardens the surface, gives the mirror finish, and will add one-third to the wearing life of the chain. This method makes for durability and excels all other processes of hardening finish.

Every retailer should have a good stock of our high-grade, gold-filled, mirror-finish Chains, Fobs and Bracelets.

We Make Bracelets of Every Description

Oval and Square, Side Swing and Hinge, beautifully finished and embossed. Pleasing to the eye, and rapid sellers.

Office and Factory, Attleboro, Mass.



New York Office, 3 Maiden Lane

Flat Belcher ring as received with claws badly worn.

How the same ring looks when stone is reset without new claws. Stone is not secure and point is below inside of ring.

How we splice settings and solder in new claws; seams do not show and rings are as perfect as when originally made.

How ring looks with new claws and stone securely reset. Entire ring is finished like new

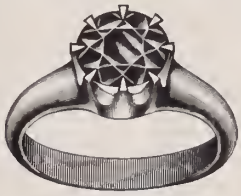
When we tell you that we have received as many as 75 diamond rings in one day for new claws and settings, you will not think us extravagant for using a full page in THE JEWELERS' CIRCULAR to exploit this feature of our business, but will wonder if you are getting your share of claw work.

99 out of every 100 owners of diamond rings willingly pay $1.50 to $5 for new claws or settings on their rings, but would not buy new mountings for $5 to $25.

It is worth while to familiarize yourself and your employees with this work, as it is one of the important little things that helps to make your business profitable.

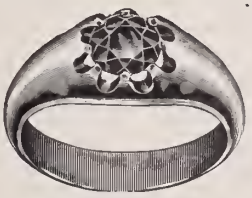
WENDELL & COMPANY

The firm that did much to change the repair end of the Retail Jewelry Business from a source of worry and dissatisfaction to one of pleasure and profit.

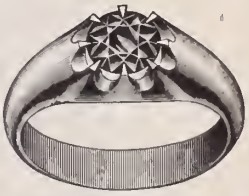


103-105 William Street
New York

TWO WONDERFUL SHOPS



57 Washington Street
Chicago

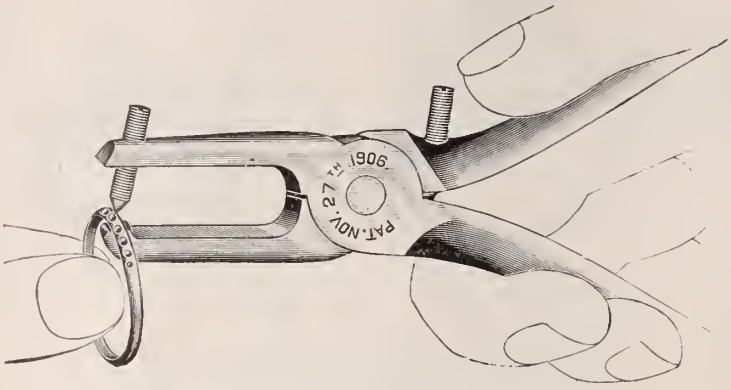


Tiffany ring as received with worn off claws. Stone cannot he reset, as it would he too low to look well and the point would come below the inner circle of ring.
(See cut No. 2 of flat belcher.)

How same ring looks with new claws and stone securely reset. Entire ring is finished like new.

Oval Belcher ring as received with claws badly worn. Stone cannot be reset, as it would be too low to look well and the point would come below the inner circle of ring.
(See cut No. 2 of flat belcher.)

How same ring looks with new claws and stone securely reset. Entire ring is finished like new.



THE PRICES QUOTED ABOVE FOR NEW CLAWS AND SETTINGS ARE SUBJECT TO OUR CATALOGUE DISCOUNT.

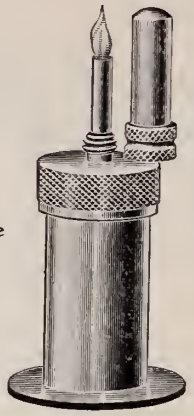
WE CAN PUT NEW CLAWS AND SETTINGS ON MOUNTINGS TAKEN IN TRADE AND REFINISH THEM SO THEY WILL BE AS GOOD AS NEW.

WE RETIP CLAWS AND MAKE NEW SETTINGS FOR CLUSTER MOUNTINGS SO THEY ARE AS GOOD AS WHEN ORIGINALLY MADE, AT PRICES THAT MAKE IT ADVANTAGEOUS FOR THE OWNERS TO HAVE THIS WORK DONE.

Carrying no diamonds in stock, entering and tagging each piece of diamond jewelry as received, then giving to each workman but one ring at a time, which is returned before he receives another, prevent any possibility of diamonds being exchanged while in our possession.

Pearl Setting Plier, No. 327

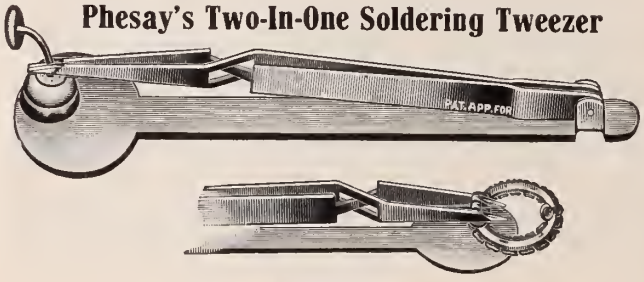
This tool should prove a useful addition to any jeweler's outfit. It is intended for setting half pearls or other stones of similar shape, which are imbedded in gold or other metal. It is used for cutting a burr and forcing it against the stone, either in brooches or rings, thereby holding the stone securely without liability of the tools slipping or breaking the stone, as is often the case with the use of other tools. The lower jaws are half round, to conform to the inner shape of rings. The work can be done more perfectly and under better control than with gravers or other tools used heretofore.



Made of best Swedish steel, nicely nickel-plated.

Price, each, $1.25

Randall Jewel Lamp

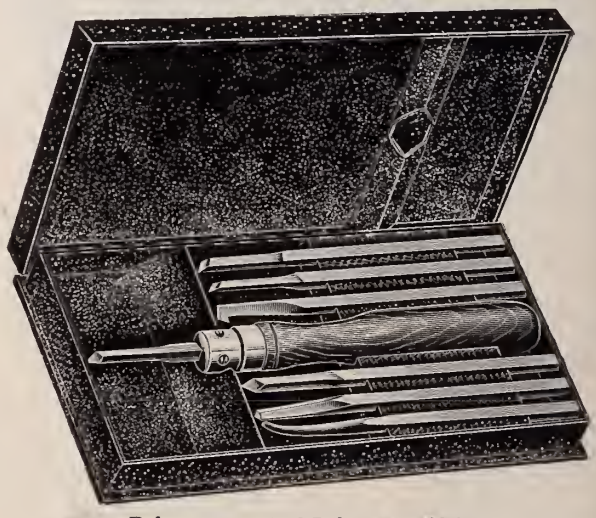


Cut is full size

Price, each, 50c.

Especially designed for work where very small flame is essential and very desirable when cementing roller and pallet jewels, for drawing temper of pivots and annealing small parts of watches. Made of brass full nickel plated. Has rubber washers inside of cap and under the hood to avoid leaking and evaporating.

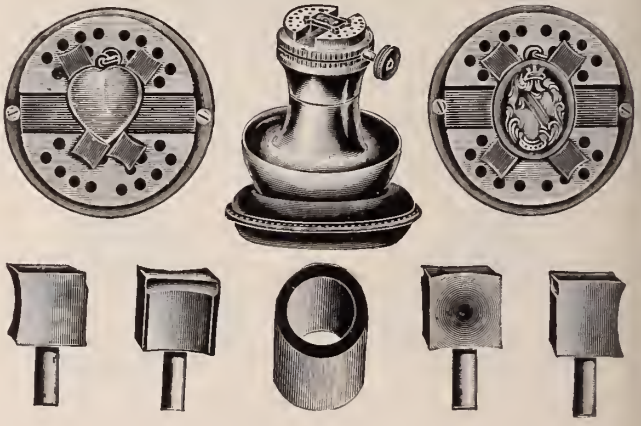
Phesay's Two-In-One Soldering Tweezer



Price, each, 75c.

By using Phesay's Two-in-One Soldering Tweezer the joint catch or Back is handled only once.

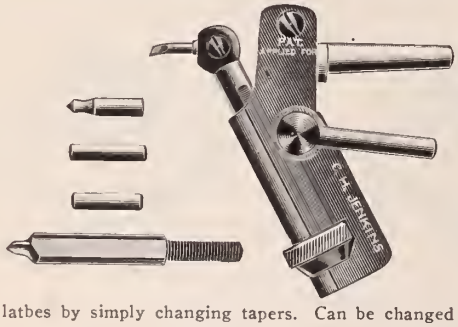
SAVES TROUBLE.—Phesay's Two-in-One Soldering Tweezers will solder plumb and true. Will not let article slide when solder flows. Will hold pieces of jewelry with rounded stones or flat surfaces with equal firmness.



Guaranteed "E.F.B." Turning Gravers No. 33

Price, per set of 7, in case, $3.00

The finest set of gravers on the market. Handle is of the finest cocobolo, fitted with nickel plated socket in which the gravers can be moved in or out as desired. The two set screws hold the graver rigid and prevent rocking or chattering. They will be appreciated by all users of fine tools.



"Ideal" Pins for Engraving Blocks

Per set of 4 with 4 pure rubber tubes, 50c.

The faces are milled to various shapes to take regular and irregularly formed articles. The few illustrations show their possibilities. Four pure rubber rings are furnished to slip over the pins when very delicate and highly polished articles are to be clamped. Made for all Standard Engraving Blocks. Please state name of Block when ordering.

Improved Turning and Jeweling Attachment No. 33

New Features

Adjustment for alignment, fine feed, with direct connected screw. Positive binder operated by slight movement of the thumb or finger. Cutters may be changed quickly. No small projecting parts to become lost or broken. Special cutters can be made from wire.

And Other Good Points

One tool may be used on different makes of lathes by simply changing tapers. Can be changed quickly.

All Standard Tapers in Stock

Each attachment is furnished with two cutters, one burnisher and two blanks. In ordering, please give name and size of lathe. **Price, each, $4.50**

EXHIBITION BULLETIN

16th Year WEDNESDAY, JULY 8, 1908 Vol. VI. No. 7

There is invariable uniformity of excellence in the production of our Diamond Jewelry. Just how far this uniformity of standard is carried, may be readily established by anyone who chooses to investigate.

Here is a good way: Look leisurely through the productions on display at our next EXHIBITION which will be held at our offices from August 24th to 29th, inclusive. Select at random any piece of Diamond Jewelry without asking the price, and, unless you are an expert, your estimate of its value will be much too high. We are turning out a large and varied line of medium priced goods, offering value ssuch as have never before been put on the market. Our workmen are permitted no digression from a fixed high standard of crafts=manship. This applies to the Jewels of medium price as well as to those pre=senting the distinguishing features of the more expensive,

We have received from abroad another shipment of a large number of lots of Diamonds, unusually fine Pearls, Sapphires, Emeralds, Rubies and other precious stones purchased by our Mr. Mayer. Remember, that these goods have been bought with a view to their utilization for our new Fall productions.

The "Krementz-Bodkin Back" STUD and VEST BUTTON

Pat. Feb. 16, 1904

Krementz & Co. believe the trade will agree that they understand the jewelry business sufficiently to know that the **"Krementz-Bodkin Back" Stud** and **Vest Button** is the simplest and best mechanical Stud or Vest Button made.

The **"Krementz-Bodkin Back" Stud** and **Vest Button** is not one piece, but **is one-piece construction,** which makes it very simple and the strongest and most durable, because:

1—It is **Solderless**
2—It has **no** spring or hollow wire to bend or break
3—It is made of **solid, hard spring metal throughout**
4—It is made by **Krementz & Co.** which insures perfect **quality, construction** and **workmanship**

THE STORY OF THE HEAD

Krementz & Co. Invite Comparison

Krementz & Co. stand back of their assertion. All **"Krementz-Bodkin Back"** Studs and Vest Buttons are sold also under the unique **Krementz Collar Button Guarantee.**

THE STORY OF THE BODKIN BACK

GUARANTEE

If for any cause whatever, a **"Krementz-Bodkin Back" Stud** or **Vest Button** should be damaged either in the hands of the dealer or wearer, a new one will be given in exchange, without charge. **"Krementz-Bodkin Back" Studs and Vest Buttons** are made in large variety of patterns in 14-kt. gold and platinum, set with pearls and diamonds.

SPECIAL ORDER WORK

Sash Buckle Pins

AMONG THE NEW Summer Goods now coming from this factory is an impressive line of Sash Buckle Pins.

The demand is assured because Fashion decrees that they shall be an essential of feminine attire.

Style and quality are assured because the Buckle in all its forms has always been a notable specialty here.

THE DESIGNS are the very latest. Applied trim and Hand Engraving furnish many attractive decorations. Plain examples for those who choose simplicity. In some, well selected stones are used to advantage.

Altogether the line is seasonable, safe, moderately priced and profitable. What more need be said?

CAMEOS

KEEP abreast of the times and show a good line of Cameo jewelry for your Fall trade. It is not our intention to presume, but this is our advice to the Jobber.

Write to-day for our booklet showing the latest in Cameo Brooches and Scarf Pins. Except the penny for the postal, it is free for the asking.

10 Kt. Some stick to an inferior grade because their fathers used it, others because they have given nothing else a fair trial; but when buying 10 K. jewelry why not insist that it be 10K ? The only absolutely sure way to protect yourself and trade is to demand stamped goods. For years our Trade-Mark has stood for honesty and quality in gold jewelry. Just give the W. E. R. Co. line a "look over."

Send for further information regarding our extensive line.

Antique Candlesticks by St. Bernward, Bishop of Hildesheim, (993-1022) Still in Existence.

By CHARLES A. BRASSLER.

IN the Romanesque period, 1000 to 1250, in which Occidental art attained its independence, the work of Bishop Bernward, of Hildesheim, the companion of Theophanu and preceptor of the minor Emperor Otto III., constitutes the first plainly recognizable group. Bernward, trained in Greek monasteries, has exercised a considerable influence on the development of the metal-working art in Germany. In the bishopric of Hildesheim, founded by him, and where in 1022 he died, he established a school of artistic casting and metal working, the chief masterpieces of which, carried out in bronze, have been locally preserved.

In the two candlesticks, made in a silver alloy, shown in the illustration herewith, the shaft and feet are formed in a perforated very florid tangle of human and dragons' bodies, evidently strongly influenced by reminiscences of northern art. The workshops in the chapters at Essen, founded by the "Ottones," Münster, Paderborn, Minden and Cologne are extensions of the Hildesheim school.

ANTIQUE CANDLESTICKS MADE BY ST. BERNWARD.

In the same manner, but no longer demonstrable by existing works, the archbishops Egbert of Friers, who died in 993, and Willegis of Mayena, who died in 1011, operated. At the same period, in Italy, Bishop Desiderius of Monte Casino had work and workmen sent from Bysantium; of the works of the somewhat later Abbot of S. Denis, near Paris, who died in 1144, there remain specimens, an antique vessel of porphyry, beautifully formed, with head and wings of gold, to represent an eagle.

The candlesticks illustrated consist of two similar pieces, each 43 centimeters high, cast in silver, to which, for the purpose of increasing its durability, some copper was added, and which was finished by gilding, of which traces are still visible, the application of which and the fact that the process was newly introduced in Bernward's workshop, is revealed by the inscription on the candlesticks, which reads as follows:

Bernwardus presul, candelabrum hoc pucrum suum primo huius artis flore nec auro, nec argento, et tamen ut cernis conflare iubebat ("Bishop Bernward, through his assistants, had these candlesticks cast at the earliest stage of the art; neither of gold nor of silver, but as you see them"—*i.e.*, plated).

The pictorial figures of the foot and shaft of the candlestick represent the realms of creation; Christ, the light of the world, dispels all darkness and floods all creations with his brilliance. On the feet of the candlesticks are recumbent dragons, on which are crouched goblins, glancing furtively upward. About the shafts vines, with leaves and bunches of grapes, twine, and at the bottom of them lions are standing, above which men are climbing upwards, while above sit birds, and beside these angels' heads peep out. From the shaft three animals (lizards or weasels) are extended upward to the light sconce, over the edge of which they are peering curiously at the light.

These interesting candlesticks are preserved at the Magdalen Church at Hildesheim.

Theo. H. Pond, who has been head of the Arts Department at Mechanics' Institute, Rochester, N. Y., for the past six years, and is a jewelry designer and worker of note, has accepted a position in the Baltimore Institute, Baltimore, Md. Mr. Pond's work has been especially noticeable in the department of Applied Arts and Crafts, at the Mechanics' Institute.

WE'RE OPTIMISTS.

During the recent depression in business, New York City was perhaps headquarters for pessimists, due to the fact that there were more bank failures in proportion than in any other place in the United States.

Now conditions have improved so much in New York that nearly all the institutions which had trouble have opened up under a new reorganization.

As jewelry Manufacturers, we have been optimistic as to the future, and by acts of this spring have backed up our optimistic thoughts by producing a large line of new, attractively-priced gold jewelry, in our various lines.

Progressive retail jewelers will undoubtedly have unusual demand this fall for this class of goods.

May our travelers when they call, or our mail order department, prove to you that we are optimists by showing you our new rings, lockets, sleeve buttons, Larter Shirt Studs and Larter Vest Buttons, etc.?

Registered in the U. S. Patent Office

The Lemp Trophy for Eight Oared Shells.

THE solid silver Lemp Trophy, which was rowed for Sunday, June 21, on the Mississippi River, by the Mound City and Western Rowing clubs, was on exhibition for a week in a show window of the Mermod, Jaccard & King Jewelry Co., St. Louis, Mo., by which it was designed and made.

The cup, which was presented by William J. Lemp, the brewer, is distinctly unique and original in design. It is a representation in solid silver of an eight-oared shell, manned by the crew and a coxswain, who present a vivid impression of being in the thick of a race. The shell is supported by two dolphins of solid silver resting on a base of the same metal, and each little part of the boat, the dolphins and the decorations on the base are perfect.

The whole work was designed and made from actual photographs of each subject presented. The oarsmen are in their racing costumes and apparently are straining every muscle to push their shells to victory, with the bright silver oars spread out equally distant from each other.

When the order for the trophy was received by the Mermod, Jaccard & King Jewelry Co., the task of making it was intrusted to the most expert workmen in the company's shops. It is entirely hand-made and of pure sterling silver. The shell is 30 inches in length and stands more than two feet high.

The new Lemp trophy will replace the one retired from competition in 1906 by the Western Rowing Club. The trophy is considered the handsomest piece of work turned out in that line in St. Louis.

Sawing and Drilling Gems.

GEMS and precious stones often require to be sawed in different directions, which operation is performed on a machine like that used by a lapidary, with the exception of the polishing plate, for which is substituted a cutting plate having sharp ends. It is also done by fastening the stone on a stand and moving continually a fine iron or copper wire stretched in a bow, which is moistened with emery and oil. However, care has to be taken not to let the stone grow too hot, as the heat may crack or make spotty.

The Chinese use strings spun over in preference to the wire, they having the advantage of keeping the emery sticking to them and of accelerating thereby the operation.

For drilling gems or other precious stones a diamond set in steel is made use of to move to and fro by a bow, or the common engraving machine, the drilling instrument of which consists of an iron point, to which is fastened a diamond splinter, which is pressed upon the stone while it is revolving upon the plate.

Burglars who broke into the store of Solomon Fry, Jr., Elm St., Gloversville, N. Y., recently, escaped with stock valued at about $150. The loot includes half a dozen watches, 17 watch chains, several stick pins, 12 bracelets, field glasses, leather bags, etc.

The Ancient Egyptian Scarab—Its History and Symbolic Significance.

By Clement W. Coumbe.

(*Continued from issue of July* 1.)

The Uses of the Scarab.

THE uses to which scarabs were put were numerous. They were used by monarchs for sending out proclamations. These were mostly unusually large. Many were worn as amulets. Numbers of scarabs have ornaments or general inscriptions, some have

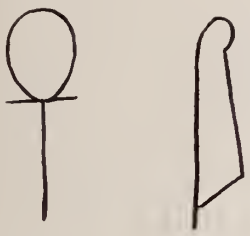

Fig. 5. Fig. 6.

personal names and friendly wishes (these were probably presents to friends). Again, scarabs have been found strung together like beads for religious purposes similar to our rosary. Of those used for social purposes some have "Good Luck" signs, or "A Happy Life"; these were used for sealing letters. Those having the cartouche of the reigning Pharaoh were no doubt worn out of loyalty. (See Figs. 2, 3 and 4.) Some were joined to the representation of the human heart, on which was inscribed "Life, Stability and Protection." They were talismans. Some had the names of deities, officials, private persons. Some had monograms.

One large class, known as heart scarabs, are found in mummies. They are from two to three inches long, and replaced the heart which had been taken out in the process of embalming. They are mostly of hard yellowish or dark green stone. According to the ancient Egyptian faith the human being had two souls—*Ka* was the vital soul, *Ba* was the responsible soul (genius). The heart of man was considered the source from whence life as well

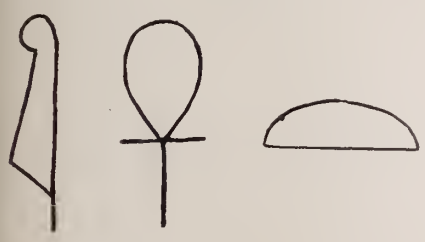

Fig. 7.

as thought proceeded. Hence the scarab (symbolizing resurrection) was buried with mummies to assist preserve the body for future reunion with the spirit. Egyptian soldiers wore scarabs as charms to increase their bravery. Women wore them to increase fertility.

And now just a word as to their composition. The soft soapstone scarabs were glazed in the fire, using different colored enamels, usually bluish green. The ones discovered in these days of a brownish or dirty white are those that have had their enamel chewed off by the teeth of Time, thus baring the stone from which they were carved. Some were made in porcelain and —very rarely—some of colored glass. Some are in gold or ivory, or even wood. Those of a brown tint were originally of a green glaze which has faded; the white were originally blue, unless perhaps some dating from the time of Amen-hotep III.

Cartouches.

The broad oval outline of the scarab was in the earlier Egyptian period used as a distinctive framework in which to inclose the hieroglyphic names of Egyptian kings. But in later historic inscriptions this wide oval circle surrounding the royal name (known as a "cartouche") gave way to a much more elongated *cartouche*, as is illustrated in Fig. 3 and Fig. 4 (page 43, issue of July 1). Hence the shape of the scarab outline in a cartouche assists to the knowledge of its relatively early date if of wide oval form, while the more lengthened cartouche outline is proof of production at the later period. It was known as "R E N."

The Scarab in Jewelry.

Scarabs were a favorite form of signet for finger rings, in which cases they re-

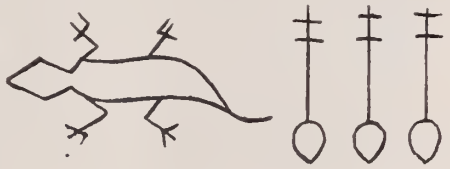

Fig. 8.

volved on an axis. The flat incised surface (reverse) was worn next the finger. When it was to be used for official signatures the ring was taken off the finger and the scarab side turned inward to allow the impression to be made. Now, very few scarab rings are ever found mounted in gold or cut in the precious stones. There are only very, very few extant. Some are in the Cairo Museum, and in these the jeweler's art shows really wonderful workmanship. The fact of their almost entire absence, however, must in nowise be considered proof that the ancient Egyptians owned but few such really valuable gems. The tombs of the Egyptian kings wherever recognizable had been for centuries looted by passing Arabs, and these later-day inhabitants knew the value of the precious metals and precious stones, but they had no use for glazed bug effigies and they attached no significance to hieroglyphics. Hence the scarceness of golden mounts and precious stones in the scarab outfit of the mighty of that day to reach down to our times. From those still existing we know that during and after the XII. Dynasty (2778 to 2565 B. C.) beautiful productions were made of gold and precious stones. All this might be supposed, for Isis was a patron of the arts.

The pages of The Circular-Weekly are scarcely the place for instruction in the art of writing or reading Egyptian hieroglyphs. But a few words dedicated to the subject may prove useful to such manufacturers who desire to intensify the mystic intent of their bug designs. To such end the few definitions that follow may prove useful.

Figs. 5 and 6 represent respectively "Life" and "Truth." Thus the trio of symbols on Fig. 7 reads: "Lord of Truth and Life." And this combination on a scarab was used as an amulet for bringing luck to the bearer.

On a presentation ring to one's fiancée the symbolic words on Fig. 8 engraved on the reverse of a scarab are highly complimentary, though to present-day eyes they smack of lizards and digging tools. They

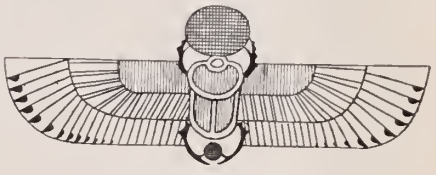

Fig. 9.—winged scarab.

convey the flattering words, "Abounding in Graces."

A very great favorite form of scarab decoration with the ancient Egyptians is reproduced in Fig. 9, known generally as a winged scarab. To make a long story short, wings spread out in this fashion were symbolic of "protection"—in this case, of course, "divine" protection, for the scarab was the emblem of the divinity Kheper. It was also symbolical of death under certain conditions.

And finally a useful form of scarab decoration is found in the familiar winged beetle given in Fig. 10.

Glancing back at the cartouches of Ptolemy and Cleopatra in the last issue, it may prove of interest to state that these two royal cartouches figured very usefully in the unraveling of the ancient language, for they are alphabetic arrangements of the hieroglyphic signature. And the knowledge that the one representing Ptolemy, having

Fig. 10.—ornamental form of scarab.

the recumbent animal as the fourth letter (L) tallies with second letter in Cleopatra (L) teaches us that the bird (Horus) figuring as sixth and ninth proves Horus to represent our letter A.

(the end.)

C. B. Engel, 217 Lackawanna Ave., Scranton, Pa., has been appointed watch inspector for the D. & H. Railroad in that section.

Rose Diamonds

Silver Mementos to the Steamship "Chicago," from the City After Which It Was Named.

THE Chicago Association of Commerce recently presented on behalf of the Great Central Market to the ship *Chicago*, of the compagnie Générale Transatlantique, a beautiful and unique souvenir. This gift, the work of Spaulding & Co., Chicago and Paris, is in the form of a sterling silver plate, weighing 10 pounds, more than one-eighth of an inch thick, 14⅞ inches long and 11⅜ inches wide. This massive tablet bears a complimentary address both in English and French. At the top of the plate, centered over the double inscription, appears in high relief the shield of the Great Central Market supported by the flags of the United States and France. The flags are embellished in appropriate colored enamel and the shield is treated in the same beautiful manner.

The delegation representing the association at the dinner given on board the *Chicago* at its pier in New York, June 11, consisted of Geo. W. Sheldon, chairman of the Foreign Trade Committee; Joseph Basch, chairman of the local committee; William A. Gibson, executive secretary; C. B. Kinley, of the Kinley Mfg. Co.; Bion J. Arnold, consulting engineer; John H. Hardin, of F. A. Hardy & Co.; Earle B. Bartlett, of W. W. Kimball Co., and H. B. Staver, of the Staver Carriage Co.

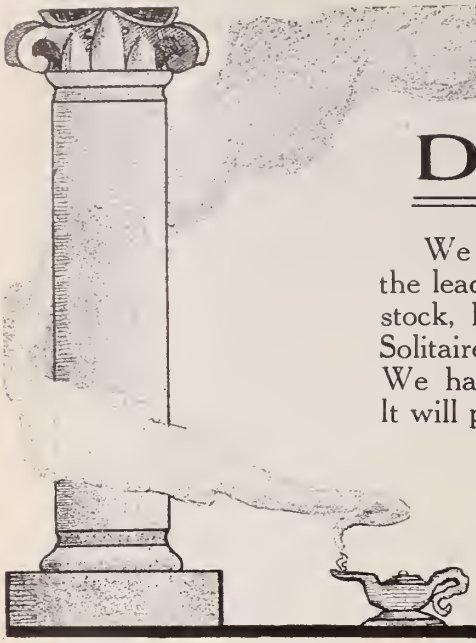
SILVER TABLET PRESENTED BY CHICAGO ASSOCIATION OF COMMERCE TO S. S. "CHICAGO."

SILVER LOVING CUP PRESENTED BY THE CITY OF CHICAGO TO THE S. S. "CHICAGO."

The inscription upon the plate engraved in two languages and followed by the autograph signatures of five officers of the association can be read in the illustration of the plate above.

A beautiful hand-carved silver loving cup also presented to this vessel on behalf of the city of Chicago is depicted herewith.

This beautiful souvenir from the city of Chicago to the new French Atlantic liner was also furnished by Spaulding & Co. It is a hand-carved silver beaker about 20 inches high, graceful in outline and rich and symbolic in ornamentation. Beneath the head of Neptune on one side is this inscription:



"This loving cup is presented to the Compagnie Générale Transatlantique by the city of Chicago as a token of appreciation of the graceful compliment paid this city in naming this steamship *Chicago*, June 11, 1908."

Beneath a similar head of the sea god on the cup's other side is the seal of the city of Chicago.

William Easley, a negro, recently confessed to robbing the jewelry store of J. Tyler, 424 N. Main St., Memphis, Tenn., of several watches and jewelry valued at $400, and was bound over to the Grand Jury to await trial on the charge.

A dispatch received at Berlin, Germany, recently, from Windhoek, Damara Land, German Southwest Africa, says that a diamond field, the extent of which is nearly 10 square miles, has been discovered at Luderitz Bay. There are no details, and the news has not been confirmed.

A dispatch from Paris, recently, stated that a woman named Mme. Sauveson, who was engaged in the jewelry business in that city, was found murdered in her apartment. A cord was wound around her neck. Neither the store nor the apartment of the murdered woman had been rifled.

DIAMOND RINGS

We import diamonds and other precious stones direct from the leading markets of the world and always carry a complete stock, hence we are able to show, at all times, a fine line of Solitaire Diamond Rings, also Cluster, Princess and Fancy Rings. We have rings to please every taste at prices that are right. It will pay you to know our line. Send for illustrated catalog.

REIGNING PARIS FASHIONS.

JEWELRY NOVELTIES SEEN IN FRANCE'S CAPITAL.

PARIS, July 1.—The French run to morbid ideas, even the jewelry designs embodying things less ornate than gruesome. I noticed on a well-dressed man a scarf pin which represented a tiny figure in gold admirably executed, hanging from a diamond-tipped gibbet. Bizarre, but not so horrible, was the head of a grinning satyr in reddish gold, while from the ears dangled tiny diamond pendants.

Unique but far from artistic are big brooches for ladies in the form of animals and insects. A queer conceit showed a realistic chrysalis formed of a baroque pearl which appeared to be hatching into a butterfly as it was escaping from a broken diamond-studded cocoon. A greyhound, at least a finger in length, with a ruby collar fastened the lace ruche of a fashionably attired lady at the Grand Prix, while another wore the head of a cat diamond incrusted, with pink pearl mouth and blazing emerald eyes. Roosters with iridescent plumage expressed in precious stones, and ducks were also in evidence. Such ornaments are too eccentric for the woman of good taste.

The ornate waistcoat and jacket has brought forth many exquisite ideas in buttons, which come in sets, six large ones for the coat and half a dozen smaller for the dainty mannish vest. One of the favorite patterns is enamel of vari colors, and the fashionable woman owns several of such sets, matching in color her various costumes. Enamel buttons in radiating effects like sun rays and gold rimmed look well. There are expensive buttons incrusted with diamonds, rubies or semi-precious stones and others of semi-precious gems, peridots of all colors, opal and turquoise matrix, amazonite, agate, jade and a long category of fancy stones which are disposed with as much art as if they were fine gems. Cameos and carved coral buttons look well, while those of Toledo damascene work, steel-inlaid, with others gold-etched or in repoussé, all swell the list of ornamental dress accessories. Small jeweled buttons are now set down the outside of the tight long sleeve.

The Directoire idea has been prolific of ornate clasps and buckles which fix the scarf-like draperies of the short-waisted bodice or fasten the loose-fronted coats. While most of these ornaments are of gilt and silver, some wealthy women insist upon having them of real gold and enamel. They are often of oblong shape and rather narrow, and of bright Napoleon blue enamel, richly encrusted in gold, with sometimes a twisted monogram. Some of them are at least a finger and a half long. Often two appear on the same dress, in the back and front; buttons to match are set down the back of the sleeve. Very large enameled or jewel-studded corselet buckles are seen on Directoire skirts or on the wide-draped girdles, with occasionally a buckle to correspond holding the wings or feathers on a big hat.

Necklaces are invariably worn with decolleté costumes, usually dog collars of very wide black velvet, ornamented in front with a long plaque of open-work design in a lattice or floral pattern, the black background visible between the interstices. Sometimes it is worn on a wide white moire ribbon, but this is not so becoming. Artistic was a plaque which reached almost around the neck, the design being gold *Bacchantes* disporting themselves amidst a tangle of grape vines.

In direct contrast to this wide and heavy neck adornment are very slender chains of gold or silver tied low down in front and from which dangle a couple of enormous oblong or circular diamonds swinging in a ruby or emerald incrusted rim.

Pretty for a young girl was a pendant consisting of three golden doves holding a tiny diamond in their beaks. For the front of the pompadour is a diamond an inch square set on a spiral wire with a background of sable osprey aigrettes. Necklaces and sautoirs of an exquisite shade of pink peridots and en cabochon were strung on a golden chain threaded at intervals with small pearls.

Startling in its realism was a girdle worn at a ball by the Princess de R. and which consisted of a jointed serpent made of scales of green and blue enamel with jeweled head and eyes and which entwined itself in serpentine undulations about the slender waist of the wearer whose taste evidently ran in this way, for above her high pompadour rose the diamond head of an asp, its golden coils resting on the hair behind.

Very dainty are ball watches of enamel jewel banded with open faces and which are worn on neck chains in guise of pendants.

Rather suggestive of coquetry are gold heart-shaped lockets with a big interrogation mark in diamonds upon the front.

A desk set designed by a celebrated artist was of most original conception. There was a large square of verd antique on which the various objects reposed. The most ornate piece was the ink well, which represented the figure of some heathenish female deity expressed in carved ivory, the head bedecked with a big cabochon ruby and the ears pierced with the same blood-red stones, while above her was an enameled and gold pagoda. The seal, the paper knife and the paper weight showed mummy-like ivory figures half emerging from golden sheath-like wrappings.

Receiver Appointed for the Harvell Jewelry Co., Litchfield, Ill.

SPRINGFIELD, Ill., July 1.—The news that Judge Humphrey in the United States District Court had on Saturday appointed John Ball, of Farmersville, as receiver for the Harvell Jewelry Co., Litchfield, which operated stores in Staunton, Girard, Gillespie, Raymond, Mt. Vernon and Divernon, etc., occasioned considerable surprise in the business community. The receivership was applied for by creditors of the concern, it being stated that the concern's troubles were due to the financial stringency which affected the mining towns where the company had branches. The liabilities are estimated at about $100,000, while the assets are placed at about $50,000.

The Harvell Jewelry Co., which was incorporated in June, 1905, with an authorized capital of $100,000, on which $50,000 was paid in, succeeded the firm of J. Harvell & Son, which was composed of J and S. O. Harvell. The latter became president of the jewelry corporation; E. E. Berson became vice-president; R. P. Bolton, second vice-president; S. J. Reeves, third vice-president; C. E. Randele, secretary, and R. L. Wooster, treasurer. Mr. Harvell was also connected with the Harvell-Bulpitt Jewelry Co. at Raymond and the Harvell-Jefferis Jewelry Co. at Taylorville, but the latter concerns are distinct corporations and are not affected by the present proceedings.

Interesting Point as to Imprisonment Growing Out of Installment Contract Suit, Comes Up at Pittsburg.

PITTSBURG, Pa., July 3.—Judge John C. Haymaker handed down a decision this week on a writ of habeas corpus in a case where a man had been imprisoned for debt, by refusing to release Adolph Meedic, who had been sent to prison by Alderman McGovern on a capias in a trover and conversion case. This establishes a precedent and is of interest to all jewelers who sell goods on leases. The courts have heretofore released persons who have been imprisoned by aldermen on a civil suit in which judgment was entered for debt, it being alleged aldermen had no right to send men to jail in civil actions.

Meedic bought a diamond from M. J. Smit, Fifth Ave. and Masters Way, on a lease. After he had paid a certain amount he refused to pay the balance. He asserted that he had paid enough, and Smit brought suit to recover the entire amount, although the balance owing was only $29. The alderman gave judgment for the balance. No appeal was taken in 20 days as allowed by law, and the alderman issued a capias *ad satisfaciendum* and committed Meedic to jail. Meedic immediately applied for a writ of habeas corpus, and then McGovern determined to make a test case of it and ascertain his right to send a man to jail. Men have been discharged heretofore on the ground that it was simply a breach of contract and that the alderman could not issue a capias *ad satisfaciendum*. The attorney who represented McGovern argued that Meedic came under the provision of the act of 1814, which permitted imprisonment for debt, because while it was founded on a breach of contract originally, it was more than a breach of contract, being conversion. Had Smit sued to recover the amount due, then no capias would lie, but as he had sued for the original amount of the purchase price, it became a trover and conversion case and therefore the capias could be issued when no appeal had been taken. The court upheld the contention and Meedic was remanded to jail, but he later paid the balance owing and was released.

C. J. Thiry, who succeeded Petz & Thiry, Detroit, Mich., has opened his new store at 27 Monroe Ave.

P. H. Philbrick, who was arrested, about a week ago, for stealing three watches from Wm. E. Bell, Little Rock, Ark., his former employer, has confessed his guilt. He was fined $25 and costs and sentenced to serve 30 days in the county jail.

Modern Cameos

The first samples of the MODERN CUT CAMEOS were brought over by us about two years ago.

Confident of the ultimate success of the stone we never tired in our efforts to acquaint the trade with its merits. Its immense popularity now attests to our correct foresight.

The same effort has been exerted on the other side in improving the quality as well as securing an adequate supply. We have succeeded also in this respect, and our Cameos are unexcelled in the matter of superior engraving, and precision of size and finish—and at right prices.

ONYX CAMEOS in MODERN and CLASSIC DESIGNS on hand in all sizes and colors for immediate delivery.

Wisconsin Jewelers' Association Opens Its Third Annual Convention at Milwaukee.

MILWAUKEE, July 7.—The third annual convention of the Wisconsin Jewelers' Association opened in the Hotel Blatz, this morning. The initial session was devoted to the address of welcome by W. G. Bruce, of the Milwaukee Merchants and Manufacturers' Association, the response by President Gustave Keller, Appleton, Wis., and the appointment of the various standing committees. In the afternoon various papers will be read and in the evening a theater party will be given, also a stag party for the men.

At the afternoon session, Edward Taylor, secretary and treasurer of the Rockford Silver Plate Co., Rockford, Ill., will speak on "Selling Retail Dealers Exclusively"; G. E. G. Kuechle, of the Alsted-Kasten Co., Inc., Milwaukee, on "Store Management."

To-morrow will be devoted to executive business. The sessions will close with the selection of officers and the organization of the new board of directors. The old board of directors held its final meeting last evening.

Programmes of the convention were sent to all jewelers of Wisconsin by the secretary, Franklin Thomson.

A complete report of the convention will be published in next week's issue.

Death of Frank Irving Fay.

WILLIMANTIC, Conn., July 6.—Frank Irving Fay, who for 14 years had been with J. C. Tracy, died July 4. He was widely and favorably known in the trade, and his death is deeply regretted.

Mr. Fay was born at Brookfield, Vt., Oct. 1, 1859. When the boy was three years old his father was killed in in the war, and he went to live with an uncle, where he remained until he was 16 years old. At this age he began the work of watch repairing, and later conducted a business for himself at Orange, Mass., giving this up later to enter the employ of Mr. Moulton, of Worcester, Mass.

In March, 1894, Mr. Fay entered the employ of J. C. Tracy, Willimantic, Conn., where he has been a much valued member up to the time of his death.

Mr. Fay was married to Miss Lizzie I. Morrill on Thanksgiving Day, 1882, at Milford, Mass. Beside Mrs. Fay there are five children who survive—Frank Allen Fay, who lives at Cornwall-on-Hudson, N. Y.; William E. Fay, who graduated a year ago from Yale and is now instructor in the High School at Willimantic, Conn.; Miss Edith M. Fay, a student at Smith College; Harold G. Fay, who is employed in the printing department of the American Thread Co., Willimantic, and Miss Mildred L. Fay, who lives at home.

Mr. Fay was a Mason, a member of the Milford (Mass.) Congregational Church, associate member of the Excelsior Hook and Ladder Co., Willimantic, and a former Councilman of the city. He was a man of unusual sterling qualities, holding the respect and esteem of all who knew him, and his loss is keenly felt in the city in which he lived, and especially in the store where his cheerful disposition and faithful service won the affection of all.

National Monthly Import and Export Statistics.

WASHINGTON, D. C., July 6.—The records of the Treasury Department contain the following comparative statistics, of interest to the jewelry trade, for May, 1907 and 1908, and for the 11 months ending May, 1908:

IMPORTS.

	May, 1907.	May, 1908.	11 Months Ending May, 1907.	11 Months Ending May, 1908.

Jewelers' Gold Bars Withdrawn and Exchanged at New York.

Week Ended July 3, 1908.

The U. S. Assay Office reports:

Gold bars exchanged for gold coin	$513,898.92
Gold bars paid depositors	31,978.83
Total	$545,877.75

Of this the gold bars exchanged for gold coin are reported as follows:

June 29	$357,950.94
" 30	15,351.85
July 1	66,894.92
" 2	58,559.32
" 3	15,141.89
Total	$513,898.92

The jewelry store of S. P. Flayer, Grand River Ave., Galveston, Tex., was entered by burglars recently and jewelry valued at about $260 was carried away. The stolen property consisted of four men's signet rings, 20 ladies' watches and 12 chains. Four men were arrested on suspicion of being implicated in the robbery.

Exports of Jewelry, Clocks, Watches, Silverware and Kindred Lines from the Port of New York.

WASHINGTON, D. C., July 1.—The following were the exports of jewelry, silverware, optical goods, clocks, watches and kindred lines from the port of New York for the week just ended:

Bahia: 1 case jewelry, $1,227; 6 cases clocks, $113; 1 case optical goods, $192.

Berlin: 44 cases clocks, $651; 4 cases scopes and views, $146.

Bombay: 1 case optical goods, $280.

Bremen: 2 cases jewelry, $310; 2 cases watches, $1,716; 1 case plated ware, $200.

Buenos Ayres: 11 cases plated ware, $1,320.

Callao: 2 cases plated ware, $361; 1 case jewelry, $148.

Colombo: 4 cases watches, $600.

Colon: 1 case thermometers, $148.

Glasgow: 91 cases clocks, $790.

Halifax: 7 cases clocks, $112.

Hamburg: 2 cases optical goods, $430; 3 cases clocks, $104; 1 case jewelry, $500.

Havre: 6 cases silverware, $15,000; 5 cases jewelry, $178.

Havana: 4 cases jewelry, $1,083; 8 cases clocks, $320; 4 cases jewelry, $890; 1 case clocks, $250.

Iquique: 10 cases plated ware, $1,525.

Kingston: 7 cases clocks, $200; 1 case watches, $238; 1 case jewelry, $108.

Liverpool: 3 cases jewelry, $300; 8 barrels jewelers' ashes, $3,500; 81 cases clocks, $2,259; 1 case jewelry, $800.

London: 4 cases watches, $1,891; 1 case plated ware, $100; 2 cases jewelry, $415; 10 cases optical goods, $3,664; 2 cases thermometers, $180; 14 cases clocks, $487; 9 cases optical goods, $731.

Manchester: 34 cases clocks, $364.

Melbourne: 17 cases optical goods, $1,298; 151 cases clocks, $1,942; 53 cases plated ware, $4,045; 22 cases clocks, 233.

Montevideo: 36 cases clocks, $910; 1 case jewelry, $851; 13 cases plated ware. $1,256.

Para: 1 case jewelry, $156.

Rangoon: 2 cases watches, $285.

Rio de Janeiro: 26 cases clocks, $493; 54 cases clocks, $1,232; 10 cases optical goods, $540.

St. Johns: 9 cases clocks, $119.

Singapore: 4 cases clocks, $120.

Southampton: 10 cases watches, $2,308; 1 case scopes and views, $237; 18 cases watches, $3,556; 1 case plated ware, $300.

Sydney: 61 cases clocks, $1,152; 5 cases plated ware, $686.

Valparaiso: 1 case watches, $970.

Vera Cruz: 4 cases plated ware, $377; 21 cases clocks, $300.

John P. Hess, Fond du Lac, Wis., has added a three-ton safe to his office equipment.

Importers Lose Interesting Fight Over Duty on Pearl Claimed to be the Product of American Fisheries.

An interesting decision was handed down Friday by Judge Hay, United States General Appraiser, in regard to the protest of Bagg, Perine & Co., New York, against the assessment of duty by the Collector of Customs on a pearl valued at $3,500 imported from Mexico and described on the invoice as a product of American fisheries. The pearl was appraised for duty at 10 per cent. ad valorem under Par. 436 of the Tariff of 1897, which provides for diamonds and other precious stones advanced in condition or value from their natural state and pearls, not set. The importers asked that it be admitted free. The argument came up before Board III of the United States General Appraisers. The question was raised at the hearing as to whether the pearl is a product of American fisheries within the meaning of that phrase as used in the Tariff Law, and if it came within the purview of that law when it had once been exported to some other country and mingled with the commerce of that country and then being returned to the United States. The importers contended that the pearls should have been admitted free of duty under Par. 483 as an article "the growth, produce and manufacture of the United States returned after having been exported without having been advanced in value or improved in condition by any process of manufacture or other means, or under the contention in Par. 626 as a product of American fisheries. The regulations prescribed by the Secretary of the Treasury in Par. 483 were not complied with and the claims under this Par. were practically abandoned at the hearing.

The opinion of witnesses familiar with pearls from experience in examining and handling them was to the effect that the pearl imported from Mexico originated in the United States, this opinion being based entirely on their examination of the pearl and was considered by the General Appraiser to be insufficient to establish the fact that the pearl is a product of American fisheries. The protest was therefore overruled.

In his decision Judge Hay says:

This pearl was assessed for duty at 10 per cent. ad valorem under Par. 435 of tariff of 1897, which provides for diamonds and other precious stones "advanced in condition or value from the natural state by cleaving, splitting, cutting or other process and not set." Were it not for the Collector's letter we should assume it was assessed under Par. 436, which provides for pearls in their natural state not strung or set at the same rate of duty. The protestants contend that it should have been admitted free of duty under Par. 483 as an article "the growth, produce and manufacture of the United States, returned after having been exported without having been advanced in value or improved in condition by any process of manufacture or other means, or under Par. 626 as the product of American fisheries. The regulations prescribed by the Secretary of the Treasury under Par. 483 were not complied with and the claim under this paragraph was practically abandoned at the hearing. It is not entirely certain that Par. 626 covers pearls. The context of the paragraph excludes the thought that pearls were in the mind of Congress when the paragraph was enacted; yet under a technical construction of the language used, a pearl might be held to be a product of American fisheries. * * *

These questions, however, we do not deem it necessary at this time to decide, for the testimony, in our judgment, does not conclusively establish that the pearl in question originated in the United States. A number of witnesses called by the importers testified as experts that it did, they based their judgment, however, entirely upon an examination of the pearl, and while they were unable in any way to locate the part of the United States from whence it came, they believed it to have originated in the United States, as they had never seen pearls of that kind that had originated in any other country. These gentlemen, from long familiarity in examining and handling pearls, could undoubtedly tell that it was a fresh water pearl, but inasmuch as they were unable to tell in what State of the United States the pearl might have been found, some doubt is thrown upon their ability to tell, with any degree of certainty, that it originated in any State of the Union.

From the Encyclopedia Britannica, under the title "Pearls," we learn that river pearls or fresh water pearls are found in Scotland, Wales, Ireland, Saxony, Bohemia, Bavaria, Lapland, Canada and the United States. Prof. George F. Kunz in his work on the "Gems and Precious Stones of North America," says, relative to pearls: "At first few were found or rather few were looked for west of Ohio, but gradually the line extended and now Kentucky, Tennessee and Texas are the principal pearl producing States, and some pearls are sent north from Florida."

We refer to this to show that the section of the United States in which pearls are found are increasing and, to say the least, changing, so that it would seem practically impossible for any expert to tell the exact location from which a pearl came. From the testimony before us we are unable to reach the conclusion, as we would have to do, that a pearl found in Florida or in Texas, for instance, would differ materially from one that might be found in Mexico just across the border, or that because it is not yet known that pearls are found in Mexico, none have been found there; when it is a matter of common knowledge that the southern part of the State of Texas differs in no material respects either in climate or in geological formation from the northern States of the Mexican republic.

We think the testimony insufficient to establish the fact that the pearl in question originated in the United States. The protest is therefore overruled.

The Death of Samuel Schroeder.

BOZEMAN, Mont., July 1.—Samuel Schroeder, well known as a jeweler in this section, died Friday last at his home, 425 N. Black Ave., of tuberculosis, after a long and severe illness. The funeral, which was held Sunday afternoon from the Baptist Church, was largely attended. Rev. O. P. Bishop conducted the services, after which the remains were taken in charge by the Odd Fellows, of which the deceased had long been a member.

Mr. Schroeder was born in New Brunswick, N. J., in 1859 and had been in the jewelry business for over 20 years. Early in life he went to Centralia, Mo., where he was married in 1883 to Miss Levina Page. He started in the jewelry business in that town in 1887, and continued there for a number of years. He came to Bozeman in 1903 and has been prominent in the jewelry business in this town ever since. Mr. Schroeder built up a good trade in Bozeman and was highly esteemed in the community. Ill health interfered with his business recently, as he has been practically incapacitated by his trouble for the past six months.

The deceased is survived by a widow and the following brothers and sisters: Mrs. J. M. Peterson, Milwaukee; J. W. Schroeder, Miss Etta Schroeder and Miss Martha Schroeder, New Brunswick, N. J.; William Schroeder, Boston; Mrs. Joseph Hodapp, Munson, Pa., and Mrs. Hoefflin, Spotswood, N. J.

During July and August all the jewelry stores of Jackson, Mich., will be closed at 5:30 P. M.

Death of D. S. Porter.

JACKSONVILLE, Fla., July 1.—D. S. Porter, a well-known practical jeweler of this town, died at the Roseland Hospital, Sunday last, after a short illness. The funeral services took place yesterday afternoon at the Chapel of the H. S. Moulton Co., the services being conducted by the Rev. J. T. Boone.

Mr. Porter, who was 56 years old, was a native of New York, but had been a resident of Jacksonville for about 12 years. Prior to coming to this State, he conducted a jewelry business at Fergusonville, N. Y., for about 15 years and moved from there to Bartow, Fla., in August, 1896, coming to Jacksonville, shortly afterward. In January, 1898, he formed a partnership with A. Marx, under the style of the Marx, Porter Co., but this dissolved within the year, and Mr. Porter continued in business alone.

He was burned out in May, 1901, and losing all that he had, went to Titusville, where for a while he was employed by H. T. Thaler. In 1902 he came back to this city and started again, but of recent years he carried a small stock, depending principally upon his repair business.

The deceased had many fine traits and was highly esteemed by all who knew him intimately. He is survived by a daughter and son in New York.

F. E. Farley, Little Rock, Ark., Goes Into Voluntary Bankruptcy.

LITTLE ROCK, Ark., July 1.—F. E. Farley, who has conducted a jewelry store at 1005 W. 7th St., filed a voluntary petition in bankruptcy in the United States Circuit Court, Friday last, and has been adjudged a bankrupt. The schedules filed with the petition show assets consisting principally of a stock of jewelry which is valued at about $3,000 and accounts due. The liabilities on open accounts are $3,981 and the other debts aggregate $660, all but $60 of which is secured.

Mr. Farley, who is well regarded in Little Rock, was at one time in the employ of Albert Pfeifer & Bro., but has been in business for himself since August, 1906, at which time he succeeded H. G. Clok. Recently he has been hard pressed for money and could not meet his liabilities. Being threatened with suit by some of his creditors, he was forced to go into bankruptcy to protect others.

The first meeting of creditors has been set for July 11.

Market Price for Silver Bars.

The following are the quotations of silver bars in London and New York, as reported by Zimmermann & Forshay:

		London.	*New York. .999 Basis.*
June	27	24 3-4d.	$.53¾
"	29	24 7-8d.	.56
"	30	24 3-4d.	.55¾
July	1	24 11-16d.	.55½
"	2	24 13-16d.	.55¾
"	3	24 13-16d.	.55¾
"	6	24 7-8d.	.56

Charles Vogt, Allentown, Pa., has offered to the Allentown City League a silver cup to be awarded to the winner of the League championship. The cup will be of the same style as that which Mr. Vogt offered to the Sixth Ward League.

WM S. HEDGES & CO.

Importers of Diamonds and Precious Stones

170 BROADWAY

New York, June 30th, 1908.

Owing to the recent death of our Mr. James Hedges, the business heretofore carried on under the above style will be continued by the surviving partners under the same firm name.

We bespeak for ourselves the same consideration and confidence which you have accorded to us in the past.

Yours respectfully,

FRANK JEANNE
CHAS. L. ROOS

68 Nassau St.,
NEW YORK

Chas. L. Cummer is a new jeweler in Bemidji, Minn.

N. H. Burger has opened a jewelry store in Placerville, Cal.

Samuel Worhaftick has started in business at Shamokin, Pa.

A. Arenberg is preparing to open a retail jewelry and repair store in Lima, O.

Otto Waelti & Co. have opened a store in the Dupree building, Philip, S. Dak.

F. M. Knight has located in Madellia, Ia., as a watchmaker and repairer of clocks and watches.

Emil E. Haffa, diamond dealer, has opened an office at 125 S. 7th St., Philadelphia, Pa.

Mr. Grossman has started in business on his own account on Market St., San Francisco, Cal.

R. C. Hardwick, Hopkinsville, Ky., will open a branch store in Owensboro, Ky., about Sept. 1.

Crane Bros. have opened a store at Tomah, Wis., and will carry a full line of jewelry, watches, clocks, etc.

J. George Garnier has opened a new jewelry store and optical parlor at 518 Minnesota Ave., Kansas City, Kans.

W. L. Spencer has opened business with a stock of jewelry, watches and clocks at 520 W. 7th St., Los Angeles, Cal.

A new electroplating plant has been opened at 24 N. Walnut St., Youngstown, O., by Todd Brenner and Robert Brown.

The Hendrickson Jewelry Co., Augusta, Me., has been incorporated in that city with a capital of $60,000. Officers are: E. J. Pike, president, and H. M. Heath, treasurer.

The Ozark Diamond Mining Co. has been incorporated with a capital of $100,000 at Little Rock, Ark., with the following officers: President, R. D. Duncan; vice-president, Charles McKee; secretary, D. B. Russell.

The Garnet Abrasive & Gem Co. was recently organized in Los Angeles, Cal., with an authorized capital of $500,000. The officers are: President, F. Stansfield; vice-president, A. P. de Rostaing; secretary, A. J. Plowman.

An application for a charter has been made by the Madison Jewelry Co., Madison, Ga., to do a general business in jewelry, clocks and kindred lines. The capital stock of the corporation is to be $5,000 with the privilege of increasing it to $20,000. The petitioners who applied for the charter were: M. W. Clement, G. W. Cavenaugh, J. F. Stovall and Q. L. Willford.

The Killiam Jewelry Co., Pittsburg, Kans., moved recently to a new location in the new Commerce building.

P. C. Nelson, who sold his business in Watertown, S. Dak., is contemplating a trip to the Pacific Coast, where he may locate.

S. C. Powell, New York Diamond Dealer, Loses or Was Robbed of Diamonds Worth $35,000 in Chicago.

CHICAGO, July 3.—S. C. Powell, of S. C. Powell & Co., New York, either lost or was robbed of some $25,000 to $30,000 worth of diamonds the early part of last week. The stones were missed as he was riding up in an elevator in the Columbus Memorial building, 103 State St., Tuesday. He hastened into the office of Stern Bros. and notified the management of the building, as well as the police.

Every effort is being made to recover the diamonds, but without success yet.

The following statement was made by Mr. Powell as to his loss:

"I arrived at St. Louis early Monday from Kansas City. I transacted several deals while in St. Louis and displayed my diamonds to a number of wholesale jewelers. At one place I sold $2,000 worth, and was paid in certified checks. I also had $200 in cash in the wallet which was stolen.

"I went to the Planters' House in St. Louis for dinner last night, and immediately afterward took an Illinois Central train for Chicago, arriving here Tuesday morning at the Park Row station at 7.20. Then I took a hansom to the Auditorium Annex Hotel, got a lot of mail that was awaiting me and made arrangements for my transportation to Cleveland, where I intended leaving for this evening.

"After that I made my way to the office of Stern Bros. & Co., diamond importers, whose office is at 201 Columbus Memorial building, where I generally make my headquarters when in Chicago. I visited the washroom on the fourth floor, but observed nothing suspicious in the behavior of any one who came near me. I then turned to Stern's office and was about to display my $65,000 worth of diamonds, when, lo and behold, the black wallet had disappeared out of my right inside vest pocket!

"I immediately notified the Pinkertons of the loss and in co-operation with the detective agency, Detectives J. B. Baily and P. S. O'Connell, of the Central Detective Bureau, are at work. Every pawnshop is being carefully watched."

ST. LOUIS, Mo., July 3.—Diamonds valued at $35,000 are being sought in St. Louis by Pinkerton detectives on the theory that they were stolen from S. C. Powell, of S. C. Powell & Co., New York, while he was in Chicago last Tuesday, June 30. Though at first it was thought that the jewels disappeared from his person after he reached Chicago, Tuesday, attention is now turned toward St. Louis, and it is probable that the gems were either stolen or lost here. Mr. Powell offered a reward of $5,000 today.

Mr. Powell came to St. Louis, Friday, a week ago, from Kansas City. He stayed at the Planters' Hotel until 8 o'clock Monday night. He missed the diamond wallet in Chicago early Tuesday. The loss was at once reported to the Pinkerton detectives by Mr. Powell, who is a member of the Jewelers Protective Union. The missing diamonds were carried by Mr. Powell in a leather wallet fastened on the inside of his vest. Another wallet containing about $65,000 worth of assorted stones, carried in the other inside pocket of his vest, was safe.

The St. Louis investigation is in the hands of Henry W. Minster, resident superintendent of the Pinkertons.

Mr. Powell, in speaking of the matter to a CIRCULAR-WEEKLY reporter Monday at his office, 170 Broadway, New York, said that the goods were first missed by him while he was in the Columbus building in Chicago. Mr. Powell said: "The goods were in an inside vest pocket. I removed the vest in a lavatory for a short time, and when I went to replace my vest I noticed the loss. I went to the hotel in Chicago and from there to the Columbus building, and am sure that while en route from St. Louis to Chicago that the goods were in my possession.

"Another wallet in a pocket on the opposite side of the vest was not disturbed."

Mr. Powell said that he had been in business more than 20 years and had never before lost any stock. He is always careful to wear a vest in all kinds of weather, when carrying precious stones. The wallet in which the goods were carried was of black leather and about eight inches long by four inches wide. A reward of $5,000 has been offered for the recovery of the jewels.

The missing goods are described by Mr. Powell as consisting of 10 parcels containing goods mostly melee and quarter carats. There was one package of imperfect melange, ranging in weight from one quarter to one and a half carats. All the goods were of qualities from fair to very good. In all there were taken 378¾ + 1/64 carats of stones. The 10 papers bore the following numbers: 738, 799, 806, 807, 671, 831, 842, 843, 839 and 825.

The firm of S. C. Powell & Co. are members of the Jewelers Protective Union, and that organization, through the Pinkertons, is hard at work on the case.

The Craftsman's Secret.

WORK in London to-day, if it has become in all its branches less of craft, depends more and more, if its worker is to make any individual success, on "temperament." Temperament in that particular sense we must take to mean the quality of inspiring confidence in one's employer or one's customer. It is something akin to the artist's temperament; it is something akin to the charlatan's power to hypnotize mobs. The worker, if he is to rise out of the ruck, must impose his private personality upon the public. More than the old-fashioned attention to work is demanded nowadays.

Unless you wish to live for posterity you cannot any more put out good work—work that is solid and lasting—leaving it alone to push its way in the world and to bring you customers paying a good price. You must obviously produce work that is good in the sense of being attractive for the moment; that is the one essential. But also you must have temperament—the temperament that brings luck, because it makes you take the right step at the right moment. And you must have that sympathy with the humanity around you that will let you know just what modification of your product will for the time hold the sympathy of the public.—From *The Soul of London*, by Ford Madox Hueffer.

Hearing on Protest of Tiffany & Co. Against 60 Per Cent Duty on Pearls Matched But Not Strung.

Testimony was taken last week before General Appraiser Sharretts on a protest of Tiffany & Co., which involves the duty on 59 pearls imported to this country by the firm for Morris Guggenheim. The original question in the case was whether or not duty should be 10 per cent., the rate for pearls in their natural condition, or 60 per cent., the rate for jewelry. Tiffany & Co. paid the lower duty at the time of importation, in 1902, and later, when a Collector of Customs reliquidated the entry and demanded 50 per cent. more, the company refused to pay the additional sum.

Suit was brought by the Treasury Department and the case reached the United States Circuit Court of Appeals, which reversed the court below and held that the importers had pursued an improper course because they had refused to pay the additional duty. The court held that if the importers were aggrieved by the imposition of extra duties the proper course was to pay the money over under protest and then go before the Board of United States General Appraisers with the demand for the return of the money. This was done and the hearing last week was on the protest by the importers for the demand of the return of the $8,000.

Mr. Guggenheim appeared before Appraiser Sharretts at the instance of the importers to sustain the claim of the 10 per cent. duty. The witness testified that he purchased the pearls while in Paris of Tiffany & Co., after spending some time in having the pearls matched and selected as to size and color. He said that 59 pearls were selected, for which about $25,000 was paid. He testified that they were not strung before the sale was made to him, but that they were laid out on tissue paper for comparison and sizing while at the Tiffany store in London, and that afterward the pearls were taken to his stopping place and placed on a string for comparison with other necklaces.

It also appeared from the testimony that no further matching or selecting was made subsequent to the transaction, which took place in Paris. The pearls, 59 in number, were sent to New York from the store of Tiffany & Co. and strung, and a clasp attached, for the purpose of making them into a necklace suitable for use as such and were then delivered to Mr. Guggenheim from the New York office. The testimony was taken at this time for the convenience of Mr. Guggenheim, who was about to go out of town. A further hearing was adjourned until September.

In speaking to a CIRCULAR-WEEKLY reporter relative to the case, John A. Kemp, attorney for the Government, said: "I cannot believe that pearls, after having been selected and matched in such a way as is necessary to make a complete necklace, are pearls in their natural state simply because they are not strung in the form of a necklace." The importers were represented by Mr. King.

Sommer & Olson, Northwood, N. Dak., have dissolved partnership. Oscar Olson will continue the business.

Death of Samuel Clement Scott.

Samuel Clement Scott, formerly a member of the old firms of J. T. Scott & Co., and S. C. Scott Mfg. Co., New York, but who has in later years been connected with the firm of Henry Ginnel & Co., 54 Maiden Lane, New York, died at his home at Sandy Hill, N. Y., last Saturday, after a short illness. Mr. Scott was sick in January with pneumonia, but came back to the office the latter part of February. He did not seem well, however, and two weeks ago Saturday left the office for a vacation. A letter was received last week from his wife saying that he was ill and not able to come down to business until the middle of this week; a later report said that he was very low with Bright's disease, and Monday a telegram was received announcing his death, which occurred Saturday morning.

Mr. Scott was born at Huntingdon, Pa., Jan. 20, 1852, and was the son of J. T. Scott, who was prominent as a wholesale jeweler. Deceased became a member of the firm of J. T. Scott & Co., which firm his father founded in 1847, at Wheeling, W. Va., but which was moved to Pittsburg, Pa., and in 1870 moved to New York. James T. Scott, a son of the founder, became a partner in 1874, and after the death of the father he, together with his brother, S. C. Scott, continued the business. S. C. Scott retired in 1898, and Wm. P. Wallace became a partner of the concern.

The S. C. Scott Mfg. Co. was organized under New York State laws in October, 1898, and Samuel C. Scott became president and treasurer of this concern, which had offices at 13 Maiden Lane. This business was continued until August, 1904, at which time Mr. Scott made arrangements with Henry Ginnel & Co. to take charge of their diamond department, they taking his stock, and thus the S. C. Scott Mfg. Co. went out of business.

Mr. Scott came from distinguished ancestry. The portrait of his great grandparents, Judge and Mrs. Anthony, are now to be seen on the walls of the Metropolitan Museum in New York, having been lately acquired. His great, great grandfather, Michael Hillegas, who was born in 1729, and died in 1804, was the first Treasurer of the United States, and an important figure in the early history of the country. His portrait appears on new 10 dollar gold certificates.

Deceased is survived by a widow, a mother, two sisters and a brother. The funeral was held at King's Wood Inn, Sandy Hill, on Monday, interment being at Sandy Hill.

Burglars Get Rich Booty in St. Louis Jewelry Store and Pawnshop.

St. Louis, Mo., July 6.—Burglars broke into the store of Adolphe S. Levi, 617 Franklin Ave., and took gold jewelry and diamonds valued at $15,000, besides $900 in cash. Mr. Levi closed the store at noon last Saturday and discovered the robbery when he opened up this morning.

The burglars went through a coal hole into the cellar and bored holes in the floor in order to get into the jewelry store and pawnshop.

The police have no definite clues.

Two Men Captured in Maiden Lane on Charge of Attempting to Steal Diamonds.

Great excitement was caused Monday about noon in the Maiden Lane district by the arrest of two men who, it is alleged, attempted to steal a package of loose stones from the firm of Cooper & Forman, manufacturing jewelers, 3 Maiden Lane, New York, and who were detected in the attempt and arrested and afterward taken to police headquarters, Mulberry St., where they were searched and held for examination to-day in $1,000 bail.

The two men called at the office of Cooper & Forman and asked to see some loose diamonds suitable for setting in earrings. The men had a card from a well-known firm in the Maiden Lane district which they presented to Mr. Forman and were taken into his private office, where he displayed, for their selection, a number of packages containing diamonds. One of the men sat down at the table with Mr. Forman and the other one sat nearby at the same table. A selection was made, and when Mr. Forman's attention was attracted in another direction a package of diamonds was slipped under the hat of one of the men and concealed beneath the sweatband.

During the time that the sale was under way an employe, William Stenson, had been watching the transaction from an adjacent office unobserved by the alleged crooks, and when the diamonds were concealed he hastily seized a large revolver and hastened to the room, where he accused the men of the theft.

The young man then rushed out of the office and called for the police, whereupon Patrolman Daly rushed to the offices just in time to seize one of the men as he was about to make his escape. The other man was captured by Lieutenant Monahan on the fifth floor and taken by him and Patrolman Daly to police headquarters. John Kramer, a salesman, also assisted in the capture. The package of diamonds which the men are alleged to have taken was valued at about $600.

At police headquarters the men gave the names of Frederick Kenny and J. D. Schenck. The police say that Kenny has had a criminal record which dates back to 1901, when he was arrested in Newark, afterwards serving in the Caldwell Penitentiary, and was again arrested in Boston, Mass., on a charge of grand larceny and imprisoned in the Charlestown States Prison for not less than four nor more than five years.

Mr. Forman, in telling about the attempted robbery, said: "The men came to our offices and presented a card from the Alvin Mfg. Co., 54 Maiden Lane. They stated that they were buying for the employes a present for a superintendent of a concern where they worked and that they were deputized to purchase some diamond earrings for his wife." They said they had bought some silverware for the superintendent.

"I took them into the private room," said Mr. Forman, "and locked the outside door. I had a small box containing diamonds and weighed out a pair of stones valued at $100. The men said they wanted something more costly, and as I started to weigh out a pair worth about $200, one of the men quickly took a paper of stones from the box and concealed it in the leather band inside of his hat.

"As I turned around our bookkeeper, William Stenson, came into the room with a revolver, and said, 'Sit down, gentlemen,' whereupon one of the men took his hat up and the package fell out on the floor. They then started to get away, and Mr. Stenson called out an alarm."

The revolver was not loaded, and in speaking of the matter Mr. Forman spoke highly of the quick wit and nerve of his bookkeeper.

A Word on Scientific Gems.

THE following letter anent scientific gems from the managing director of the Goldsmiths & Silversmiths' Co., London, was recently published in the London *Financial News:*

To the Editor of the *Financial News:*

Sir—Now that the "scientific manufacture of diamonds" bubble has been pricked it is to be hoped that the last has been heard of all such "scientific" productions, notably those of rubies, emeralds and sapphires. Scarcely a day passes but that the question arises many times in some form or other, and a great deal of time is occupied by the staff of this company in indicating to a now disillusioned public the fraudulent nature of such "scientific" efforts.

Briefly, one may as well assert the successful artificial production of gold, or a full-blown scented rose, as to claim the production of precious stones, a work which nature has occupied herself millions of years in accomplishing. The thing—the fraud—has been put forward so frequently in the past that one wonders at having again to refute it; hut so much has been written recently in the public press, and discussed in private, concerning the genuineness of diamonds, their allied gems, and other precious stones, as well as their imitations, that my company may be pardoned if they ask for a little space in your valuable paper to satisfy not only their own clientele, but the public, who have some interest in knowing that their possessions are of the value and rarity they have always attached to them.

There is no need to discuss variations of market value; they are relatively insignificant. The important thing is to reaffirm the fact that the diamond, ruby, emerald or sapphire cannot be imitated. Any assertion to the contrary can be dismissed at once with the same assurance as any concerning imitations of gold and silver. It has been claimed, however, that the precious stones can be chemically reproduced and successfully pass all tests required of nature's gems. We know the result of this claim in the case of diamonds, and it is not necessary to refer to the somewhat painful details of the recent case to dispose of it in the same way that it has been disposed of scores of times before.

The publicity given to these "scientific" statements in influential quarters, and the resulting violent fluctuations in Stock Exchange securities covered by them, would make the reason for foisting the statements upon unsuspecting cable correspondents sufficiently obvious. It may be now reasonably expected that no such operations will be successful in the future, whether performed upon the editor, his correspondent, or his public.

I am, sir, yours obediently,

W. H. WILLOUGHBY,

Managing Director Goldsmiths & Silversmiths Co., Ltd., Regent St., W.

Because a trunk containing jewelers' tools was destroyed in a railroad wreck in Dakota, R. L. Wells, Portland, Ore., obtained judgment against the Great Northern Railway Co. for $390.45, recently. The suit asked $469.70 damages. Wells came to Portland from Chicago and on his arrival learned of the destruction of his trunk. As the railroad company refused to pay the damages he demanded he brought the suit.

Milton Sandfelder, representing eastern manufacturers, is in San Francisco, Cal.

Traveling salesmen in Los Angels, Cal., recently, included: Fred Dorrance, Dorrance-Batten Co.; E. V. Saunders and J. J. Valentine, A. I. Hall & Son, all of San Francisco, Cal.

Traveling salesmen visiting Boston, Mass., during the week, included: R. H. Schley, Sloan & Co.; Harry Higham, Alling & Co.; C. H. Crane, Strobell & Crane; Frank I. Locklin, Merrill Bros. Co.; E. Cooper Stone, Jones & Woodland Co.

W. H. Hovey, traveler for J. B. Whitney & Co., San Francisco, Cal., has left for the south with his lines of silverware and clocks. Mr. Johnson, traveler for Julius A. Young, San Francisco, Cal., leaves, this week, for the south with Fall lines of glass and silverware.

Among the traveling salesmen in St. Louis, Mo., the past week, were the following: George W. Beardsley, Allsopp & Allsopp; Mr. Curran, A. J. Hedges & Co.; Eugene C. Holbrook, Ferdinand Bing & Co.'s Successors; Emil Herbeck, Herbeck-Demer Co.; J. H. Carmichael, Bride & Tinckler; C. T. McKenna, Kelly & Steinman.

Commercial travelers calling on the trade in Omaha, Nebr., during the past week, were: Wm H. Torrance, Leys, Christie & Co.; H. F. Kneeland, G. T. Sutterly & Co.; F. E. Quinn, Samuel Buckley & Co.; L. M. Frank, Buffalo Jewelry Case Co.; Charles Ballin, Ballin Bros.; A. A. Bruckner, W. A. Pickard, J. J. Cohen; M. E. Van Bergh, Van Bergh Silver Plate Co.; M. B. Bernstein, Tuthill Cut Glass Co.; M. B. Bernstein, Tuthill Cut Glass Co.; P. A. McCourt, H. C. Fry Cut Glass Co.

Albany, N. Y.

Mendel Levitz, 3842 N. Pearl St., expects to have his catalogue ready, July 15, for distribution to the trade.

A report from Keene Valley recently states that the general store of O. E. Partridge, of that town, was entered by burglars and about $100 worth of watches and jewelry removed. The cash register containing small change was left untouched and the safe containing quite an amount of money was not molested. No arrests have been made.

John Fuhrman, 95 N. Pearl St., accompanied by a local detective, went to Rochester recently for the purpose of identifying some articles of jewelry found in the possession of a man named Valentine there. The jewelry answered the description of the articles stolen from Mr. Fuhrman's store, May 20. Two men were arrested for the crime, but it was believed that a third man was implicated. One of the men arrested here pleaded guilty recently and was sent to Danamora prison for three years. An effort is now being made to connect Valentine with the crime here, but he denies that he had anything to do with it.

A fire alarm was turned in one evening last week, from John C. Pierik's store, Springfield, Ill., where a flue was found to be burning. A colored porter in the basement had been burning paper in the furnace and the flames were so strong that they had gone through the chimney, which resulted in the alarm.

Los Angeles.

Dr. Bert Collins, optician, is now with Julius Wiesenberger, 453 S. Broadway.

A. Shaddow, formerly with the J. P. Trafton Co., is now with A. B. Cohn & Bro.

Ernest Pollock, of Pollock Bros., Riverside, made a trip to this city by automobile last week.

Ed Turner, of E. W. Reynolds Co., is making a tour of the smaller towns of southern California.

J. H. Birnbaum, of Birnbaum Bros., who has been ill for some three weeks, is again able to be at the store.

John O. Slemmons, representative of J. B. Bowden & Co., New York, is spending July with his wife at Coronado Beach.

Mr. Leatart, formerly of Janes & Leatart, of this city, but now with Geo. F. Blakeslee, Tonopah, Nev., has been here on business.

C. C. Brooks, representative of Morgan & Allen, who has been here with his wife for a short time, left for home last week.

L. B. Cohn, senior proprietor of the Diamond Palace, is spending a few weeks at Wheeler's Hot Springs, in the Ojai Valley.

J. W. Wiesenberger has been making changes in his store windows, resulting in a decided improvement in their appearance.

Henry B. Crouch has taken two additional rooms over his store and is already occupying them with his repair department.

Louis Nordlinger, of S. Nordlinger & Sons, is spending a few weeks at Coronado Hotel. He is accompanied by Mrs. Nordlinger.

A. E. Baranger, formerly with E. W. Reynolds Co., has started in the jewelry business on his own account at San Jacinto, Riverside County.

Mrs. Glass and Miss Jennie Glass, mother and sister of Clem S. Glass, manager of the H. J. Whitley Co., have gone east for a trip of two months or more.

William F. Marshall, formerly with Burr Freer, San Francisco, has taken a position as traveling representative of Hambright & Walsh, covering the Pacific coast west of Denver.

H. T. Brown, representing Gilmore & Lee, is making a trip through the smaller towns between here and San Francisco, going via the San Joaquin Valley and returning by the coast route.

George A. Brock, of Brock & Feagans, accompanied by Mrs. Brock, started yesterday for an extended tour through the east. He will visit St. Paul, then proceed to Maine, returning by the way of New York and other eastern cities, and stopping briefly at his old home in Joliet, Ill.

J. G. Donavan, of J. G. Donavan & Co., started yesterday for New York and other eastern cities to buy goods for stocking the new store into which he is to move. He expects to be gone five or six weeks. He will be accompanied as far as Chicago by his wife and son, who will remain there during his stay in the east.

Jewelers from neighboring towns who have visited this city within the past week include J. H. Padgham, of J. H. Padgham & Son, Santa Ana; Hermann Schitterer, of Hare & Arnold, San Diego; D. L. Neilson, Monrovia; J. L. Foote, Fullerton; W. C. Guerth, Redlands; Mrs. La Breche, Santa

Paula; Joel Kloss, Corona. Mr. Kloss was accompanied by his wife.

A. T. Werner, a jeweler who occupies a room adjacent to Howard F. Wallace, wholesaler, 414½ S. Broadway, lost $700 worth of gold goods by burglary. The loss, however, was covered by a burglary insurance policy. The burglar did not venture to interfere with Mr. Wallace's place, which was amply protected by burglar alarm, although an adjacent shoe store lost $500 in cash. Mr. Werner's safe and that in the shoe store were both blown open with explosives.

Ira Smith and daughter, formerly of Pomona, Cal., have formed a co-partnership with F. M. Taylor, Pasadena, under the firme of F. M. Taylor & Co. The new firm occupies a handsome store, one side being fitted up for an optical department and the other for the sale of jewelry. A unique and attractive feature of their window display is a large clock with a dial, covering the greater portion of the window.

A new new gem company has been incorporated under the title of the Garnet Abrasive & Gem Co. The capital stock is fixed at $500,000. The officers are: F. Stansfield, president and general superintendent; Albert R. de Rostaing, vice-president; A. J. Plowman, secretary. The officers, with W. E. Jones and P. H. Morgan, constitute the board of directors. Mr. Stansfield is present manager of the Western Gem Co. and Mr. de Rostaing, who is to be the designer for the company, is an artist. The company owns three claims in Riverside County, which are expected to yield tourmalines, beryls and associate gems, and it has also a turquoise property. It is proposed to fit up a large and handsome store in this city for a sales room. Mr. de Rostaing will decorate the new place of business, and it is expected to be one of the "show places" of Los Angeles.

Pacific Northwest

In a fire at Tenino, Wash., June 23, F. S. Scholz's store was burned, the loss being about $2,000.

Sunday, June 23, the workshop of the Diamond Drill Co., at Rossland, B. C., was broken into and 18 black diamonds and 60 diamond chips, the whole lot valued at $12,000, were stolen. The stones were the property of Stone & Knight, Spokane, Wash. The workmen locked up the building on leaving it Saturday night, but neglected to put the diamonds into the safe. When they returned the door was unlocked and the stones gone. It is thought that the robbery was committed by persons familiar with the place.

On June 20 the court appointed A. F. Nichols as receiver of the business of Henry Wilbur, a jeweler at Seattle, Wash., who left the city a few days before that date. On checking over the articles in the store it was noted that some gold watches, which had been left for repair, were missing and the stock of the store contained little of any value. Harry Goodman, a diamond merchant, accuses Wilbur of taking away three diamond rings valued at $260. Wilbur, who is about 28 years of age, left Seattle in the company of John D. Palado, a barber, who was heard of in Spokane since they left.

San Francisco

TRADE CONDITIONS.

The gradual improvement which has been going on in all lines of business for the past few months continues, even in midsummer. While a few say that the season's quietness has lowered their sales somewhat, most of the firms find that the business for June has been fully as good as that of the month of May and some find a small increase in the amount of sales. Taking into consideration the usual falling off in trade which is expected by the dealers, the situation is materially improved. In a statement issued a few days ago by the North American Bank of San Francisco, a very optimistic report was given of the conditions on the Pacific Coast. The officers of the bank said that collections are about back to normal, while enormous reserves are piling up in the banks. The money rate is very low and industries of all kinds which have been suspended for some months are being resumed. The amount of building in San Francisco has increased greatly during the month and plans are being drawn for many more structures to be erected in the immediate future. The business outlook is brighter than it has been for many months.

C. J. Noack, Sacramento, was a San Francisco visitor last week.

E. V. Saunders, of A. I. Hall & Son, is in Los Angeles on a business trip.

Arthur G. Prouty, Napa, recently visited the wholesale trade in San Francisco.

Frank Chester, with Nordman Bros., returned, June 27, from his wedding trip.

Jos. Nordman, of Nordman Bros. Co., will leave shortly for his Summer cottage at Mt. Reo.

Jas. A. Sorensen, president of the Sorensen Co., will leave, the last of the week, for his vacation at Hoberg's Resort.

The trustees of the Stanford University have completed the sale of the jewels of the late Mrs. Stanford, realizing $500,000.

Albert Lee, manufacturers' agent, returned recently from an eastern trip. While away he secured the agency for several new lines.

A. E. Morro, Los Angeles, has been in San Francisco for several days, calling on the trade and buying additional stock for his new store.

On his way home from his vacation at Santa Cruz, L. C. Koberg, the Healdsburg jeweler, stopped in San Francisco and called on some of the firms here.

Robert Bastime, who returned recently from his vacation, is much improved in health and has again taken up his work as city salesman for the Alphonse Judis Co.

M. L. Levy, of M. L. Levy & Co., manufacturing jewelers of San Francisco, accompanied by his wife and son Lester, is on a three weeks' trip to the Yosemite Valley.

The baseball team of the wholesale jewelers played a team from the Gorham Rubber Co., recently, defeating them by a score of 11 to 5. The jewelers' team has been playing all season and has been defeated only twice.

C. J. Auger, Van Ness Ave. and Market St., has secured a new store at 118 Kearney St., between Post and Sutter Sts., in the new business district and near the location which he had before the fire. He is moving into his new quarters.

R. H. Krause, of the California Jewelry Co., and Fred Lezinsky, of Fred Lezinsky & Co., both of San Francisco, and Mr. Sadler, the representative of the Dennison Mfg. Co., were registered last week at the Paso Robles Hotel, Paso Robles, where they have shaken off the cares of business and are enjoying the ocean breezes.

J. R. Jenkel, now located on Van Ness Ave., has leased a store on Market St. and will move at once to the downtown district. He will be the first one of the Van Ness Ave. jewelers to move down. Others are preparing to move in from the more remote districts, but most of the Van Ness Ave. stores will be maintained for some time yet.

Hammersmith & Co. supply all the medals awarded the victors at the athletic games conducted in the Stadium at Golden Gate Park on Independence Day. They have also received the orders for the trophies to be awarded in the automobile and motorcycle races in Tanforan Park.

Some time ago Miguel L. Cornejo was arrested while trying to smuggle pearls into the United States from the Republic of Mexico. He furnished $4,000 cash bail and was released. He forfeited the bail and disappeared. So United States Marshal Elliott has announced that on July 9 the confiscated pearls will be sold to the highest bidder. The lot consists of 503 pearls and two boxes of mother-of-pearl. Marshal Elliott has received a private offer of $12,000 for the lot. One-half of the price of the gems will go to the informers.

Charles Hogan, alias Bert Bell, who is wanted in this city on a charge of robbery, has been located by the police in Sacramento. He is in jail in that city, and detectives will be sent from here to bring him back. Hogan, alias Bell, is said to have been implicated in the hold-up of J. E. Paulson, the jeweler who was robbed by a trio of footpads at Steiner and Page Sts. on the night of March 18. The robbers got two gold watches and $195 in cash. Two men, George Sullivan, alias Frank Williams, and Frank Sheppard were taken into custody, but the third man escaped and the police were unable to find a trace of him until they got word that he was serving a sentence in the Sacramento Jail for vagrancy.

Omaha.

Grover Peterson, with the Sol. Bergman Jewelry Co., is spending his vacation at Lake View.

O. C. Homan, of the C. B. Brown Co., has returned from a visit to his parents in Des Moines, Ia.

W. B. Lodge, Lander, Wyo., is in the city. Before returning home he will visit his parents in Walnut, Ia.

W. W. Bell, Yutom, Nebr., and A. R. Stoehler, Macedonia, Ia., were in the city last week purchasing stock.

It is claimed that the death of A. B. Hubermann tied up $800 in cash of James L. Gaines, manager of the Masconoma Colored Club, and he has begun suit in the District Court against the administrators of the jeweler's estate, Henry C Hubermann and Charles A. Grimmel, to get the money. He says May 15, 1907, he gave Mr. Hubermann $800 to keep for him. Afterwards the money was deposited in the First National Bank to Hubermann's credit. The estate, according to the petition, will not pay the creditors more than 50 cents on the dollar, and he asks the court to order the return of his money in full.

Epidote

Handsome—Odd—A Good Seller

Epidote in the compact variety forms a beautiful addition to our large line of cabochon cut stones for rings, scarf pins, links, shirt waist sets, etc.

The colors range from a pistachio green to a shading and combination of this green and a clear Pompeiian red.

This stone is 6–7 in hardness, 3.25 to 3.50 specific gravity, and takes a high polish.

We are cutting Epidote in regular as well as special sizes at reasonable prices.

Special Arrangements for Out-of-Town Trade Write for Information

Canada Notes.

The assets of E. Langlois & Co., Quebec, were sold July 2.

M. L. Clappison, Hamilton, Ont., is selling out by auction.

S. T. Vanstone, Burks Falls, Ont., has suffered loss by fire.

M. Cochenthaler, Montreal, has obtained judgment against A. Marks for $192.

Mark T. Thomas & Co., Ottawa, have been succeeded by H. W. Montgomery.

J. J. Kelly has a bill of sale against Geo. B. Silkstone, cutler, Toronto, for $450.

V. E. Paridis has been appointed curator of the estate of E. Langlois & Co., Quebec.

Edmund Eaves, Ltd., Montreal, has issued execution against Nap. Royal for $220.

H. W. Montgomery has purchased the jewelry business of Mark T. Thomas & Co., Ottawa.

Ryrie Bros., Ltd., Toronto, have issued a writ for $341 against Hugh Gunthrie, Guelph, Ont.

M. & A. H. Fox, cutlery, etc., Victoria, B. C., have suffered loss by water. The insurance covered the loss.

R. J. Abbs, western traveling representative of the Goldsmiths Stock Co., Toronto, is spending his vacation in Muskoka, with his family.

David Williams, traveling representative of P. W. Ellis & Co., Toronto, returned this week from a trip to Manitoba. He has gone to take a vacation at Algonquin Park.

Out-of-town jewelers calling on the Toronto trade this week included H. W. Herchmer, Bobcaygeon; N. F. Babb, Stratford; George Hynds, Acton, and Nelson McLeod, Cannington, all of Ontario.

After the Three Rivers fire, Napoleon Lemieux, jeweler, of that place, opened his safe and found that the contents had been practically ruined. The fire had not actually pierced the safe, but the jewelry was baked. It has not yet been gauged how much loss has been sustained, but it is quite certain that it will prove very heavy.

Trade Gossip.

A very novel device, which will no doubt be found exceedingly handy by all jewelers who use soldering tweezers, was recently invented by Ernest Pollisky, 731½ Felix St., St. Joseph, Mo., who has applied for a patent on the same. The tweezers are attached to two points at right angles, which can stick into the charcoal block, and by reason of double hinges the tweezers may be used in any position.

The Nassau Bank of New York has notified its patrons in the jewelry trade that arrangements have been made for those who wish letters of credit to use in Europe, by which the same can be charged against their account at the bank so that upon returning from Europe, when the book is balanced, the depositor can get back all the vouchers which he drew while abroad. In addition to letters of credit the bank is prepared to furnish travelers' checks payable in all parts of the world.

E. A. Lewis, of Lewis & Van Sickle, Oskaloosa, Ia., is back from a trip to New York.

Attleboro.

C. A. Marsh & Co. will close their factory July 18 until Aug. 3.

Alexander Chadbourne has opened the Chicago office of J. E. Blake & Co.

The Watson & Newell Co. closed on Saturday for a two weeks' shut-down.

George E. White, of White & Rounseville, is enjoying the sea breezes at North Falmouth during the hot days.

In the Jewelers' League, Saturday, the D. F. Briggs Co. beat R. F. Simmons Co. and the Horton Angell Co. won from Bates & Bacon.

The C. D. Lyons Co. gave a dinner to its employes at Lake Pearl on Friday. After dinner the employes enjoyed games and other diversions.

J. I. Keegan and H. J. Rosencrantz, known as the famous "Irishman and Jew" team of salesmen in the Orient, who represent the D. F. Briggs Co. and other houses, are in Europe.

The R. F. Simmons Co., Bliss Bros. Co. and W. E. Richards & Co. closed, July 3, and will not reopen until July 13. The closing is to enable the installation of a new boiler, which is necessary.

A persistent rumor has been in circulation that one of Attleboro's largest concerns contemplated removing to Pawtucket. At the factory the owners are silent and will make no comments at this time.

Thomas E. McCaffery will advertise the jewelry business of Attleboro at the Denver Democratic convention and at the Elks gathering at Dallas, Tex. He took with him last Friday a big umbrella presenting pictures of Attleboro jewelry factories and containing catchy epigrams.

The P. J. Cummings Co. through its treasurer, Helen Cummings, has submitted the following report: Treasury stock, $29,400; machinery, $20,277; cash and debts receivable, $26,392; manufactures and merchandise, $26,701; good will, $55,000; total, $157,770. Capital stock, $100,000; accounts payable, $18,473; floating debt, $17,551; profit and loss, $21,746; total, $157,770.

William P. Stowe, a well-known local jewelry salesman, gave a dinner at his home in Edgewood, R. I., last Thursday to commemorate the completion of 40 years as a traveling salesman. A party of 26 Attleboro, North Attleboro and Providence friends were present to assist in the observance. Mr. Stowe is now a member of the traveling staff of W. H. Wilmarth Co., with whom he has been connected for 25 years. Previously he was in the employ of the Gilchrist Co., of Boston, and the Plainville Stock Co. His genial and pleasant nature has won for him a host of friends.

The old "Steam Power" building has been condemned and the tenants will be obliged to seek new quarters. July 1 notice was given to C. D. Lyons Co., E. D. Gilmore & Co., Rothschild Bros. Co., A. S. Ingraham and A. L. Leavitt that after that date the owners would not be held responsible for any mishaps that might occur. The tenants can occupy the building until they secure other quarters, but they do so upon their own responsibility. Coming at this time it is a severe blow to the tenants, as there is but little space that is available at the present time. It is a serious problem that confronts the firms, and unless more quarters are provided it may be necessary for one or two to seek quarters elsewhere temporarily. The members of the firms are not prepared to state just yet what they intend doing. The old Steam Power building was erected in 1859, and has been occupied continuously. When the place is vacated it will be removed, and on the space it is believed a large modern factory will be built.

North Attleboro

Theron I. Smith is spending the Summer at Oak Bluffs.

G. Herbert French is spending the Summer at Harwichport.

John Thompson has opened his Summer cottage at Lake Archer, Wrentham.

Clarence W. Fisher, head of E. I. Franklin & Co., is enjoying a vacation in Nova Scotia.

Louis Blackinton, western representative of the W. & S. Blackinton Co., is at the factory.

George W. Cheever, of Cheever, Tweedy Co., has opened his Summer cottage at Oak Bluffs.

Frank P. Kennedy, New York representative of Paye & Baker Mfg. Co., was in town over July 4.

Daniel M. Chisholm will have charge of the New York interests of Bugbee & Niles Co. during the month of July.

Frank E. Whiting, Chicago representative of Whiting & Davis, will move his household effects to Chicago this month.

The disbursement of a 25 per cent. dividend to the depositors of the defunct Jewelers' National Bank will require $160,000. The checks will be issued about Aug. 1.

Ira Robinson, foreman of the G. K. Webster Co., was married yesterday to Miss Bertha E. Bloss, of South Attleboro. The employes of the concern presented Mr. Robinson last Friday with a chest of table silverware.

Alpin Chisholm, of the Bugbee & Niles Co.; Elton B. Fisher, of E. I. Franklin & Co.; K. L. Taylor, western representative of Riley & French, and G. C. Hudson left Friday on a trip to St. John, N. B. Returning, they left St. John on Monday and will arrive home to-day.

The A. B. Lindroth Co. has engaged room in one of the company shops. The space is that formerly occupied by F. H. Cutler & Co. previous to their removal to the Manufacturers building. The new concern expects to begin at once to equip the place and get ready for the Fall business.

Speaking about the strange and freakish things cyclones can perform, F. M. Barney, of Elm Creek, Nebr., sent THE CIRCULAR-WEEKLY a photograph of a lower part of a caster which had been forced through a bough of a walnut tree. This caster had been on a table which was standing ready for supper when a tornado struck the house June 4 last. The tornado destroyed the house and in some way unscrewed the caster from the base, the latter being carried a long distance and forced through the tree. The same storm struck another home and carried a watch a mile. When found the screw back had gone from the timepiece, but the crystal and movement were in good condition.

Harrisburg, Pa.

Cohen Bros. have recently added an optical department to their large store at S. George and King Sts., York.

S. R. Kauffman, Sunbury, has opened a store in Beaver Springs, Pa., in the room formerly occupied by O. M. Klose.

I. M. Rothenberger has purchased the Colonial Hall property in Lennington, where he will open a store. He will continue his store at Wernersville, Pa.

Jacob C. Schmidt, Lebanon, has rented the Blue Rock property along Sevatara creek, near McGillstown, and is now erecting a comfortable Summer cottage on the place.

Announcement was made last week of the successful bidders for furnishing State supplies for one year. The contract for optical instruments was awarded to the Kendall Optical Co., of this city.

The friends in this city of Mr. and Mrs. G. W. Landis, Newville, this State, were greatly pained to learn of the death, June 27, of their daughter, Miss Emma Landis, which occurred suddenly at her home.

The local police effected a clever capture last week in the arrest of J. W. Wallingford and I. J. McClure, who are wanted in Baltimore and Washington for working off bogus checks on business men and banks.

As was expected, Judge Kunkel last week refused to grant a charter to the Business Association of Pennsylvania, which sets forth that it was for the purpose of securing the co-operation of the business men of Pennsylvania to procure the amendment of the mercantile tax laws of the State.

Boston.

The death is announced at East Bridgewater, Mass., of George L. Jones, who had many friends in the Boston trade.

Joseph H. Studholme, Waltham, has filed a voluntary petition in bankruptcy. His liabilities are $967 and his assets $300.

Henry Cowan, with his wife and daughter, are registered at the Shelbourne Hotel, Atlantic City, N. J., where they will stay for some time.

T. F. Jackson, now of Chicago, but formerly of the Boston firm of Jackson & Lill, was in this city during the past week, representing a Chicago concern.

A. W. Armington, buyer for the Shreve, Crump & Low Co., sailed July 4 on the *Republic* from this port on his annual Summer buying trip. He will visit the diamond centers abroad.

The Boston Jewelers' Band, of which E. W. Rollins, salesman for Nelson H. Brown, is the manager, and nearly all the players are connected with jewelry concerns in this city and suburbs, will play for the Chelsea Y. M. C. A. on the occasion of the annual field day of the organization this month.

The largest creditors of Albert G. Farnham, the Lawrence jeweler whose petition in bankruptcy was noted last week, are: Arthur B. Lovering, Lynn, $1,700, secured; Moses L. Farnham, Andover, $479; Queen City Ring Mfg. Co., $148; Oscar E. Place & Sons Co., $317; L. I. Pendleton & Sons Co., $136; Albt. Walker Co., $130; Henry Cowan, $113; A. Paul & Co., $456; I. Warshauser, $255.

AMERICA'S NEWEST GEM AMATRICE
The Most Remarkable, Beautiful and Individual Matrix Precious Stone Ever Offered to Jewelry Wearers.

Entirely superior to any other matrix gem in permanent jewelry merit.

COLOR—Wonderful shades of green combined with infinite forms of matrix effects in shades ranging from subdued pink through tans and light browns down to very dark brown. Peculiarly adapted to gold jewelry.

HARDNESS AND POLISH—Matrix and color polish equally and brilliantly, and there is no roughness nor any porosity in the polished matrix. Amatrice is materially harder than turquoise.

INDIVIDUALITY—The unequaled variety of matrix effects makes each stone an individual gem. Exact duplicates do not exist, but beautiful matching effects for sets are obtainable.

SALABILITY—At retail the most salable of matrix gems, because the range of color combinations and innumerable matrix effects appeal strongly to the individual buyer.

RETAILERS SHOULD REQUIRE MANUFACTURERS TO SUPPLY DIFFERENT TYPES IN EACH LOT BOUGHT

Amatrice Positively Does Not Fade Nor Change Color.

Buy through the regular trade. Only one Amatrice mine in the world owned solely by

OCCIDENTAL GEM CORPORATION
216-217 Dooly Block, Salt Lake City, Utah

A. J. Bruneau, Secretary, will be at Manhattan Hotel, New York, until July 15th, 1908.
Descriptive folders for distribution to public furnished by manufacturers with each lot of Amatrice jewelry.

Pittsburg.

TRADE CONDITIONS.

Wholesalers report a material improvement in business and a corresponding improvement in collections, especially in the agricultural districts. Pittsburg merchants have been rather lenient with customers, in the matter of collections and have given creditors long time in settling their accounts. Business men are encouraged, too, because of renewed activity in the steel industry, which is looked upon with favor. Large orders are being received for raw and finished products. There is also greater activity among local railroads, and all things considered conditions are much brighter than they have been.

E. H. Will is in Europe and expects to be abroad several weeks longer.

A. A. Gillespie and Sam F. Sipe both sail for Europe from New York, July 15.

Paul Butler, with the George B. Barrett Co., has gone east to spend his vacation.

Samuel Stewart is camping at Silver Lake, where he expects to remain for several weeks.

The following out-of-town jewelers were in Pittsburg last week: E. P. Seaman, Monongahela; Albert Munhall, Freeport; John Linnenbrink, Rochester; J. R. Thorn, Toronto; Mrs. Katzenmeyer, Burgettstown; J. F. Murphy, Donora; George Eckert, Jeanette.

Morris Biederman, who some time ago filed a petition in voluntary bankruptcy, recently asked to be discharged, but the action was opposed by some of his creditors until certain charges pending are disposed of.

The employes of E. P. Roberts & Sons Co. challenged the employes of the W. J. Johnston Co. to play a match game of baseball, and next Saturday has been set for the battle. The game will be played on the Western University grounds, North Side. Following will be the line-up for the Johnston team: Smith, rf.; Gray, ss.; Jones, 1b.; Stehle, p.; Johnston, c.; Cronin, 3b.; Koenig, 2b.; Letzkus, cf.; Ward, lf. The Roberts team will line up as follows: Struka, 1b.; Parlett, ss.; Fogel, 2b.; Miller and Freund, c.; Saran, 3b.; Douglas and Klein, rf.; Bastor, cf.; Stediford, lf.; Kurtz, p. Refreshments will be served during the game.

George West, of West, White & Christy, says that John Collins, the man recently arrested in Jeffersonville, Ind., and sent to prison for 10 years, who was found to be the man who robbed sample trunks belonging to the firm, will be tried in Ohio at Canton just as soon as he serves his 10-year sentence for other crimes. Mr. West says that he understood that if Collins had been given a 20-year sentence for his Indiana offenses the Ohio charge would not have been pushed, but the Pinkerton Detective Agency is now determined to have him tried for stealing from the Pittsburg firm, and he will be taken to Canton at the expiration of his Indiana sentence.

Frank J. Walker and Ralph Waldeman, charged with smuggling diamonds and other jewelry into the United States, on which they paid no duty, are still in jail. The action brought by the United States Government to sell the goods will be disposed of this week in the United States Court. The Government has custody of the goods. No other charges have been lodged against the men, and it is doubtful if there will be further prosecutions. Abraham Bros.' representative, of Birmingham, England, who is here and has laid claim for the goods, is not expected to leave the city until the court acts on the forfeiture charge. Proceedings will, however, be begun to secure possession of the goods, valued at $10,000, left in Kingston, Jamaica, by Walker, which are being held in bond. Walker had intended going back to bring them to this country to dispose of, but his arrest here spoiled his plans.

Philadelphia.

Emil E. Haffa, diamond dealer, has opened an office with Jacob Rubenstone & Co., 125 S. 7th St.

George W. Welzel, manufacturing jeweler, 125 S. 7th St., is convalescing from an attack of malaria.

The William C. Penfold Co. instituted suit in the local courts last week against Jacob Leskin to recover on a contract.

George W. Read, of Larter & Sons, New York, is spending a few weeks with his family at Oak Lane, a suburb of this city.

The New York Tortoise Shell Co. obtained judgment in the local courts last week against the Hepner Hair Emporium Co. for $526.94.

William Egolf, watchmaker, resigned his position in Bridgeton, N. J., with Capt. George Bowen to return to his old place as watchmaker for William Long, 1627 South St.

Naum Rosenbaum, formerly a retail jeweler on 9th St., above Chestnut St., was formally discharged last week from bankruptcy in the United States District Court here.

F. B. Wallen, 405 Broadway, Camden, N. J., with his family, spent the July 4 holidays at Wildwood. Mr. Wallen took an active part in the motor boat races held there Saturday.

Simons, Bro. & Co.'s factory resumed its full schedule time again last week. Improvement in business conditions caused the firm to determine to put their entire force on at full time.

Louis Stern, of Louis Stern & Co., Providence, R. I., is spending the Summer with his children at Atlantic City. Mrs. Stern, who has gone abroad, will rejoin her family at the shore in September.

The Philadelphia Horological Club, at a recent meeting, after increasing its membership by a half dozen, adjourned its meetings until September. The next meeting will be held on the last Thursday of September.

The will of Wm. Farr, an old time retired jeweler, who died recently at an advanced age, was admitted to probate last week and disposes of an estate valued at about $300,000, much of which goes to charitable institutions.

John Oberholtzer, of the firm of J. B. Bechtel & Co., has departed for an extended vacation trip to the Great Lakes, Niagara Falls and Canadian resorts. J. B. Bechtel is spending a few days at the homestead of his family in Boyertown.

Williams, Brown & Earle, manufacturing opticians, Chestnut St., near 10th St., were successful in securing some of the contracts for State supplies at the letting by the Board of Public Grounds and Buildings, at Harrisburg, last Wednesday.

The task of transferring $7,000,000 worth of gold coin and certificates from the Farmers & Mechanics' National Bank to the Philadelphia Clearing House, which has taken a month of daily transfers of several hundred thousand dollars, was completed last week.

John A. Kinsler, manufacturing jeweler, 1020 Chestnut St., enjoyed an outing at Wildwood over July 4, and purposes to make this his Summer retreat at convenient times during the season. A. J. Smith, with Mr. Kinsler, with a party of friends, made a fishing excursion to Salem, N. J., from Friday until Monday.

Montague Mendoza, with the Van Dusen & Stokes Co., of this city, returned from a trip to Europe, last week, arriving in New York on the *Caronia*, Thursday. While in London, Mr. Mendoza was married to Miss Nellie Marguerite Whalcott, of that city, in St. Mary's Church. His bride accompanied him on his return to this country.

The Shoptaugh-Anderson Co., to manufacture optical goods, capital stock $10,000, filed articles of incorporation in the Camden County Clerk's office, last week. The incorporators are: Curtis A. Shoptaugh, 405 S. 4th St., Colwyn, Pa.; Edward S. Gifford, 1639 N. Franklin St.; Solon E. Anderson, 5909 Ridge Ave., and Wm. R. Fairman, 2554 Myrtlewood St.

Frank L. Davis, a progressive retail jeweler of Market St., near 52d St., whose efforts brought to a successful termination "the Get Acquainted Carnival Week" for the merchants and shoppers of that section of the city, declares that the carnival was so successful in a social as well as a business way that the promoters are highly elated and fully satisfied with results.

It was reported here from New York last week that a combination has been effected among burglary insurance companies in order to conduct their business under a mutual agreement and at uniform rates. The Burglary Insurance Underwriters' Co. was formed and the minimum amount for which single policies are issued was raised from $750 to $1,000 with the premium at $12 a year. Agents commissions have been cut from 30 to 25 per cent.

Sol. and Ed. Sickles, of M. Sickles & Sons, are quartered at Atlantic City with their families for the Summer. Benjamin F. Krischer, bookkeeper, who has been in failing health for some time, has been granted an extended leave of absence by the firm and has gone to a health resort hoping for an early and permanent recovery. George Liniken, who was formerly with the firm as bookkeeper, has been engaged to temporarily fill Mr. Krischer's place.

The Bailey, Banks & Biddle Co. and J. E. Caldwell & Co., both displayed in their show windows, last week, innumerable prizes to be awarded at out-of-door events July 4. These included watches, plaques, medals and cups. But it was noticed that cups were comparatively few in number, while there appears an increasing number of hardwood shields and plaques, with appropriate silver adornments and inscriptions which may be used to advantage as decorative works about the homes of successful competitors for athletic contests.

GORHAM SILVER

BEAUTY, ORIGINALITY AND FITNESS

¶ In no direction is Gorham proficiency in design and dexterity in fashioning more prominently displayed than in the Cups, Vases and Trophies which have this season been prepared as prizes for summer sports and pastimes.

¶ From the simplest of cups to the most elaborate of emblematical special pieces, they bear alike the stamp of originality and significant fitness for their purpose.

¶ Individuality and exclusiveness, qualities so insistently desired by the average prize committee, are characteristic in a marked degree of these, as of all other Gorham productions.

American Precious Stones in 1907.

THE total value of the precious stones produced in the United Staes during 1907 is placed by the United States Geological Survey at $471,300, as compared with $208,000, the Survey's figures in 1906. This great increase is due chiefly to a very large output of sapphire in Montana, of both the blue and the variegated variety. The total production of sapphire in the United States for 1907 is estimated at $229,800. Tourmaline is second in importance, and is placed at $84,120. Among other important gems produced were chrysoprase, to the value of $45,500; californite, $25,000; turquoise, $23,840; spodumene gems (kunzite and hiddenite), $14,500; varicite, utahlite and amatrice, $7,500; rose quartz, beryl and aquamarine and garnet, each over $6,000.

It is exceedingly difficult to obtain figures that adequately represent the value of the production of precious stones. It is the aim of the Geological Survey to give statistics that show the value of the output in the rough state. This is often impossible, since it cannot be known what a certain lot of mineral will yield when selected and cut. Some of the figures furnished are evidently the values for elaborated gems, while others may represent but little more than the cost of mining. Of late years it has been thought in the gem trade that the figures given to the Survey did not fully represent the total of our gem production. In fact, in some quarters it is thought that the large increase shown in the figures of the 1907 report is due more to the increase of accuracy of the Survey's work than to any addition in the number of gems mined.

An advance chapter containing the Survey's report on the production of precious stones in 1907, by Douglas B. Sterrett, forming a part of the annual volume of Mineral Resources of the United States, will soon be ready for distribution and the report will as usual be published either in whole or in part in THE CIRCULAR-WEEKLY, beginning at an early date.

Victims of Fraudulent Advertisers.

JUDGING from the number of letters that have come to THE CIRCULAR-WEEKLY from jewelers who have wished to register complaints against a defunct clock company of Brooklyn, it seems that this concern did considerable business with the trade, and, what is more, succeeded in getting an amount of money in advance from jewelers who sent in orders. In most instances the money was simply kept by the company and nothing was sent to the jeweler—not even an acknowledgment of the letter. Inasmuch as those who were managing the concern have skipped out without leaving any trace behind, there appears to be but little for the victims of the concern to do but to pocket their loss and charge it to the cost of experience.

The incident, however, calls attention to the fact that many merchants who would not send goods on approval to customers whom they did not know, or of whom they could not get a report as to rating, etc., do not hesitate to send money to concerns of whom they know nothing in answering advertisements for what appear to be bargains. This practice, while in no way reprehensible, at least shows lack of caution unless the jeweler who sends orders to an advertiser and pays in advance takes into consideration the character of the medium in which he sees the advertisement, or unless he knows the concerns in question either through having personal dealings with them or by reputation.

In journals like THE CIRCULAR-WEEKLY, which exercise supervision over its advertising columns and do not accept advertisements except from legitimate and well-established firms, the merchant is perfectly safe, and there is little or no risk to the reader by whom money is sent; but unfortunately there are many papers and magazines who will insert advertisements of any concern who will pay their bill for advertising, without considering the question of the risk to which the readers of the advertisements are subjected. We feel that such publishers shirk a legitimate responsibility, and would advise all victims of swindling advertisers to not only try and obtain justice as far as the advertiser is concerned, but also notify publishers of papers in which the advertisements appeared. But the main thing at all times is to consider the character of the publication before answering an advertisement or sending money in advance to a concern whom one does not know.

THE JEWELERS' CIRCULAR-WEEKLY reaches the largest number of possible buyers at the least cost. The most profitable medium to use for marketing your goods.

Gem Importations for June and the Fiscal Year.

THE importations of precious stones during the present month made heavy strides toward normal figures, which have not been at all approached since last December, the importations for June amounting to $701,869.74, a jump from $463,454 in the month of May, which up to that time was the largest month of the present year. Of course, when compared with the imports of June a year ago, which amounted to $2,414,367, the figures of last month look small, but it is encouraging to feel that since the big drop after the financial flurry of last year the imports of gems have been gradually but steadily increasing, indicating a natural resumption in the business. Of the imports last month the value of cut precious stones and pearls were $437,394.67, and of uncut stones $264,475.07.

According to the figures given out at the Appraiser's office Friday, the importations of gems in the port of New York for the fiscal year ending June 30, 1908, amounted to $15,557,866 as compared with $41,112,371 a year ago. The cut precious stones and pearls imported in the year ending June 30, 1908, amounted to $10,715,649, and uncut precious stones, principally diamonds, were

Trade-Mark

OUR guiding principle has always been to incorporate as much artistic skill and good material in the construction of our jewelry as possible. This is contrary to the skimming, economic operations so extensively practiced in the manufacture of inexpensive gold jewelry. In observing this standard we naturally sacrifice the petty profits resulting from the less exacting methods of others; nevertheless our jewelry is consistently low priced and of a quality away beyond the ordinary.

¶ *Ask to see it and look for our trade-mark—the imprint of originality and all that's good.*

85 Sprague Street PROVIDENCE, R.I.

H. A. KIRBY

9-11-13 Maiden Lane NEW YORK CITY

valued at $4,842,217. In the fiscal year ending June 30, 1907, the cut precious stones and pearls amounted to $31,011,279 and the uncut $10,101,092.

The following comparative table shows the total value of imports of precious stones and pearls at New York for a number of years past:

Year ended June 30,				1908.....	$15,557,866.47
"	"	"	"	1907.....	41,112,371.00
"	"	"	"	1906.....	40,217,542.78

Lancaster, Pa.

Jacob Bassler is spending two weeks at Atlantic City.

Charles E. Foose, with the Non-Retailing Co., has started on a trip through the south.

Franklin Gierstein, watchmaker, left last week for Hamburg, Germany, his old home, to visit his parents.

Isbert Cassel, New York, has taken a position as watchmaker with Marcus Edelstein, 162 N. Queen St.

George R. Weber, of Louis Weber & Son, has been spending a few days in New York, accompanied by his wife.

Jerome J. Falck has gone to New York on a combined business and pleasure trip, and he will remain there a week.

The daughter of Benjamin Lichtenstein has been in Philadelphia undergoing treatment for a painful throat trouble.

Carlos Verlata, New Orleans, en route to New York on business, stopped off in Lancaster several days last week to see relatives.

The employes of the Hamilton Watch Co. factory have organized a first-class baseball club, with F. G. Carpenter as manager.

Samuel Warhaftick, late of Lancaster, who was recently married in New York, has engaged in business for himself at Shamokin, Pa.

George F. Parker, Jr., Rocky Mount, N. C., having finished a course in engraving at the local technical school, has returned home to take a position with his father.

S. Kurtz Zook was notified last week that he had been elected a delegate to the Retail Jewelers' National Convention, which meets at Cincinnati, O., from Aug. 4 to Aug. 7.

G. William Reisner furnished to the Pitcairn Athletic Association, Pitcairn, Pa., a set of gold, silver and bronze medals and several silver cups, prizes for a Fourth of July athletic meet at Pitcairn.

Considerable surprise was created at Lancaster, Friday, by the shutting down of the Hamilton Watch Co.'s factory after a few hours' notice to the employes, as it was supposed the factory was too busy even to give the employes the usual Summer vacation. The notice posted stated, however, that work would be resumed Aug. 3.

An unsuccessful attempt was made about a week ago to rob the jewelry store of A. Poyas, 16 Mills St., St. John, N. B. The would-be thieves had cut a square piece of glass in the window with a sharp instrument and were evidently ready to force it in when they were frightened away.

New York Notes.

Burt Ramsay, Cleveland, O., visited this city and Newark, N. J., last week.

The New York Jewelers' Board of Trade has issued its semi-annual rate book.

Fred Barry, representing Louis Stern & Co., Providence, was a local visitor last week.

Edward Sickles, of M. Sickles & Son, Philadelphia, was a caller in town last week.

Bernhard Gutter, of the firm of Bernhard Gutter & Son, 135 Bowery, died recently.

E. Langen, of the Powers' Mercantile Co., Minneapolis, was in this city last week buying goods.

Mr. Hoffman, representing the Webster Co. in this city, spent the holiday at Cottage City, Mass.

Frank Kennedy, of Paye & Baker Mfg. Co., with his wife, is spending a short vacation at North Attleboro.

Charles Abbot, an engraver for the trade, was prostrated by the heat last Thursday afternoon. He will recover.

W. E. Hays, of Alfred Eaves, wholesale jewelers, Montreal, Can., stopped at the Astor House, in this city, last week.

Fred M. Cook, local salesman for Whiting & Davis, is in the east this week enjoying an automobile trip down Cape Cod.

Robert H. Clampett, southern salesman for C. Ray Randall & Co., North Attleboro, was guest at the Astor House last week.

J. Parker Ford, of Ford & Carpenter, jewelry manufacturers at Providence, was a caller in the Maiden Lane district last week.

J. E. Mizer, jewelry buyer for the Howland Dry Goods Co., Bridgeport, Conn., was a visitor in the Maiden Lane district last week.

McDougall & Southwick's jewelry buyer, Miss Igoe, returned to her home in Seattle, Wash., last week, after an extended stay in town.

B. Noble, connected with the firm of Sturtevant & Whiting, North Attleboro, Mass., was a visitor in the Maiden Lane district last week.

A. J. Brumeau, secretary of the Accidental Gem Corporation, Salt Lake City, Utah, is stopping at the Hotel Manhattan in this city for a few days.

H. C. Van Ness returned last week from a vacation spent at North Attleboro. Mr. Van Ness is the New York representative for the Codding & Heilborn Co.

L. P. Kadison, of the firm of Fera & Kadison, 65 Nassau St., accompanied by his wife and son, sailed, Thursday of last week, on the *Amerika* for Europe.

Arthur Henius, of the Bruhl Bros & Henius Co., and August Goldsmith, of Stern Bros. & Co., sailed for Europe last week on the *Kaiser Wilhelm der Grosse*.

Chris Bernloehr, of C. Bernloehr & Bro., Indianapolis, Ind., sailed from this city on the *Rotterdam* last week. He will be absent on the Continent about two months.

Edward B. Roehm, Detroit, was a visitor in town last week. He came to this city to attend the annual convention of Phi Gamma Delta recently. He is the official jeweler for that fraternity.

Daily papers during the past week have contained a story relative to the arrest of an alleged coin thief giving the name of George Brown, alias George Coppinger. It is alleged that the man had in his possession a quantity of valuable coins and antique jewelry. The arrest was made at the coin establishment of Thomas L. Elder.

Wedding ring manufacturers and silverware dealers in New York City should have enjoyed a good trade last month, as figures from City Hall show that 4,476 marriage licenses were granted during the month of June, making a grand total of 15,102 for the first six months of 1908.

It was decided last week by the Board of General Appraisers that side and back combs, composed of celluloid, ornamented with gold-plated metal, set with imitation precious stones, are to be regarded for customs purposes as jewelry. The assessment made by Collector Fowler was allowed to stand, and the claim for lower duty overruled.

F. M. Mayer, of the Bruhl Bros. & Henius Co., recently perfected the copyright registration on a novel device for a Republican campaign button which shows outline portraits of President Roosevelt and Secretary Taft shaking hands under the letters U-N-I-TED, thus making the word United indicate "You and I, Ted." The whole device is surmounted by an eagle.

The annual exhibition of jewelry by Powers & Mayer, 258 Fifth Ave., will be held at the offices of that firm from Aug. 24 to Aug. 29, inclusive. A large variety of the newest productions of this concern will be on exhibition. This annual display has attracted much attention in past years and the exhibit this year will be well worth a visit. Mr. Mayer, of the firm is now abroad.

A decision handed down by United States General Appraiser Sharretts last week overruled a protest filed by A. Steinhardt & Bro., and others, of this city, as to the duty on necklaces. The importers objected to the action of the Collector of Customs in assessing a 60 per cent. duty on necklaces and other articles, commonly known as jewelry, it being alleged by the importers that the articles should be admitted to entry at 10 per cent. This contention, however, the Board holds to be erroneous.

The argument in the matter of the dismissal of the proceedings against Maurice C. Dreshfield, against whom a petition in bankruptcy was filed some time ago, and who, it is alleged, was connected with George H. Carpenter in transactions by which $182,000 worth of diamonds were obtained by alleged false pretenses, came before Judge Holt in the United States District Court last week, following the report of Special Master Olney, which recommended the discharge of the petition against Dreshfield on the ground that the three creditors were not all bona fide creditors. The matter was referred back to Special Master Olney.

The contention of W. H. Merrell, of this city, was defeated in an attempt to secure a reduction in the rate of duty assessed on a carved marble fountain which the importer claimed to be statuary within the meaning of the word as used in the Reciprocity Treaty between the United States and Italy. The fountain was classified as a manufacture of marble at 50 per cent. It was the contention of Mr. Merrell that it should be admitted as statuary with the tax of only 15 per cent. Judge Waite, who writes the decision for the Board of General Appraisers, says the garden fountain as an entirety belongs to the class of conventional objects of ornament or utility as the Board has uniformly held, and are not statuary within the meaning of the tariff.

Light was thrown upon the alleged robbery on Dec. 14 last of Morris S. Garfinckel's jewelry store, 715 Fulton St., Brooklyn, by a report filed last week in bankruptcy proceedings against Garfinckel, which declares the belief that the robbery story is a "fake." Garfinckel's creditors filed a petition in bankruptcy a few days after he told them that in consequence of his safe having been robbed and $3,000 worth of jewelry stolen he was unable to pay his debts. United States Commissioner Morle took the testimony of several witnesses and reported to United States Judge Chatfield that he is convinced Garfinckel schemed to have his safe emptied or to rifle it himself, pretend a burglary had been committed, and then settle with his creditors for less than he owed them. Judge Chatfield decided to take further testimony, it appearing from the record that perjury has been committed.

Another letter supposed to be from the so-called Black Hand regarding the disappearance of Mayer Newman, who has not been seen at his home, 1555 Fulton Ave., Bronx, since the middle of June, was turned over to Captain Pierce of the Bronx detective force last week. Since Newman's disappearance several letters have been received saying that he has been captured by the Black Hand and demanding a ransom of $10,000. The letter which was received last and given to Captain Pierce stated: "We have received word from our agent that Newman died and had to be buried at sea. He starved himself to death. We regret his loss, as we lose our $10,000 ransom. He died 50 miles from San Diego, Cuba. (Signed) Black Hand." This letter was posted at Station L, in Harlem. It has been the opinion of the police since Newman's disappearance that the Black Hand letters were not genuine.

A customs controversy regarding the classification of hat pins with fancy beads was heard Thursday of last week before General Appraiser Sharretts and Chamberlain. The importers were represented by A. H. Washburn and George Puckfur, who claim that the customs authorities erred in classifying the hat pins at 60 per cent. ad valorem, considering this a high rate. The attorneys said the rate of 45 per cent. was applicable. J. A. Kemp was the solicitor of customs to argue in behalf of the Government, and said that the heads of the pins came within the cut glass schedule and that consequently the 60 per cent. rate should be allowed to stand. The lawyers for the importers tried to persuade the Board of Appraisers that the heads are manufactures of paste. At the conclusion of the argument

Capital and Earned Surplus, over $1,500,000. Deposits over Fifteen Millions.

Offers a favorable market for short and long time jewelry and diamond paper.

New York Notes.

(*Continued from page 63.*)

the Board took the papers in the case and withheld the decision.

David Hartstein is enjoying a four weeks' vacation at the Grand Central Hotel, Tannersville, N. Y.

Daniel Chisholm, of the Bugbee & Niles Co., North Attleboro, Mass., was a caller in this city Monday.

July 1 marked the 30th anniversary of the Jewelers' Protective Union, which was founded July 1, 1878.

A meeting of the creditors of Joshua C. Condon, Opelika, Ala., is to be held to-day at 11 A. M. in the rooms of the Jewelers Board of Trade.

Percy Savery, of the Wadsworth Watch Case Co., and his wife spent Sunday with Mr. and Mrs. Edw. Sickles at the latter's cottage at Atlantic City, N. J.

The Union Watch Co. has been incorporated under the laws of New York State with a capital of $20,000. The directors are: Alexander Hartfield, Dominick Melillo & Agnes Vassalotti, all of New York.

An open letter has been published in the New York *American* by Mrs. Annie Newman, asking for news of her husband, the jewelry salesman, who left his home, 1555 Fulton Ave., the Bronx, on June 16, and has not since been seen.

Emil Lewy, of Lewy & Cohen, 530 Broadway, returned last week from the European markets on the *Finland*. Mr. Lewy has been abroad for six weeks, and during that time has visited the jewelry centers of France, Austria and Germany in search of novelties.

Since the recent death of James Hedges, senior member of the firm of W. S. Hedges & Co., diamond importers, 170 Broadway, Frank Jeanne and Chas. L. Ross, the surviving partners, have announced that they will continue the business without change under the old style.

Newspapers in New York contained an article Tuesday morning relative to a unique house which is to be built for Wm. Reiman, 328 Fifth Ave. The house will rest upon a turning table, and the gasoline or electric engine in the butler's pantry will supply power to make it revolve at its owner's desire.

Otto Koenich, who said that he was a waiter, and Albert Jansen, a watch repairer, both of whom live at 81 Bowery, were arrested in a pawnshop at 157 Bowery last week as they were trying to sell 40 pieces of silverware marked "Tiffany & Co., E. P." The men could not explain how they came by the silverware, and were locked up at police headquarters as suspicious persons.

By order of the United States District Court an automobile belonging to the estate of George H. Carpenter, who it is alleged was implicated in transactions by which a number of diamonds were obtained from Rudolph Breidenbach, and against whom a petition in bankruptcy was filed some time ago, was sold at public auction Thursday at the Empiré State Galleries, 2148 Broadway, by Auctioneer Charles Shongood. Wm. Lesser is the receiver in bankruptcy in this matter.

An involuntary petition in bankruptcy has been filed in the United States District Court against Julius Kronrot, formerly a retail jewelry merchant and real estate operator in the Eastern District, Brooklyn, in partnership with Harris Goldberg, under the firm name of Kronrot & Goldberg. The petitioners in proceeding are the Lafayette Trust Co., which has claims aggregating $67,033.16; the First National Bank, having a claim of $5,360.70, and the Nassau Trust Co., with a claim of $1,000. Practically all of the debts consist of promissory notes, unsecured except by small mortgages.

M. A. Mead & Co., wholesale dealers in American watches, have moved into a large suite of offices on the 12th floor of the Silversmiths building, 15-17 Maiden Lane. The offices are most conveniently arranged and are newly furnished. The offices consist of a shipping room, sales room and private office for J. T. Montgomery, the manager. Conveniently near the counter in the salesroom is a vault for storage purposes. A new safe made by special order for the concern is also included in the office fixtures. The rooms are large and receive excellent light. This firm also has offices at Chicago and Pittsburg.

Invitations have been sent out by the Jewelers' 24-Karat Club, of New York City, for the seventh annual outing of the club at the Port-au-Peck Hotel, Saturday, Aug. 1. The boat will leave Pier 10, North River, foot of Cedar St., at 9.15 A. M. The Athletic Committee members have donated a beautiful cup to be competed for in a baseball game between a team representing the club and a team representing a jewelry organization from a large neighboring city. An entirely new series of athletic events have been arranged for this year, and with the exception of pitching the quoits the programme will be entirely new. The quoits proved so popular last year that it has been decided by the committee to continue it this year, and it is understood that several of the contestants for this event are already in training. A handsome cup, known as the "President's Cup," has been presented by President H. C. Larter. This cup will be awarded in an entirely new and novel manner, about which more will be said later. The contest for the cup this year will be a "genuine 24-karat event." Another interesting and novel feature will be a lemonade race, and it is expected that some surprising records will be made. The committee feel that some of the members whose years make their participation in athletic contests largely a memory of the past should also be provided for, and therefore have arranged for a story-telling contest for which a handsome cup has been donated. This event should prove one of the most interesting of the day's sport, and it is needless to say that there will be a number of stories told worth listening to. A folder will be sent out a few days before the outing which will give additional details as to the outing.

J. L. Pittluck, Shamokin, Pa., has publicly announced that he is retiring from the jewelry business and is about to sell out his entire stock at 16 W. Independence St., that city

Newark.

TRADE CONDITIONS.

THE CIRCULAR WEEKLY'S new Newark representative finds the optimistic spirit strong. "Picking up a little" is the slogan almost everywhere.

A. J. Parker, of the Osmun-Parker Co., recently returned from his circuit with the sample case and brings a fairly encouraging report.

T. M. Schroeder and W. O. Lehsten, salesmen for the Schickerling Mfg. Co., have just returned from their trips with their sample cases.

When F. C. Palmer, Woodside, N. J., shot at his wife June 30 before turning a revolver on himself and blowing out his brains, the bullet struck G. M. Grover, who interfered to save Mrs. Palmer. The jeweler's condition is said to be serious.

Among the contributors to the Newark *Evening Star's* fund for the first outing of poor mothers and children, under the auspices of the paper, is mentioned the International Jewelry Workers' Union, No. 2. The outing will consist of a trip on the steamer *Majestic* to Coney Island.

A fairly general move is on foot to have 5 P. M. closing of factories and offices through the Summer. Some concerns have adopted the plan, others have decided to try it tentatively through July, after the regular two-week shut-down, and others have agreed to it for Fridays and Saturdays, but will try to keep running till 6 o'clock other days.

Durand & Co., Franklin St., are among the few concerns which have found it desirable to change the Summer vacation schedule a little. This company will take its vacation two weeks later in the month. Arrangements are on foot for at least one of the traveling salesmen to leave for his circuit about the first week in August. Another of the men will probably leave this week.

The most emphatic move of the manufacturing jewelers at present is to start for seashore and mountains. For some little time the trade in Newark has fallen into the almost unanimous habit of taking the first two weeks of July as a general vacation, many also adding a week in midwinter. The July period is being observed this year with more than usual unanimity. In fact, a large number of concerns closed all last week, many others closed July 1, while a limited few waited till last Saturday before they shut their doors.

The Newark Mfg. Jewelers' Association has suspended business for the Summer, and its resumption of activity in the Fall, according to some of the officers, will be subject to the call of the president and secretary, and will await the development of circumstances which make a meeting desirable. Through the Summer there is but one issue of any consequence which holds the attention of the association in its corporate capacity—that is, the work of the commission appointed by Gov. John Franklin Fort to look into the matter of apprenticeships, a theme in which the jewelers are intensely interested.

H. W. Sayward has purchased the business of the A. C. Lord Optical Co., Tilton, N. H.

Connecticut.

F. A. Searle, New Britain, treasurer of Landers, Frary & Clark, New Britain, has gone to Chicago.

General Geo. H. Ford, New Haven, lost a favorite driving and saddle horse, Rudolphus Centaurus, which died July 4.

The office force of the Bristol Brass Co. and of the American Silver Co., Bristol, held their annual picnic, July 1, at Lake Compounce.

The factory of E. Ingraham Co., Bristol, was closed, July 3, for three weeks, during which time inventory will be taken and repairs will be made.

L. V. B. Hubbard, Shelton, and Mrs. Hubbard went to Stepney, June 26, to attend the wedding of their granddaughter, Miss Olive Hubbard.

Emil Beerbaum, foreman of the Waterbury Clock Co.'s factory at Waterbury, and his daughter sailed, June 26, for Europe, where he will pass several months.

Miss Kate L. Beckley, with the International Silver Co., and Miss Lulu P. Williams, with Manning, Bowman & Co., Meriden, sailed, Monday, from Boston for Europe.

The factory of the Wm. L. Gilbert Clock Co. and the Morgan Silver Plate Co., Winsted, closed June 26, the former for a month and the latter for three weeks, for inventory and repairs.

The fire brigade of the R. Wallace & Sons Mfg. Co., Wallingford, held its sixth annual outing, June 27. There were field sports, including a baseball game, and an excellent dinner was served.

Work is starting on the building at Center and Church Sts., New Haven. The property is owned by Leopold Simons, of Simons & Co. A new front will be put on the building and a story will be added.

Burglars broke into the store of D. R. Merritt, New Canaan, last Wednesday night, and stole watches and jewelry valued at several hundred dollars. Access was gained through a rear door. The stock in the safe was not touched.

George H. Parker, Thomaston, who had been employed for many years by the Seth Thomas Clock Co. as shipping clerk in the marine department, died June 30 on a train near Waterbury, of heart disease. He is survived by a widow and two daughters.

Factory "L," of the International Silver Co., and the R. Wallace & Sons factory shut down, June 27, for two weeks for inventory and repairs. Factory "P," of the International Silver Co., will shut down Friday of this week for the same purposes.

Among the Hartford jewelers who have signed a petition for an early movement on Saturdays during August are the following: Harvey & Lewis, Hansel, Sloan & Co., C. H. Case & Co., H. P. Levy, Edward F. Coxeter, Henry Kohn & Sons, E. Gundlach & Co., Phillip H. Stevens Co.

Among Stamford jewelers who donated pieces for the Field Day, to be held Aug. 12 by the Connecticut Fifers and Drummers' Association, Stamford, are C. F. Bates, who gives a loving cup; S. Kronholtz, loving cup; Samuel Phillips, a silver water pitcher, and G. H. Thamer, loving cup.

Two Italian boys were arrested last Sunday in New Haven, charged with the burglary which was committed on the night of June 23 in the store of Guiseppe Carnovi, Hill St. About $100 worth of jewelry was taken by the burglars. The boys gave the names of Antonio Fornari, Johnstown, Pa., and Vincenzo Alonzo, New York.

Henry Warnock, who was formerly salesman for the Meriden Britannia Co., and who retired some months ago on account of ill health, was found dead several days ago in his boarding house at 52 Buckingham St., New Haven. He was 72 years of age and was a veteran of the Civil War.

Providence.

Harry Cutler, of the Cutler Jewelry Co., is away on his western trip.

Harry Mays, of the George W. Dover Co., is now spending his vacation away from business cares.

Peter Lind, of the T. W. Lind Co., is absent on a two months' trip to Europe, accompanied by Mrs. Lind.

The Champlin building closed last Friday for 10 days for overhauling of the boilers and general repairs.

The vacation season is on and many of the manufacturers have already installed themselves in their Summer homes by the seaside.

A change in location has been made by Charles Krumweide, chainmaker, he now being located at 111 Point St., removing from 178 Eddy St.

Among jewelry buyers in town last week were: Joseph Rosenberg, of Detroit; B. J. Skeller, Chicago; M. L. Schwab, New York; A. J. Morais, New Orleans; H. S. Daniels, Chicago; C. Meister, Pittsburg; H. Leach, Chicago.

Local creditors are considerably interested in the affairs of the Cummings & King Co., Chartley, Mass. This firm has creditors here among the findings and stone houses, as well as among the jewelers, and it is expected that the first meeting will be held this month.

William B. Easton, 60 years old, for 44 years employed at the works of the Gorham Mfg. Co., died at his home, 42 Arlington Ave., Thursday, after an illness of a few days. His death was due to a paralytic shock, but he had been in poor health for a long time. He had never married. Mr. Easton is survived by two sisters.

Franklin N. Ward, for four years assistant manager of the local branch of the Jewelers Board of Trade, has become manager since the withdrawal of Frank C. Murray from that position, Mr. Murray having gone to Florida, where he will engage in the turpentine business. Mr. Wood is well known and well liked among the manufacturers, and was formerly with Bradstreet's, New York.

Articles of incorporation have been issued by the Secretary of State to the Waite-Evans Co. to manufacture and sell jewelry. The capital stock will be $100,000 and the headquarters will be in this city. The incorporators are: Charles D. Waite, Edward B. Evans, of Providence, and Isabella Waite, of Warwick. The new company succeeds the Waite-Mathewson Co., 95 Chestnut St.

The members of the Advisory Council of the New England Manufacturing Jewelers and Silversmiths' Association have decided to seek from the members of the association their opinion regarding the advisability of establishing in this city an employment bureau which will be of mutual benefit to the employers and the employes. The matter has been under consideration for some little time, but nothing definite regarding it has been done, it is stated, aside from this. It is thought by some that the establishment of such a bureau will result, if it is decided to have one, in a place to which the employes can go to secure employment without cost to themselves, and to which the manufacturers can apply whenever they are in need of hands. The plan is but in the formulative stage as yet, but will be given the consideration which it is believed that it merits.

Minneapolis and St. Paul.

Miss M. L. Simpson, with B. F. Simpson & Co., Minneapolis, has returned from her vacation.

Mr. and Mrs. L. T. Dillon, of Litchfield, Minn., have been in the cities en route for Northwood, Ia.

L. L. Williamson, of 1717 East Franklin Ave., Minneapolis, has been visiting in Hutchinson, Minn.

Charles L. Cummer, who is starting in business at Bemidji, Minn., has been in the Twin Cities buying goods.

John Iverson, with S. Swanson, Minneapolis, was recently called to his home at Harmony, Minn., to attend the funeral of a relative.

H. B. Lund, Morris, Minn., has been in the Twin Cities as a delegate to the State Republican convention. Mr. Lund's family is camping at Glenwood, Minn.

Paul V. McCoy, Minot, N. Dak.; A. Swedlund, Williston, N. Dak.; Mr. Villeux, Wahpeton, N. Dak., and H. B. Lund, Morris, Minn., were callers on the jobbing trade during the week.

S. H. Clausin & Co., Minneapolis, have bought one of the largest safes in town for their new quarters in the Warner building. It weighs three tons, is seven feet high and has 180 drawers, each deep enough to take a full-size tray. E. P. Gravel is a new traveler for thias house, working in Minnesota and Wisconsin.

Toledo.

G. D. Southworth is making a number of attractive alterations to his place of business, 3233 Monroe St.

Tiedtke Bros., Summit St., have added a jewelry and optical department to their store, a very comfortable section of the second floor being devoted to these two departments.

J. J. Freeman & Co. will install the clocks in the new Secor Hotel, which is to be ready for the grand opening Aug. 1. The hotel will be the finest in northwestern Ohio.

C. Kenneth Merrill, of the Merrill, Broer Co., wholesale jewelers, left, this week, for a long tour through the eastern jewelry centers, and will cover New York, Newark, Providence and Boston. He was accompanied by Mrs. Merrill, and after business is attended to the couple will spend several weeks at eastern watering places.

ENTERPRISING and successful jewelers everywhere are pushing the sale of some individual line of watches which they believe to be superior to all others, and upon which they can also make a satisfactory and justifiable profit.

This explains the growing demand for ILLINOIS WATCHES, in 0, 12, 16 and 18 sizes, by increasing numbers of leading jewelers throughout the United States.

If you are not familiar with the superior quality of — and advantages gained by handling—Illinois Watches, it will mean reputation and dollars for you to investigate.

Every one fully guaranteed.

Vol. LVI. CHICAGO, WEDNESDAY, JULY 8, 1908. No. 23.

Chicago Notes.

A. Harper has returned from his trip to Bristol, Conn.

F. S. Newcomb, Minneapolis, Minn., with his wife and baby, visited in Chicago last week.

George Thorp, of Thorp & Hoberg, Sioux City, Ia., was a recent visitor here on a pleasure trip.

J. C. Howard, with J. M. Becker & Co., is having a two weeks' outing near Burlington, Wis.

C. J. Roehr, of C. J. Roehr & Co., is making a two weeks' visit to the factory at Providence, R. I.

W. N. Brooks, of the Chicago office of Simons, Bro. & Co., is spending his vacation with relatives in Ohio.

Frank L. Murray, salesman with Despres, Bridges & Noel, is taking an automobile trip through Michigan and Indiana.

William J. Miller, manager here for the Seth Thomas Clock Co., is visiting his father, who is ill, at Lancaster, Pa.

C. T. E. Smith, P. G. Storm and P. B. Kehr, travelers out of Chicago for Reed & Barton, are now on their vacations.

Geo. H. Thomas was recently presented with a litter of five Japanese pups by his neighbors in the Heyworth building.

M. A. Mead, of M. A. Mead & Co., was in New York last week, superintending the opening of a branch office in that city.

R. T. Kleckner, traveler from the Chicago office of the Theo. W. Foster & Bro. Co., has just returned from a Pacific Coast trip.

R. H. King, of the Chicago office of Ostby & Barton Co., is on the sick list, and has been confined to his home for the past week.

J. M. Tuttle, silver buyer for Hyman, Berg & Co., has been confined to his home for the past three weeks on account of illness.

B. Weinstein, 531 S. Halsted St., is spending his vacation in the northern part of Michigan, and is expected to return about July 10.

L. Stanford and F. J. Aicher, travelers from the Chicago office of the Alvin Mfg. Co., have left for their respective territories in the northwest and the Pacific Coast.

H. M. Blankenstein, silver buyer for the Prager Co., San Francisco, was a recent visitor in Chicago. He reports a most encouraging outlook for Fall business in the far west.

W. O. Kellogg, western manager of the Watson & Newell Co., is taking an outing in his automobile among the lakes of Wisconsin. He is accompanied by his wife and daughter.

F. G. Thearle, of the C. H. Knights & Thearle Co., returned from a three months' recreation trip to Europe, coming on the *Amerika* from Southampton. He returns much improved in health.

G. S. Titus, western manager of the Middletown Silver Plate Co., is making a visit to the factory and taking a short vacation in New York and at the seashore. He will be away about two weeks.

A. Rahm, of Rahm & Will, Iron Mountain, Mich., recently brought his wife to Chicago to be operated upon at the Augustana Hospital. She is so much improved now that Mr. Rahm returned home.

O. A. Starke, of the Star Watch Case Co., Ludington, Mich., was a recent visitor here, as was also Paul Heyer, manager of the New York office of the company. Mr. Heyer will visit the factory before he returns to New York.

The Seth Thomas Clock Co. recently sold a tower clock for the new court house at Gallatin, Mo. The sale was made through F. P. Wynne, at that place. The clock has four five-foot glass dials, and is equipped with an 1,800-pound striking bell.

J. B. Sherman, the newly elected secretary of the Meriden Cutlery Co., spent a few days last week with Dr. J. R. Payne, local manager here for the company. Mr. Sherman comes from Boston, and has the reputation of being an expert in the cutlery line.

Eugene Edelstein, of the Illinois Watch Case Co., has just returned from a three months' business trip to Europe. Joseph Wright, of the same company, has just returned from an extended trip through South America, Spain, Portugal, England and Germany.

In the matter of Jones & Dreyer, in bankruptcy, the appraisement of stock and fixtures has been made and the value of stock is given at $28,000; furniture and fixtures at $1,018. Notices will be sent out by Frank H. Jones, receiver, this week, announcing a sale of stock, furniture and fixtures, good will accounts receivable and stock held as collateral. The sale will be held July 16. A trustee will be appointed on this date also.

The following were among the out-of-town jewelers here during the past week: E. A. Shetter, DeKalb, Ill.; J. C. Seaton, Somonauk, Ill.; B. H. Britton, Hampshire, Ill.; Wm. Nisbett, Grand Rapids, Minn.; R. P. Kiep, Joliet, Ill.; John Gaarde and wife, Beloit, Wis.; Miss Sadie Landsburg, Rock Springs, Wyo.; G. W. Flanders, Niles, Mich.; C. N. Hetzner, Peru, Ind.; E. C. Zimmermann, La Salle, Ill.; Mr. Linnig, of Linnig Bros., Peru, Ill.; Geo. Thorpe, Sioux City, Ia.; Charles Jordan, St. Louis, Mo., and W. H. Mellar, Michigan City, Ind.

St. Louis.

E. Markley, Brinkley, Ark., and Mrs. Markley, were in St. Louis last week.

E. A. Schoenle, of the Maschmeyer-Richards Silver Co., left, last week, for a four months' trip through California.

Among the other out-of-town visitors during the week were: F. B. Wolff, Chester, Ill.; Anton Wolff, of Wolff Bros., Murphysboro, Ill., and Fred Studer, Waco, Tex.

E. Massa, of the Bauman-Massa Jewelry Co., has gone on a trip through Colorado which will keep him traveling for a month or more. J. J. McKenna, of the same firm, returned last week from an extended fishing trip.

The retail store of Weiss & Wohlgemuth has been moved temporarily to 713 Pine St., half a block west of the old store, until a new building can be erected on the site. They expect to be back in the old quarters about Oct. 1.

Three men of the Mermod, Jaccard & King Jewelry Co. will go on their vacation trips this week—Joseph M. Fitzroy and Gus Schuerman, of the solid silver department, and Arthur Raven, of the umbrella department. Mr. Fitzroy goes first to Chicago and then to Denver, Colo. Mr. Schuerman will spend his time on the Great Lakes and in Detroit.

The picnic given by the Eisenstadt Mfg. Co. last Saturday to its employes and their friends, in celebration of the 25th anniversary, proved a great opportunity for enjoyment. Exactly 166 persons went to Priester's Park, across the river, in the three special cars. A baseball game between the office and factory men resulted in a victory for the former. A dinner was served at 6 o'clock and dancing was enjoyed until 10 o'clock, when the special cars returned to St. Louis. Brainerd Ryan, W. J. Schoenthaler and H. Kellersman were the committee of arrangement.

We ask you to consider the proposition of placing your order for Catalogs in our hands. We believe we could serve you satisfactorily for the reason that we thoroughly understand advertising through Catalogs.

Lawrence Herschede, of the Frank Herschede Co., and Walter and Alfred Herschede, of the Herschede Hall Clock Co., have taken the business of the Reliance Motor Car Co., Reading road, and will do a general garage business under the name of the Herschede Motor Car Co. Alfred Herschede will devote his entire time to this business, acting as manager.

The proposal to confirm the settlement in the bankruptcy of Hugh Murray, Covington, Ky., will come up before the United States Court in that city July 15 at 10 A. M. The bankrupt's application to confirm the compromise with creditors at 50 per cent. was filed Friday, and the referee reported that it had been accepted by creditors holding a majority in number and amount of the claims filed.

Out-of-town jewelers here the past week buying goods included: Charles Haynes, Henn & Haynes, Chillicothe, O.; A. Scott, Batavia, O.; L. C. Eveslage, Ripley, O.; Julius Wikstrom, Chattanooga, Tenn.; H. C. Swarner, Baltimore, O.; Owen Sherwood and C. F. Held, Falmouth, Ky.; Mr. Washburn, Anderson, Ind.; J. W. Sparks, Sabine, O.; Andrew Aman and A. Wahlrab, Dayton, O.; J. H. Reiffe, Hastings, Neb.; G. F. Gallup, Cattletsburg, Ky.; William Leive, Sr., Aurora, Ind.; H. Risinger, Lawrenceburg, Ind.; J. D. Ward, Rising Sun, Ind.; O. B. Radabough, Memphis, Tenn.; Mr. Metzger, King & Metzger, Lexington, Ky.; C. G. Schlenker and wife, Hickman, Ky.; Philip Horr, Aurora, Ind., and J. N. Calvert, Russellville, O.

Prentice Tiller, who was last week tried and found guilty of robbing the Michie Bros.' jewelry store of about $2,000 worth of jewelry in 1891, was on July 1 sentenced to seven years imprisonment, his appeal for a new trial being overruled by the court. Tiller began his thieving career at the age of 12 years, and his record shows him as having served terms of five to eight years imprisonment for offenses including the robbing of the Pacific Express of $92,000 at St. Louis, Mo., when employed there as a clerk in the 80s. He next robbed the Michie store and escaped to Detroit, Mich., where he was arrested under the name of G W. Price, and convicted of robbing post-office boxes in that place. After serving his time for this he went to St. Joseph, Mo., where he was arrested, tried, convicted and sentenced for a similar offense. He was also implicated in the Tiffany diamond robbery at Dayton, O., by misusing the mails.

Cleveland.

J. F. Krohme, Jr., Clarksburg, W. Va., was in this city Thursday.

Mrs. H. W. Arnstine and two children are at Chautauqua for the Summer.

Mr. and Mrs. Sterling Hubbard have returned from their wedding trip and are with Mr. Hubbard's parents on E. 40th St.

H. S. Hurlbut and O. P. Rowley, of the Scribner & Loehr Co., are preparing to start out on their usual trips about the middle of this month.

The Ball system of railway time service is being installed on the Delaware & Hudson Railway by Mr. Ball's two assistants, J. W. Dutton and W. H. Saxton.

The Diamond Show Case Co., of this city, is fitting up the new store of R. C. Harwick, at Owensboro, Ky., in mahogany. When completed the store will be one of the finest south of the Ohio River.

B. V. Arnstine, of the Arnstine Bros. Co., was home for a few days over the Fourth. H. W. Arnstine is at present on the Pacific Coast, where he will remain in the interests of his company for several months.

Walter O. Knight, of the Cowell & Hubbard Co., was married on the evening of June 27 to Miss Ethel Trask. Upon their return from a wedding trip through the East they will be at home on E. 81st St.

The attendance at the National Educational Association Convention was a severe disappointment to the city of Cleveland, and particularly to the retail jewelers, who laid in a stock of souvenir spoons, etc. Preparations were made for about 40,000 visitors, but very few over 10,000 materialized.

The following jewelers were visitors at Cleveland during the past week: H. H. Brainerd, Medina; F. R. Montgomery, Sandusky; Robert Miller, Lorain; F. E. Crampton, Burton; G. H. Follett, Jeffersonville; J. F. Krohme, Clarksburg, W. Va.; J. H. Wight, Wellington; L. C. Morris, River Rouge, Mich.

Kansas City.

Leslie Burkland, Moberly, Mo., was in the city last week, on his way north.

George Krieke, of Hassig & Krieke Jewelry Co., has been ill for several days.

S. E. Woodstock, of the Woodstock-Hoefer Watch & Jewelry Co., is in Iowa for a couple of weeks.

T. L. Ricksecker, formerly of Armourdale, Kans., has moved to 28th St. and Southwest Boulevard, in this city.

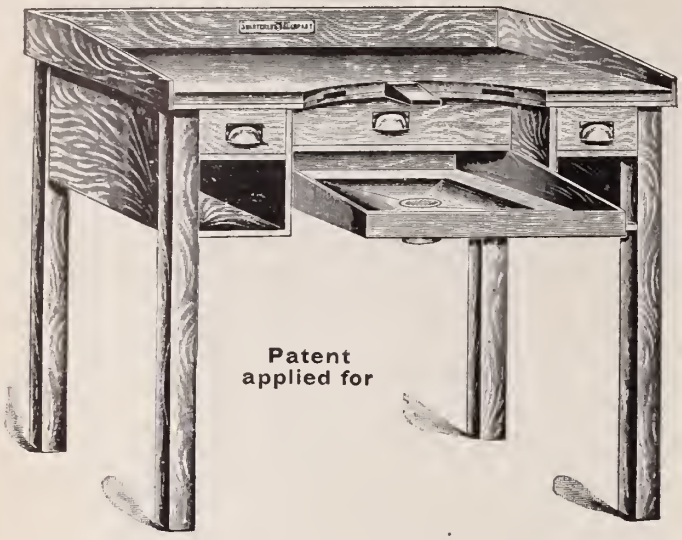
F. J. Nevin, of Nevin Bros., has returned from McAllister Springs, Mo., where he has been paying his mother a visit.

The engagement is announced of Sam Bloom, traveler for the Meyer Jewelry Co., and Miss Emma Fricke, assistant bookkeeper of the same house.

A. H. Cohn, of the Eastwood-Park Co., arrived in the city this week on his way home from the Pacific coast, and reports things looking bright out west.

C. E. Manor went to Lexington, Mo., this week to conduct a stock reducing auction sale for J. H. Briggs & Co. The firm will then be dissolved and Mr. Briggs will continue alone.

Louis Hayman, of the material department of the Meyer Jewelry Co., and Clyde Chapman, of the engraving department of the same establishment, are at Excelsior Springs, Mo.



Julius Baer, an optician of 1030 Main St., has joined with the Fitwell Clothing Co., of 1008 Main St., in leasing the first floor of a new building to be erected at 1121 and 1123 Walnut St. The lease is for 10 years from Oct. 1, 1909.

The following retailers from the surrounding country were in during the week: Ora Stutzon, Garden City, Mo., E. H. McClintock, Thomas, Okla.; R. R. Smithers, Cameron, Mo.; D. E. DeLanty, Parkville, Mo.; Arthur W. Haley, Delphos, Kan.

Fritz Hoefer, Aurora, Nebr., and wife have been paying a visit of several days to Chas. C. Hoefer, of the Woodstock-Hoefer Watch & Jewelry Co. Although their names are spelled alike, the two men have been unable to rake up any closer relationship than that of being good friends.

Mr. Fricke, with Meyer Jewelry Co.; Mr. Oskamp, with the Cady & Olmstead Jewelry Co., and J. W. Trowbridge, with the Woodstock-Hoefer Watch & Jewelry Co., have returned from Marion, Kans., where they went to testify in the Carr murder trial. Carr is on trial for the murder of an express messenger, and jewelry from all three of these houses was found in his possession after the murder was discovered. The State had 130 witnesses.

The Edwards & Sloane Jewelry Co.'s people have had a number of cases of appendicitis. C. E. Vandel has just returned to work, after undergoing an operation, E. L. Donaldson is now in the hospital, and word comes up from Texas that E. H. Ray, their traveler in that State, is about to undergo an operation. Paul Preston will take out E. H. Ray's trunks as soon as they are ready for the road, and Frank Bangs will cover Oklahoma and Kansas territory. This house is prepared for a big trade, and reports a finer line of goods than has ever gone into the trunks at any one time in recent years.

1 MAIDEN LANE :. :: NEW YORK

I can do from $2,500 to $10,000 a week for you without adding one dollar's worth of new goods to your stock. I positively guarantee cost or better

ALL COMMUNICATIONS STRICTLY CONFIDENTIAL

A. E. GATES, 1 Maiden Lane, New York

Detroit.

Robert Kay of Wright, Kay & Co., has been spending his vacation in Toronto.

C. S. Hannan, with Wright, Kay & Co., is on an eastern trip, during which he will visit New York.

C. E. Avery and E. W. Krainbrink, with Chas. A. Berkey & Co., started out on the road Monday, after spending some time going over stock in the store.

V. C. Morse, secretary of the Michigan Retail Jewelers' Association, spent part of last week in the city, making final preparations for the convention this week.

H. I. Scribner, Columbus, O., who has been here on a visit, was the victim of a robbery Thursday night. A $200 unset diamond was stolen from his room in the hotel where he was stopping.

W. A. Sturgeon & Co. closed their auction sale Friday, and plans for the disposal of the remainder of the stock have not been made. The auction sale may be continued in September until such time as the stock is reduced, and the remainder may then be sold in bulk.

Detroit jewelers and opticians have taken with ready interest to the installation of a nest of the Ku-Kus. The committee which is arranging for the dinner and initiation ceremonies in the Hotel Tuller this week have already received many applications for membership. Many of the outside retailers who are here attending the State jewelry and optical conventions are also in the class of initiates, who will take the degree of Flip-Flops.

Columbus, O.

F. W. Wallis, optician, has returned from a five weeks' visit at his old home at Beverly, Mass., and at Boston.

Frank B. Ross, 10 E. Long St., is conducting an auction sale. The Hoffman Jewelry Co. has closed a successful June discount sale, and L. W. Lewis, 99 N. High St., is also having a midsummer discount sale.

Sculler Bros., 212 E. Main St., had a narrow escape from being burned out Saturday night. They occupy one side of a large furniture store, and a fire started in the cellar. The damage to stock from fire and water was $500, confined mostly to the furniture men, and the damage to the building was about $50. The origin of the fire is unknown.

A movement is on foot to have all jewelry stores close Friday afternoons during the hot Summer months. Columbus has not yet acquired the eastern habit of Saturday afternoon holidays, but a number of stores close on Friday afternoons, and the jewelers' clerks want the jewelers to do likewise. All jewelry stores were closed Saturday on account of the Fourth of July.

A branch of the order known as "Ku-Kus," founded by A. L. Thoma, of Piqua, and composed of jewelers, opticians and persons connected with those two businesses, was organized in Columbus, Tuesday night, June 30, with 43 charter members, this following a number of unsuccessful attempts to get the jewelers of Columbus organized into a society to be a part of the National Jewelers' Association. The week before Mr. Thoma was down from Piqua and called a preliminary meeting, attended by 35 men, and on June 30 these 35 met again and elected officers and put eight applicants through the "Flipflop" degree and allowed them to be enrolled as charter members. Following are the officers: Frank McGuire, King of the Ku-Kus; Clyde S. Reed, Prince of the Ku-Kus; Clyde C. Haines, scratcher; E. S. Albaugh, keeper of the kash; C. W. Taylor, chief; W. S. Andrews, guide. Monthly meetings will be held.

Pacific Coast Notes.

The Holcombe jewelry store at Haywards, Cal., has been purchased by W. C. Hays, San Francisco.

Roy Taber, manager of the Dorris jewelry store at Dorris, Cal., has recently made improvements in fixtures and enlarged his stock.

E. Trautman, optician and jeweler, of Yuma, Ariz., has moved into larger quarters in his new store at 2d St. and Madison Ave.

The jewelry firm of Hilgerloh, Pearson & McCarthy has leased store space in the new business block now being constructed at Manhattan, Nev.

A Los Angeles jeweler may soon open a new jewelry store in Riverside, Cal. Negotiations for the lease of a store in the best shopping district of the town are now under way.

The preliminary proceedings in the case of L. J. Matlock, charged with stealing jewelry from the store of his employer at Las Vegas, N. Mex., have been untangled, and he has been taken to that place to face the charges.

Wm. Dupen, Jr., manager of the jewelry department of Weinstock-Lubin & Co., Sacramento, Cal., has just brought out a moderate-priced, nickel alarm clock, which needs winding only once in eight days. The alarm rings twice with an interval of 20 seconds at any desired time in 24 hours. It is arranged with a 24-hour dial, thus doing away with its ringing for both day and night. It may be manufactured at a very small increase over the cost of the ordinary one-day clock.

Milwaukee.

At the meeting of the Wisconsin Association of Optometrists, which opened here Monday, A. A. Lueck, Antigo, Wis., gave a talk on "Skiascopy," and Dr. Reno Weiss, of the Wisconsin College of Physicians and Surgeons, spoke on "Dental Lessons and Their Concomitant Ocular Effects."

The present week will see street clocks restored at former locations, and jewelers' curbs, made vacant by the midnight clock raid in March, will in many cases be graced with new timepieces. Richard Seidel, Grand Ave., has just put up a fine new street clock, the old one having been ruined at the time it was torn down.

Burglars, one night recently, broke into the curio shop at 5 Fifth St., Minneapolis, Minn., and stole about $1,000 worth of jewelry and silverware. The thieves are supposed to have escaped on one of the street cars which frequently run past the door of the little store.

Indianapolis.

All of the traveling men of the I. Grohs' Jewelry Co. started on the road last Saturday.

Caleb Asberry, Charlestown, found a pearl valued at $500 in the Ohio river last week.

A. P. Craft, of A. P. Craft Co., will return this week from his fishing trip to Three Lakes, Wis.

The regular monthly meeting of the Indianapolis Retail Jewelers' Association was held at the Commercial Club, Monday evening.

The Archibald-Cleaver Co., 22 E. Washington St., has been succeeded by the Cleaver-Havelick Co., Gerritt A. Archibald retiring from the firm.

Burglars entered the store of James Hart at Scottsburg a few nights ago, stealing 30 watches. Bloodhounds were placed on the trail, but the thieves were not caught.

George W. Kiefner, traveling salesman for Hoffman & Lauer, has gone to his home at Loogootee, where he will spend his vacation, fishing and visiting with friends.

A. P. Craft Co., manufacturers, and F. M. Herron, a retail jeweler, have decided to close their establishments at noon on Saturdays until the first week in September.

Among jewelers in the city last week were: J. W. Thompson, Danville; J. A. Miessen, Cicero; E. O. Collins, Frankfort; L. M. Harlin, Lynn, and Aaron Pursel, Noblesville.

Clarence James, who returned last Wednesday from an automobile trip through Indiana, Ohio and Kentucky, went to Terre Haute, where he spent the last three days of the week with relatives.

Edward F. Otto, Crawfordsville, and Miss Nelle Lee Byrd were married, June 26, at the home of the bride, 15 miles south of Crawfordsville. After the reception Mr. and Mrs. Otto left for an eastern trip.

State Geologist W. S. Blatchley has received a collection of hog bristle bracelets worn as ankle ornaments by the Negrito young women of the Bataan province in the Philippines. The bracelets have been added to the State Museum. They were donated by G. B. Jones, Portland, Ore.

The following have joined in the movement of the Merchants' Association to close at 5 P. M. each day until Sept. 4: Cleaver-Havelick Co., Chris. Bernloehr & Bro., Cohen & Sons, Horace A. Comstock, Gray, Gribben & Gray and Charles Mayer & Co. About 150 have joined in the agreement, and others are expected to follow.

At the convention of the Indiana Retail Furniture Dealers' Association held here June 30 Ralph B. Clark, an Anderson jeweler and president of the Indiana Retail Merchants' Association, delivered an address on "Co-operation of Retail Merchants and Its Advantages." Among the advantages, he said, were the abolishing of premiums, prizes and gifts; abolishing of trading stamps; establishment of reasonable hours of labor; encouragement of local improvements; caused licensing of itinerant merchants; establishment of social relations among competitors; abolishing of unprofitable advertising; protection against "dead beats," and temporary defeat of the parcels post.

If You Are At a Standstill

It is Time to Put New Life Into Your Business

If trade is not coming your way, there is a way to make it come—a way to turn all of your goods into cash at once and to give your business a fresh start.

Why drag along when a week or so of HAND SERVICE will make things move, build up your bank account and give your store an advertising such as it never had?

No doubt you have on hand a lot of stock that is earning you nothing. It is tied up capital; that capital ought to be turned over several times a year at a good profit and you are losing money when it isn't.

Maybe you don't think well of auction sales.

My methods are different from those of other auctioneers. Let me tell you of them.

My long experience enables me to appreciate the conditions and solve the problems of the retailers. I can size up the situation immediately and give the needed advice.

For the asking, I will send you the letters of hundreds of jewelers that tell of the benefits of the HAND AUCTION and the GREAT AFTER EFFECTS.

My Latest Success—the of Sale of the W. A. Sturgeon & Co. Stock, Detroit, Mich.

JAMES L. HAND

America's Leading Jewelry Auctioneer

14 MAIDEN LANE NEW YORK

Do Not Be Misled, Brother Jeweler,

By Auctioneers Copying My Style of Advertising

I have for fifteen years advertised as America's Leading Jewelry Auctioneer

I have conducted the largest and most difficult sales ever made in America, and my results were not only 100 cents on the dollar, but a profit of 20 to 25 per cent. over cost on the entire sale of the old goods in the store and on new goods on memo. 25 to 75 per cent., yet I sell only solid gold and silver and fine goods. I employ to assist me four of the best-trained auctioneers in America—salesmen and gentlemen. I do not associate with any other kind. I guarantee results equal to those of any pair of auctioneers in the world. I guarantee 100 cents on the dollar or over for myself or men, and my guarantee is good.

Look me up in the rating of Bradstreet's and see. Why fool with men without experience? Remember I stand back of my men, and if you need memo. goods to sweeten up your stock I can furnish you any amount desired and at prices that will pay you handsome profits.

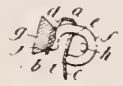
PATENT DEPARTMENT

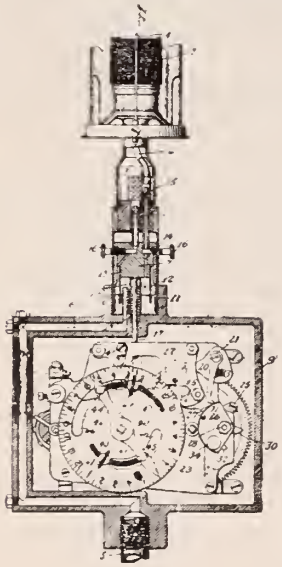


[IN WHICH IS CONTAINED A LIST OF THE LATEST PATENTS GRANTED BY THE UNITED STATES AND GREAT BRITAIN, THE UNITED STATES PATENTS THAT HAVE EXPIRED AND THE REGISTERED TRADE-MARKS.]

UNITED STATES PATENTS.

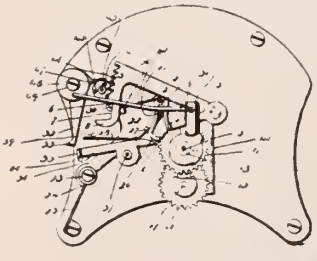
ISSUED JUNE 30, 1908.

891,996. SAFETY DEVICE FOR BROOCHES AND THE LIKE. Herbert A. Ives and Dennis W. Jeffery, Colchester, Eng. Filed March 5, 1907. Serial No. 360,669.



A brooch or like article having, in combination, a hook, and a guard apertured to be slipped over

the hook and to be supported on the brooch without other means of attachment, said guard having an elastic arm bearing against the point of the hook.

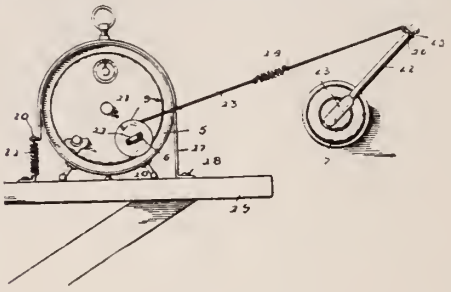


891,999. TIME LAMP-LIGHTING MECHANISM. Marvin W. Lewis, Cleveland, O., assignor, by mesne assignments, to the Consolidated Lighting Co., Philadelphia, Pa. Filed Nov. 8, 1904. Serial No. 231,837.

The combination of a valve, operating means therefor, a motor, means to transmit power directly

from the motor to actuate the valve operating means, and independent means operated by the motor to time the operation of the valve.

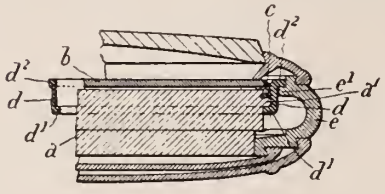
892,067. SHIP'S-BELL CLOCK. Paul Lux, Waterbury, Conn., assignor to the Waterbury



Clock Co., Waterbury, Conn. Filed March 5, 1908. Serial No. 419,319.

In a ship's bells clock, the combination with a hammer, of means for operating the same to strike ship's bells by double strokes, the said means including a half-hour eccentric, a half-hour switch, and a half-hour lever for catching the hammer on the up-stroke on the half hours which are indicated by an odd number of strokes.

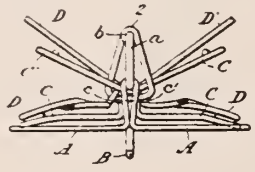
892,095. ELECTRIC-LIGHT CUT-OFF. James B. Smith and Yancy D. Lott, Jackson, Miss. Filed Dec. 18, 1906. Serial No. 348,480. Renewed March 4, 1908. Serial No. 419,198.



The combination with a clock having an alarm spring winding shaft and a switch, of an arm se-

cured to the handle of the switch, a winding drum upon the alarm spring winding shaft, flexible connection between the drum and the arm, and an elastic power storing element interposed in said connection.

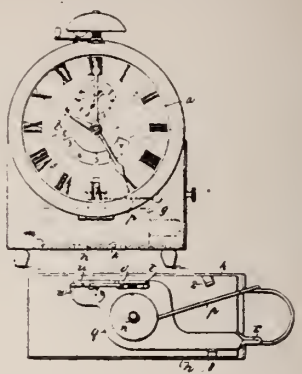
892,147. RING-BAND FOR WATCH MOVEMENTS. Charles Funk, Geneva, Switzerland. Filed Oct. 23, 1906. Serial No. 340,134.



The combination with a watch case center having a circular rim and a watch movement plate having a circular external rim, of a ring band comprising a cylindrical body portion *d*, an internal flange d^1 at one edge thereof and an external flange d^2 at the front edge thereof, the ring band receiving the

movement plate with the rim of the movement plate resting against the flange d^1 and the flange d^2 resting upon the rim of the watch case center, and a ring *c* having a dial bezel surrounding the movement plate and received therewith within the ring band.

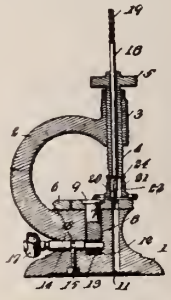
892,227. VEIL-PIN. Florence A. Curry, Arlington, Mass. Filed Feb. 21, 1906. Serial No. 302,191.



A veil-pin composed of a holding device whose rod is bent back above the holding portion to support the remaining parts; a wire base whose extension is rigidly attached to the said rod, a wire leaf normally bearing upon said base and having an ex-

tension wound about said rod and projecting above the same, a wire leaf normally bearing on the aforesaid leaf and having an extension which winds around said rod and projects above the same and springs normally holding down said leaves, all so combined that pressure upon the extension of the lower leaf will lift the same from the base and also lift the upper leaf, and pressure upon the extension of the upper leaf will lift the same from the lower leaf.

892,245. ALARM-CLOCK. Mary J. Gallagher, New Park, Eng. Filed Feb. 17, 1908. Serial No. 416,334.



The combination of an ordinary alarm-clock provided with an hour hand; an additional sleeve adapted to move with said hour hand; a pointer and an arm mounted on said sleeve; a lamp; and means to extinguish the same, adapted to be operated by said arm, said means consisting of a bracket *t* provided with an extinguishing flap *v*, and a bracket *u* provided with a bent lever *w*

adapted to control said flap and to be in turn controlled by said arm.

892,309. JEWELER'S STAKING-TOOL. Loren Russell, Carthage. Filed Oct. 23, 1907. Serial No. 398,743.

A device of the class described, comprising a base provided with an overhanging arm, said arm having a threaded vertical bearing, a horizontal table rotatably mounted on the base below the bearing, said table being provided with an annular series of openings of different sizes, and adapted to receive the hub of a balance wheel, means for

locking the table to the base, a hollow sleeve threaded into the bearing, a hollow plug having an extended base for engaging the balance wheel on the table, the upper end of the plug being adapted to receive the lower end of the sleeve, and a centering staff movable through the sleeve and the plug and provided in its lower end with an opening for receiving the staff of the balance wheel.

DESIGNS.

39,380. EMBLEM. Bessie T. Capen, Northamp-

ton, Mass. Filed April 6, 1908. Serial No. 425,573. Term of patent 3½ years.

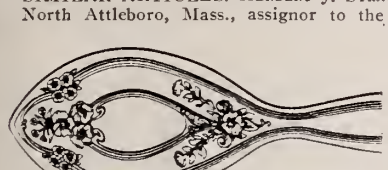
man, assignor to the Gorham Mfg. Co., Providence, R. I. Filed April 30, 1908. Serial No. 430,237. Term of patent 14 years.

39,382. HANDLE FOR SPOONS, FORKS OR SIMILAR ARTICLES. William C. Cod-



man, assignor to the Gorham Mfg. Co., Providence, R. I. Filed April 30, 1908. Serial No. 430,238. Term of patent 7 years.

39,383. BACK FOR BRUSHES, MIRRORS OR SIMILAR ARTICLES. Sidney A. Keller, New York, assignor to the W. H. Saart Co.

Filed May 22, 1908. Serial No. 434,440. Term of patent 3½ years.

39,384. BACK FOR BRUSHES, MIRRORS OR SIMILAR ARTICLES. Herbert J. Straker, North Attleboro, Mass., assignor to the W.

H. Saart Co. Filed May 21, 1908. Serial No. 434,196. Term of patent 3½ years.
Print.

2,312. *Title:* "CLASS PIN PAGE NUMBER THREE." (For Class Pins.) Stephen Lane Folger, New York. Filed May 25, 1908.

UNITED STATES TRADE-MARKS.

[The following trade-marks have been adjudged entitled to registration under the Act of Feb. 20, 1905, and are published in compliance with Section 6 of said act. Said section provides:

"Any person who believes he would be damaged by the registration of a mark may oppose the same by filing notice of opposition, stating the grounds therefor, in the Patent Office, within 30 days after the publication of the mark sought to be registered, which said notice of opposition shall be verified by the person filing the same before one of the officers mentioned in Section 2 of this act. If no notice of opposition is filed within said time the commissioner shall issue a certificate of registration therefor, as hereinafter provided for."

Marks which are stated to have been "Used 10 years are registrable under the last proviso of Section 5 of said act, which is as follows:

"And provided further, that nothing therein shall prevent the registration of any mark used by the applicant or his predecessor, or by those from whom title to the mark is derived, in commerce with foreign nations or among the several States, or with Indian tribes, which was in actual and exclusive use as a trade-mark of the applicant or his predecessor from whom he derived title for 10 years next preceding the passage of this act."]

PUBLISHED JUNE 30, 1908.

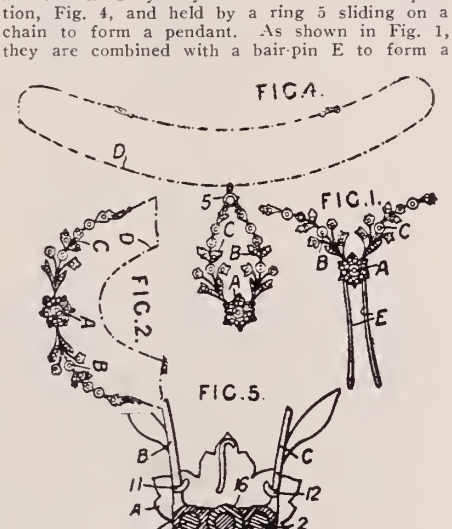
Filed March 10, 1908. Serial No. 33,280. Published April 28, 1908.



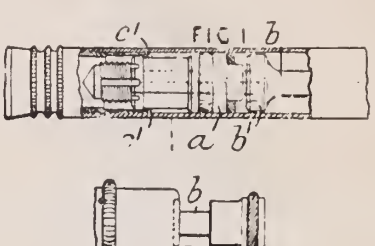
BRITISH PATENTS.

(Abridgments of Specifications, 1907, from *The Illustrated Official Journal.*)

ISSUE OF JUNE 17, 1908.

4,540. JEWELRY. H. Haseler, Birmingham. Feb. 25.

Two jeweled curved sprays B, C, hinged to the back of a rosette A, can be worn as a pendant, necklace, or hair ornament. As shown in Fig. 2, the sprays have a chain D attached to be used as a necklace. They may be turned to another position, Fig. 4, and held by a ring 5 sliding on a chain to form a pendant. As shown in Fig. 1, they are combined with a bair-pin E to form a



hair ornament. With the sprays in this position. a second necklace may be formed. The sprays are hinged at 1 and 2, Fig. 5, to the rosette, and are held in their different positions by hooks 6, 7, 11, 12. A threaded socket 16 on the hair-pin engages a screw pin 15 on the rosette, the socket 16 engaging with curved recesses 18 on the hinges of the sprays to hold them in position.

4,549. TIME CHECKS FOR GAMES. J. Ferguson, Renfrewshire. Feb. 25.

A time-recording apparatus is included in the electric light circuit for a billiard table, so as to indicate the time during which the table is in use. A magnet *a* in the lighting circuit has an armature *e*, which bears against a pin *f* on a frame *g* pivoted at *p*. When the light is switched on, the armature *e* is drawn up and the frame *g* tilts over so as to bring the upper of the recording-wheels *i*, *j*, into contact with a drum *h* connected to a clock. The wheels have time numerals, or amounts to be paid marked on their edges, and these are displayed through orifices in a plate *n*. When the current is switched off, a hand-operated spring lever arm *o* is turned to disengage the wheel *i* from the drum *h*, and to stop it by bringing it into contact with the plate *n*. The figures may be brought back to zero by turning back the drum *h*, with the wheel *i* in contact, by a handle h^1.

4,787. PENS. G. Sweetser, Upper Norwood, London. Feb. 27.

A fountain-pen is filled by a piston *a* loosely mounted on a square portion of a piston-rod *b*. When the piston is withdrawn by means of the head b^2 of the rod *b*, the air in the rear of the reservoir passes through the piston. Upon the return stroke, the enlargement b^1 comes against the piston, closing the passage through it, and a vacuum is formed behind the piston. When the nib is dipped in ink and the enlargement b^1 is lifted slightly, the pen is filled. To prevent the piston from following the rod by the pressure of the atmosphere as the valve is opened, the piston

either engages hooks c^1, or wedges into the rear end of the pen carrier.

Complete specifications accepted June 11, 1908. 1907.

13,160. NECKTIE FASTENER. Swanson.

19,977. FOUNTAIN-PEN. Bristow.

26,012. WATCH CASE. Francillon & Co. 1908.

Applications Filed June 1 *to June* 6, 1908.

11,907. BRACELET FASTENING. Saul Betts, London.

11,940. PURSE. F. J. Seller, Manchester.

11,955. METHOD OF MAKING LENSES. J. M. Orr, London. Complete specification.

12,001. INKSTAND. Rudolf Penkala, London. Complete specification.

12,040. JEWELRY GUARD. A. E. E. Keating, London.

12,074. SLEEVE LINK. V. H. Buck, Highbury.

12,311. CUFF LINK. C. E. Sugden, London.

Designs issued July 2, 1901, *for* 7 *years.*

34,702. BADGE. Louis Sickles, Philadelphia, Pa.

Now It's The Lord Elgin

The demand to-day is for thin watches.

The public have been waiting for a thin Elgin Watch—now it's here—the

LORD ELGIN

The Thinnest Watch Made in America with Enamel Dial

the thinnest watch made in America with enamel dial.

Like all Elgin Watches—it was not put on the market until worthy to carry with it the Elgin reputation for reliability.

Every Lord Elgin is cased at the factory and timed in the case—the most accurate thin watch in America.

Four grades—7, 15, 17, and 17 Jewels adjusted. 18K and 14K solid gold cases, also 25 year filled cases.

Furnished with metal dials, plain or engraved, gilt or silver.

Prices furnished on application by your jobber, or write the Company for only authorized price list.

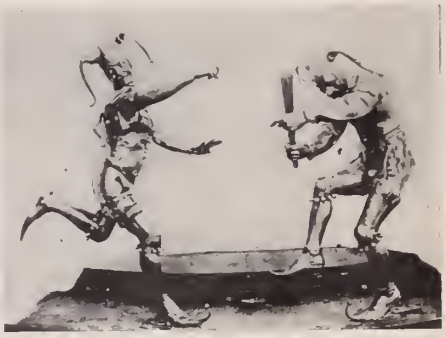
THE HOROLOGICAL REVIEW

Interesting Automatons in the Famous Old Clock at Munich.

IT is probably known that in many cities of the European continent there exists clocks which not only strike the hour, but operate performing automatons. This custom is centuries old and prevails chiefly in southern Germany and Austria. In nearly all cases these old clocks and their figures are real objects of art and are preserved even if the building in which they were housed has been razed on account of age and the consequent danger of collapse. While the exterior of such a clock is frequently treated in the ancient style adding to the picturesque appearance of the public building, a church or city hall, the clockwork itself is strictly modern.



DANCING AND PLAYING FIGURES.

Thus, in the famous old Bavarian capital, Muenchen, a few weeks ago, a fine new city hall was completed on the site of the old one, and its chief attraction is the magnificent tower shown in the picture. Above a fine entrance in the tower is a jutty made entirely of copper, within which several figures can be seen. There is a row of sounding pipes which ring like a bell, the so-called turnier, Harlequin dance, watchman, angel of peace, bell striking men, etc. Some come into action in day time and others at night. After the clock has struck, the bells play a melody, whereupon the two bell-strikers repeat the hour. Then follows a second melody and the turnier; a dance follows and is concluded by the crowing from the cock. At night the bell players repeat the hour, after which the watchman appears with a burning lamp in his hand; he moves around the left corner of the jutty, blowing his horn, while the angel of peace walks around the right corner.

The whole mechanism is a fine example of ingenuity in this kind of work. The apparatus is operated electrically and automatically. Of course a very complicated and ingenious system of motors, contact levers, gears and switchboard is necessary. The figures are, to a certain extent, dependent on the standard clock housed in the fire station of the new city hall. This is very accurate and actuates several branch clocks. It is fitted with a synchronizing arrangement by means of which the tower clock is kept swinging equally with the standard clock. Upon swinging every second time a slight electric current goes through the second-pendulum, so that its movement is fixed by electromagnets.

A special pointer controls both clocks by indicating the oscillations of the pendulum every 1-60 of a second. The tower clock is also provided with an electric, automatic winding mechanism operated by a motor. By the revolution of a main-wheel once every hour a circuit is closed four times a day by which the motor is started and winds up through gears a heavy weight. The motor is also stopped automatically, by means of the clockwork. Moreover, a triple contact-work is provided for the electric starting of the bells, turnier, dance and jutty figures. For the others a special apparatus electrically driven is arranged.

HARLEQUINS.

Both clocks are fitted with a nickel-steel compensation pendulum, to render the motion as accurate as possible.

In the fifth floor we find a main switchboard with the complete shunting mechanism, while cut-outs are located near the figures themselves. We see Volt and Amperemeters to measure the current consumption, a series of cut-outs to disengage each figure separately, two large automatic starting devices, which are themselves rotated by their own motors to drive the 4 horse-power motor for the dancing automatons, the seven small magnetic-automatic starters for the smaller motors of the bell strikers, etc.

The principal part is the so-called contact roller which starts and controls all movements. It is propelled by an electric motor and bears on its surface a number of shoulders, which press down one after the other, the contact levers being arranged

WALTHAM WATCHES

COLONIAL SERIES

These Extra Thin Watches may be had in four qualities of movements as follows:

RIVERSIDE; NICKEL;

19 fine ruby jewels; raised gold settings; double roller escapement; steel escape wheel; exposed sapphire pallets; compensating balance, adjusted to temperature and five positions; meantime screws; patent detachable balance staff; patent Breguet hairspring, hardened and tempered in form; patent micrometric regulator; tempered steel safety barrel; red gold center wheel; exposed winding wheels.

ROYAL; NICKEL;

17 jewels; red gold settings; exposed pallets; compensating balance, adjusted to temperature, and three positions; meantime screws; patent detachable balance staff; patent Breguet hairspring, hardened and tempered in form; patent micrometric regulator; tempered steel safety barrel; exposed winding wheels.

NO. 1425; NICKEL;

17 jewels; red gilded settings; exposed pallets; cut expansion balance; meantime screws; patent detachable balance staff; patent Breguet hairspring, hardened and tempered in form; patent micrometric regulator; tempered steel safety barrel; red gilded center wheel; exposed winding wheels.

NO. 1420; NICKEL;

15 jewels; settings; exposed pallets; cut expansion balance; meantime screws; patent detachable balance staff; patent Breguet hairspring, hardened and tempered in form; patent micrometric regulator; tempered steel safety barrel; exposed winding wheels.

Riverside and Royal grades are supplied in Gold and Gold Filled cases, both Regular Jointed Open Face and Calumet (Single Joint).

No. 1425 and No. 1420 grades are supplied in Gold Filled Cases only, both Regular Jointed Open Face and Calumet.

Colonial Series watches have Gilded or Silver Finish Metal Dials, as may be preferred. Solid Gold, 18k. and 14k. dials at an extra charge.

Movements manufactured and guaranteed by

WALTHAM WATCH COMPANY,

WALTHAM, MASS.

in a row parallel to it. Thus each time an electric circuit is closed, a motor is started which actuates a particular figure. As the whole performance lasts six to 12 minutes, according to the hour, the contact roller makes one full revolution or sometimes two, in the above time. There are two motors, one for day service and another for the night. The first motion of the contact roller is done by the tower clock which closes at a fixed moment an electric circuit. This starts the motor for the contact roller and the latter closes the circuits for all the various figures in the manner described above. When a figure or group of figures have performed their function, a lever fastened to it actuates a cut-

NIGHT WATCHMAN.

out and motor and figure stand still. After the contact roller has completed one revolution, it is stopped automatically and then it is all in readiness for the next turn to be made.

The largest group is that showing the dancing figures. The figures stand upon a disk which makes two full revolutions and in addition turn round their own axis. After the second revolution, a shoulder fastened to the disk closes the circuit for a strong magnet, which interrupts the current for the motor. In another large group two concentric disks rotate in opposite directions. Besides a herald, hornblower, etc., a knight on horseback stands on each disk. During the first revolution they pass each other without mishap, but during the second turn they meet and one is lifted off the saddle and falls backwards. At the same time the remaining figures stop for a little while, to make the defeat more impressive. Upon resuming the motions the two knights disappear in the background where the conquered stands up again automatically.

Another ingenious design is a series of playing-bells, of which there are no less than 43, all well-tuned. To operate these a special roller and motor are arranged in front of them, while in the eighth floor a separate switchboard is provided with the necessary voltmeters and amperemeters, fuse-boxes, cut-outs and automatic starters for the bell motor. A battery of accumulators containing 12 cells actuates the 43 magnets for the various hammers. It is charged from the switchboard through resistance coils. The bell apparatus may be started not only by the main switchboard, but also by a separate contact, so that it is possible to play songs at any time independent of the other figures. In addition, a special finger-board with 54 contacts is erected, by means of which any music can be played by hand.

State Commission for Watchmakers.

(Paper read by CHARLES S. SANDS, Kirksville, Mo., at the joint Convention of State Associations of Retail Jewelers and Opticians of Missouri and Kansas.)

IN our efforts to improve business and trade conditions through the means of trade organizations, I feel confident that the subject of this paper, "A State Commission for Watchmakers," as assigned to me by our honored president, is entitled to the profound consideration of every individual to whom fate has been so unkind as to ally them with the jewelry interests, as either apprentice, watchmaker or proprietor.

Every local association of jewelers, every State association of jewelers, and our National Association should invite discussion of this question and the means whereby a "State Watchmakers' Commission" shall become a reality. The accomplishment of this would mean a larger apprenticeship and the striving of every watchmaker to attain a point of efficiency which would entitle him to point with pride to his certificate issued by the State. We would then have a much larger percentage of competent and capable watchmakers receiving the highest standard of wages, which at present not over 10 per cent. of them command.

Under such a law every enterprising and up-to-date jeweler would be quick to apprise the public that the efficiency of the work done in his establishment was vouched for by the State, and therefore was not to be compared in value with that of the man who was unable to show such a certificate of competency. This would have a certain tendency to elevate and maintain prices justified by this class of work, and I believe that the public would soon recognize that the man who places a low value on his services does so because the State of which he is a citizen fails to recognize in him a craftsman worthy of the name he assumes.

Our business is believed to be the most honored one of all the mercantile lines, as our very existence for any number of years in a community depends upon the confidence established between the jeweler and his patrons, and we admit with regrets that the service at the bench in the average jewelry store is not of a quality calculated to impress the customer with a confidence in the establishment as a place to patronize for all of his needs, from adjusting the hands on his watch to the purchase of a diamond.

How many times has a good patron been lost, one who has spent hundreds of dollars with you, by discovering that his watch has been disfigured by a file, or the time-keeping qualities impaired through your workman's inefficiency. Who is to blame for this occurrence? You may feel that this thing is out of your reach; that it is beyond your control; that you are unable to keep a first-class workman constantly in your employ with the facilities at your comand to get in touch with them, or that you cannot pay the salary commensurate with such ability; but neither of the reasons advanced reaches the root of the evil, which is, that there is no standard of excellency by which you may judge whether a man should be considered as an apprentice or a finished workman.

What other trade is there where workmen, posing as competent and thorough, are paid for their services salaries ranging from $10 to $35 per week, and all working on practically the same class of work, from the dollar watch to the $200 chronograph or repeater? Both workmen will ask the public the same price for replacing a balance staff, jewel or other repairs in a watch, while only the better workman is really able to do the work at all, and the other workman turns it out a useless thing, only in condition to be taken to the real watchmaker and a double bill to pay in order to be a timepiece. This of itself proves the falsity of our present system, and should call attention to the rank injustice which is being done both to the real workman and to the public. It calls for an accounting of the ability of every professed workman, regardless of the value which he arbitrarily places upon it.

Three or four competent watchmakers, composing a State board, would, by an examination, refuse to give a certificate to the workman who cannot adjust an escapement, misfits a mainspring, files balance bridges, uses brass for roller jewels, soft solders wheels to pinions and staffs, turns a pivot down to one-fourth size to go with a misfit jewel, files balance screws or loads them down with all sizes of timing washers, bends hairsprings out of shape; in fact, the "botch" will be branded as such, and with him we would dispose of the fellow who has been the price-cutter from time immemorial, and the man who forces us to-day to do work for the same price or less than we were getting 10 years ago, while every laborer, tradesman, artisan or manufacturer is getting 50 per cent. more for his product to-day.

Are we to permit such conditions to continue, or shall we, through the medium of such powerful organizations as this and others which have lined up with us in the great work for our welfare demand that the legislators give us the protection legitimately due the honest, trustworthy and conscientious jeweler who is seeking to improve his own condition and at the same

DUBOIS

Safety Chatelaine Brooch and Case Combined

Which Enables a Watch to Keep Correct Time

Cannot Be Lost **Absolute Security** **Will Not Pull or Wear Off**

Patented U. S. June 9, 1908.
Patents Pending in Foreign Countries.

Watch worn as Chatelaine, showing it lifted to read the time.

MERITS—Holds the watch firmly and securely, thus preventing the movement from being jarred, as there is no swinging or bobbing up and down while the wearer is walking or running. Protects both the case and garment from wear.

UTILITY—It can be raised so as to read the time, and reversed to have either the dial or back facing front, without removing brooch pin or watch from the garment. Can be worn on the shoulder, belt, chain or fob.

ARTISTIC AND PRACTICAL—The only brooch and watch combined. Affords absolute security, as it has a safety catch. Nothing to wear out, as it works on friction bearings. Eliminates the possibility of loss of the watch owing to either bow, hook, swivel or link wearing out, breaking or coming apart, as in the old style chatelaine. Does not interfere with either winding or setting of movement.

Watch worn on belt as Chatelaine, also long neck chain can be worn attached to it.

Licensed Under Wachter Patent. Patented July 25, 1905; May 21, 1907.

DUBOIS WATCH CASE CO.

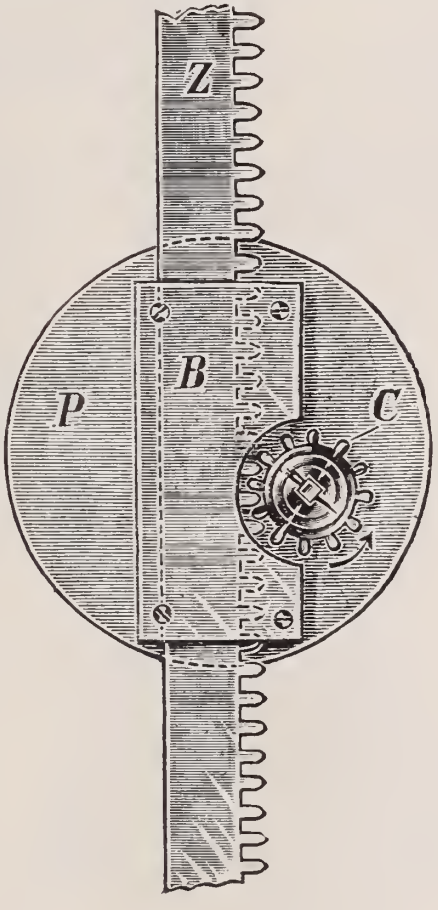
time protect the public from the parasite who takes from them and gives nothing in return?

We believe that every jeweler before us to-day is in sympathy with this effort to improve the qualification of the watchmaker, that it may rebound to his own interests, as well as those of his employer; also that all watchmakers worthy of the name and the confidence of the people will hail with joy any method of placing before the public the means of distinguishing the difference between the "botch" and the skilful, studious mechanic, who has spent years and great effort acquiring a thorough knowledge of the construction and repair of the most delicate, accurate and perfectly constructed piece of mechanism ever put together by human genius.

Watchmakers of the highest order are not actuated solely by the amount of money received for the repairing of the individual watch, but take a deep pride in doing something so that every individual part is in a state of perfection and will perform its proper functions, and work in unison, to the realization of the modern American watch, the most wonderful and marvelous piece of precision mechanism on earth.

We have succeeded in making national as well as State laws intended to protect the public against the purchase of inferior articles sold as manufactured of gold and silver, and have tried to persuade ourselves that the need for this was a burden of odium to be placed upon the necks of the department stores and mail-order houses; but how few of us have realized that the first essential element of a successful retail jewelry establishment is installing and maintaining a rapair shop whose output is as dependable and satisfactory as we would have our gold and silver be.

How many of us would "make good" if the law provided that every balance we trued and poised had to be within "one-half karat of perfect," or the pallet jewel be set with 925/1000 correct?



We are living in a day of strong competition, perhaps the most keen and strenuous in history. We are compelled to study every system of economy, cudgel our brains to the utmost for new ideas in advertising to attract the elusive dollar to our door, study every possibility of the purchasing power of money, that we may be able to compete with the larger buyers. We refuse to sell certain makes of goods which we do not consider up to the high standard which we have raised for our wares, and yet, in that same establishment where the owner feels that he is the soul of honor and his word as good as the gold he sells, the mainspring of the whole institution is at fault, the foundation of the whole structure is built on the sands and eventually will totter and fall because of the incompetency of the man at the bench, the individual who ministers to the wants of fully one-half of the patrons who enter the store. Many of them go away never to return, feeling that they have been defrauded of their money and bearing witness against the jeweler's reliability.

Let us unite for concerted action on this, the pulse of our business, and maintain a State board, the character of which cannot be impeached, and for neither political nor personal considerations will issue a certificate to any man, but will make it a proper reward for high-class mechanical attainment. This is not impossible, and we point for example to the State boards of pharmacy all over this great country which have raised the efficiency and pay of the pharmacist to a standard well worth emulating. We also have our commissions for dentists, engineers, plumbers and other trades and professions, which we believe are improving conditions in those lines.

Let the States of Missouri and Kansas be the birthplace of this movement. Let our own legislators have the honor to put into force and effect this progressive step which we believe will be well applied to many trades besides our own, and we shall at least have the promise of better wages for the workman, better prices for the work, better work for the people and a clear conscience besides.

A "Saw-Clock" of the 18th Century.

AMONG my drawings, says a writer in the *Deutsche Uhrmacher Zeitung*, which I was turning over the other day, I found a sketch of a so-called saw-clock

A SAW-CLOCK.

which came into my hands for repair several years ago, and which interested me so much that I made a sketch of it.

The accompanying illustration shows the clock about one-third size. The back, carved from wood, is finely gilded. At the top is inlaid an enamel picture representing the pilgrimage resort of Mariazell, in Styria. The saw-clocks, as is well known, derive their name from the rack, fastened in a vertical position, and which, seen at a distance, shows some resemblance to a saw blade. On this rack the clockworks, with the case in which they are enclosed, move slowly downward, the weight of the works creating the motive power. When the clock has reached the lower end of the saw it is pushed up again by hand and re-commences its exceedingly slow downward movement.

This very simple winding mechanism is shown in a separate illustration. The rack Z, seen here from the rear, is screwed on two pillars at the upper and lower ends to the carved back, and is embraced by the clamp B of the works. The pinion C is firmly attached to a ratchet wheel, not shown in the illustration. When the clock has passed downwards on the rack, it is raised, as already described, by hand to the upper end of the rack. This causes the pinion C, with the ratchet wheel attached, to turn (in the illustration) towards the right (in the opposite direction to the arrow). In consequence of the ratchet, however, it is held under the weight of the clockwork stationary in that direction, and can only revolve slowly with the movement of the clockwork. The clock runs forty-eight hours on one winding. The pinion C, on the arbor of which a wheel that engages the center pinion at 8 to 7, is mounted, is caused by the rack to make three revolutions in 24 hours.

How old this clock may be—it has a verge escapement—I am not in a position to state; but I do not think I am far wrong in attributing it to the second half of the 18th century, at which period there was a craze for these mechanical playthings. The metal case of the clock is heavily loaded with lead, to impart to it the necessary impetus.

Organization of a Service for the Transmission of Time by Telephone.

THE *Révue Chronomêtrique*, of Paris, published in a recent issue a communication from the observatory of Montsouris, relative to the transmission of time. The *Révue* expresses its gratification at being able to bring to notice the fact that the watchmakers of Paris avail themselves of the service.

Watchmakers may visit this scientific establishment, where they may find a model installation of pendulum regulators and where every one of them may observe with what scrupulous care the determination of the correct time has been established and may be obtained. It is to the commandant Gugon, member of the Institute and director of the observatory of the board of Longitude, to which the Chronometry is indebted for this new service.

"Watchmakers now have a new task," said a watch expert, "that of inventing something that will make watches used in skyscrapers keep correct time. The perpendicular steel construction of these high buildings forms a magnet that acts on the wheels of the watches, accelerating or retarding the balance wheel. That's why so many watches in skyscrapers won't keep the correct time."

Profit

Is what you are in business for—"Ball Watches" assure you several varieties.

1—A fair cash return.

2—Satisfied customers—most desirable "profit."

3—No preliminary repairing of movement—No fitting to case—No long regulation. Thus, saving your time is "profit."

4—No "price cutting" competitors.

AN EXAMPLE OF A GREAT ACHIEVEMENT IN THE MANUFACTURE OF IMPORTED WATCHES IS EVIDENCED IN

"Tavannes" Movements and "Cyma" Watches

WHY?

Because all features heretofore existing that have been an obstacle to the modern watchmaker have been eliminated — being brought about by the introduction of automatic machinery in the manufacture of these goods, and the concentration of our mammoth factory on a modern scale, enabling us to furnish "FINISHED MATERIAL" ready to use.

"TAVANNES" movements and "CYMA" watches give most satisfactory results when exposed to the extreme influence of TEMPERATURE, ELECTRICITY or MAGNETISM.

Modern Methods of the Jewelry Store Thief

Chances Which Jewelers Are Necessarily Compelled To Take

THE modern petty jewelry case thief is getting to be more and more experienced, successful and prevalent. Almost daily reports are received from the different centers concerning the sly theft of one or more pieces of jewelry from show cases at the counters and while the goods are being shown. That there are men and women who live entirely by stealing one or more pieces of jewelry under various circumstances is well known to the jewelers and the police.

Safeguards are placed wherever possible. But the conditions are such that the petty thief often succeeds in getting off with the goods regardless of the alertness of the salesman. It is a very delicate proposition to refuse to allow a prospective lady customer to handle certain goods for which she may ask. The lady might be perfectly honest. She examines certain pieces of attractive jewelry in the cases. Perhaps some of the jewelry is protected by being locked in chain form, or in individual cages, or otherwise protected from theft. The lady wants to handle a certain article, to try it on. She may be well dressed and pretty. She makes a polite request for the article, and it is exceedingly difficult to say no. In fact, it is so hard to refuse prospective customers of this kind that the owner of the establishment or the salesman may make up his mind to take the chances and let the lady try on the jewel. The lady has won her opportunity.

She may be perfectly honest. She may be an accomplice of a professional jewelry thief. She may be working a game on her own lines. She gets the article in question. She has previously inspected the goods, and days before had duplicates made of some of the adored gems. The lady is swift of finger and quick of thought. She returns the jewel, but it is not the original one, although it is just like it in appearance. The lady makes an excuse and departs. She is seldom caught.

The change in the gems is discovered sooner or later and the loss side is charged up with the theft. Then there are well-trained male and female hands that would do well in the show juggling line. There are men and women who can pick up an article and palm it in such a way that you are deceived most completely. In one instance the little shapely hand of a miss covered a gold pencil. The woman worked outside the line of vision of the eye of the clerk back of the show case.

The little miss simply palmed the small gold pencil, and the back of her hand acted as a curtain before the salesman. He simply missed a pencil. It was not of much value, but the little lady had laughing eyes. He could not even suggest that one of the pencils was missing. What if the count had been wrong! Or perhaps a pencil had fallen out and was after all nearby. So the salesman never winced. And the lady got away with the gold pencil.

Politeness assists many a petty jewelry thief to get free. Rather than take chances, men and women are often permitted to leave a store even though the men back of the counters feel pretty sure that the persons have stolen something. But there is no direct evidence.

Not long since a man fixed the electrical equipment in the store, actually cutting wires, and he was no doubt an expert. Suddenly he opened one of the jewelry cases and removed some articles, just as if he had a right to do so. He was seen by a number of persons, and no one supposed that he was doing anything wrong. He went back to fix the wires near the case and then he picked up his kit of tools and departed. He secured $50 worth of gems and was never caught.

Some salesmen are active. They read about persons sticking jewels under edges of counters with gum, expecting to return next day and get the jewels. So some men keep their eyes open all the time.

A comely young woman recently entered a jewelry store and examined a number of jewels. Suddenly the salesman saw that her hand went down back of the counter and it seemed as though she was gumming some article of value there. The lady soon departed. The salesman rushed around the counter and, sure enough, there was the heap of gum, freshly stuck on, hiding, no doubt, an expensive jewel. Quickly the young man followed the woman. He asked her please to return to the store a minute. Thinking that she might have forgotten something, she returned. In most dramatic form the salesman undid the gum and looked for the hidden jewel. There was none there. The other clerks were laughing. The lady said: "Oh, excuse me, I forgot my gum." She took it and went out and never imagined she had been suspected. The boys called the salesman "Gum" for months after that.

Nevertheless, there are ingenious systems of actually getting and hiding valuables by means of gum, soft resin, and even in the hat. On one occasion, a woman managed to select a costly gold ring from a case and slip it under a pin and heavy feather in her hat. The evidence against this lady was so clear that she broke down when questioned in the private office of the manager. She wept and then exposed the ring and returned it. The flow of tears, the sad story of want, etc., softened the heart of the owner of the store and the girl was not prosecuted.

Doing a Little More.

THE reason some people never succeed is that they start out at too fast a pace. The man who hopes to win a 25-mile race is not usually in the lead at the end of the first lap. It is interesting to watch one of these long races. A great many quit at the end of the first quarter mile and a few more at the end of the mile; then it becomes a question of staying power and "spurt" at the end.

Some fellows with fairly good staying ability get left because they have not enough steam in reserve to put up the gauge a notch or two on the home stretch. The man who has learned to "keep under his body" knows how to so husband his physical endurance as to be able to do a "little more" when the pinch comes.

So with success; the man who wins is the one who does a little more than is expected of him all along, and who can do a little more than he himself expects to do at the last. The man who is afraid of work in these days of hustle will find himself at the wrong end of the procession. Work is the "open sesame" of every gate of life.—*General Merchants Review.*

The annual meeting of the Retail Jewelers' Association of Jacksonville, Fla., was held in the Board of Trade Auditorium in Jacksonville, recently.

Mrs. Katherine B. Bahret, widow of Charles Bahret, at one time a well-known jeweler in Poughkeepsie, N. Y., died a short time ago of paralysis at the home of her son in that city.

Selling Arguments Used by Enterprising Retail Jewelers

Various Ways of Exploiting Miscellaneous Lines of Jewelry, etc.

THE beauty in our glasses is that they rather add to the dignity of one's appearance than detract from it. Some people have the idea that glasses spoil beauty. On the contrary, they rather enhance it, and suggest learning, too. But it is not of the looks of our glasses so much as their efficacy and accuracy of adjustment to the individual sight that we want to speak. For young or old we adjust the lenses with scientific precision, and far less expensively than you might think. Parsons Optical Co., Charleston, S. C.

Watch Talk.—A watch talk? Well, no, for master forgot to put a mouth in my face when he made me. Although he put life in me, he did not make my hands sufficiently strong to strike you when you abuse me, consequently you can smash my face or take my life any time. Then you may punish me still more by taking me to some unskilled watchmaker to revive me—some fellow who promises to put a spring of life in me for 50 cents—give me a physic and thoroughly purge me for 50 cents more, but who does not even take me apart. I'll talk right for you if you will take me to Gordon's, Shreveport, La.

Diamond News.—Perfect diamonds for $70. Absolutely perfect diamonds, ¾ carat each, set in hand made 14-karat rings, at $70. You can't buy them at any other place for this price. Your money back the next day if you change your mind about the purchase. Lebolt & Co., Chicago, Ill.

Wedding Silver.—Sterling silver for wedding presents is unformly acceptable and appropriate. Correct taste, however, requires selection from an old and reputable make, such as Towle Sterling; good weight and strength, for permanent table use and a pattern in which a complete family service is available. The design should be of definite character. The pattern which perhaps best answers these requirements, in addition to its irreproachable beauty and refinement, is the Newbury, a Colonial pattern, expressing in its refined lines the simplicity and purity of the period, and distinguished by its enrichment of delicate beading. The historic atmosphere surrounding the name "Newbury" suggests the culture and elegance of old English ancestry and Colonial ideals. The Newbury is made in all standard pieces, and in a multiplicity of sizes. Selections at suitable prices are thus made easy. Also available in chest combinations. Exhibited in this city by Maier & Berkele, Atlanta, Ga.

One Dollar To-day Only for any article in the "Dollar Day" show case. Second show case, north side. Full of great bargains from all parts of the store. Paul-Gale-Greenwood Co., Norfolk, Va.

When you ask "which is the best jewelry store in town," don't take the word of so many partisans. Don't ever take our word for it. Get your data from first hands. Divest your mental processes of all prejudice and see for yourself. Ingalls, Rock Island, Ill.

June and the Lovely Bride.—Custom and society are responsible for the fact that more marriages are contracted in June than any other month, and realizing this as a fact we urge you to examine our complete and varied assortment of cut glass, china and silver. Our prices are right at all times and we don't have to move in order to give you the right prices. Don't you want a pair of the So Easy eye glasses. We test and fit correctly. Taylor Bros., Houston, Tex.

Gifts of Sterling Silver are the gifts the bride treasures most. The lasting durability of such gifts make them the choicest of wedding gifts. Many new and useful sets in cases such as mayonaise sets, marmalade jars, individual peppers, salted almond sets, relish dishes. All the fancy serving spoons and forks in many dainty patterns. J. C. Peers & Son, Rockford, Ill.

The New Quarters of August Loch, Pittsburg, Pa.

AFTER 28 years of active business life on the North Side, Pittsburg, Pa., August Loch, one of the progressive jewelers of that side of the Allegheny river, has built for himself one of the finest business homes in the two cities at 817 Federal St. Mr. Loch began business in a modest way.

The first floor of his present attractive three-story building contains 2,500 square feet of floor space devoted to the main store room, optical and repair departments and his office. The store is furnished in rich mahogany with decorations that blend harmoniously with the delicate colorings of the store walls and presents a very pleasing effect to the visitor. There is nothing gaudy about the interior and its beauty of refinement impresses everyone who enters the store. Mr. Loch held a formal opening of his store June 13, when large crowds visited the place.

A handsome street clock has been placed in front of the building which is an additional attraction to the street. Mr. Loch bought the property some time ago, moving several months ago from his old location at Federal and North Diamond Sts. to his own home.

Educating the Customers.

JOHN WESLEY'S mother sat repeating over and over to her boy some lesson. Samuel Wesley, the father, became irritated and said: "Susanna, why do you tell that lad the same thing for the hundredth time?"

"Because," she replied, "the 99th time he did not understand."

You are educating your customers. You can't do it in one lesson nor in two or three. Keep up the good work for you will gain your point in the end.—*Minneapolis Tribune Hustler.*

Displayed in the show window in the store of Wright, Kay & Co., Detroit, Mich., recently, was a painting by J. M. Dennis, a well-known local artist. The picture portrayed a woodland scene and attracted a great deal of attention.

QUESTION No. 2168.—**Casting Gold Ring Bands.**—*We are often compelled to make rings from old gold, given to us by our customers, and we would like to know how we can make a cheap mould for casting plain rings.* *C. & J.*

ANSWER:—A very good and inexpensive mould for casting gold rings can be made

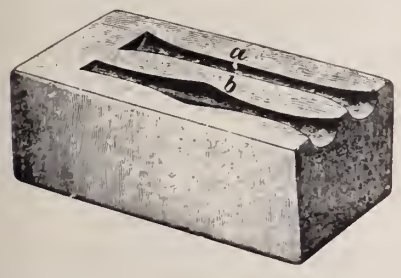

FIG. 1.

out of soft sandstone. The stone should be square in shape, with one side ground flat. The stone need be only from three to four inches long. The desired shape of the band can be dug out with an engraving tool and smoothed up with sand-

FIG. 2.

paper and a file. One end must remain open and enlarged so that the molten gold can be poured in. (See Fig. 1.) For a cover for the stone mould use a flat piece of charcoal, with the end opening enlarged to facilitate pouring. (See Fig. 2.) Wire the two halves together. After the casting is completed the band is bent into shape, heated, and the two ends forged or soldered together. No air channels are needed in the sandstone mould, the stone being porous enough to allow the air to escape.

QUESTION No. 2169.—**Acid Spots on Dipped Silver.**—*We have an old silver cup, given to us to be repaired and cleaned, which showed green spots on the surface after it had been delivered to the owner. We repaired the cup in the regular way, using borax as a flux for some soldering that had to be done, then dipped it into a pickle, rinsed off and polished. We fail to understand how the verdigris can appear on this sterling silver, and would like to have your opinion.* *A. S. & Co.*

ANSWER:—The sterling silver cup was composed of porous silver, and the pickle dip must have been quite strong and contained copper which was taken up in the pores. Some time afterward green, caused by the copper, began to show. This can be avoided if the cup is immersed in boiling water to which has been added a little sal-ammoniac. Let remain for a while until the acid is boiled out of the pores. The ammonia will assist in drawing out the copper, and the green spots cannot appear on the surface afterward.

QUESTION No. 2170.—**To Repair Enameled Dials.**—*What kind of material can I use to repair cracked and chipped enameled clock and watch dials?* *R. E.*

ANSWER:—In order to repair enameled dials a fusible enamel can be purchased from dealers in watchmakers' supplies, or if desired a white enamel is prepared out of the following: Silver sand, 1½ ounces; red lead, 1¾ ounces; oxide of tin, 1¼ ounces; saltpeter, ¼ ounce; borax, one ounce; flint glass, ½ ounce; manganese peroxide, one grain. The parts are all fused together and allowed to cool, then crushed into a fine powder and well washed to rid them of impurities. When in a plastic condition it is applied to the well-cleaned cracks or broken places in a thin, even manner, and allowed to dry. Next hold over a spirit lamp and let fuse, when it can be smoothed down with a knife. After cooling, the surplus enamel can be removed with a corundum file and polished with putty powder.

QUESTION No. 2171.—**Cementing Pearls.**—*What kind of cement is used for fastening pearls securely.* *C. P.*

ANSWER:—Pearls are secured in the settings with some of the jewelers' Armenian cement. A good cement is the French white pearl cement. This requires heating until near the boiling point. The pearl must be gradually and carefully heated, placed in position and held firmly in place until set. A small hole may be drilled in the pearl, and a pin cemented in will hold it securely.

QUESTION No. 2172.—**Cement for Jet.**—*I frequently have to cement together jet articles. What kind of cement is the most useful for jet jewelry repairing?* *C. J.*

ANSWER:—For jet articles use shellac. This is first smoked until it turns black. When ready to cement, warm the parts to be joined before applying the shellac. Then press the parts firmly together.

QUESTION No. 2173.—**Gold Used by Egyptians.**—*Is it known just how long since the old Egyptians used gold for ornaments and other purposes?* *G. E.*

ANSWER:—The following report recently made gives us some idea how far back we may go to find the extensive use of gold in ancient Egypt:

According to the *Scientific American*, a discovery of remarkable Egyptological interest has been made by Theodore M. Davis at Thebes, by the excavation of the tomb of Queen Teie, one of the greatest names in ancient Egyptian history, since she was the mother of the famous Amen-hotep IV., the heretic king of the 18th dynasty. The tomb of this royal personage was found to bear the marks of the religious zealots, who carefully removed therefrom every trace of the peculiar pantheistic monotheism she endeavored to introduce into the country. The doorway, consisting of piled stones sealed with the royal seal, was found to have been broken down, the huge wooden doors torn from their hinges, the catafalque torn to pieces, and the mummified corpse itself turned over in order to erase the name of Amen-hotep IV., which was originally inscribed on the sheet of gold upon which the body reposed. When excavated the tomb was found to still bear all these traces of the zeal of the religionists, effected during the period in which the country was in the throes of a religious revolution long before the time of Moses. The excavators found the tomb virtually lined with gold leaf, and fragments of gold were found on all sides. The coffin reposed upon a bier incrusted with gold, and was supported by four lions' paws, which were of the same precious metal. The coffin was perfectly intact, and is stated to be a magnificent specimen of the ancient Egyptian jeweler's handicraft. The wood of the coffin is entirely covered with a frame of gold inlaid with lapis lazuli, carnelian and green glass. There is a hieroglyphic inscription upon the metal plate, to the effect that the coffin was prepared for Queen Teie by her son. The mummy itself was enwrapped from head to foot in sheets of gold, with bracelets on the arms and a necklace of gold beads and other ornaments executed in the same metal around the neck, while the head was encircled by a priceless object—the imperial crown of the queens of ancient Egypt. The crown, though of simple design, is of magnificent workmanship, depicting the royal vulture holding a signet ring in either talon, while its wings surround the head and by means of a pin are fastened at the tips, the whole article being fashioned in solid gold without any additional embellishment. This discovery is considered to be one of the most important from an archæological point of view that has been made in Egypt during recent years, affording as it does a priceless relic of the barbarous ornamentation and love of jewel embellishment which prevailed among the earliest Egyptians.

Henry Zellerbach, Houston, Tex., on July 1 moved to attractively furnished quarters in the Moon building, Hallettsville, Tex.

Frauds in Curios That Are Sold to American Tourists Who Are Seeking Antiques.

SUPPLEMENTING the consular report from Belgium one year ago, warning American tourists against the purchase in Europe of so-called "antiques," Consul Maxwell Blake sends from Dunfermline the following advice pertaining to Scotland and to the "Old World" generally:

As the Summer season approaches, in anticipation of the usual annual influx of Americans, many of whom continue under the delusion that all things in this country are as old as its history, the growing legion of so-called "antique" dealers, from cities to remote villages and unfrequented farmhouses, are now occupying themselves in arranging for display their various stocks of made-to-order antiquities.

It ought by this time to be known to even those of little experience that the genuine antique, providing it has originally possessed something more than age alone to consecrate it, has long ago passed out of the market as an article to be cheaply and haphazardly bartered for. This on the contrary seems to be a fact that is anything but generally known, especially to the average American abroad, in whose lack of knowledge of such things lies the security from punishment and the profits of the fraudulent miscellaneous antique dealer.

MAKING ANTIQUE GOODS.

Thus, largely as the result of American demand—a demand that has long outgrown the supply, and which has increased with the disappearance of the genuine antique—such irresistible opportunity and reward has been offered the forger that now, thanks to his productive industry, there is both abundance and variety of supply again of "antiques" executed with all degrees of skill, varying from the crude products of amateurs to others of such pretentious workmanship as often to puzzle the connoisseur himself.

Rare old-period furniture, given the gloss and appearance of age by constant rubbing with bone and pumice stone; old hand-rolled copper plate, which has not been made since 1840, a most favorite article of deception, over 1,000 pieces of which have been lately examined without finding half a dozen genuine specimens; Spanish ivories, skillfully "aged" brown by acids; first-state engravings and prints; Queen Anne silver, superstructures of which are built up upon the handle of an old spoon bearing genuine marks; "old" Bristol and Waterford hand-cut crystal; and that particular kind of china which is in most momentary demand, whether it be Oriental blue and white, or Lowestoft, abound everywhere in such wholesale lots as one would think should alone serve to excite the suspicions of any thoughtful person.

COLLECTIONS AND COLLECTORS.

In the preparation of this article visits were paid to scores of "antique" shops, from a few of the more trustworthy ones in the large cities to those of the smaller and more cunning and less suspected ones in nearby villages and along motor-car highways, the latter establishments generally conducted by some "interesting old character" who sat smoking his pipe indifferently, offering his wares in some basement difficult of approach, the windows of which were conventionally screened by a thick net of cobwebs.

The first delusion to be got over is the rather prevalent idea that this fad of collecting, or the actual love for antique objects, is something peculiar to the people of the United States, who are supposed to put greater store upon the possession of such things than is common abroad. This is a misconception. On the contrary, throughout Great Britain, and even more so on the Continent, collecting has been a passion since the 18th century. The British Isles have been searched up and down from door to door by experienced collectors for upward of 50 years, and not being large geographically the thoroughness of the search shows the remote likelihood of picking up something good for little money at this late day during a few weeks of a summer sojourn abroad.

Don't look for bargains in antiques. If one wants genuine things he should visit a dealer of recognized standing and reliability, for there are a few such; pay him his price, which is sure to be high, and purchase only upon his written guaranty that the article is as represented, genuinely old and actually of the period. One cannot become a judge of antiques by reading a few books, and if a person has neither the means to buy, nor the experience necessary to select what is really worth purchasing, it is far more satisfactory to buy first-class reproductions: the latter are what one generally finds in the average "antique" shop at more than twice their actual value.

REPRODUCTION OF HISTORICAL OBJECTS.

Beware of buying Robert Burns chairs, and Mary Queen of Scots tables and all such things. It is safe to say that they are spurious. Beware especially of Sheffield plate; it is practically all modern, or old pieces plated over, which completely destroys its value as an antique. Buy the new as such at one-half the prices asked for it by the "antique" dealer.

Beware also of engravings and prints. Many reproductions of old prints are made by artists of great ability, with no intention at deception. Some of these I have lately seen in antique shops, artfully "aged" and hung in old frames, the unscrupulous dealer asking four or five times the price the print can be purchased for of the publishers. Crystal and china are also made in the old shapes and often in the actual molds of a hundred years ago; these are legitimate reproductions. It is the so-called "antique" dealer who buys them up and offers them to the unsophisticated as genuine.

Jeweled Chinaware.

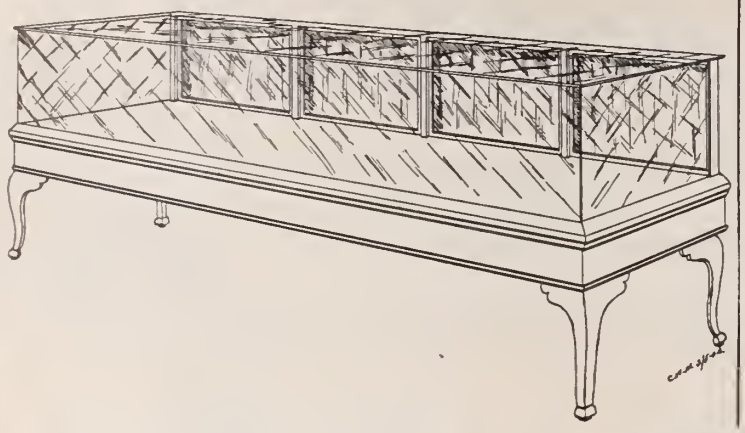
(From the Kansas City, Mo., *Times*.)

WHEN a king buys china he doesn't care much about the price of it. Neither does a duke, according to D. F. Richardson, a salesman from Chicago. Mr. Richardson represents a house that handles china from a factory at Stoke-on-Trent, England. This factory supplies the tables of King Edward VII. and many of the members of the nobility of England.

"See this plate?" he asked yesterday, as he took a piece of china from his trunk. "Made for King Edward for use on his yacht. And the set of dishes cost the ruler about $15,000." The plate was plain except for a narrow rim of dark blue and gold. At intervals on the rim of the plate were small embossed anchors joined by ropes of gold.

FOR A DOZEN PLATES, $500.

"Pretty, isn't it?" the salesman asked. "And it's pretty costly, too. A dozen of these plates cost the king about $500, but you see he had to buy much china because he entertains many persons." The salesman picked up a quaint-appearing little cup rimmed with gold.



"Some more royal china," he said. "This set was made for the Duke of ———, but it wasn't as expensive as the one made for King Edward. This set cost only $3,000."

On the tables near the salesman were rows and rows of china. As the visitor looked at the various pieces there came a flash from one of the ornaments on one of the plates.

"Looks like an opal," the visitor said.

STYLES IN TABLEWARE CHANGE.

"It is an opal," the salesman replied, "and
